CHRONOLOGY OF REMARKABLE EVENTS.

JANUARY 2, 1851, TO JUNE 28, 1851.

JANUARY.

2.—GREAT meeting at the London Tavern, to procure the abolition of the paper duty.—Cholera raging at Jamaica; 650 deaths in Montego Bay.

4.—Collision at Boxmoor, on the London and North-Western Railway: 14 persons injured.

5.—Amount of duty levied on goods imported into the United Kingdom in the year ending this day, £10,966,935. St. Stephen's Church, Walbrook, re-opened.—Deficiency in the revenue on the quarter, £109,428.—Balance in the Exchequer, £9,245,876.

6.—A watchman killed on the East and West India Dock Railway.

7.—The rebel Hermanns killed whilst leading an attack of Kaffirs on the town of Beaufort.

8.—British Museum re-opened.—4,000,000 dollars. of gold-dust arrived at New York from California during the week. —Hostilities renewed in Kaffraria.

10.—New French Ministry appointed.—Fire in Messrs. Wallace's cotton-mill, Manchester: damage, £22,000.—Gen. Narvaez, the Spanish Minister, resigned; leaving Madrid the next morning, for France.

11.—Schleswig—Holstein submitted to *terms* imposed by Austria and Prussia.—The American ship *Franconia* wrecked, off Anglesea: 11 lives lost.—The *New Commercial* brig wrecked, near Land's End: 8 lives lost.

12.—Duke of Newcastle died, aged 66.

14.—Fire in Moreland's cotton-factory, Manchester: damage £5000.—The election of Mr. Reynolds as Lord Mayor of Dublin declared illegal.

15.—*Vautilus* screw-steamer wrecked off Holyhead: 9 lives lost.—Fire in St. Martin's-lane (Ben Caunt's): 3 lives lost.—First trial by jury in Austria.

16.—News of Nicaragua being blockaded by the British squadron.—News of strong agitation in Australia against convict transportation thither.—A man accidentally shot at the Regent's Canal Docks.—Boiler exploded at Holmehouse Colliery, Wigan: two lives lost.—News of appointment of new Ministry in Spain: Bravo Murillo President of Council.

17.—Two lives lost in a sewer at Islington, from the New River breaking into it.—Marquis of Northampton died.

18.—French Ministry resigned.—A young man drowned, at Hungerford-pier, in a foolish attempt to jump from a steam-boat in motion.—News of the loss of H. M. steam-ship *Pioneer*, on the 22nd November last, on a reef near Sierra Leone.

19.—Lord Robert Taylour died suddenly.

20.—Commencement of strike of seamen in the Northern ports, against the Mercantile Marine Act: between 6000 and 7000 men out.—The Grand Council of Tessino abolished the punishment of death for political offences.

21.—Grand Civic Banquet in Dublin; the Lord-Lieutenant present.—High tide in the Thames: the Temple Gardens covered to the depth of several inches.—Brighton Pavilion opened with a grand ball.—Fort Hare and the town of Alice attacked by the Kaffirs, who were repulsed with great loss.

22.—Lord Burghersh died.—The *Atlantic* steamer put into Cork in distress.

23.—News of political outbreak in Chili: insurgents defeated.—Great Reform meeting at Manchester.—Reciprocity navigation treaty between Great Britain and Sardinia signed.

24.—A "transition" Ministry appointed by Louis Napoleon.—Spontini, the musical composer, died.—Lortzing, the German composer, buried.—Skirmish near King William's Town with the Kaffirs, who were defeated.

25.—News of the blowing up of the Portuguese 32-gun frigate *Donna Maria II*, at Typa, China: upwards of 200 lives lost.—Mrs. Reid (the Royal centenarian) died, aged 102.—Great Protectionist meeting at Pocklington.

27.—Fire in the clock-tower of the New Houses of Parliament.—Great fire in Houndditch: a fireman seriously injured.—Audubon, the naturalist, died, aged 76.

28.—Fire at New Cross railway station: 20 carriages destroyed.—Mrs. Sloane committed to Newgate, charged with horrible cruelty to her servant girl.—Cholera on the native defeated, with great loss.

30.—Extensive conspiracy discovered in Vienna: 70 persons arrested.

FEBRUARY.

1.—The Kroll Garten, at Berlin, destroyed by fire.—Mrs. Shelley died, aged 53.

2.—The Prussian Ministry defeated in the Lower Chamber.

3.—Cholera raging at Bombay: 3000 died in a month.

4.—The brig *Laurel* run down in the Forth of Clyde: 14 lives lost.—Parliament opened by the Queen in person.—Lord Shaftesbury resigned the post of chairman of Committees in the House of Lords: Lord Redesdale appointed in his stead.—Fort Dharoor, in the Nizam's dominions, surrendered to the British.

5.—The boiler of the passenger-boat *Plover* exploded at Glasgow: one man killed, and several injured.—Dr. Pye Smith, the Dissenting preacher, died.—Mr. D. W. Wire elected Alderman for the ward of Walbrook.—Mr. and Mrs. Sloane sentenced to two years' imprisonment.

7.—Lord John Russell opened up the Papal Aggression question in the House of Commons.

8.—The lucky of Schleswig delivered up to the Danes.—Serious riot by paupers in Barham Union Workhouse: 37 persons arrested.—Railway from Madrid to Aranjuez opened by the Queen of Spain.—Arrival of Spanish gun-boats at Gibraltar with prisoners from Algiers.—Arrival of Sardinian warsteamer left Genoa with goods for the Great Exhibition.

10.—Mr. Satchell elected M.P. for Windsor.—The British Institution exhibition of pictures opened.—The French Legislative Assembly refused the dotation grant to M. Louis Napoleon.—A lady robbed of jewels, &c. of £170.

11.—Mr. Disraeli brought on his motion respecting agricultural distress, in the House of Commons.—An old gentleman accidentally burnt to death in Baker-street.—The Jamaica Legislature met for dispatch of business.

12.—Great meeting in Drury-Lane Theatre to procure the repeal of the Window-tax.—Hostilities continued in Yucatan.—Dr. Smith installed Roman Catholic Archbishop of Trinidad.

13.—Mr. Disraeli's Agricultural Distress motion lost by a majority of 14.—Mr. Baird (Free-trader) elected M.P. for the Falkirk.—Hon. Mr. Ashley (Free-trader) elected M.P. for Portsmouth.—Dr. Briggs enthroned R. C. bishop of Beverley.

14.—Ecclesiastical Titles Bill read a first time.—News of complimentary visits between the Gov.-General of India and Gholab Singh, on the 27th and 28th December.—A Wesleyan minister, in Somersetshire, strangled himself with a piece of calico.—Valentine's Day: the number of letters passed through the chief office exceeded the daily average of 40,750.—Explosion of naphtha in Salford: one person killed, and another much injured.—Hon. Stuart Knox returned M.P. for Dungannon.—Serious riots in Stockholm on this and following day.

16.—Messrs. Mitchell's printing establishment, in Paternoster-row, burnt down.

17.—The Chancellor of the Exchequer introduced his Budget to the House of Commons.—Garibaldi arrived at Geneva.—The area in front of St. Paul's Cathedral opened to the public.—Mr. Barrow returned M.P. for Nottinghamshire.

18.—The first cargo of French articles for the Great Exhibition left Havre.—Railway accident near Alderley: one person killed, and several severely injured.

19.—Messrs. Wigan's premises, Tooley-street, destroyed by fire.

20.—Mr. L. King brought on his County Franchise motion: Government defeated by a majority of 48.—News of the wreck of the *John Adams* steamer, on the Mississippi: 193 lives lost.

22.—The Russell Ministry resigned.—Serious revolt at Yarmouth, by seamen on strike.—Anniversary of the birth of Washington celebrated at New York with great pomp.

23.—Joanna Baillie died, in her 90th year.

24.—A porter squeezed to death on the South-Western Railway.—A watchman drowned in the Wapping Basin.—A labourer killed by a fall at the New London Gas-Works, Vauxhall.—The town of Fayetteville, Tennessee, nearly destroyed by a tornado.

25.—The Marriage Affinity Bill lost.

26.—Mr. Macready took his farewell of the stage.—Church of the Holy Trinity, Bracknell, consecrated.—Re-action in the Canton provinces gaining head.

27.—Destructive fire on Messrs. Teacher's tallow melting premises, Paternoster-row.—Sheriff Allson inaugurated Lord Rector of Glasgow University.—Sir John Tobin, of Liverpool, died, aged 88.—Insurrection in China.

28.—Sir J. Pirie died, aged 71.—Earthquake at Rhodes: about 1000 lives lost.—Marshal Dode de la Brunerie (one of Napoleon's marshals) died, in his 77th year.—Two labourers killed at Rochester, by the fall of a wall which they were pulling down.—One of the medical officers of the parish at St. Magdalen dismissed for neglect of a female patient

MARCH.

1.—Public dinner to Mr. Macready in the Hall of Commerce, London.—The Earl of Eglinton elected Lord Rector of Mariscal College, Aberdeen.—The *Buckinghamshire* East Indiaman burnt in the Hooghly: damage, upwards of £120,000.

2.—Revolutionary riot at Bessac, in the Herault.

3.—Fire in Belvidere-crescent, Lambeth: a young woman burnt to death.—Fire in Crown-street, Soho: a female in an adjoining house killed by excitement.—The Russell Ministry resumed office.—The Earl of Harrington died.—Resolution of the Senate of the American Senate to send a Government ship to carry Kossuth and his companions to the United States.

4.—Anniversary of the proclamation of the Sardinian constitution celebrated at Turin, with great enthusiasm.—Second session of the 31st Congress of the United States terminated.

5.—Lambeth Ragged Schools, the gift of Mr. Beaufoy, opened.—252 Hungarian refugees arrived at Liverpool from Turkey.—Great meeting in St. Martin's Hall, Long-acre, to promote the repeal of the taxes on knowledge.

6.—Borrricault's comedy, "Love in a Maze," produced at the Princess'.—News of the almost entire destruction of the city of Rangoon, in Burma, by fire: loss about £300,000.—Unusually high tide in the Thames: the banks overblown in many places.—3000 tons of ice arrived in the river from Norway.—41 female emigrants set out for Australia, under the auspices of the Female Emigration Society.

7.—Sir G. Grey stated the proposed modifications of the Ecclesiastical Titles Bill.

8.—The Queen's cutter *Gathchill* lost by collision with the steamer *European*, in the Clyde: one life lost.

9.—Rev. Robert Eden consecrated Bishop of Moray and Ross.—Dr. Whewell, the British philosopher, died, aged 74.

10.—The 74th regiment embarked at Cork for the Cape.—Mr. Carter elected Alderman for the ward of Cornhill.

11.—Her Majesty's Theatre sold to Lord Dorset's motion to bring the revenues of Crown lands under the controul of the House of Commons, by a majority of 1.

12.—The ship *Lawrence*, American frigate, laden with goods for the Great Exhibition, anchored in Cowes Roads.—Grand fancy fair in Brighton Pavilion.—A child killed at Rochdale, by a monkey.

14.—Railway collision at New Cross: five persons seriously injured.—The *Border Queen* screw-steamer wrecked on the Wotiga Islet, Cattegan.

15.—Socialist disturbances at St. Amand, France.—The Earl of Ellesmere died.—Terrible railway explosion at Nithshill: 51 persons killed.—The steamer *George W. Kendall* exploded on the Ohio: 21 lives lost.

17.—A boy killed on the South-Western Railway.—Terrible boiler explosion in a cotton factory at Stockport: 20 persons killed.—Explosion in Hay's Colliery, Ashton: three persons killed.

18.—A female burned to death in the Broadway, Southwark.—Assembly-buildings, Philadelphia, destroyed by fire: loss, 30,000 dollars.

19.—General Sir C. Napier arrived in London.—Mr. Linton, "Bishop of Gretna," died.—Deputation of representatives of the public press waited upon Lord J. Russell to procure a repeal of the advertisement duty.

20.—The *Corsaire*, Paris paper seized, in order for prosecution.

21.—Lord Dacre died.—General Sir A. Duff died.

22.—Her Majesty's Theatre opened for the season.

23.—Rev. Mr. Bennett preached his farewell sermon in St. Barnabas Church, Pimlico.

24.—Duke of Arsenia Regulation Bill passed in the Lords.

25.—The second reading of the Ecclesiastical Titles Bill carried by a majority of 243 in the House of Commons.—Lord Lansdale resigned the office of Master of the Rolls.—Boiler exploded in Riga-street, Manchester: nine persons killed.—Thomas Drory and Sarah Chesham executed at Clonmell, for murder.

26.—Fire in John-street, New Kent-road: two lives lost. —New Corn Exchange, Northampton, opened.

27.—Sir Gilbert Heathcote died.—The Chinese pirate, Chui-Apoe, sentenced to transportation for the murder of Captain Da Costa, strangled himself in prison.

29.—Charles Landseer, R.A., elected keeper of the Royal Academy.—The steamer *Patna* lost near Bullali.

30.—Census papers filled up.

31.—The Duke of Brunswick and Mr. Green crossed the Channel from Hastings in a balloon, alighting eight miles from Boulogne.—Loss, 5,000,000 dollars in gold dust, exported during this month from California.

APRIL.

1.—A man threw himself down the well of the Monument stair-case, sustaining no bodily injury.—Mr. R. W. Allen elected Warden of Dulwich College.—Rear-Adm. Sir Nicholas died.

2.—The County Franchise Extension Bill lost in the Commons, by a majority of 216.—Sir A. Cockburn and Sir J. Romilly re-elected respectively M.P. for Southampton and Devonport.—Splendid testimonial presented to Mr. Brassey, the great railway contractor.—Grand banquet to Lord Stanley at Merchant Tailors' Hall.

3.—Fearful earthquake at Valparaiso: many buildings destroyed, and several lives lost.

4.—The Chancellor of the Exchequer brought forward his amended Budget.—Mr. Rushton, the Liverpool magistrate, died.

5.—A woman killed, near Gloucester, by her husband.

6.—A man committed suicide by leaping off Blackfriars Bridge.

7.—The Spanish Cortes dissolved.—Fire in the Thames Bank Depository.—Revolution broke out in Portugal, headed by the Duke de Saldanha.

8.—John Parry, the distinguished vocalist, died, aged 76. —Indian excesses continue on the Rio Grande.

9.—The second reading of the Smithfield Market Removal Bill carried by a majority of 161.—Great banquet to her Majesty's Ministers, at the Mansion-house.—New entrance to the Nineveh sculptures, in the British Museum, opened to the public.

10.—Engagement at Ouad-Sahel, in Algeria, between French troops and Zouaves: the latter defeated.

11.—Mr. Bethell elected M.P. for Aylesbury.

13.—Shocks of earthquake felt in Sweden and Norway.

14.—£10,000 worth of cotton burnt in a cotton-shed, in Liverpool.

15.—Levi Harwood and James Jones executed for the murder of the Rev. Mr. Hollest.—Terrible storm on the coast of New England (U.S.), causing great loss of, life and property.

16.—An farmer shot by a clergyman, at Walton, accidentally.—Lieut. Fletcher and Capt. Morris killed whilst fighting with the Kaffirs.

17.—A man, in a fit of delirium, jumped from a window of the Royal Manchester Infirmary, and was killed.

18.—Lord Langdale died.—A woman run ever by a cab, in Wych-street, Strand, and killed.

19.—Great excitement reigning in Havannah with regard to a projected American invasion.

21.—A man crushed to death, at Liverpool, beneath a mass of iron.—A man killed by falling through the roof of the Crystal Palace.—A man drowned, at Manchester, through the giving way of a suspension-bridge.—A man dropped dead, through over-excitement, at a cock-fight, in Edinburgh.

22.—Great Protectionist dinner at Edinburgh: 700 present.—George Carnt executed at Bury St. Edmund's for murder.—The Exchange, Santa Fé, burnt down: loss, 20,000 dollars.

23.—Mr. Serjt. Murphy returned M.P. for Cork.—Hundredth anniversary of the Society of Antiquarians celebrated at Freemasons' Tavern.—John Miles and John Smith executed, at Taunton, for murder.—The 300th anniversary of Shrewsbury school celebrated.

24.—The garrison of Oporto declared for Saldanha: the Royal troops defeated.—A farmer killed by lightning, near Lichfield.—A man killed by falling from a ladder in Regent's Quadrant.

25.—The *Feiz Baari* Turkish frigate, anchored at Spithead.—The Portuguese (Thomar) Ministry resigned.—Two men killed in a well at Dorking, by the earth falling in.

26.—Patrick Joyce executed, at Liverpool, for murder.—Mrs. Waylett, the vocalist, died.

28.—Admiral Sir Edward Codrington died.—The *Prince of Wales* ended Chinese disturbances at Singapore.

29.—Edinburgh Assembly-hall struck by lightning, and partially burnt.—The Prince and Princess of Prussia arrived in London.—Great Protectionist meeting in Drury-lane Theatre.—The Duke de Saldanha entered Oporto in triumph.—Earl of Cottenham died

30.—Collision in the Saltash tunnel of the Lancashire and Cheshire Junction Railway: eight persons killed, and upwards of 30 wounded.—Colliery explosion in Wigan: three lives lost.—The Charter Cap won by Mr. Lister's Nancy.—20,447 persons sailed from the port of Liverpool during this month.

MAY.

1.—The Great Exhibition opened by her Majesty in state. —Royal Academy Exhibition opened by her Majesty.—Mr. Hume's motion, that the Property-tax be renewed only for one year, carried against Ministers, by a majority of 14.

—Earl of Rantry died.—Louis Jerome Firnand, a military contractor, after twelve days' trial for fraud, honourably acquitted.

2.—Tremendous fire at San Francisco: upwards of 900 buildings laid in ashes.

4.—*Fête* of the Republic celebrated in France.

5.—Fire in the day at the Great Exhibition: £1600 taken at the doors.—The schooner *Fyfe* run down, off Beachy Head: crew saved.

6.—Government defeated by a majority of 1 in favour of Lord Naas' motion respecting the duty on bonded spirits.—The Duke of Saldanha appointed President of Council in Portugal.—Viscount Newry died.—Reward of £50 each offered for the apprehension of the four abducted witnesses in the St. Leas Bribery case.

7.—The championship of the Thames gained by Coombes, beating Mackinney.—The Royal mail steamer *Falcon* wrecked near St. John's, Newfoundland: crew saved.

8.—Mr. Cayley's motion for a repeal of the Malt-tax negatived by a majority of 268 to 122.—Foundation-stone of a new Roman Catholic Church laid at Hammersmith.—Gold-dust to the amount of £5300 abstracted from a waggon, on the South-Western Railway.

10.—The cathedral of Pittsburgh (U.S) destroyed by fire. —Fifteen companies of U. S. troops left New Mexico on a campaign against the Indians.

11.—Violent thunder-storm at Boulogne: a child killed by lightning, and much damage done.—Sir J. M'Gregor died, at Toronto, West Indies.

12.—Two men killed on board the *Governoir* Sardinian frigate, through one of her guns going off while they were in the act of loading it.—Captain Somerset committed to the House of Correction for ten days, for assaulting a policeman.—The new Museum of Practical Geology, Jermyn-street, St. James's, opened by Prince Albert.

13.—The clipper *Ariel* burnt, off the mouths of the Hooghly: value £100,000.—The Religious Houses Bill lost on the motion for reading it.—Captain Somerset committed to the House of Correction for ten days, for assaulting a policeman.—The new Museum of Practical Geology, Jermyn-street, St. James's, opened by Prince Albert.

14.—Fire in John-street, New Kent-road: two lives lost. —New Corn Exchange, Northampton, opened.

17.—Sir Gilbert Heathcote died.—The Chinese pirate, Chui-Apoe, sentenced to transportation for the murder of Captain Da Costa, strangled himself in prison.

20.—Charles Landseer, R.A., elected keeper of the Royal Academy.—The steamer *Patna* lost near Bullali.

21.—Census papers filled up.

22.—A young man fell from the roof of a house in Dunfries, while in a state of somnambulism, and was killed.—Splendid meteor seen near Stepney.

23.—Jewish Disabilities Bill passed through committee.—A man killed through the falling of some scaffolding under the fourth arch of Blackfriars-bridge.—Tremendous fire on Adrmral Humphrey's and other premises, Montague-close, Southwark: damage, £100,000.

24.—Lady Godiva procession at Coventry celebrated with great splendour: upwards of 60,000 persons present.—Mr. Hartley and Mr. Cotterel elected Sheriffs of London.

25.—Resolved in the French Assembly that the French Constitution be totally revised: committee appointed.—The Scottish Universities Bill thrown out, by a majority of 1.—The Diocesan Synod at Exeter formally opened.—Charles Dora, a fireman, committed to Lambeth for six weeks, for abstracting portions of goods exhibited in the Great Exhibition.—Royal Thames Yacht Club challenge cup won by the *Titania*.—Foundation-stone of the City of London Hospital for Diseases of the Chest, at Victoria-park, laid by Prince Albert.

26.—Alderman Salomons (a Jew) elected M.P. for Greenwich, by a majority of 897.—Thermometer in Hyde-park 90° in the shade.—Debate respecting the abolition of protective duties commenced in the French Assembly.—Small-pox raging with great violence, at St. Laurent, near Nancy, France.—Eight soldiers killed by the heat at a review in the Champs de Mars, Paris.

27.—A young man drowned in the Serpentine whilst bathing.

28.—Grand banquet at the Mansion-house (London) to the Royal (Exhibition) Commissioners.—Serious affray at Liverpool between military and police.

20.—Grand banquet at Richmond to Foreign Exhibition Commissioners.—£3711 5s. received at the doors of the Great Exhibition.—A gentleman of fortune committed suicide at the Camden station of the North-Western Railway, by lying in front of an advancing train, which cut off his head.—The *Pacific* steamer made the run from New York to Liverpool in 9 days, 19 hours, and 25 minutes.—A sturgeon, measuring 7 feet 2 inches in length, taken in the Tay. —The steamer *Ohio* run down, near Philadelphia: several persons drowned.—The Canada Parliament assembled.

21.—The Epsom Derby won by Sir Joseph Hawley's Teddington.

22.—Mr. Fox's motion for the promotion of secular education lost in the House of Commons, by a majority of 90.—The *Prince Albert* ketch sailed from Aberdeen, in search of Sir John Franklin.

23.—The Epsom Oaks won by Lord Stanley's Iris.—The Jamaica House of Assembly prorogued.

24.—The last 5s. day at the Great Exhibition: £50711 received at the doors.

25.—M.Godard made a successful descentin a parachute, Paris.—The Right Hon. R. Lalor Sheil died, at Florence.

26.—The Chess Tournament, at the St. George's Chess Club, commenced.—First 1s. day at the Great Exhibition: £920 taken.

27.—St. Matthew's Church, Islington, consecrated.

28.—Protectionist dinner at Tamworth, resulting in a riot.—Mr. Crawford (Free Trade) elected M.P. for Harwich.

29.—Mr. Baillie's motion condemnatory of Lord Torrington's policy in Ceylon lost by a majority of 80.—Cholera prevalent at Cincinnati (U.S.).

31.—Her Majesty's birthday celebrated.—Two boys drowned, at Bankside, whilst bathing.—Rauch's statue of Frederik the Great inaugurated by the King of Prussia, at Berlin.

JUNE.

1.—Louis Napoleon opened the railroad at Dijon, France; and afterwards explained himself in a somewhat violent speech.—News of French aggressions in the Sandwich Islands.

2.—The Earl of Shaftesbury died.—St. Jude's Church, Southsea, consecrated.

3.—Three persons accidentally drowned in the Thames.

4.—Cholera on the increase in the Western States of America.

5.—55,029 persons visited the Great Exhibition.—The Emperess Vase, at Ascot, won by Woolwich.

6.—St. Paul's Church, Charlestown, consecrated.—A large whale captured in Great Man's Bay, Connemara.—A railway train thrown off the line, near Lewes: 5 persons killed.

7.—The Russian troops evacuated the Danubian provinces. —Boiler explosion at Mr. Braine's colliery, Kingswood: 7 persons killed.—The Mississippi rapidly rising: much land already submerged.

9.—News of a revolt of slaves at Old Calabar: the insurgents in possession of everything.

10.—News of a serious riot at Hoboken (U. S.): several lives lost; upwards of 60 persons arrested.—The three sons of the late Earl of Aldborough arrested, at Leghorn, for conspiracy.

12.—Cholera on the increase in the Western States (U. S.)

—H. Dignan sentenced to a fine of 500 francs and six months' imprisonment, for writing an article in the *Enlightenment* condemnatory of capital punishment.

13.—Grand costume ball at Buckingham Palace.—The Plymouth packet struck on a sunken rock off Scilly, and instantly foundered: all lost, including 18 emigrants.—Cholera raging in Jamaica.

14.—Vice-Admiral Sir C. Malcolm died.—Thomas Monle, Esq., the antiquarian, died.—A guard killed on the Great Western Railway.—During the first three days of this week 15,000 persons visited Westminster Abbey.

15.—Statue of N. Poussin, the painter, inaugurated with great pomp at Andelys, Normandy.

16.—Third jubilee of the Society for the Propagation of the Gospel celebrated.—Mrs. Graham's balloon descended accidentally: the aëronaut and her husband much injured.

17.—70,000 persons visited the Crystal Palace.—Riot on Red Bank, near Philadelphia: several persons injured.—Cholera raging in Kentucky.

18.—Mr. Wyld's Sunday Trading Prevention Bill thrown out in the Commons.—One of the attendants of the hollow brick-making machine at the Great Exhibition; so injured by the machinery as to necessitate amputation of the arm.—French troops in Algiers successful in a series of engagements since the 8th: western tribes submitted; and the French immediately proceed to coerce those on the east of Djyelli.

19.—The House of Commons resolved itself into a committee on the Smithfield Market Removal Bill, thus striking a tremendous blow at the long-loved City nuisance.—News of the probable close of the Indian war in Yucatan, the Indians having sustained a terrible defeat at Bacalos.—Grand banquet at Birmingham to the Great Exhibition Royal Commissioners and foreign visitors.—Grand floral *Fête* at the Old Wells, Cheltenham.

21.—J. S. Mansfield, Esq., appointed stipendiary magistrate at Liverpool.—Two men, fighting on board the *Queen* steam-tug, off the Durham coast, fellowboard and drowned.

—Total number of visitors since the opening of the Great Exhibition, 1,812,419: amount received, exclusive of season tickets, £101,268 3s.

22.—A young man fell from the roof of a house in Dunfries, while in a state of somnambulism, and was killed.—Splendid meteor seen near Stepney.

23.—Jewish Disabilities Bill passed through committee.—A man killed through the falling of some scaffolding under the fourth arch of Blackfriars-bridge.—Tremendous fire on Admiral Humphrey's and other premises, Montague-close, Southwark: damage, £100,000.

24.—Lady Godiva procession at Coventry celebrated with great splendour: upwards of 60,000 persons present.—Mr. Hartley and Mr. Cotterel elected Sheriffs of London.

25.—Resolved in the French Assembly that the French Constitution be totally revised: committee appointed.—The Scottish Universities Bill thrown out, by a majority of 1.—The Diocesan Synod at Exeter formally opened.—Charles Dora, a fireman, committed to Lambeth for six weeks, for abstracting portions of goods exhibited in the Great Exhibition.—Royal Thames Yacht Club challenge cup won by the *Titania*.—Foundation-stone of the City of London Hospital for Diseases of the Chest, at Victoria-park, laid by Prince Albert.

26.—Alderman Salomons (a Jew) elected M.P. for Greenwich, by a majority of 897.—Thermometer in Hyde-park 90° in the shade.—Debate respecting the abolition of protective duties commenced in the French Assembly.—Small-pox raging with great violence, at St. Laurent, near Nancy, France.—Eight soldiers killed by the heat at a review in the Champs de Mars, Paris.

27.—A young man drowned in the Serpentine whilst bathing.

28.—Grand banquet at the Mansion-house (London) to the Royal (Exhibition) Commissioners.—Serious affray at Liverpool between military and police.

DIRECTION TO THE BINDER.

The Large View of the Exterior of the Crystal Palace is to form the Frontispiece to the present Volume (XVIII).

THE ILLUSTRATED LONDON NEWS.

No. 463.—VOL. XVIII.] FOR THE WEEK ENDING SATURDAY, JANUARY 4, 1851. [SIXPENCE.

THE EXCISE DUTY ON PAPER.

THE year has opened with a large financial surplus, and the doors of the Treasury are besieged by a crowd of over-taxed and eager applicants for relief. Each of them is injuriously affected by some particular impost out of the many that press upon the collective energies of the people, and each is perhaps more anxious for the repeal of the one that is felt to be individually oppressive, than for the general re-consideration of the whole subject with a view to national rather than to partial benefit. The Chancellor of the Exchequer will have hard work to defend his "surplus" from their combined attacks. We hope that more wisdom will govern his councils than he exhibited when he was last placed in the enviable position of a tax-repealer. His surplus is large enough to enable him to satisfy many of the applicants, and to grant substantial, not illusory relief.

The four most prominent of the oppressive taxes that will be brought under his notice, are the Property and Income-Tax, the Window Duty, the Soap Duty, and the Paper Duty. A strong case can be made out against each of them. It may be asserted that the Property and Income-Tax was temporarily imposed to meet a casual deficiency, and that in justice it ought to be immediately repealed, now that the necessity which produced it is no longer in existence. Far be it from us to attempt to weaken the force of this argument. We admit it to the fullest extent. With regard to the Window Tax and the Soap Duty, they are taxes upon the public health and comfort; and the first of the two operates most injuriously upon the amenity of our homes, and our enjoyment of the air and light of heaven. The Excise Duty upon Soap, besides being an interference with trade, is to some extent a tax upon cleanliness. There is no reason in the world, that we are aware of, why either of them should be retained, except that they are productive. We have not a word to urge in their behalf, and shall rejoice if they be forthwith swept away, even if the country should be taxed in some other manner to make up the deficiency which their abolition might cause.

The Paper Duty, which we have mentioned last, seems to us, however, so immeasurably more injurious than any of the other three, that we would urge its immediate abolition, in preference to any or all of them. Even were there a deficit, instead of a surplus, it ought to be repealed; and we trust that the gentlemen who have taken advantage of the present condition of the national income to put forward a claim in behalf of untaxed paper, will occupy the high ground upon the question which they are entitled to assume. The accidental plethora in the Chancellor of the Exchequer's money-bags may render it easier for the Government to yield upon this point than might otherwise have been the case; but it must never be forgotten that the tax is so impolitic, so bad, so unjust, so mischievous, in every possible way, that its abolition would be the imperative duty of a wise and far-seeing Government, even if it were in distress for want of money. Were human ingenuity exhausted to discover a tax that could commit more serious mischief on a free and civilised people than the tax upon paper, it would fail to find one; unless, perhaps, it were an excise duty upon quartern and half-quartern loaves. Next to such an odious tax as that would be, it is difficult to imagine an impost more directly injurious to all, except the very rich, than the Duty on Paper. We proceed to show how multifarious are the evils which it causes, and how many claims—each different, and each sufficient—may be urged for its immediate abolition.

In the first place, let us consider how the tax affects the manufacturer and the labourer, and how much it interferes with the trade and industry of the people. Paper is made of a material that, of itself, is but of little value. Not above two-fifths of the cost of production go for the rags, or the refuse cotton of which it is manufactured, and for the construction, and wear and tear of machinery. All the rest goes for labour. Raw cotton, a short time ago, was burdened with a duty of five-sixteenths of a penny per pound, which was repealed because it was supposed to interfere injuriously with the cotton manufacture. The refuse of cotton, which cannot be employed for any useful purpose except for paper-making, is taxed, although cotton itself is free. The law allows any one to burn or other-

[COUNTRY EDITION, WITH FRIDAY'S LONDON MARKETS.]

Jan 14 January 1851

wise destroy cotton refuse, but as soon as it is converted into one of the most beautiful and useful articles of civilised life—paper—it is taxed by the Government at a rate amounting to about three hundred per cent. on its previous value. Add to this the constant supervision of the Excise Office, which is not simply a nuisance to the manufacturer, but, by the restrictions imposed upon him as regards the use of material, prevents him from making experiments, and from improving his manufacture, to the great injury to every paper-maker in an extent which is almost impossible to estimate. Whatever affects the manufacturer affects the labourer. If the demand for an article of prime necessity be restricted by the dearness consequent upon a tax, the demand for labour is restricted in a proportionate degree. When we consider the almost countless purposes for which paper is already required, and to which it might be applied with still greater advantage to the overstocked labour-market of the country, if no tax were placed upon it, we come to the conclusion that, simply as a manufacturer's question, and without reference at all to the moral and intellectual branch of the subject, it is of national importance that the trade of paper-making should be as free as that of calico-making, or the cloth manufacture, or any other untaxed branch of industry that employs hands, and enables those hands to contribute to the prosperity of the State. Large quantities of paper are used, not only for printed books and newspapers, but for the whole correspondence of the country; for the ledgers and day-books of all its trades and professions, and for school purposes in every educational establishment, from the workhouse and national schools, up to the Universities of Oxford and Cambridge. It is used not only for these intellectual purposes, but, in its coarser form, is an article of first necessity to all wholesale and retail traders, for the package of their goods. It is also extensively used in the arts, in the shape of card-board, and mill-board. It forms the ornament of the walls of our apartments; and, were it untaxed, might be made to adorn the cottages and huts of the poor, as well as the houses of the middle and upper classes. Every one of these, and many other markets for paper, is narrowed by the tax, and by the interference of the excise-man in the operations of the manufacture. It is no exaggeration to say, that not a fourth part of the paper is consumed in any one of these various branches of business that would be consumed if the duty were abolished. For every individual whose labour is now employed in the production of paper, it is likely that four would be employed, if the trade were as free as that of calico-making. It has been estimated, on unquestionable authority, that, in London alone, 40,000 additional people would procure work in some one or other of the countless trades that depend upon paper, including, besides the paper-maker, the printer, the bookbinder, the bookseller, and the author; the machinist, the type-founder, the paper-stainer, the paper-hanger, and scores of others that will suggest themselves to the reader's mind without being enumerated. At least a quarter of a million of people in addition to those now directly or indirectly employed on, or interested in, the manufacture of paper, would thus, in all probability, find employment throughout the whole country, to the diminution of the Poor-rates, and to the increase of the national wealth. We assert that upon this ground alone, independently of the state of the national revenue, the Government has no right to throw this amount of productive labour out of the market, and to impede or prevent the industry of the people, in the money brought in to the national Exchequer from this source cannot be a gain. It is, indeed, a question whether, for the sake of the £800,000 per annum derived from it, the State does not in reality lose twice or even three times that amount, which it might receive in other and fairer taxes if these 250,000 people were fully and profitably employed in this all the more "that the raw material from which paper is manufactured," says Mr. Crompton, the eminent paper-maker, in an able pamphlet which has just been published, "is now being purchased by foreigners for exportation, to be manufactured in countries where no tax exists, and the paper produced therefrom superseding, in our own colonies and other countries, British paper. The consequence is, that large quantities of the raw materials are shipped to the United States, and this not only advances the price here, but takes away the labour upon the same, which would otherwise be performed in England." As a necessary supplement of the Free-Trade policy, which the Government has staked its character and existence to maintain and carry out, it is bound to treat the paper-maker with justice, and to bring him on a footing of equality with other manufacturers. If it were proposed to-morrow to put an excise-duty upon manufactured cotton, there would be such an outcry throughout the length and breadth of the land, that no Government could hold its place against it. We have but to imagine what a blow it would aim at our home and foreign trade—what a diminution of employment it would cause—what poverty and pauperism it would create, to see at a glance the full impolicy and injustice of that similar tax, which now exists upon paper. The one tax is not a whit more defensible than the other would be.

We find the subject has grown upon us. We have scarcely touched upon it as a consumer's question, and have purposely abstained from complicating the argument by the important considerations which arise from it, in its connection with the literature and education of the country. We must, therefore, return to it in our next, and leave it in the meantime as a manufacturer's question, to the earnest support of all the friends of Free-Trade. In this view of it—and even if paper had nothing whatever to do with the extension of religious and secular knowledge among the people—we should consider the case for the repeal of the duty clearly made out. How much more important and urgent it becomes, in connection with the cause of Religion, Education, and Literature, we shall endeavour to show hereafter.

REPEAL OF THE PAPER DUTY.

A crowded meeting took place on Thursday evening at the London Tavern, for the purpose of adopting such measures as might seem advisable for obtaining the abolition of the tax upon paper. Shortly after seven o'clock the chair was taken by Charles Cowan, Esq., M.P.; and among the gentlemen on the platform we observed Milner Gibson, Esq., M.P.; Peter Borthwick, Esq.; Herbert Ingram, Esq.; Mr. John Cassell, Mr. C. Reed, Mr. P. Barnes, Mr. Thomas Beggs, Mr. J. Holyoake, &c.

The chairman said the object of the present meeting was to devise such measures as might be deemed expedient for obtaining a repeal of the Paper Duty. Some of the paper-manufacturers believed that the repeal of the duty would be injurious to their interests (Cries of "No, no"); but even if there was a pecuniary loss, it would be most desirable to get rid of the grievous restrictions imposed upon the trade; if it was a monopoly, the sooner that monopoly was got rid of the better for all classes of the community. (Cheers.) The hon. gentleman then proceeded to detail the vexatious nature of the restrictions to which the Excise regulations subjected the manufacturer: he believed, if any other article of general consumption was subject to such restrictions the law would not be permitted to endure for a day. (Hear, hear.) He then pointed to specimens of paper manufactured from straw, and which was calculated to confer the greatest benefit upon the agricultural interest, but the enormous duty which the Government thought proper to impose upon it checked it, and to that species of manufacture. He objected to the tax upon paper more peculiarly, because it was a tax upon labour. They were in the habit of ridiculing the Chinese for crippling the "understanding" of their females; but their own conduct was equally absurd and unjustifiable, because they crippled the industry and resources of the working-classes. He reminded the meeting, that in Paris there were 30,000 females employed in the manufacture of ornamental paper and boxes, which they were enabled to produce at an extremely cheap rate, in consequence of the absence of all taxes upon paper. Surely, when they had daily placed before them such lamentable details of the privations and misery to which the great bulk of the female working-classes were exposed in their own metropolis, all philanthropists were bound to exert themselves to obtain a repeal of these vexatious and impolitic duties. The hon. gentleman then referred to the depressed condition of the letter-press printers, owing partly to this tax and to the effect which the reduction of these duties would have in diffusing copies of the sacred writings as well as cheap literature generally among the people. A reference to the Crystal Palace, and the objects for which it was intended, applause, followed by laughter and hissing from some of the persons present; and Mr. Cowan concluded by expressing a hope that, now the subject had been taken out of the hands of the Chancellor of the Exchequer and brought before the House of Commons, they would succeed in accomplishing the objects they had in view.

A letter was then read from Mr. Joseph Hume, M.P., in which he expressed his readiness to form one of the committee for the Repeal of the Paper Duty, and giving his cordial support to the objects of the meeting.

Mr. John Cassell moved the first resolution. He was unanimous for the repeal of those taxes, not only because it interfered with the labour and industry of the people, but also because it prevented a more general diffusion of information among the people. The resolution was as follows:—

> That in the opinion of this meeting the duty on paper is emphatically a tax upon skill and industry, as it increases the cost of an article of general consumption, and limits the field of production, thus interfering with the employment of capital and labour engaged in a great variety of trades and occupations, and affecting less directly, but most injuriously, the interests of the public at large; and that in its effects it is vexatious and unjust, necessarily creating delays and difficulties in the way both of the manufacturer and the consumer.

He wished to call the attention of the meeting to the large number of trades and occupations which were intimately connected with the paper trade. He found in a Birmingham paper that there was a large number of the manufacturers of that town employing a vast quantity of paper and pasteboard, and even in the wrapping up of articles of trade amounted as much paper per annum as amounted to £600 duty, at the rate of 1½d. per lb. He complained of the injustice of compelling parties to pay duty upon paper used for printed books, pamphlets, or almanacks, while being allowed upon the large quantities that frequently remained unsold. But, independently of the inconvenience and loss to those connected with the manufacture and consumption of paper, he took his stand upon the higher ground of its interfering so materially with the diffusion of literature and knowledge among the people. He trusted the movement that had been thus auspiciously commenced would not be abandoned until they had won the prize of industry entirely free. (Cheers.) He pointed out the injurious operations of the tax upon the publications issued by himself, and although it had been said that the repeal of these taxes would let loose a flood of low-class publications upon the country, he had no fear to deny it. (Hear, hear.) He believed there never was a time when there was such a spirit of enquiry abroad among the working-classes. (Cheers.) If they could only obtain cheap publications, he was satisfied the more intelligent working-classes would lay out their money in that way instead of spending it in taverns and ale-houses. (Loud cheers.) Seeing the universal demand that prevailed upon this subject, he did not see how the Government could resist the appeal. Having pointed out the great increase that had taken place in the consumption of paper during the last few years, he would ask the meeting what would be the amount of increase if the duty was abolished? He should conclude by assuring them that he would use all his efforts to promote the intellectual advancement of the class from which he had himself sprung. (Cheers.)

Mr. Peter Borthwick seconded the resolution. They had assembled that evening to ask the Government to repeal those taxes which bore the most heavily upon the manufactures of that country from the oppressive Excise regulations under which some of its branches still laboured; and to call upon them to redeem a pledge given to the people so far back as the time of Sir Henry Parnell's Excise Committee. (Hear, hear.) That committee had recommended the repeal of three most obnoxious ones, namely, glass, leather, and paper. Two of these articles had been already relieved from the duty; and the third—the most important of all—remained still oppressed and crippled. (Hear, hear.) As the chairman had well expressed it, they now appealed from Downing-street to Downing-street in matters—the people of England. (Cheers.) The tax upon paper differed from all others in this, that the material itself was of little or no value; its whole value was derived from labour, and labour alone. He instanced the case of a Bible, which 5-16ths of a penny per pound, or about 7 or 8 per cent. of its value, was considered so oppressive a tax that the Government took it off; while paper was taxed to the amount of at least 300 per cent. upon its value, and unless the people spoke out that tax would be continued. It was estimated that if the taxes were abolished no less than 50,000 additional hands would be employed; and if it was taken into calculation the vast variety of uses to which paper would be put in that case, the number of hands would be enormously increased. He looked forward to the time when cannon, as they might read every day, these 500,000 persons to go across the broad Atlantic and seek employment were their labour and industry was untaxed? (Cheers.) There were other objectionable regulations in existence connected with taxes upon newspapers—(cheers)—which was also an indirect tax upon knowledge. He trusted they would all be unanimous in their demand for the abolition of this tax upon paper, and they would rely upon it the others would shortly follow. (Hear, hear.)

Mr. Ruffey, from the body of the meeting, wished to know whether the business of the meeting was to be confined to the objects detailed in the resolution, as, if it were, it was his intention to move an amendment.

The chairman said the business of the meeting was confined to the objects embodied in the notice calling the meeting together.

The resolution was then put to the meeting and carried unanimously, amidst loud cheers.

Mr. Peter moved the next resolution. It was intimated to them by the chairman that the manufacturers, as a body, were opposed to the repeal of the tax; but he thought the public ought not to submit to be controlled by what was merely a class interest. (Cheers.) His objection to the tax was embodied in the resolution he had to submit to the meeting, and was grounded upon the more important one which it involved—namely, the impediments it threw in the way of the education and knowledge of the people. (Cheers.) He need only refer them to the opinions of the giant of periodical literature, Mr. Knight, in support of the resolution of this tax, and he should conclude by submitting the following resolution:—

> That this meeting is further of opinion that the duty on paper, by adding to the cost, and, consequently increasing the price of books, newspapers, and periodicals, impedes the progress of knowledge and education of the people.

Mr. Herbert Ingram seconded the resolution. At that late hour he would not detain the meeting by any lengthened remarks. As a large consumer and manufacturer of paper, he could support them that all the facts and inconsistencies referred to by the previous speakers were far understated. (Hear, hear.) He would refer particularly to the newspaper duties, which, while could, he had no doubt, be produced at one-half their present price, if the duty on paper was abolished. (Hear, hear.) He had a large experience, as consuming many tons of paper per week; and he could, therefore, speak with confidence upon this point. He gave his hearty support to the resolution. (Cheers.)

Mr. Holyoake begged the permission of the chairman to move an amendment. His object was rather to enlarge and extend the terms of the resolution that had been moved, than to move any real amendment. The purport of his amendment or addition was to include the repeal of the advertisement duty and the stamp upon newspapers. (Cheers.) Although cheap literary publications were of great value, it was of still more importance that the people should have that political knowledge which would protect them from political oppression, and maintain their political liberties. (Cheers.) So long as these taxes were retained the poor man would find it impossible to obtain for himself a newspaper. (Hear, hear.) Having urged upon the meeting the great advantages that would result from enlarging the terms of the resolution, and thereby taking it out of the mere category of a trade question, and elevating it to the dignity of a great public interest, he concluded amidst loud cheers by submitting his amendment.

Mr. Collett seconded the amendment. He did because, in the first place, the additional reduction of the revenue would be very trifling; secondly, because, so long as the penny stamp was retained, the working-man could not obtain a newspaper. Eighthly, wrongly so—Collett or anybody else—the working-man would interfere with politics. (Loud cheers.) Whatever the result might be, the working-man had something to do with the laws besides obeying them. His third ground was, that the law was so unjust, that it could not be enforced with regard to these stamps and duties. Mr. Collett concluded an able address by seconding the amendment.

The chairman said he should be disposed to take up the motion that had just been submitted as an addition rather than an amendment, and would put it in that shape to the meeting, concurring entirely, as he did, in the views of its supporters.

Mr. Milner Gibson having been appealed to by Mr. Collett, explained the grounds upon which he had refrained from taking any part, advocated the repeal of the duty on paper, the stamp on newspapers, the advertisement duty, and the tax on foreign books. He was glad the addition had been proposed, as these taxes were always linked together. He was for cheap newspapers; and if competition was good for the farmer, or good for trade, why should it not be good for newspaper proprietors? (Cheers.) Let the Government disguise it as they might, he believed there was a latent fear of diffusing political knowledge among the people. (Loud cheers.)

The resolution, as amended, was then put to the meeting, and unanimously agreed to amidst loud cheering.

Mr. Edwards moved a vote of thanks to the chairman, which was duly seconded, and carried with acclamation.

Mr. Cowan briefly returned thanks, and the meeting separated.

ENGLISH PROTESTANT PLACE OF WORSHIP AT ROME.

AMONGST the various points of discussion raised by the recent agitation on the "Papal Aggression," the question of the character of the toleration accorded to the Protestant religion in Rome has been mooted; and from the fact of the English Chapel being outside the walls of the city, it would seem to be inferred that that external situation has been imposed as a mark of degradation on an antagonist church, by the bigotry of ecclesiastical statesmen.

Without entering upon this "vexed question," we may observe, that, as the Protestants of the Lutheran persuasion possess a place of worship within the city; and the Americans, who of late years have begun to resort to Rome in large numbers than was hitherto customary with our transatlantic brethren, have succeeded, through the judicious interference and great influence of Mr. Cass, the United States Chargé d'Affaires, with Cardinal Antonelli, in obtaining the sanction of his Eminence, as Cardinal Secretary of State, to the establishment, in the very heart of the city, of a House of Worship, where American citizens of the Reformed Faith publicly perform Divine service according to the Presbyterian ritual; it would seem that the site of the English Chapel, *extra muros*, which has been instanced as an indignity offered to the Church of England at the head-quarters of Catholicism, is due rather to the absence from Rome of religious public functionary accredited from this country who could with propriety make a representation in the proper quarter on the subject—Great Britain being the only State recognizing the comity of nations, which has no diplomatic relations with the Court of Rome.

Until the year 1826, the English residents at Rome had no fixed place of worship; prayers being read on Sundays, sometimes at one private residence and sometimes at another, according as suited convenience. They at length, on account of its great size, and its proximity to the English quarter, fixed upon a large building just outside the Porta del Popolo, on the ancient Flaminian Way, as apartments in which they considered of sufficiently capacious dimensions to afford accommodation to the increasing numbers of the congregation, which in some seasons mustered from six to eight hundred souls. This building, which had been previously used as a granary, was accordingly fitted up in the winter of the above year, for the purpose, with the consent of the Roman Government, which accorded, either as a guard of honor, or to preserve order in the neighbourhood, two sentinels to keep watch and ward at the entrance every Sunday, during the hours of service.

The interior of the "Chapel" thus dedicated, at the very threshold of the Vatican, for the religious use of the descendants of the men who, having thrown off its authority, had most fiercely defied its thunders in the days of religious fanaticism and polemical strife—has standing protest, as it were, against its spiritual pretensions and power—is plain and wholly devoid of ornament: its form is oblong, and it contains a pulpit, reading-desk, and communion-table, together with seats and benches for the congregation. The tiled floor is covered with straw, over which is laid a carpet, according to the Roman fashion, to insure warmth. There is always a verger in attendance to direct strangers to a seat, provide them with prayer-books, testaments, &c., and give whatever other attendance the officiating clergyman or the congregation may require; and this official, oddly enough, is an Italian and a Roman Catholic.

The service of the Chapel is only maintained during the season—that is, from the commencement of October to the end of May—the English, along with the other fashionable visitors of the Eternal City, invariably migrating to some cooler retreat during the sultry months of summer.

In the Engraving, the Chapel is seen in the foreground, with the sentinel at the door; the city-gate in the centre is the Porta del Popolo, which forms the grand northern entrance to Rome, and corresponds with the ancient Flaminian Gate, which spanned the Flaminian Way as it entered the city; the site, however, is not exactly the same, the Flaminian Gate having been a few yards more to the east, in the walls built by the Emperor Honorius, at the close of the fourth century. The present appearance of the Porta del Popolo—at least, of the external façade, seen in the illustration—is due to the genius of Michael Angelo, of which, however, it forms by no means a worthy monument. It is a lofty structure, supported on each side of the arch by flanking columns of the Doric order, in pairs, the intercolumniations of which are filled with statues of the Apostles St. Peter and St. Paul. Through the gateway is seen the Piazza del Popolo, with its noble fountains, Egyptian obelisk, and churches—one of the finest public squares in Europe.

FOREIGN AND COLONIAL NEWS.

FRANCE.

As the fear of the Red Republic fades away in the minds of public men in France, the inherent weakness of that incongruous compound of heterogeneous opinions—the "party of order"—as the majority in the Legislative Assembly is most inappropriately called, begins to display itself in its purposeless feuds and divisions, and paltry intrigues, and petty plots, which seem to flourish amongst our neighbours with a luxuriance of growth peculiar to the political soil of the country, and which produce no other fruit than contempt and hatred for all constituted authority.

The disgraceful affair of the conspiracy of the spy Allais, which we noticed last week, has terminated, so far as that miscreant is concerned, in his conviction of the charge of making false and calumnious denunciations, and his condemnation to a year's imprisonment, a fine of 300 francs, and the payment of the costs of his own trial. With respect to M. Yon, the Commissary of Police of the Legislative Assembly, whose very questionable conduct in the thorough-going support which he gave Allais throughout the whole business, notwithstanding all the prevarications of that conscienceless scoundrel, it was not thought that he would find any support in the Assembly; but the desire at any cost to thwart the Ministry and assist the President of the Republic—against whom the majority has for the present thought fit, from some unaccountable fit of caprice, to array itself in hostility—was too strong to be resisted; and, accordingly, the committee to whom the question of the dismissal or retention of M. Yon in the service of the Assembly was referred, reported in favour of his being retained in his office; but M. Yon, notwithstanding this factious decision, found his position so untenable, that he sent in his resignation on Tuesday, which was at once accepted by the President and the satisfaction of the Assembly. This ill-feeling which has sprung out of the matter between M. Dupin, the President of the Assembly, and Louis Napoleon, is such that it could not be restrained at the official reception at the Elysée on Tuesday evening, when M. Dupin, in the customary address on such occasions, having assured the President of the Republic that all the acts of the Assembly, as well as those of its *Bureau*, were inspired by a profound attachment for the person of his President, and a sincere desire to preserve a good understanding between the two powers of the state, he was interrupted by M. Bonaparte, who audibly exclaimed, "I must believe it, M. le President, because you say it." The President of the Republic, in his reply, said that he had no fear of the Assembly:—"You and I, each in the limits of our attributes, must endeavour to enforce respect for the Constitution, and the authority which is given to us by the constitution, without encroachment by the one power on the other. I do not insist on the prerogation of my powers, but I do insist, when I shall receive to the end of the period for which I have received from it, to restore it intact and respected. My conviction is that France wishes for peace and order, and it would blame the one of the two powers which would attack the other."

Another case of collision between the Assembly and the Executive, the arrest for debt of M. Mauguin, a member of the Legislative Assembly, who was a member of the Provisional Government in 1830, when Louis Philippe was called to the throne. M. Mauguin was arrested under a sum of 9936. He pleaded his non-liability to arrest, on the ground of his being a member of the National Assembly, and demanded to be taken *en référé* before the President of the Civil Tribunal of Commerce of the Seine. The President declared that the arrest was legal, the constitution of 1848 not having reproduced the provision of the Charter of 1830, by which members of the legislative body were protected from arrest during the session, and for six weeks preceding and following it. This decision created a great sensation at the Assembly. The Opposition members, and some even of the members of the majority, complained loudly of the conduct of the tribunal, and declared that the inviolability of members was henceforth a fiction. The Minister of Justice, however, supported the decision of the law courts, and the matter was committed to the Government to a policy of hostility to the privileges of the Assembly: and the Assembly, to be avenged, passed a resolution, directing M. Mauguin to be immediately set at liberty, and he accordingly was released, despite the will of the Government and the decision of the law authorities.

These checks, given so unhesitatingly to the Ministry by the Legislative Assembly, afford topics for copious speculation in the Parisian press; but it is thought that, though the Government cannot continue in office if many similar obstacles should occur, the defeats already sustained will not cause any change in the Cabinet at present.

GERMAN STATES.

The Free Conferences of the plenipotentiaries of the German Powers at Dresden have begun, but nothing has yet been effected towards an adjustment of the questions at issue, beyond the settlement of preliminaries.

M. de Beust, the Saxon Minister, presided at the first meeting, on the 27th ult., at the Brühl Palace, and declared that the Conferences were opened under the joint direction of the Austrian and Prussian Governments, who had selected him (M. de Beust) to act as chairman.

On the same day (the 27th ult.), the Elector of Hesse returned to his capital (Cassel), and, amidst the parade of Austrian, Prussian, Bavarian, and Hessian troops, and the sullen gloom and silence of the subjects, once more took up his abode in his palace.

With regard to the affairs of Schleswig-Holstein, we learn from Vienna, under date the 29th ult., that Austria and Prussia had resolved to maintain Holstein, and that the Federal troops would immediately pass through the Prussian territories for that purpose. The accounts from Berlin of the 30th ult. confirm this statement, and advices from Cassel and Frankfort of the 31st, announce that the Federal troops have already begun their march upon Holstein; they are to proceed by way of Magdeburgh.

UNITED STATES.

The accounts this week from New York are to the 21st ult., and are of considerable interest. The President has issued a proclamation declaring that the act of Congress fixing the Texan boundary is in full force and effect. This shows that Texas acquiesces in the adjustment of the affairs of last session. On the contrary, the Legislature of South Carolina has emitted a note of warlike preparation, the Senate having passed a bill for a convention, and giving 300,000 dollars for military purposes. It is not likely, however, that anything will come of this, for all the forts in the harbour of Charleston are fully manned with the troops of the central government, and the Governor could be raised in the adjoining states in a few days to take possession of all the principal towns. The President, in reply to the inquiry of the Governor of South Carolina, demanding the reasons for sending troops to Charleston, replied that, being Commander-in-Chief of the navies and armies of the United States, he could not be held accountable for the manner in which he performed his duties.

The Secretary of the Treasury had issued his annual statements of the finances of the country. The report, in accordance with the President's Message, recommends a revision of the tariff, the adoption of specific duties in all cases where they can be applied, and a home valuation substituted in other cases for the present *ad valorem* duties; and, in the event of the rejection of these, the substitution of a higher rate of duties upon certain articles. These several propositions all tend to the accomplishment of one object—namely, the protection of the New England manufacturers and the Pennsylvania iron masters. It is the revival of the old Protectionist policy which has always advocated by Mr. Webster, though now brought before Congress under the more specious pretext of guarding the revenue from fraud. The whole change involves the appointment of a large number of appraisers and other officials, who will, according to the usage

on such occasions, be selected from political partisans whose votes will be of service to the Government.

On the 16th ult., the business in the Senate at Washington was temporarily interrupted, in consequence of the excitement of the senators on the pleasure of Jenny Lind in the gallery. Miss Lind's first concert at Washington was crowded to excess, and attended by the President and all the notabilities. Jenny was eminently successful at Baltimore, the enthusiasm of the public in no wise abating. Large preparations have been made for her at Havanna, where a very sumptuous residence has been taken for her. Our last accounts from thence are, however, that the Havanese are in very great doubt whether they shall admire her or not. They have the conceit that they are the greatest amateurs in the world, and that there is no other music in the world than that of the Italian school. They are, therefore, in great doubt whether they ought to like Jenny Lind or no.

A number of lives were lost on the Mississippi, near New Orleans, on the 13th ult., by the explosion of the boiler of a steam-boat. The accident took place on the eastern shore, and a party of over 100 persons on board, including several ladies and many of the most respectable citizens of New Orleans. Among the sufferers are several members of the New Orleans press.

The ship *South Carolina*, from Liverpool, Oct. 23, arrived in the lower harbour of Boston on the 13th ult., with signals of distress. She had thirty cases of small-pox on board, from which the passengers had suffered severely.

Mr. George Thompson is lecturing to large audiences in Boston on the subject of British India: having given up any direct reference to the "peculiar institutions" of America, he is heard with attention by large audiences.

A spirited meeting has been held in New York by the friends of cheap postage. Resolutions were adopted urging an immediate application to Congress.

A report of the bill reported at the last session, providing for a uniform rate of two cents, prepaid, on letters, and one cent on newspapers.

A destructive conflagration occurred at Halifax on the 11th ult., consuming about 100 dwelling-houses and the North Barracks.

Two million dollars of gold dust had been received from California.

The advices from the interior of California are terrific. Cholera was devastating the cities of Sacramento and San Francisco at a most frightful rate.

WEST INDIES.

We have advices from Kingston, Jamaica, to the 12th ult.

The cholera had quite subsided in Port Royal and St. Catherine's. In Kingston the cases were few, and the hospitals contained few patients. In the country districts, however, it was raging violently, and numbers were being carried off.

INDIA.

Accounts anticipatory of the Overland Mail have been received during the week from Bombay, Dec. 1; Calcutta, Nov. 23. The whole of that vast empire was in a state of almost perfect tranquillity. The subjugation of the Punjaub was considered as complete, that officer having been issued to throw open the army to all castes—Hindoos, Sikhs, Hindees, and Mussulmen. This was deemed a most judicious measure.

Sir George Berkeley, the Commander-in-Chief at Madras, had sent in his resignation, preferring to serve under Sir W. Gomm, who is his junior. Major Angelo had been removed from the management of the Calcutta branch of the North Western Bank, in consequence of a deficiency in his accounts. The people were still suffering much sickness in the Punjaub.

The causes of education was making rapid progress both at Bombay and Calcutta. Schools were rising in all directions, and under the most influential auspices, for the improvement of the poorer classes. Amongst the intelligence communicated on this interesting subject we find noticed the laying of the foundation-stone of the girls' school at Calcutta—an institution brought into existence by the Hon. Mr. Drinkwater Bethune, legislative member of council, and specially patronised by Government. This may be regarded as the inauguration of female education in India—henceforth, it is to be hoped, destined to form a matter of public concern. Mr. Bethune, besides bestowing on the subject an unbounded amount of attention and care, has subscribed no less a sum than £10,000 from his own private purse to the establishment. At Bombay the cause of native female education is progressing quite as promisingly as at Calcutta, though under wholly different auspices. Schools are also about to be established in numbers by the members of the Students' Literary Society, themselves all natives, stimulated alone by the counsel of their instructors, and their own anxiety for the improvement of their countrymen. The recent meeting also mentioned, which had for its object the organising of district schools throughout the presidency, and of aiding and guiding the efforts of those already in existence, with the view of disseminating knowledge among the humbler classes of the community.

NAVAL AND MILITARY INTELLIGENCE.

SCINDE PRIZE-MONEY TO BE REFUNDED.—The Court of Directors having decided that the overpaid shares shall be refunded, the President of the Council in India has directed that the amount so overpaid in the first and fifth quarterly portions of the Scinde prize-money shall be recovered in six monthly instalments, commencing from the first issue of pay, officers returning to Europe being required to make good the amount previous to their embarkation.

THE BRITISH MEDITERRANEAN FLEET.—We have intelligence from Malta by the 22nd December, which is unimportant, except to state that the fleet under Sir William Parker sailed from Port Mahon on the 2nd, and anchored on the 8th at Barcelona, whence, however, they were compelled by a gale of wind to take a sudden departure on the 11th, leaving behind to pick up some thirty officers from the different ships who happened to be on shore, and were unable to get on board. The *Scourge* conveyed them all to Malta, where she arrived on the 14th inst., in company with the *Firebrand*, and the rest of the fleet was looked for daily, though it is possible that Sir William Parker, to avoid the hubbub of a Christmas day in port, will manage to keep out until the 26th. The *Dragon* will repair to Naples to relieve the *Vengeance*.

THE VACANT COLONELCY.—*On dit* that Earl Cathcart, the Colonel of the 3rd Dragoon Guards, will be removed to the Colonelcy of the 1st Dragoon Guards, and that Major-General Bouverie will succeed to the 3rd Dragoon Guards.

CEYLON RIFLE REGIMENT.—It is stated that orders have been issued to reduce this regiment to the extent of 400 men.

THE MERCHANT SERVICE.—On Wednesday, the 1st inst., the act of last session (13 and 14 Vict., cap. 93), for improving the condition of masters, mates, and seamen, and maintaining discipline in the merchant service, came into force in its several parts. Hitherto its operation has been confined, in respect to the Board of Trade, to the election of local marine boards, to preparations for providing sailors' homes in seaport towns, and to the granting of certificates of service and of competency to persons who were connected with the service. The 1st of January has been fixed for the operation of the act as relates to the compulsory production of certificates of masters and mates, agreements with seamen, advances and allotments of wages, health on board ship, desertion, discipline, log-books, payment of wages, and discharge of seamen, in regard to such ships as are in the United Kingdom, and to the owners and crews thereof; and with respect to such ships as are not within the United Kingdom on that day, and to the owners, masters, mates, and crews thereof, as soon after the first subsequent arrival of such ship in the United Kingdom before preparations are commenced for a further voyage or departure from any place therein. Among the regulations now enforced is one declaring that no foreign-going ship shall proceed to sea without the production of the certificates of the master and mates as to their competency. Each seaman is to have nine superficial feet on board, properly ventilated, and in the same ship where accommodation for the rest of his class is provided. Provisions and water are to be of the kind and quantity specified in the act. Other regulations have reference to the payment of wages, and to certain particulars as to the voyage and payment of wages; indeed every precaution seems to have been taken to improve the condition of persons employed in the service.

THE LAST SURVIVOR OF COOK'S VOYAGES.—The last survivor of Cook's voyages furnishes a pitiable tale, with which we have been favoured, and to which we cannot direct the attention of our readers without a feeling of disgust and sorrow—disgust at the ingratitude of the nation to one who has so well earned it, and sorrow as much for the country of which such a disgraceful deed can be recorded as for the unfortunate individual who is the victim of it. John Hennvite Walsh Wade was born in New York, May 1, 1751, at the time it was still an English colony. In 1773 he was impressed into the British navy, and served in it until 1797, a period of 24 years, when he was paid off as master's mate. During that long and eventful interval he had been to 42 engagements by sea and land, and had been wounded 21 times—severely in the head at the battle of the Nile. At his outset in midshipman life he was put on board the *Resolution* Captain James Cook; accompanied that celebrated navigator in his voyages of discovery; and was on shore with him when he was killed on the Sandwich Owyhee, he himself receiving a spear wound. He served on board the *Barfleur*, in Rodney's action of April 12; also off Cape St. Vincent; he served in the *Arethusa* at the capture of *La Belle Poule*; belonged to the *Defence* at the action of the glorious 1st of June; to the *Royal Sovereign*, at Teneriffe, when Nelson lost his arm; to the *Bellerophon*, at the battles of the Nile, Copenhagen, Camperdown, and Trafalgar; and still belonged to the same ship when Napoleon took refuge on board of her in 1815. In 1798, being then in the *Culloden*, at Spithead, he took an active part in the mutiny which broke out in the fleet, for which acts of insubordination he incurred the displeasure of the Admiralty, who, although he remained many years after in the navy, and still fought our battles eventually, inflicted their punishment by refusing to grant him any pension or relief. He is now in his hundredth year, allowed to beg, and exist upon the poorest pittance, at Kingston-on-Thames. This veteran was concerned in the mutiny of the fleet at Spithead in 1798; and is such a deed never to be overlooked or forgiven? Were those engaged in the Irish rebellion of the same period subjected to unrelenting condemnation? After being engaged in this mutiny Wade fought at the battle of the Nile, at Copenhagen, and Trafalgar, having been previously engaged in Rodney's action in 1782, and under Howe in his glorious victory over the French fleet in 1794. That such a man should now be forced to

> Beg bitter bread through realms his valour saved

is, indeed, too like a verification of the words of the poet, and we can scarce suppose that the Admiralty know of his situation. We cannot believe that official vengeance can have pursued this man for more than half a century; we cannot conceive that such monstrous persecution and unrelenting severity could be resorted to at the present period. We therefore hope to hear that the Admiralty has bestowed upon him such a pension as his long and meritorious services deserve. In the mean time we would recommend him to public sympathy. A few small sum would purchase for a man 100 years of age an annuity sufficient to keep him from want during the short remainder of his career in this life.—*Shipping Gazette.*

THE ILLUSTRATED LONDON NEWS.

THE PAPAL AGGRESSION.

MEETINGS.

The agitation on this subject draws towards a close, the public concluding, probably, that it has done its part, and ought now to wait till Parliament takes up the subject. From much of the agitation of modern times the nobility and clergy have stood so much aloof that it was surmised they had become totally adverse to all kinds of political agitation. The present agitation, which has in general been courteous and moderate, has developed a great many fine opinions, and has shown, while they have very naturally stood aloof from Chartist or ultra-political agitation, that they only needed a fit occasion to make them take their old position as leaders of the people. Yet, however there were many meetings originated, of which there have now been upwards of twenty. Besides those already recorded we have now to add that—

A Meeting was held at the Corn Exchange, Hertford, took place on Saturday last, in pursuance of a requisition signed by the Earl of Sandwich, Earl Fitzwilliam, the Duke of Manchester, the Earl of Aboyne, and nearly all the magistrates of the county and county members, and also numerously signed by many of the clergy, consisting consisted of the parochial clergy. The Under Sheriff, Mr. Lawrence, presided. The Earl of Sandwich, who moved the first resolution, said, he thought county meetings were to be avoided, yet, if ever there was a time when the people of England were called upon to express their opinions firmly, though calmly, it was upon a question affecting their civil and religious liberty, and the Queen's supremacy. The resolution proceeded in the most decided manner against the recent assumption of power in this country by the Roman Pontiff as an unwarrantable interference with the rights and prerogatives of the Crown, and justly offensive to the feelings of the inhabitants of this kingdom. The Rev. Robert James M'Ghee, of Hollywell-cum-Needingworth, near St. Ives, in seconding the motion, entered at some length into a history of many of the bad parts of the Romish religion, that Earl Fitzwilliam, who moved a resolution declaring the unchangeable attachment of the meeting to the principles of the Reformation, thought it necessary to say that it would have been better had some parts of the rev. gentleman's speech been omitted. A different opinion was expressed by other speakers; but there was no opposition to the resolutions, or to the address founded on them.—The Rev. Mr. Maingford carried a resolution condemning Tractarianism, but it was not allowed to be incorporated in the address, that was moved by Mr. Thornhill, M.P., and was, by order of the meeting, confided to the Earl of Sandwich, the Lord-Lieutenant of the county, to be presented to her Majesty.

LIVERPOOL.—On Monday evening a meeting of the members of the Protestant Operative and Reform Association, and others, was held. The Rev. Dr. M'Neile presided, and addressed the meeting at considerable length, expressing a hope that England would not stultify herself in the eyes of the civilized world by talking like a bully and acting like a lamb. A resolution was carried, pledging the meeting to use every constitutional means to prevent the establishment of a Roman Catholic hierarchy in this country, and to call on all parties to hold that the only reasonable, Christian, and successful mode of opposing the ecclesiastical claims and the secular aims of the Romish Church, is by proclaiming the truth of God, and disavowing all sympathy with the manifestations of an intolerant and persecuting spirit.

THE PROTESTANT DISSENTERS OF STAFFORDSHIRE have agreed to the address to the Queen, to which they say, agreeing with their brethren at Leeds, and probably expressing pretty nearly the opinions of the bulk of the Dissenters —"We are desirous to maintain, in all its integrity, the unparalleled the cherished principles of civil and religious liberty. We witness with grief the injurious effects in Ireland of a Protestant Establishment unrighteously imposed on eight millions of people—seven millions of whom are Catholics. We grieve over the defections from the English Church to the Church of Rome, and the Romanising tendencies of many of the clergy, who are leading their flocks 'step by step to the verge of the precipice.' We disapprove of the late Ministerial measure, as having been given to Romanism, of the grant to Maynooth, of grants to Roman Catholic Bishops in our colonies, and, indeed of all grants of public monies for religious teaching, whether Catholic or Protestant; and we humbly hope that your Majesty will withhold sanction from all further grants for such purpose, and discountenance all such religious teachers who hold loosely the Protestant doctrines of the Reformation."

AT NOTTINGHAM AND DERBYSHIRE, on Monday, at a public meeting of the inhabitants, where one of the usual addresses was moved, a Mr. Wright moved, by way of an amendment condemning the tendency of Popish legislation to give countenance to Popery. The appointment of Catholics to offices was one of the circumstances he most dreaded. The amendment, however, was unsuccessful, though the meeting seemed to acquiesce in his arguments, and the address, without the alteration, was carried.

EVENTS.

MR. BENNETT.—More correspondence has taken place between the Bishop of London and the readers of Mr. Bennett's congregation. It has been published, and bears the strongest testimony to the piety and unquestionable exertions in his office. But the result of that and of further communications between the Bishop and Mr. Bennett is, that the rev. gentleman has declared that he had not resigned Bourne's living, and that he should continue to read and 4th Vic., cap. 6, secs. 3 and 4, to give effect to his own order. The case will go first to the Arches Court; and Mr. Bennett and his friends, it is said, are determined to fight the battle in every court up to the House of Lords.

MR. DODSWORTH has, it is stated, placed his resignation in the hands of the Bishop of London.

DOCUMENTS.

THE ARCHBISHOP OF ARMAGH (Doctor and Lord John Beresford), in reply to an address from 132 clergymen of his diocese, states that it would be strange if the Irish branch of the United Church, which has suffered so much from a similar exercise of the usurped power of the Pope, were to look on in silent indifference, while the English branch is resisting so resolute a by the intrusion of a newly-erected hierarchy within its borders. He continues, he says, to the English constitution, and to the Protestant Succession, but he says, duty England of a regularly constituted Roman Catholic Episcopate is regarded by See of Rome as an important means of advancing its interests. Cardinal Wiseman regarding himself "Archbishop of Westminster," and in assumption to which, unhappily, the Irish have been long accustomed, and an instance of which has been very recently furnished in the "Synodical Address" condemnatory of the Queen's Colleges, from a diocesan of the Irish Church) the official signature of "Paul, Archbishop of Armagh, Primate of all Ireland, and Delegate of the Apostolic See." He cordially joins his clergy in claiming that Ireland, which has so long suffered from the grievous injustice of foreign encroachments, has been enabled from experience to form very effective measures may be adopted for the purpose of protecting Great Britain against the encroachments and usurpations of the Bishop of Rome, and that, with reference with loyal sympathies he shall be totally discountenanced in both countries

THE BISHOP OF KILMORE, ELPHIN, and ARDAGH (Dr. John Leslie) has replied to an address from the clergy of Elphin in a similar spirit, adding:—"I need scarcely repeat my assurance of cordial concurrence in your protest against the many wrongs which have been endured by the people of Ireland for several years past;" and advising his clergy to use "redoubled diligence in defending our apostolic citadel from external assault or internal treachery, in providing us because for our unhappy individual who is the victim of it. John Hennvite Walsh Wade was born in New York, May 1, 1751, at the time it was still an English colony. In 1773 he was impressed into the British navy, and served in it until 1797, a period of 24 years, when he was paid off as master's mate. During that long and eventful interval he had been to 42 engagements by sea and land, and had been wounded 21 times—severely in the head at the battle of the Nile. At his outset in midshipman life he was put on board the *Resolution* Captain James Cook; accompanied that celebrated navigator in his voyages of discovery; and was on shore with him when he was killed on the Sandwich Owyhee, he himself receiving a spear wound. He served on board the *Barfleur*, in Rodney's action of April 12; also off Cape St. Vincent; he served in the *Arethusa* at the capture of *La Belle Poule*; belonged to the *Defence* at the action of the glorious 1st of June; to the *Royal Sovereign*, at Teneriffe, when Nelson lost his arm; to the *Bellerophon*, at the battles of the Nile, Copenhagen, Camperdown, and Trafalgar; and still belonged to the same ship when Napoleon took refuge on board of her in 1815. In 1798, being then in the *Culloden*, at Spithead, he took an active part in the mutiny which broke out in the fleet, for which acts of insubordination he incurred the displeasure of the Admiralty, who, although he remained many years after in the navy, and still fought our battles eventually, inflicted their punishment by refusing to grant him any pension or relief. He is now in his hundredth year, allowed to beg, and exist upon the poorest pittance, at Kingston-on-Thames. This veteran was concerned in the mutiny of the fleet at Spithead in 1798; and is such a deed never to be overlooked or forgiven? Were those engaged in the Irish rebellion of the same period subjected to unrelenting condemnation? After being engaged in this mutiny Wade fought at the battle of the Nile, at Copenhagen, and Trafalgar, having been previously engaged in Rodney's action in 1782, and under Howe in his glorious victory over the French fleet in 1794. That such a man should now be forced to

> Beg bitter bread through realms his valour saved

is, indeed, too like a verification of the words of the poet, and we can scarce suppose that the Admiralty know of his situation. We cannot believe that official vengeance can have pursued this man for more than half a century; we cannot conceive that such monstrous persecution and unrelenting severity could be resorted to at the present period. We therefore hope to hear that the Admiralty has bestowed upon him such a pension as his long and meritorious services deserve. In the mean time we would recommend him to public sympathy. A few small sum would purchase for a man 100 years of age an annuity sufficient to keep him from want during the short remainder of his career in this life.—*Shipping Gazette.*

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently taken place:—*Archdeaconries.* The Rev. Wm. Arundell, Bourne, to Norfolk. *Deaneries Rural:* The Rev John Digby Wingfield, to Coleshill; the Rev. Richard Williamson, to Pershore, in the diocese of Worcester. *Canonry.* The Rev. Henry Moore, to Hansard, in the Cathedral Church of Lichfield. *Prebendary.* The Rev. W. Palmer, to Sarum. *Rectories.* The Rev. Straton Charles Campbell, to Cockley Cley, Norfolk; the Rev. R. Lawrance, to Bisedon, Somerset; the Rev. Thomas Fielder Woodham, to Farley Chamberlayne, Hants; the Rev. William Du Heaume, to the Holy Trinity, Jersey; the Rev. James Leslie M'Ghee, to High Roding [illegible] diocese of Ripon, to St. Mary's, Southampton (by the Lord Chancellor); the Rev. E. B. Burrow, to Evercreech-cum-Chesterblade, Somerset; the Rev. H. Holmes, to Elderfield, Worcestershire; the Rev. Robert William Burton, to Wiveton, Middleton; the Rev. W. W. Pitman, to Wellington-cum-West Buckland.

VACANCIES.—Beckenham Rectory, Kent, archdio. Canterbury; value £600, with residence; patron, J. Case, Esq.; Rev. A. Jessopp deceased. Dorsington Rectory, county and dio. Gloucester; value £199; patron, J. Harward, Esq.; Rev R. Lawrance promoted. Ravenden Vicarage, Bedfordshire, dio. Ely; value £261; patron, Duke of Bedford; Rev. W. J. Crespin deceased. [illegible] Renhold Vicarage, Bedfordshire, dio Ely: value £126, with residence; [illegible] T. Dawson, Esq., Rev. A. J. Crespin deceased. St. Sidwell Perpetual Curacy, Exeter; value £261; patron, Vicar of Bedford; Rev. F. Courtenay deceased Classical Mastership, Junior School, University College, London; salary, £200; applications before Jan. 8.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and regard: The Rev. Charles Wade Uniacke Uniacke, from the congregation of St Augustine's Church, Everton, of which he was curate in his resignation; the Rev. John Jones, A.M., upon his retirement from incumbency of St Andrew's Church, Liverpool; the Rev. W. M. Coles, of Melton Mowbray, from the parishioners; the Rev. W. Birley, from the parishioners of Hon-cum-Haigh.

[illegible] Richard Burgess, B.D., Rector of Upper Chelsea, has been appointed a Prebendary of St. Paul's Cathedral.

THE RECTORY OF ST. MARY'S, SOUTHAMPTON.—This valuable living, recently vacated by the resignation of the Earl of Guilford, has been presented by the Bishop of the diocese to the Venerable Archdeacon Wigram (not Wrangham, as stated by a contemporary last week), who will shortly enter on his duties.

NEW CHURCHES IN WESTMINSTER.—The Bishop of London has given instructions to the commissioners for the new churches to proceed [illegible] Westminster, to push forward the works, in order that it may be ready for consecration early in the ensuing spring, by which time it is expected that the church now being erected by the Venerable Archdeacher Berford, at Vauxhall bridge, will also be ready. As to the foundation-stones of both churches [illegible] laid on the same day (Nov. 8, 1849), it is intended, if possible, to consecrate them on the same day.

DISSENSION IN LEEDS.—The Bishop of Ripon is taking very decided measures for checking the prevalent Puseyism in this district. Some days ago the incumbent of Shadwell was ordered to desist from certain papa. practices in his church, and during the past week the still more notorious St Saviour's Church, Leeds, has been specially under his Lordship's consideration, and has led to several measures against the Rev. Dr. Hook's curate, the Rev. Mr. Rooke to desist from taking any part in the performance of Divine worship in any episcopal church within the diocese; and has threatened the Rev. Mr. Wilkinson, the incumbent of the same district with the same sentence within five days unless he can satisfactorily justify his conduct. The Rev. Mr. Minster, the vicar, has likewise received notice that further steps will be taken in reference to his church.

THE THREATENED STRIKE ON THE LONDON AND NORTH WESTERN RAILWAY.—On the part of the servants of the London and North-Western Railway continue to receive assurances of the good feeling of the men from various portions of the line, and more particularly, it appears, does the spirit of discussion prevail on the northern division, where the obnoxious fines [illegible] has been already stated that the directors never contemplated the slightest alteration with reference to the men engaged under the locomotive department on the southern division of the line, but with reference to the northern, they still adhere to the three months' notice: and, with a view to bring the matter to a conclusion, so far as the engine-drivers and firemen of that division are concerned, the following notice has been issued, and a card has called upon to append his signature thereto:

> London and North-Western Railway. Northern Division. Engine Works, Crewe. Do you agree to conform to the service of the company, subject to the existing conditions? and do you will draw your collections to the time months' notice, and in regard to all new

Nearly every man to whom the foregoing questions have been put on the northern division, it is stated, have subscribed their signatures to the declaration of "I agree to the above;" and it is further added that so many of the old hands have subscribed to the form, that of the twenty-six new men already employed ten have been withdrawn, and have returned to their old employment on other lines, with the understanding that, when d the company require their services, they should have the preference of selection. Whilst matters have thus arrived at an amicable conclusion on the northern division: on the southern or London division of the line, the directors have felt it advisable to serve the present fourteen days' notice to quit on twelve of the men, chiefly belonging to Camden station. It appears that some of the men, both at Rugby and Camden, have reported themselves sick, and thus have relieved themselves from duty, as the authorities believe, for the purpose of going to various places and agitating the question. On Thursday night a meeting of a large number of the engine-drivers and firemen was held at the Railway Tavern, Hampstead road, when it was resolved "That this meeting, consisting of engine-drivers and firemen employed at the Camden-town and other stations on the southern division of the London and North-Western Railway, beg to express their satisfaction with the regulations at present existing on their division of the line, and respectfully decline to be bound by the rules in force on each elsewhere," and, "that a copy of the foregoing resolution be sent to Mr. M'Connell, requesting him to present it to Mr. Glyn, accompanied with a respectful intimation that the men who have received notices on the southern division of the line, will be happy to remain in the service of the company."

The directors of the East and West India Docks, with a view to encourage the import trade of the port of London, have unanimously resolved to reduce the rates on indigo, tea, cotton, rice, rum, &c., so as to effect a saving to the public of upwards of £12,000 per annum. The London and St. Katherine's Dock Company will follow in the same liberal course.

ACCIDENT.—On Saturday morning an accident occurred at the building in Hyde-park. A man, named Smith, was at work at one of the gutters, when he [illegible] to the ground, between 90 and 40 feet below. He was picked up in a [illegible] state, and conveyed to St. George's Hospital, where it was discovered that both his legs were fractured, and his head having come in contact with [illegible] jection of the ironwork, one of his eyeballs was dreadfully injured; but notwithstanding these and other injuries great hopes are entertained of his recovery.

[illegible] farmer.

SERIF. PASHA OF ALEPPO.

The present Pasha of Aleppo is a man of no ordinary qualifications for an Oriental: never educated or much in society from which the person of his rank usually derives his experience, he has shown new ideas—he is indebted to his own shrewd abilities and application to business in the various subordinat departments through which he worked his way slowly, but patiently and perseveringly—till his zeal and efficiency afforded him an opportunity, on more than one occasion, to impress his superiors with a very favourable opinion as his qualifications for a higher and more important official position than any that he occupied before. He was, therefore, after filling several less important appointments in different portions of the Sublime Ottoman provinces in Turkey, in Europe, and Asia, nominated to Aleppo, not very long since; and up to the period of his recent error as Judgment as regards the outbreak in that Pashalic, nothing could have been more creditable than his discharge of the high and arduous duties of

FOUNDING OF A HINDOO FEMALE SCHOOL IN CORNWALLIS-SQUARE AT CALCUTTA.

his office, towards all sects and classes. Indeed, the Jew and Gentile population had every reason to congratulate themselves on his discharge of the duties of his office, in every instance in which their respective interests were brought before him; and his able and impartial administration was a great blessing to the country at large; and no doubt his efficiency at a former period, and his judicious discharge of his duties, will obtain for him the marked notice and favourable recommendation of the representatives of Europe at the Porte, and that we shall soon be enabled to announce his nomination and promotion to some equally important department as that from which he has been only deposed from the necessity of the moment. We must recollect he had not adequate powers at his command at the time, and his conciliatory disposition towards the rebels was more apparent than real; his only hoped thereby to borrow time, throw the evil-disposed off their guard, and keep them in obeyance more by kind words than by threats of intimidation, which he and they knew he had not the means to put into execution, until reinforced from other military *dépôts*, or from Constantinople. It is now fully admitted, that had he adopted any other course, the loss of life and property to all sects, Jew and Gentile, would have been much more, and, probably, the city and castle have fallen into the hands of the rebels and Bedouins.

The recent instructions from his Sublime Highness Abd-al-Medjid that all civil and military officers throughout the Ottoman dominions should take an oath to discountenance, directly and indirectly, any means hitherto known whereby bribery or corrupt means was known to be had recourse to, so as to interfere with the due discharge of their respective functions, by the heads or subordinates of the different departments of the kingdom, have had a most salutary effect, and have already worked great good for the Turkish Empire. The very apprehension of reports being made on the subject must operate beneficially; and the commissioners already instituted, and the cases of fraud and embezzlement detected and punished, have worked a great change. This was very remarkable in the cases inquired into at Damascus lately. Said Pasha, the brother-in-law of the Sultan, punished severely some persons who were found guilty of having to a large amount defrauded the Porte in past years: they were put in prison, and their ill-acquired gain confiscated or transferred to the public treasury. It is a pity that Said Pasha is fanatical, for his other acts are much to his praise, and he has done much good;

THE PACHA OF ALEPPO.

but his conduct on a recent occasion is highly censurable. The cousin of Aleppo has already been given in our number of December 7th. The appointment of the late Turkish Ambassador in London to Aleppo must be very desirable, for, judging from his past conduct, we feel satisfied that he goes to his new field of usefulness with every disposition to do his duty impartially and efficiently, and to the full satisfaction of the aggrieved sects, native and European. The active measures adopted by the Porte speak well for the future; and the new law just put in force must do much good and give general satisfaction. It is now permitted that the Capitation, or Poll-tax hitherto levied on the different sects not Mohammedan, and collected by Moslem functionaries, be received in the respective provincial treasuries directly from the heads of the respective sects, Jew or Gentile, and thus doing away with one of the fertile sources of disagreement and dissension heretofore between the Moslems and other sects.

The following is the latest intelligence:—*The Lloyd* states that the conscription at Damascus has terminated without any further disturbances. It is now going on at Homs and Hamah. The newly-appointed Governor of Aleppo has just arrived at Beyrout; he has collected 5000 troops, and intends to proceed to the place of his destination attended by this corps: "DAMASCUS, Dec. 9th.—The Christians and Jews residing here are living in continual apprehension, lest the Mussulmen population should exercise similar cruelties towards them as recently in Aleppo; but their apprehensions are gradually subsiding, in consequence of the active measures which the authorities are adopting. 5000 more troops will embark at Alexandria, to reinforce the garrison of that city. A public road is being laid made from Beyrout to Damascus."

FOUNDATION OF A HINDOO FEMALE SCHOOL AT CALCUTTA.

THE very interesting ceremony depicted in the accompanying Illustration, (from a Sketch by an obliging Correspondent), took place at Calcutta on Tuesday evening, the 6th of November. The scene is Cornwallis-square, where a School for the Education of Hindoo Females is now building by the Hon. Drinkwater Bethune. The first stone was laid by the Hon. Sir John Littler, the Deputy Governor of Bengal. His Honour (a High Mason) was assisted by a large assemblage of Masonic brethren, and the Bishop of Calcutta, with a great number of Government officers, and a numerous assemblage of native gentlemen, in the presence of a vast concourse of natives, and of almost all the Europeans in Calcutta. The scene was truly picturesque, and the event is important for the influence it is likely to have on the future destinies of native society.

Sir John Littler first arrived, and, shortly afterwards, the masonic body marched from the General Assembly's Institution to the site of the intended building. Having arrived within a proper distance of the spot, the procession halted, the brethren opened to the right and left, and faced inwards, so as to leave room for the officiating Grand Master, preceded by his standard and sword-bearer, to pass up the centre, followed by the rest, so as to invert the order of procession. When the Grand Master arrived, he received the plans of the building from the builder, Mr. Grey, and presented them to Sir John Littler and the rest of the company for their inspection. The inscription on the plate was then read by the Grand Master, who requested Sir John Littler to descend from the platform, in order to assist at the ceremony, presenting him, at the same time with the silver trowel made for the occasion. The Grand Treasurer then placed two bottles, containing coins and records of the present reign, in cavities prepared for them in the lower part of the stone. The plate was then placed in its bed by Sir J. Littler, the cement was applied, and the stone let down slowly to solemn music. The Grand Master next proved the stone by the square, level, and plumb-rule, which were successively handed to him by the Grand Wardens; after which, the Grand Master said "May the Grand Architect of the universe bless this foundation-stone which we have laid, and may we be enabled, by His providence, to perfect this and other virtuous undertakings." The cornucopia and cup of wine and oil were then handed to the Grand Master as before, who, having poured them on the stone, said—"May the bounteous author of all good bless this city with abundance of corn, wine, and oil, and with all other necessaries and comforts of life."

Such are the principal details of the ceremony; but we should add, that the officiating Grand Master addressed the company, pointing out the great object for which the institution was intended by its founder—namely, the education of Hindoo females, hitherto kept in ignorance and behind purdahs (*i.e.* within the walls of the houses), and altogether reduced to the level of domestics.

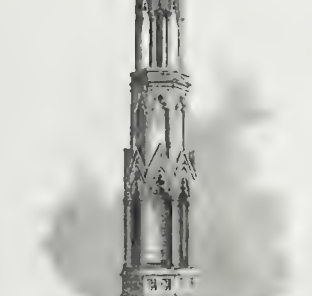
The Hon. Mr. Bethune, addressing himself to the Deputy Governor, the Bishop, and the company in general, alluded in strong and feeling terms to the conduct of Baboo Dokhinarunjun Mookerjea, and the intelligence and spirit displayed by him in affording his unasked assistance to this good work. This native gentleman expressed to Mr. Bethune his mortification at the thought that the rich gentry of his country should have so small a share in a great national undertaking like the present, expressing his own readiness to advance the cause to the utmost of his power. He at once made a gift to Mr. Bethune, of sufficient land as a site for the proposed school, and which was, after some additional purchases, exchanged for the present more commodious area. Mr. Bethune proceeded to say, that that day they had seen the possession of the land symbolically given, by the delivery of a young "Asoka"-tree; that that tree, the "tree of gladness," was, from the gracefulness of its foliage, the surpassing beauty of its flowers, and its high estimation among Hindoo women, an appropriate representation of such an institution as he wished to found. He added that tree was doubly hallowed by its connexion with the name of Sir William Jones, and ought to be held, not only in Calcutta, but in the villages around, as a symbol of female education, "a new tree of liberty to remind us of the bond of fellowship which unites our labours in one common cause." Mr. Bethune then referred to the aid which the cause of female enlightenment had received from the Bengalee newspapers in Calcutta. He had observed incidents and heard anecdotes which proved to him that now was the true time to commence the great work: he knew that many educated young natives had made and were now making efforts to educate their wives; he had received support and encouragement from all divisions of native society, and he was satisfied that "this generation would not pass away without witnessing a marked and happy progress in this matter of female education, and a decided elevation in the position of the women of this land in the scale of social existence." Such is an imperfect summary of this eloquent speech, which concluded with a feeling invocation to the Almighty to protect the work that had been so auspiciously begun, and to grant His blessing on the infant institution.

In the *Friend of India*, whence we quote these details, it is observed that Mr. Bethune has sown a seed which will one day bear noble fruit, and that he has chosen the best possible time for the operation. "For years there has been a movement in native society, before which ancient prejudices are rapidly melting away; and, although we occasionally observe extraordinary instances of retrogression in particular localities, and among particular individuals, the general tendency of the movement cannot be misinterpreted. The great obstacle to permanent advancement has hitherto been the entirely uncivilised character of the female portion of native society, which tends to weaken, to a great extent, the liberal principles imbibed by the young at our great Colleges. This evil will be remedied by native female education, and to this great work Mr. Bethune has addressed himself with an earnestness and liberality which do credit alike to his judgment and his heart."

We understand that the building of this School will cost Mr. Bethune the large sum of £5000. Our Illustration represents the hon. gentleman addressing the assemblage at the foundation, on November 6; next to him is the charitable native who has given the site for the School; around them are the decorated Brethren of the Masonic Lodges, with their banners; and the variegated tent contains the musicians of the 70th Regiment. The time is just after sunset; red and blue lights are burning, and throwing the crowd into mystic effect; and the tent in the foreground is filled with company, including officers in uniform, natives in turbans, or white, blue, and red scull-caps; altogether presenting an impressive spectacle.

MONUMENT TO THE LATE SIR EARDLEY WILMOT, BART.

THE colonists of Van Diemen's Land, in testimony of their sense of the mild government of the late Sir Eardley Wilmot, Bart., have lately erected, at Hobart-Town, the Memorial engraved below. The design closely resembles the Eleanor Memorial crosses of the mother country. It bears the following inscription:—



MONUMENT TO THE LATE SIR EARDLEY WILMOT, BART.

Underneath are deposited the remains of
SIR JOHN EARDLEY EARDLEY WILMOT, BART.,
Of Berkswell Hall, in the County of Warwick
Late Lieutenant-Governor of the Colony of Van Diemen's Land
For m[illegible] and Chairman of the Quarter Sessions of the
[illegible]
Died on the 3rd February, 184[illegible]
This Monument is erected as a mark of respect to his Memory,
By public subscription, in the year of our Lord
MDCCCL.

THE SCREW STEAMER "ARNO," FOR THE MEDITERRANEAN.

STEAM TO THE MEDITERRANEAN.

THE accompanying steam-vessel, the *Arno*, just built by Messrs. Reid and Wood, of Port-Glasgow, is stated to be the finest screw steam-ship, in appearance, size, and speed, that has ever appeared in Liverpool, where this description of steamer is fast monopolising the Mediterranean trade.

The *Arno* is a beautiful specimen of Clyde ship-building. She is a tauntly sparred three-masted schooner, rigged man-of-war fashion. Her funnel is cream-coloured and she has painted ports, which give her hull a light appearance, and make her look more like a sailing vessel than a screw-boat. She has a very handsome stem, terminating in a scroll figure-head, and chastely adorned with carved work. Her quarter is a *chef d'œuvre* of ship-building art, and each gallery is ornamented with a medallion, emblematic of the rise of the river Arno. Her stern is decorated with an elegant device, with the arms of Liverpool in the centre, and surmounted by the ship's name, in rays. Her lines are beautifully true, and with a sharp entrance and clean run, combined with a fullness at the waist, give her that rounded side which all handsome vessels must possess. Her deck accommodations are very compact, and have been arranged with an eye to utility in working the ship. Over her main and after hatches she has two well-wrought iron cranes for the purpose of landing or receiving cargo, and by which the boats can be lowered at any moment. She has a fine quarter-deck, upwards of sixty feet long, under which are the main cabins. The engineers are provided for by houses on deck. Her cabins are very roomy, and ornamented with taste and elegance. The walls of her saloon are of painted oak, surmounted by a chaste moulding, relieved with floral carved brackets, all richly gilt. The doors of her state rooms are of highly polished oak, the upper panels decorated with a chaste design in fretwork, backed by crimson satin. Her saloon sofas are upholstered in rich crimson-coloured figured velvet, and are ranged in a circular form in her counter, which is very ample in its proportions. Her other cabins and offices are fitted in a similar style. Her plate service is of massive silver, all the large pieces of which, as also her stone ware, are marked with the ship's name in a novel and artistic device, emblematic of the rise of the river from she takes her name. The light is admitted to the saloon from two cupola sky-lights, with frosted panes, which will subdue the glare of the sun when in more southern climates. Throughout the ship, ventilation and utility appear to have been properly attended to. The *Arno*'s dimensions are:—length over all, 200 feet; beam, 28 feet; depth of hold, 16 feet; burthen, 700 tons. Her engines are 150 horse-power, on the direct action principle, made by Messrs. Thompson, of Clyde Bank foundry. The *Arno* is commanded by Captain G. H. Haram, a gentleman who was for some time connected with the British and North American Royal mail steamers, and who has also had considerable experience in the Mediterranean, having served the early part of his profession on those waters. She is the property of Messrs John Bibby and Sons, and other parties in Liverpool, under the title of the Liverpool and Mediterranean Screw Steam-ship Company, and will be despatched for Italy and Sicily in a few days.

On Saturday, the *Arno* made her trial trip from Greenock to Liverpool, with upwards of 600 tons dead weight of coal on board. The following were the results:—She moved ahead shortly after four o'clock, the paddle-steamer *Admiral* having a start of about a mile. Passed the Cloch Light at 4h. 22m., and ran from there to the Cumbrae Light in 1 hour and 16 minutes, the distance being sixteen miles, and this against rather a head wind. Ailsa Craig was made at 5h. 42m., and her course being now a little more southerly, the wind, which was from W.N.W., began to tell upon her canvass, and the Mull of Galloway was reached at 11h. 50m. She was abreast the point of Ayr Light by 1h. 52m., and stopped off the Bell Buoy at 8h. 16m A.M. on Sunday, the *Admiral* easing for the same purpose just five minutes before, being hardly three-quarters of a mile a-head. Here the *Arno* had to wait more than half-an-hour for want of water, and in the meantime the *Astrologer*, from Constantinople, came up, and, drawing less water, passed over the bar about a mile a-head. The *Arno* moved on after her at ten minutes to nine, and headed her before she reached the Crosby Light-ship, sailed up to the Sloyne, and then returned to lie off Clar nce Pier until tide-time, having run the distance from Greenock to the Bell-buoy in sixteen hours and a quarter—an unprecedented passage for a screw-boat.

SCENE IN GILTSPUR-STREET.

A CHARGE of frightful cruelty to a servant-girl has recently been the subject of a most painful magisterial examination at Guildhall, by Mr. Alderman Humphery. The person charged with this revolting conduct is Mr. Sloane, a special pleader, residing in the Middle Temple; and the servant, Jane Wilbred, formerly an inmate of the West London Union. The report of this case we have reserved until the trial. The committal of the accused, on Friday last (December 27), gave rise to a burst of popular vengeance, which is here illustrated, for the more emphatically conveying our reprobation of a species of "Lynch Law," which, by acts of terrific violence, would pronounce condemnation *before trial*. The disgraceful incident represented in the Engraving occurred in the conveyance of Mr. Sloane from the police-office, at Guildhall, to the Compter, in Giltspur-street. The details are as follow:—

Great difficulty was experienced as to how Mr. Sloane should be removed in safety, as the mob seemed rather to be increasing, with the desire to see a man who had rendered himself so singularly notorious. Various expedients were suggested, and a person was despatched to obtain a cab in some part remote from Guildhall, and to drive round by Moorgate-street and Fore-street into Basinghall-street, and then wait at the church; and, in the meantime, it was arranged that several policemen were to guard the magistrates' entrance and keep back the crowd from the hall, while Mr. Sloane made a rush into the hall and effected his escape by the back way to where the cab was waiting for him. The cab was kept waiting at the church for a short time, and then Alderman Humphery thought it advisable to have the cab brought close up to the door, which was accordingly done. An officer was sent down to the Compter with instructions to the governor to have the door open, and everything prepared to afford defendant a ready reception on arriving there. The cab door was opened, and Mr. Sloane (who had only about three yards to go), accompanied by Springate, the gaoler, suddenly rushed out, and was endeavouring to force his way into the cab, when the mob closed upon them, and, had it not been for the able exertions of Mr. Superintendent Hodgson, Mr. Roe, and about a dozen constables, Mr. Sloane would have been torn to pieces by the exasperated mob. One old woman, we noticed in particular, was making most furious lunges at him with an immense umbrella. With great difficulty Mr. Sloane got into the cab, but the crowd all pressed forward, and with such violence, that both the windows of the vehicle were smashed to atoms, and mud, spittle, and all kinds of filth were showered upon him through both windows, so that in less than two minutes he was so bespattered that it was next to impossible to discover which was the gaoler and which Mr. Sloane. About twenty constables surrounded the cab, and the driver lashed his horse to try and escape the rabble, but they impeded his way so much that he was unable to proceed at any but a rapid walking pace. Two policemen endeavoured to block up the windows by standing on the steps of the cab; but, in spite of their exertions, the gaoler received a smart blow on the face, which was intended for Mr Sloane. Through some mistake, the vehicle was directed to the Old Bailey, where a crowd of some thousands awaited its coming, and, by the time the cab arrived opposite the Compter in Giltspur-street, the road and every place where standing-room was to be obtained was crowded with one mass of human heads. The policemen were bespattered with filth. They were obliged to use their staves very freely on stopping at the door of the prison; and Mr. Sloane, as soon as the cab door was opened, made one bound on to the pavement, three more took him into the middle of the lobby, and the gate closed behind him, much to the disappointment of the people outside. Shouts, yells, groans, and every imaginable expression of disgust and horror were reiterated by the crowd on the way from the court to the Compter; and even when Sloane was safely inside, they lingered outside, hissing and hooting, and calling upon the turnkeys to turn Sloane out among them, and they would give him what he deserved. Six policemen remained in front of the door for some time, as it was feared that it would not be safe to leave the front door guarded only by the gaoler.

On Saturday Mr. Hamber, the messenger to the Court of Bankruptcy, reported to the court that a bankrupt, named Ephraim Godbolt, had died raving mad that morning. Ephraim and George Godbolt were builders and carpenters, at 14 and 15, College-walk, Chelsea, and on Thursday last were made bankrupts. Notices of adjudication were served upon the bankrupts on Friday evening. The bankrupt Ephraim Godbolt had previously laboured under ill-health; and the fact of having been made a bankrupt produced such a shock upon the nervous system that he expired in a state of raving madness on Saturday morning.

On Saturday night, some expert thieves effected an entrance, it is supposed by means of skeleton keys, into the premises 26, Craven-street, Strand. They removed a large iron chest from its position, and it is conjectured that their efforts to break it open proved fruitless, as they carried off that and its contents, £65 in gold, £31 10s. in silver, several Bank of England notes, and a £5 note of the Old Sarum Bank.

The amount of coinage at the Philadelphia Mint for the month of November, exceeded 4,000,000 dollars. The capabilities of the establishment may be extended to the coinage of 8,000,000 dollars monthly.

CONVEYANCE OF MR. SLOANE TO GILTSPUR STREET COMPTER.

CALENDAR FOR THE WEEK.

SUNDAY, Jan. 5, 1851.—Second Sunday after Christmas.

SUPPLEMENT GRATIS.—Next week will be given a SUPPLEMENT to the ILLUSTRATED LONDON NEWS; including the Title-page and Index to Vol. XVII.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 4, 1851.

A GREAT and beneficial change is quietly taking place in Ireland. Landlords and tenants, finding the uselessness of appealing to the Legislature for assistance, have begun to look their mutual difficulties in the face, and to enter into such arrangements as the altered circumstances of the country require. Rents in many districts have gone down to the equitable prices which allow the tenant to live after payment of his rent; and the high competition prices which the peasantry offered for land, but did not pay, are fast becoming matters of tradition. Emigration—which even the winter months has not stopped—has rendered this unnatural competition for land quite impossible; and to such an extent has emigration been carried in some districts that a new danger—that of under-population—quite as subversive of all real prosperity as over-population, has been incurred. Landlords have, in some districts, been so alarmed at the possible consequences of this drain of the people from a soil which can have no value at all unless there are human beings to turn its resources to account, that they have entered into negotiations to retain their tenantry and labourers, lest they should be left alone in the wilderness. But what, after all, we must consider as the most fortunate circumstance for Ireland, is the new flax movement, which is to link the fortunes of an island that is essentially agricultural, to the manufacturing prosperity of Great Britain. We now import, it appears, foreign oil-cake for fattening cattle, to the amount of £600,000 per annum. We also import flax-seed for sowing and crushing, of which the annual value is estimated at nearly £1,000,000; and we import flax and hemp in a fibrous state of the annual value of nearly £3,000,000; making little short of £5,000,000 worth of produce which might be grown in Ireland, if the people understood its culture, and if both landlords and people set cordially to work to grow it, to meet even the present demand. What the future demand for flax may be, will depend upon the success of the recent and still pending experiments in Manchester. The average annual importation of flax for the last twenty years has been about 1,250,000 cwt. In 1849, it amounted to 1,806,786 cwts., while there is reason to believe that in 1850 it was 2,000,000 cwt. This importation, at an average value of £50 per ton, would amount to no less than £5,000,000. Were this sum expended in Ireland, the flax, for which it paid, might be produced from lands that are incapable of growing wheat, and without any interference with the ordinary pursuits of agriculture, and moors and hill sides that now lie waste might smile with the blue flowers of a hardy and profitable plant. Were there anything in the soil or climate of Ireland to prevent the cultivation of flax as profitably as it is produced in France, Belgium, Holland, or Russia, it would be useless to urge the subject, however great the market for flax might become by the extension of the linen manufacture of England or the north of Ireland; but, when it appears, to use the words of the Royal Flax Society, that "the ignorance of the proper system of management of the flax crop, on the part of the farmers, is the only cause why we procure our flax from abroad," it is time that Irish landlords on the one hand, and English capitalists on the other, should combine in a work of such importance. Ireland was brought to distress and misery by the cultivation of one plant, and it will be an appropriate compensation if she owes her future prosperity to another. One great difficulty in the way of the better cultivation of the soil has been removed, by the transfer of estates into the hands of solvent proprietors; and in spite, therefore, of occasional agrarian outrage, and of a wicked but happily partial agitation, which seems to be directed against rent, in any shape or degree, and which has broken out in the north-western districts and elsewhere, we think there are unmistakable symptoms, both in England and in Ireland, that the night of Ireland's calamity has passed away, and that a morning of hope has at length dawned upon it.

A SLIGHT episode in the Papal controversy, not involving points of faith or doctrine, is too remarkable and amusing to be passed over without notice. A literary warfare is at the present moment going on, which, if it do not minister to the instruction, will increase the mirth of the nation. The two belligerents are Lady Morgan and Cardinal Wiseman, and the point in dispute is a matter of fact asserted by the latter personage and denied by the clever ecclesiastic. The *causa belli* occurred, originally, in her Ladyship's work on Italy, published more than a quarter of a century ago, and is stated in the following paragraph, describing the entrance of the French into Rome:—

> The sacrilegious curiosity of the French broke through all obstacles to their search in the chair of St. Peter. They actually removed its aspotic cesaker, and discovered the relic. Upon its mouldering and dusty surface were traced cu[illegible]ings, which bore the appearance of letters. The chair was quickly brought into a better light; the dust was quite removed, and the whole inscription (for an inscription it was) faithfully copied. The writing is in Arabic characters, and is the well-known confession of the Mahometan faith:—"*There is but one God, and Mahomet is her prophet.*" It is supposed that this chair had been, among the spoils of the Crusaders, offered to the Church, at a time when a taste for antiquarian lore and the deciphering of inscriptions was not yet in fashion. This story has not been contradicted, and the chair is there still; but the taste has allowed remember the fact, and none but the audacious repeat it. Yet such there are even at Rome.

Lady Morgan's authorities for the piquant story are the celebrated travellers and authors, Denon and Champollion. Dr. Wiseman, in the year 1833, when an unknown priest, or, as Lady Morgan calls him, "a youth to fortune and to fame unknown," published a denial of the story, which denial, however, was destined not to reach the knowledge of her Ladyship till within the last few weeks, when some zealous rummager among the rubbish of past controversies brought the subject to light, and published a version of it in the columns of a daily contemporary. This has brought Lady Morgan into the field with a letter published in the form of a pamphlet, addressed to "Nicholas by the Divine Mercy of the Holy Roman Church by the title of Saint Pudentiana, Cardinal Priest Archbishop of Westminster, and Administrator Apostolic of the Diocese of Southwark," in which she not only re-asserts the truth of the story, but administers some very telling rebukes in her own happy and forcible manner. Not contented with the original charge, her Ladyship in this letter has made a second, which must be quite as disagreeable to Cardinal Wiseman as the first. She says:—

> In defence of the sacrilegious French I have nothing to say. They showed as little delicacy towards the Sacred Grotto, the most holy relic of the church of San Lorenzo, of Genoa, as they did to the chair of St. Peter. Till the arrival of those meddling Savans, "*ove as malvenu de tout*," the Sagro Catino had passed for a club made "of one emerald of prodigious size," which also figures in the Last Supper, and was forbidden to human touch. The French first asserted it had been part of the spoil taken by the Crusaders at Cesarea, in the twelfth century; but when it was carried to Paris, and presented to the Institut, being subjected to the test of scientific scrutiny, it proved to be a piece of green glass—a pious fraud which had escaped the discovery of ages!

Lady Morgan, whose early energies were devoted to the cause of Roman Catholic Emancipation, cannot be suspected of hostility to the Roman Catholic body; and therefore the "publication" will find, if he ventures again into print on the subject, that he has a very formidable antagonist to deal with. The quarrel is by far the prettiest that the Papal aggression has yet called forth. We only wish all Papal controversies were as provocative of smiles.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

The New Year was ushered in on Wednesday at Windsor, under the cheering influence of a bountiful charity dispensed by her Majesty and her Royal Consort, in accordance with their annual custom.

In the morning, a serenade in honour of the day was performed under the windows of the Royal apartments by the band of the Royal Regiment of Horse Guards. At ten o'clock, the Queen and the Prince, attended by the Court, proceeded to the Riding School, where her Majesty's New Year's gifts to the aged, infirm, and deserving poor of Windsor, Eton, and Clewer, were distributed in the Royal presence. The selection of the very numerous objects of the Queen's bounty had been made under the superintendence of the Hon. and Rev. Gerald Wellesley, her Majesty's domestic chaplain, and the clergy of the vicinity, all of whom were present on the occasion. Directly after the entrance of her Majesty and the Royal party, the distribution commenced. Blankets, calico, and flannel were distributed, and also the following provisions—meat, bread, potatoes, and pudding. A large quantity of coals were also dispensed. When the interesting ceremony of the distribution had concluded, the Queen and the Prince, with the Royal party quitted the Riding School.

The Duke and Duchess de Nemours and the Prince de Joinville arrived at the Castle on Friday, on a visit to the Queen and the Prince. The Royal Princes enjoyed the diversion of shooting on Saturday morning, with Prince Albert, and returned to Claremont in the afternoon.

On Sunday her Majesty and his Royal Highness the Prince Albert, the ladies and gentlemen of the Court, and the domestic household, attended divine service in the private chapel. The Hon. and Rev. G. Wellesley officiated, and administered the Holy Communion.

On Monday the Queen and the Prince took their usual early morning walk. Several visitors arrived at the Castle in the course of the day, and the Royal dinner circle included the Chevalier and Madame Bunsen, the Marquis of Douro, the Rev. Lord and Lady Wrightesley Russell, and Sir C. L. Eastlake.

On Tuesday, the First Lord of the Admiralty and Lady Arabella Byng arrived at the castle on a visit to the Queen and the Prince, and joined the Royal dinner party.

On Wednesday, after the distribution of the Royal gifts, Prince Albert went out shooting, accompanied by the Marquis of Douro, and attended by Lord Camoys, Colonel the Hon. C. B. Phipps, and Colonel F. R. Seymour. In the evening the Royal dinner party included his Excellency the Chevalier and Madame Bunsen, the Marquis of Douro, and the Right Hon. Sir Francis and Lady Arabella Baring. After dinner, a performance of music took place in the Waterloo Chamber. The Queen's private band was in attendance, strengthened by a number of additional performers of eminence.

On Thursday his Excellency Senor Isturiz, his Excellency the Marquis d'Azeglio, the Marquis of Abercorn, the Earl and Countess of Jersey, and Lady Clementina Villiers, General the Hon. Sir Charles Grey, and Colonel the Hon. Ponsonby, and Lord and Lady Stanley of Alderley arrived at the Castle on a visit to the Queen and the Prince. Her Royal Highness the Duchess of Kent was prevented by slight indisposition from dining with her Majesty on New Year's Day.

Her Royal Highness the Duchess of Gloucester, who has been a [illegible] sufferer, was present on Thursday. Dr. Hawkins is in attendance upon her Royal Highness. The Duke of Cambridge, the Duchess of Beaufort, and several members of the nobility, have called during the week at Gloucester House to inquire after her.

The Duke and Duchess of Somerset gave an elegant entertainment on Wednesday evening (New Year's Day), at their mansion in Park-lane, to his Excellency Baron General Radowitz, and a distinguished circle, invited to meet the illustrious stranger.

We are glad to announce the safe *accouchement* of the Lady Olivia Sandilands. Her Ladyship gave birth to a son and heir on Tuesday last in Hertford Street.

We regret very much to announce the premature demise, at Hornby Castle, on Christmas Day, of Miss Marcia Frederica Isabella Lane Fox, granddaughter of the late, and niece of the present Duke of Leeds, in the early age of twenty-one. The lamented deceased was an exceedingly beautiful girl, and universally beloved. The Duchess of Leeds, who has exercised maternal care over her niece for some years past, is almost inconsolable at the painful event

COUNTRY NEWS.

REDUCTION OF INCOME-TAX.—IMPORTANT TO TENANT-FARMERS.—An application has been made by the Income-Tax Commissioners for the Yeovil division to the Board of Inland Revenue, to ascertain whether they ought to make any reduction in the amount of income-tax assessed on tenant-farmers in cases where their rents had been reduced; and the answer received from the Board is to the effect that, in all cases where there has been a *bond fide* reduction of rent, there might be a reduction of the income-tax in the same relative proportion. The tax must be assessed on not amount of rent actually paid, or for which the tenant is really liable, and not on the nominal amounts at which the farm is rented. It is highly important to the tenant-farmers of the kingdom that this step should be widely known, for that which is done in a district is of course app loable to the country at large; we hope, therefore, that our contemporaries generally will take cognizance of this circumstance, and make it known to their readers

OPENING OF THE BRIGHTON PAVILION.—The Pavilion will be opened by a ball which will take place next week. Every effort is being made to place the building in a perfect state of preparation. Some idea may be formed of the extent of the rooms when it is stated that they are 300 feet in length, and will accommodate 2000 guests. The following ladies have accepted the office of lady patroness:—The Duchess of Norfolk, the Countess of Shrewsbury, the Lady Willoughby d'Eresby, Lady Gage, Lady de Tabley, the Baroness Wenham, Lady Alfred Hervey, the Hon. Lady Brooke Pechell, Lady Westphal.

The inhabitants of Sunderland, at a meeting last Monday, determined to memorialize Lord Palmerston, to use his influence with the French Government to effect an equalization of the duties on coa s imported into France, which impose a proportion of fifty francs the tonnage on British coals, being borne, to what is imposed on Belgian coals, being inland borne

On Thursday week, the Right Hon. Lord and Lady Petre gave a very interesting entertainment at Thoraton Hall to the children of the school maintained and supported by them. The scholars were assembled in the steward's-room, where an excellent repast, was provided for them, his Lordship being present, and [illegible] with her Ladyship and the Rev. Mr. Lee, actuated spiritedly into the endeavour to increase the gratification and promote the amusements of the juvenile guests. In the course of the afternoon prizes were distributed to the most deserving pupils; and, after a delightful day, the little band separated with strengthened feelings of respect and gratitude towards their noble patron.

THE PROGRESS OF TEMPERANCE IN LIVERPOOL.—It has usually been a subject of remark (says the *Liverpool Mercury*), that the number of prisoners charged with being drunk and disorderly was greater at this particular period than at any other period of the year. This year, however, it is satisfactory to state, that the number of "drunk and disorderlies" was very small for the Christmas season, and even below the average of ordinary occasions. The Bridewell books, on the 26th, recorded only 23 prisoners of the above class, and of these 14 were charged with being booked for safety, and only nine with being drunk and disorderly.

RESTORATION OF WELLS CATHEDRAL.—It is stated that the works, which have been some time in abeyance, will be resumed forthwith, the necessary funds having been liberally provided by the Very Rev. the Dean, assisted by other dignitaries of the Cathedral.

GROSS OUTRAGE.—Father Ignatius (the Hon. and Rev. Mr. Spencer) was assaulted in Liverpool on Friday week. Whilst passing from St. Patrick's Chapel, he was met by two men, one of whom cast his arms around the monk, whilst the other tripped him up. One of the party subsequently attempted to kick the rev gentleman whilst he lay on the ground, but was prevented by a female, who struck him a severe blow with a basket across the head. A few blows passed between the attacking party and some bystanders, but the arrival of the police put an end to the disgraceful scene.

"NO POPERY" OUTRAGES.—A correspondent of the *Morning Chronicle* communicates the following statement of facts:—"There is a community of Benedictine nuns established at Stanbrook, a small hamlet four miles from Worcester. These ladies, about twenty in number, are employed in the education of Catholic young ladies, of whom there are from thirty-five to forty in the establishment. I have two daughters who are receiving their education there, and more than one hundred are amongst the nuns. The situation is lovely, and there is no male person residing on the premises except an aged chaplain, and the labourers, useless to be employed only during the late outbreaks. In answer to my inquiries, I have received a letter from my sister (one of the religious), which says:—'You will be surprised and sorry to hear that we have not been left free from molestation during these outrageous times. A party assembled one night in front of our house and kindled an immense fire, in which were burnt the figures of the Pope, the Cardinal, a figure representing our abbess, and another of our bailiff. Cheering and shouting were the only weapons to be done, and many wise precautions were taken, therefore it passed off without anything serious being done; but I much fear, had we not policemen around us, we should have had something more than fear to repent from. Fortune has been on the field on the other side of our wall. Thank God, it passed off as it did! You may imagine we were frightened.' I think all will agree that this was a very innocent party and wanton outrage; but what surprises me, and to which I wish particularly to draw attention is, that although the intended 'aggression' was known beforehand to the police, no attempt was made by the magistracy or the police to prevent it. I fear we shall have to expect that such scenes have been allowed to the mob, not only to 'no-Popery' occasions, but on other late occurrences, which I need not enumerate. We soon entirely to have forgotten the 10th of April, 1848. I am, sir, your obedient servant, J. R.—Knutsford, December 30."

POPPERY MAGAZINES.—The corporation of Liverpool have judiciously come to a determination to guard the huge deposit of gunpowder in the neighbourhood of their town against lightning. The circumstance of 800 tons of this dangerous material being permitted to remain open to explosion from a stroke of atmospheric electricity has recently excited much apprehension amongst the inhabitants, and it is expected that the site of the small temporary magazine on the north of Salisbury, the 14th ult., in a poaching affray on the farm of Middle Balbeggie, on the estate of the Earl of Rothes. The poaching party consisted of eighteen persons; and two policemen and the gamekeeper of the whole Fife and Kinross-shire hunting combined to apprehend them, the poachers threatened to shoot them. The party were all armed with guns, and the policemen satisfied themselves with marking several of them so as to be able to identify them afterwards.

RIOTOUS PROCEEDINGS TO WELSEYAN REFORMERS.—Lately, in various parts of the county of Norfolk, and especially in the neighbourhood of Aylsham, Holt, Gawston, Great Witchingham, and Lenwade, there have been serious disturbances, caused by parties calling themselves "Wesleyan Reformers," who have rebelled against the authority of the "Conference," or governing body; endeavouring to exclude the regularly appointed preachers from the pulpits of various chapels, and to take possession of those buildings. The most serious disturbances have taken place at Lenwade, where violent assaults have been committed, the services of the chapel stopped, the preachers assaulted with stones, and burnt in effigy.

METROPOLITAN NEWS.

THE NEW HOUSE OF COMMONS.—During the recess, the workmen have been actively engaged in constructing a permanent roof to the new House of Commons. When the new house was first occupied members, neither the members nor the reporters could hear distinctly what was said, and, in consequence, Mr. Barry constructed several temporary roofs to overcome the difficulty. Before the prorogation of Parliament, Mr. Barry had determined, it is stated, on making a permanent roof, after the temporary model which had been found to answer, and that permanent roof is now almost finished. It rises from the middle of the windows with a high pitch to nearly the height which the first permanent roof was, and presents a light and elegant appearance, in keeping with the other portions of the building. On each side of the house new galleries and division lobbies are being prepared, and a handsome and elegant waiting room is in course of fitting up in the cloisters. The new house is permanently to be taken possession of when the House meets after the Easter recess, and will, we believe, be found to answer satisfactorily. Several important alterations are being made in the approaches to the house, which, when finished, will contribute to the comfort and convenience of members, and give a pleasing and finished appearance to the commencing portion of the new line of street.

LAMB AND FLAG RAGGED SCHOOLS, CLERKENWELL-GREEN.—The annual treat to the children attending the above schools took place in the school-rooms, on Thursday, when upwards of 350 children were bountifully supplied with the old English fare of roast beef and plum-pudding. At 12 o'clock the court in which the school is situated was thronged with the anxious little ones, eager to gain admittance to the scene of festivity, which was tastefully decorated for the occasion; at length the time arrived for the doors to be opened, and the school-rooms were soon filled, and the guests seated around the various tables. At about one o'clock order was proclaimed, and grace having been sung by the children, the work of mastication commenced, and continued until about three o'clock, when a short address was delivered by Mr. Watts, the honorary secretary on the benevolent system, and the children having eaten to their hearts' content were dismissed, and re-assembled at half-past five, for the purpose of being examined and having suitable rewards presented to them. The improvement of the children is very striking, and the manner in which they replied to the various questions put to them, bespeaks the care that has been bestowed on their education. The children sang several pieces, and each child having received a present, together with a book, the proceedings of the day terminated with prayer.

FEMALE ORPHAN ASYLUM.—A general court of the guardians and committee of this institution was held on Thursday, at the Asylum, Westminster-road. Mr. Charles Evans in the chair. It appeared that the number of children admitted since the commencement of the institution, in 1758, had been 2503; of whom 913 had died in the house, 2-38 had been put out apprenticed or married, 3 were employed in the house, and 16 were at present in the Asylum. Since the year 1706, 756 young women had publicly returned thanks and received five guineas reward each for having faithfully served their apprenticeship. After some discussion, it was resolved that a handsome tablet, to the memory of his late Royal Highness the Duke of Cumberland, as the munificent patron of that institution for forty-five years, should be erected in the chapel. After a vote of thanks to the chairman, the meeting separated.

LORD LECONFIELD'S SCHOOLS FOR ST. MARY-LE-STRAND.—The Rector, the Rev. Mr. Dodson, has just issued a pastoral letter, in which we find the following communication particulars regarding the parochial schools:—"I am sure that the unwearied interest which you have evinced during my pastoral relation to you of more than twenty years, in our various parochial charities, will render acceptable to you some remarks upon their present condition, and which, I am happy to say, is prosperous in all respects. We may assume ourselves as having an unusually large proportion of the children of the poor receive the benefits of education in our parochial, infant, and Sunday-schools, for I found, upon a personal inquiry last year, accompanied by a parishioner, at every house, and as far as was practicable, at every abode of the poor, that out of 369 children between the ages of two and fourteen, there were 370 in distinct attendance at our various schools. Your own zeal and kindness, therefore, in your daily visits hourly render unnecessary, in this parish, any legislative enactments for popular education. The benefits of this threefold system of parochial education among us (for more than half of the children are in the parochial schools) have spread through the infant-school, and the majority of the children in both these schools attend the Sunday-school; it was pleasingly manifested in the course of those public examinations of all the schools which I have held, throughout the greater portion of last year, in church, on Sunday afternoons. Permit me to bring again before your notice my annual request, that you will kindly encourage the sons, might be built on the piece of ground belonging to the parish which has long ago been disused for burials, and which, I am assured by professional persons, might be rendered perfectly healthy and convenient for the purpose. I have reason to hope that this valuable opportunity of providing for the accommodation of the schools, and of perpetuating your benevolence to the poor, as an example for future generations, will be speedily taken into the strenuous consideration of your treasurer and committee.'

ROYAL NAVAL BENEVOLENT SOCIETY.—A special meeting of this subscribers of this society took place on Tuesday, at the Thatched House Tavern, St. James's-street; the Right Hon. Lord Radstock presiding. His Lordship stated that the present meeting had been convened in consequence of the melancholy death of their late secretary, Commander Dolben, and that it was necessary the rules provided in this society for such a contingency, he thought it advisable to call them together for the purpose of adopting the necessary measures preparatory to the election of another. His thought it advisable that the duties of secretary should be confided to officers in the navy, and he felt assured, amongst that body, there could be many found adapted in every way to fill the office. With regard to the age of the candidates, they had limited it to forty five; and he thought it desirable that it should not be extended beyond that period, for if it was, they could hardly expect to retain their services for any length of time. He would therefore call upon them to elect a committee to look into the various testimonials of the candidates. After some discussion, a committee composed of the following gentlemen was elected:—Sir Charles Malcolm, Admiral Sir Thomas Bladen Capel, Sir Charles Ogle, Admiral Sir Thomas Hastings, Captain Sir Edward Parry, Captain Sir Henry Ducie Chads, Captain

ELM TREE IN THE SOUTH-WEST PORTION OF THE BUILDING.

the display of light manufactured goods, and will also give a complete view of the whole of the articles exhibited, with an extensive view of the interior of the building."

Mr. Paxton proposes that powerful magnifying-glasses, on swivels, should be placed throughout the Galleries, at short distances, for commanding a more perfect general view of the Exhibition.

The whole width of the Gallery roofs is 264 feet, which, as in other parts of the building, are supported by cast-iron columns, and cast-iron and wooden trussed girders. Over each of the Galleries adjoining the central aisle there is an additional tier of girders, so that if, at the *eleventh hour*, additional space be required, two galleries the whole length of the building may be added.

The flooring of all the Galleries consists of 1¼-inch deal battens, grooved and iron-tongued; these battens are each 7 inches in width, and are firmly nailed on to the joists, which have a scantling of 7 inches by 2½ inches, and fixed at intervals from centre to centre of 2 feet 6¾ inches; trusses are introduced transversely, at intervals of 8 feet, which are 7 inches square, consisting of two pieces, separated by a space of 2 inches, in which space are introduced 1¾-inch tension rods, passing through eyes formed in cast-iron saddles, the ends of the tension-rods being screwed up to cast-iron shoes. Longitudinal girders, 9 inches in depth by 3½ inches in width, extend under the joists throughout, firmly fixed to the girders.

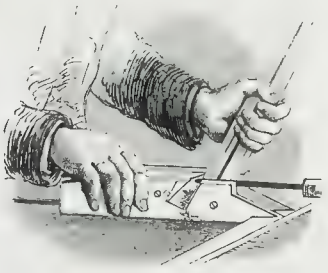
The external sides of the Galleries are enclosed with vertical deal sashes, each 15 feet 2 inches in height, by 7 feet 6 inches in width; occupying the spaces between the deal framed intermediate columns and the iron columns, respectively. The glass in these sashes is the same as that used for the skylights. There are eight squares in width, and each square is 49 inches high, weighing nearly 53½ oz. In order to guard against the injurious effects of storms against so large a surface of glass, exposed to wind and rain, the upright panes are tied together by three round iron tie-rods; and strengthening pieces of deal 7 feet 7 inches long by 1⅛ inch thick, and of segmental form on the edge, are screwed to the sides of the sashes. The sashes are secured to the columns by three iron clamps to each column.

The water from the adjoining skylights is carried into the "Paxton" or three-way gutters, fixed between the lower parts of the columns; and by the introduction of cast-iron rain-water heads fixed round each column, with opening from the "three-way" gutters, the water finds its way into the transverse trough gutters, which, being furnished with false bottoms, have a full inclination towards the tops of the hollow columns, which convey it to the iron pipes underground.

The exposed sides of all the Galleries are protected by handsome wrought-iron ornamental railing, of a diamond pattern. This railing is placed between the iron columns, and secured to the floor by means of two intermediate open iron vertical standards, with plinths of the same material: the standards are each 8 inches in width. A deal plinth is continued between the standards and columns respectively: this plinth is 4½ inches high, and 1⅛ inches in thickness. The iron forming the panels is ½ inch wide, by ½ inch thick; the iron is turned over both at the top and bottom, and is screwed, in the former case, to the hand rail, and, in the latter, to the deal plinth: ornamental bosses on diamond-shaped grounds are fixed at the intersections of the diagonal iron bars. The hand-rail is of mahogany, of segmental form, being 3 inches in width or diameter, and 2⅛ inches deep. The pattern of the railing is well chosen, and gives a pleasing finish to the galleries. In the construction of the sides and roofs of the galleries, the operations of the workmen are much facilitated by traversing scaffolds, running each on four small rollers or wheels planks being laid longitudinally on the top of the floor as tram plates for the same. The length of each of these travelling scaffolds is 24 feet, and the height sufficient to enable the men to fix the girders into the tops of columns, &c.

RAISING THE GIRDERS OF CENTRAL AISLE.

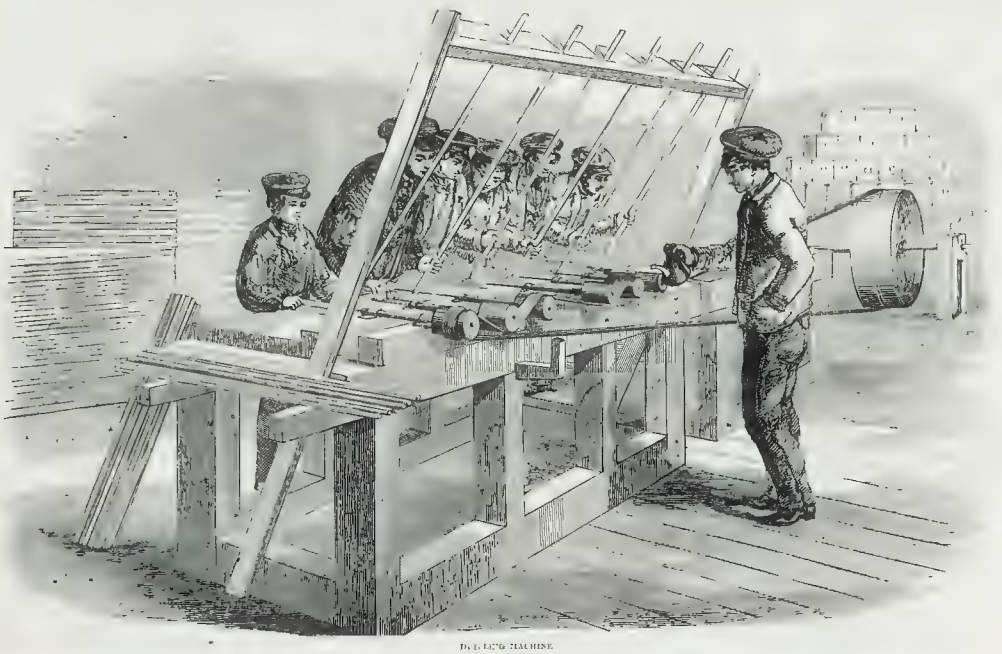
In order to raise each of the 72-feet girders which support the "ridge and furrow" roof over the central aisle, a stout and tall "derrick," properly rigged with chain and pulley-tackle and guide-ropes, is fixed up midway between the two columns over which the girder is to be fixed. This derrick consists in the present instance of several fir scaffold-poles firmly bound together, and reaching to a height of about 70 feet above the ground. When the girder is securely attached by means of a stout chain to the rope by which it is to be raised, a signal is given, and the other end of the rope, which passes over a pulley at the top of the derrick, and thence round a leading block at the bottom of the derrick is attached to a team of six horses: the horses, drawing the rope out "on end," raise the girder in a few minutes nearly to the position it is destined to occupy; but the whole process of moving the derrick from one intermediate point to another, and securely setting it up, and entirely completing the operation of fixing



DRILLING MACHINE.

it over the columns, occupies about two hours, so that four of the trussed 72-feet girders can be fixed in a day by means of one derrick Several men are required to attend to the guide and other ropes while the girder is being raised; and three men are required at each end of the girder to fix it in its proper bearings.

The Drilling Machine, represented upon the present page, has been fully described at page 396 of Number 455 of the ILLUSTRATED LONDON NEWS.



DRILLING MACHINE.

PROFESSOR COWPER'S LECTURE IN THE GREAT EXHIBITION BUILDING ON TUESDAY LAST

PROFESSOR COWPER'S ILLUSTRATIONS

OF THE SCIENTIFIC CONSTRUCTION OF THE PALACE OF INTERNATIONAL INDUSTRY.

(From our own Reporter.)

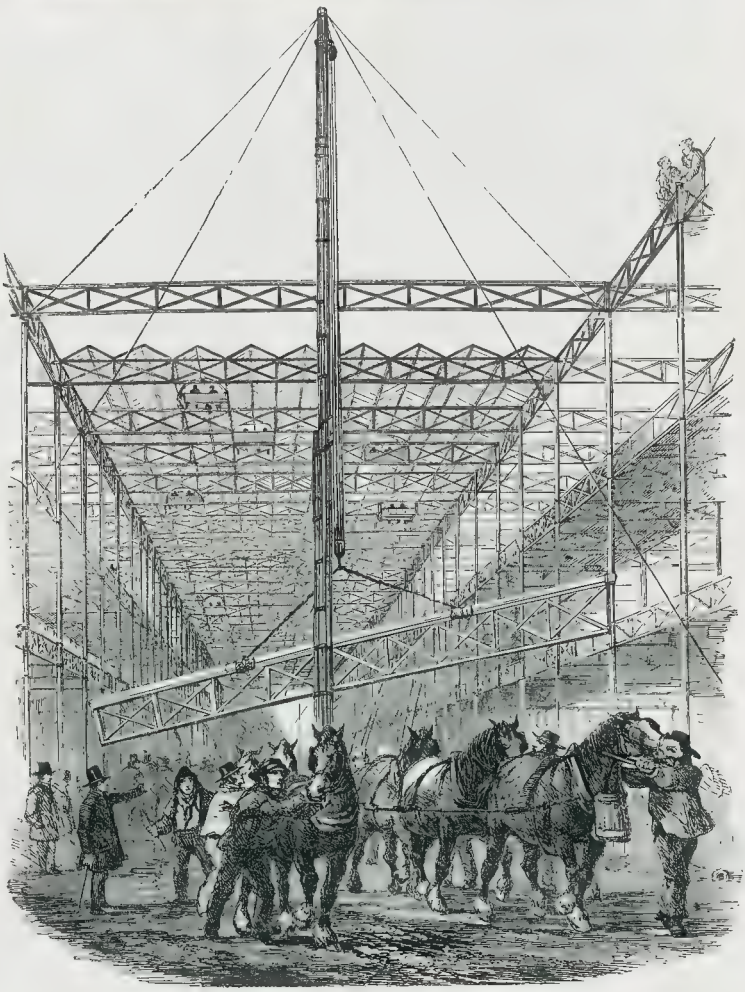
THE last day of the year 1850, the one on which Messrs Fox, Henderson, and Co., contractors for the building, were to have given up possession to the Royal Commissioners, was not inappropriately chosen for the private visit of the members of the Society of Arts, who collected together in large numbers to listen to Professor Cowper's truly lucid explanations of the scientific construction of the great Industrial Palace. As important alterations and additions have been made in, and to, the original contract, the Commissioners have granted to the contractors an additional month to complete the whole of their works.

The space enclosed as a lecture-room for the occasion is situated on the south side of the building, towards the west end, extending 120 feet in length by 72 feet in width, so that there was sufficient space for at least two thousand people; but, as far as we could judge, there were not more than twelve-hundred persons present, including many visitors, especially ladies, who were not members of the society. On three sides of the lecture-room the enclosure was effected by elegant carpets suspended from the cast-iron girders and reaching to the floor; while the fourth side was formed by the permanent vertical matched boarding between the upper and lower tiers of ventilators. A temporary wooden platform, with table in front, had been erected especially for the use of the lecturer, and a long desk and seat had also been provided for the use of the reporters. Drawings and diagrams, illustrative of the subject, were pinned up behind the lecturer's table, as will be seen by reference to the Engraving above.

At ten minutes before twelve, previously to the two thousand workmen leaving the building for dinner, the visitors were admitted to the lecture-room, and at a minute or two after twelve Mr. Cowper commenced his illustrative lecture as follows:—

"I have been requested, on this occasion, by the council of the Society of Arts, to point out to you the *scientific principles* of the construction of this magnificent building. I must confess that, when first applied to, I felt considerable difficulty in acceding to the request, as Mr. Paxton, the originator of the grand building in which we are now assembled, had already at your own Temple of Science, in the Adelphi, given you an account of the growth of the idea in his own mind from the first employment by him of glass, to cover the *plants* of all nations, to that of enclosing with the same material the *industrial works* of all nations, but he has said nothing about the scientific principles by which the details have been so beautifully carried out by the talented and enterprising contractors. To Mr. Paxton, then, we are indebted for the original idea of this building—to him also, we are indebted for the 'ridge and furrow roofing,' and also for the 'three-way-gutters,' whereby not only the rain-water is effectually carried away from the skylights, but also the condensed moisture from the under-side of the glass, which covers the building. It was he, also, who furnished the bold outline of the structure, to be constructed as to its principal dimensions of multiples of simple parts. It was a grand idea, and as original as it was grand. Mr. Paxton submitted his plan to Messrs. Fox and Henderson, who were at the time sending in tenders for the gigantic building of brick, with its colossal dome. As those who sent in tenders for the building of brick were permitted to make suggestions, provided such suggestions were accompanied by detailed plans and estimates, Messrs. Fox and Henderson, seeing at a glance that the Paxton design was the one most suitable for the intended purpose, at once recommended it to the notice of the Royal Commissioners, at the same time undertaking to prepare detailed plans of such design, together with estimates, in the short space of one week; and this promise the contractors not only made, but, by working day and night, actually fulfilled; and the consequence was that the general design was adopted; and we have now to see how this extraordinary and novel plan has been carried out.

"In the first place, this building is not what is usually termed an architectural structure. It is not built of wood, neither of stone nor brick, but of iron. The architect deals with materials the strength of which is hardly ever the subject of calculation: brick is laid upon brick, and stone upon stone, without the slightest fear of their crushing from any weight they may be required to sustain, and without much thought of the *quantities* to be used. The engineer, on the contrary, has to deal with iron, a material whose strength is calculated in every situation in which it is used, and the economy in quantity reduced nearly to a *minimum*. Iron also differs altogether in appearance from brick and stone, which present large, broad surfaces, while iron, on the contrary, presents, as you will perceive throughout this building (except, indeed, the external boarding), such narrow surfaces, that it may be almost described as consisting of an assemblage of lines; and, in the building in which we are now collected, these lines are made up principally of columns and girders. Do not misunderstand me—I have no desire to depreciate architectural beauty; but it will be seen, on an inspection of this building, that the constructors have been guided by more cogent reasons than mere architectural beauty. I may mention that architects have no particular love for iron; and, as an example, I may allude to the roof of the hall of King's College, which is supported by iron columns; these columns are encased in wood, in order to give them a more substantial appearance. Everybody seems to have become a critic with regard to this building; we often hear people say, 'How very slight;



RAISING THE GIRDERS OF CENTRAL AISLE.

but I would advise them to leave out the letter 's,' and then pronounce the word, as it should be, 'licht:' they will then be nearer the mark.

"Let us begin with the columns, which are not solid, as if of brick or stone—but hollow—that is tubular; and here science at once decides that this is the stiffest and strongest form for a given quantity of material. For instance, if we take two iron columns, each 30 feet high, the one being of 12 inches diameter, and hollow, with metal an inch thick, and the other being solid and 6 63 inches diameter, we find that the former will sustain about four times the weight of the latter. Perhaps there are some circles present who, on looking at he columns of this building, may consider them weak; let me, however, ' specifically request of such critics to test their own power of judging of these [illegible] by mentally estimating what these two quite—one inch in length—[illegible]

[illegible] between two boards, the upper one being adjustable by hinges, and then placed in lights of the upper sash, just above the quills, until they reached 24ths, which was found to be the crushing weight. This beautiful and conclusive experiment drew forth loud applause.]

"The columns throughout rest on what is technically called concrete, composed of large stones mixed with 1-7th of sand and 1-7th of lime; the whole being incorporated with a sufficient quantity of water, the gravel is taken from pits sunk on the premises. An iron tubular socket, from three to four feet long, according to the levels of the ground, which differ throughout, and of the same diameter as the column itself, is placed upon the concrete when dry; the bottom of the socket, being very broad and flat, is firmly bedded in the concrete by cement. To fix the socket exactly in its right place, with regard to the rest of the sockets, is indeed a very nice point; and a repetition of this operation constituted, in fact, the setting out of the building. A dendrific (which many of you are acquainted with) for marking the direction, a 24-feet rod to measure the distances, and wooden stakes, each having a nail driven into it, to mark the point corresponding with the centres of the respective columns, were required in the 'setting out.' When the concrete was put into the holes dug for its reception, the socket was carefully lowered into its place, and adjusted to its exact position by means of a triangular wooden frame, points in two of the angles resting on the nails of two stakes, the other limb having a semicircular end, to fit the outside of a contiguous socket; and so on with the rest. Perhaps there never was a ground-plan of similar character set out with such wonderful exactness—its beauty and accuracy meet you at every step you take

"Column covers column with as much truth as if their places were set out on a sheet of paper, instead of on an area of 18 acres of ground. The sockets being fixed in their places, the lower columns, 18 feet 8 inches high, are fixed upon them by bolts and nuts; also a connecting piece, 2 feet 4½ inches high, from another column, 16 feet 7½ inches high; then another connecting piece, and so on. There are in the whole building 2000 columns, the first of which was fixed in its place on the 26th of September last. It will be seen from the observations that these columns and connecting pieces should stand perfectly upright one upon another. In the usual way, the ends of these columns and connecting pieces would have been *chipped* and *filed* and here, I think, Fox and Henderson showed considerable tact in turning the 12,000 ends of the columns and pieces, or what's one and the same thing the ends; the effect of which is, that if the base of the socket is placed perfectly level, the columns and connecting pieces *must* stand upright. [The Professor now produced several pieces of wood, the ends of which were not properly faced: the consequence was, that, when placed one above the other, the whole fell together; but on immediately after substituting some properly-faced pieces of wood, and placing them one above another, the whole resumed their vertical position.] By the precaution of facing the ends of the columns and connecting pieces, you will not discover a crooked line throughout the building

"We now come to the girders, which from their generable appearance may be called trellis-girders. Girders are usually made *solid*, and vary a good deal in form; but in order to show the importance of form, you have only to look at the [illegible]

Mr. Cowper pointed to sketches of transverse sections of iron in four different forms: first, a square; second, the square divided equally, and the two parts placed one above the other; thirdly, an angle and top flange; and fourthly, an edge, one at top, and the other at bottom; and, lastly, an upright, with a narrow [illegible] at the top, and a wide flanch at bottom; the two latter sections being under most usually adopted for girders.

"It is to see how the different parts of a girder 'behave,' to use an expression very familiar to engineers. In a common girder we have what is known as the pressure, or thrust; while, in a suspension-bridge, we have tension. In a girder there is both the thrust and tension."

In order to show that form has a great deal to do with the strength of materials, the Professor subjected a small sheet of tin to the pressure of his hand, and immediately doubled it up; but, on putting the same piece of tin into a tubular form, and squeezing it in the same way, we like pressure, it resisted under 2 cwts. He then analyzed a trells-girder, showing its weaknes without the add ion of the braces, by means of wooden models, and by the aid of laths pinned at the angles, and representing one half of the longitudinal section of the building. Mr. Cowper further explained the imaginary building of the critic which might be blown down by a gust of wind, and then, adding to the model braces throughout, exclaimed, "And here is the building of the contractor—Now see how stiff this slight model has become

"The extreme load which is ever likely to be placed on any one of the girders is 7½ tons; whereas every cast-iron girder is proved by the hydraulic testing machine to 15 tons, the breaking weight being 30 tons.

"The almost entire absence of scaffolding is not the least curious part in the construction of the building. When I took my class from King's College over the building, some of the pupils asked, 'Where is the scaffolding?' The fact is, the columns and girders, themselves form the scaffolding; and, with the addition of a wooden pole or two, and a few ropes and pulleys, the whole of the columns and girders are fixed in their places.

"The 'Paxton' gutters, when first designed for the Chatsworth Conservatory, were cut out by hand; but this would have been too tedious a process for a building required to be executed in so short a time. Machinery was therefore contrived, by which the rain-water gutter is bent to the curve required; the two sloping condensation' gutters, one on either side of the timber, are all cut out together

As first, it was intended that the building should be of uniform shape from one end to the other; but Fox and Henderson considered that the introduction of a transept would give additional stiffness to the building: still, with a flat roof as that of the nave, the trusses would have required principals; it was, therefore, boldly determined to overtop the tallest of them by a semi-circular arch. To have made the ribs of the arch—or principals, as they are called—of brick would have [illegible] too great a mass. It was, therefore, determined to construct them of wood. Each rib is composed of four layers of planks laid flat upon each other, with curved planks on the inner and outer sides; a strong strap of iron runs along the inner and outer sides, and iron-screw bolts and nuts pass through the iron straps and the wood, binding the whole firmly together, making the arch stiff, and with so little tendency to spread, that, when the ends (by way of trial) were put on planks and the arch loaded with a weight equal to that which it was intended permanently to sustain, the fracture was found to be sufficient to keep it from moving. Arches, doubtless, have some thrust or tendency to keep, but that it may be overcome is instanced by a cow's horn, and even this model, composed of layers of wood, gives you some idea of the strength to which it will be obtained. [The Professor then loaded the model with weights equal to 224 lb. but without producing any change in its form.] Various persons have given hints and suggestions during the planting of the trees, one of which has been mentioned in a history, but, at present, I consider myself only at liberty to mention that Mr. Fox has personally superintended the entire erection of the building, and has been indefatigable in his exertions from morning until ten in the morning until ten at night. The general management was entrusted to Mr. Cochrane, the setting out of the columns to Mr. Browniger, the contrivance of the various machines to my son (Mr. E. A. Cowper); and the making of the principals was suggested by Mr. Welby, the foreman. The contractors duly acknowledge the assistance they have received from Messrs. Cochrane and Co., of Woodside Ironworks, and to Mr. Robert Jobson, of Holly-hall Works, both near Dudley, for their great exertions in forwarding the castings.

"Messrs. Tupper and Carr supplied the [illegible] for their galvanized iron of No. 18 Birmingham wire gauge, which constitute the buffers or blades of the ventilators. I look upon the original idea of Mr. Paxton as one of the most successful efforts of imagination and genius, and I consider the way in which Fox and Henderson have made the bold conception *practicable*, one of the most successful and astonishing examples of contrivance, tact, science, industry, and perseverance, and engineering skill the world ever saw; and, whatever wonders may hereafter be placed in this building, the structure itself will be the greatest wonder of all. There is no doubt that, when our friends from the Continent visit this splendid Palace, they will be perfectly astonished at the preposterous notion of retaining the trees within it! but they may learn a lesson from them, and that an unimportant one. Some of our intending visitors have been planning themselves of fate years with planted trees of liberty, which have withered and dried up, and were finally uprooted. Now, we are not a people very fond of emblems, but I look upon the existing real trees of liberty; they prove beyond dispute that we do not live under a despotic Government. The people—right or wrong—wished these particular trees to remain. A thousand trees were cut down in Kensington-gardens some years since, and not a word of complaint was uttered; but John Bull had set his mind on these six or eight trees in particular, whether they spoiled the building or not; and there they are standing proofs of the assertion that our Government pays the public. We can carry our imagination further, and say these trees represent the liberties and rights of various classes and opinions, and all that is required is that each Tree of Liberty should be so pruned and trained as not to overshadow its neighbour's domain, while the magnificent arch above, like our glorious constitution, is comprehensive enough to include and protect them all."

When the lecture (which was received with evident signs of satisfaction) was drawn to a conclusion, Mr. Cowper, accompanied by a crowd of his new pupils, proceeded to the different parts of the building, and explained, in order, the testing machine; Henderson's patent; "derrick," crane; sash-pinching and cutting machines, the machinery for cutting off the ends of the sash-bars, and forming the semicircular ends to the sashes; the fitting machine; the mode of painting the sash-bars by machinery; the glazing wagons; the construction of the transept, and other parts of the ingeniously-contrived edifice—all of which have been fully illustrated and described in the ILLUSTRATED LONDON NEWS

Among the visitors who appeared to take the [illegible] the proceedings, we observed Sir Edward Codrington and James Walker, Esq., two of the vice-presidents, and the following members of the Society of Arts—Dr. Faraday, Dr. Forbes Royle, of the East India House; W. Brockedon, Esq., R.A.; Dr. Lyon Playfair; William Wyon, Esq., R.A.; Joseph Paxton, Esq.; Joseph Glynn, Esq., F.R.S.; Dr. Roget, F.R.S.; R. B. Dockray, Esq.; Professor Tennant, and Arthur Aikin and Francis Whishaw, two of the former secretaries of the society; while Mr. Grove, the present indefatigable secretary, was all on the alert to render every assistance to Professor Cowper, who afforded so great a treat to all assembled.

GREAT INDUSTRIAL EXHIBITION OF 1851.

THE Great Crystal Palace will not be entirely arranged for its high destiny, probably, till the end of the present month; but to all those disposed to comment bi-enturely respecting its non-completion, we can satisfactorily answer that before the 31st the much more work had actually been performed by the contractors than was originally designed. Independently of the numerous alterations and improvements in the shape, character, and use of the various materials, two of the refreshment spaces which were to have been open, are to be filled up like the rest of the interior, whilst an additional gallery of nearly one mile in length, and twenty-four feet in width, was ordered for the space decisions of the Royal Commissioners. There never was a public structure in any way approaching the magnitude and character of the Hyde-Park repository accomplished with less official or departmental jobbing, with such rapidity and security, with less detriment to its neighbourhood during its erection, or with such honourable success of its architect and builders. It is universally, in its present condition, al owed to be a masterpiece of constructive ingenuity and architectural art and beauty; and justly despised as we are abroad for our public monuments and buildings, the edifice raised by Messrs. Fox and Henderson may be pointed out as a monument [illegible] of the industry and resources of any nation, ancient or modern.

The executive committee have compiled the offices set apart for them; the completion of which, let us add, was not to have been effected till after the construction of other parts of the building. The flooring has much progressed, [illegible] of the nave, and [illegible] the west side, and the difficult task of grassing the transept. It is impossible to overrate highly the ability and energy of the contractors; one or both of them are constantly on the spot, and give evidence by their presence and attendance, of the untiring zeal and assiduity which have sustained them through their task.

Messrs Fox and Henderson (as our readers will see elsewhere) very [illegible] acknowledge the impartiality of the Society of Arts in the great movement which produced their marvellous work. by a private invitation to the gentlemen on the noon of the 31st, to inspect the works, &c; and the occasion was propitiously inaugurated by Professor Cowper, of King's College, on the scientific and mechanical character of the construction, and materials used in the building. Facing the inclement and rainy weather which incessantly prevailed during the day, a large and gentlemanly company assembled in answer to this courtesy on the part of the contractors, and the Professor was eagerly followed and listened to in the course of his explanations as to the testing of the girders, the transept, the travelling scaffolding, the panelling and cutting machines, the Paxton gutters, the circular saws, &c., and the construction of the transept, which we have at various times presented in verbal and illustrated description.

The arrangement and settlement of the vouchers for the exhibitors have proved a task of a most arduous nature; so many new questions arising, so much explanation before on the local committees, the official subordinates, and the contributors, that we may be well allowed to express our sense of the onerous duties of the Executive Committee and their staff. We sincerely trust that the local committees, now determining their share of the question, will imitate so good an example

Blank forms for intending exhibitors to insert the character, &c. of their articles in the official catalogues have been issued, and are obtainable at the offices: they are printed in various sizes, and in the four coloured inks which we mentioned last week. Those for raw materials in black, machinery in blue, manufactures in red, and the fine arts in yellow. We have previously explained the heads of the regulations affecting the construction of the catalogue [illegible] these forms; but may be well to enforce all the official regulations, and to wise affecting contributors, are obtainable from the local committees, or from the offices at the Hyde Park Building

Mr. Miles Sampson, the largest silk consumers in the country, has been refused the amount of space he demanded, on the plea of the limited room assigned to the section under which he wished to contribute. He has appealed to the Commissioners against the decision of the Metropolitan Committee which dictated the refusal. He asserts that he consumes 300 bales of raw silk annually; that he has agencies established in London, Reading, Derby, Manchester, and three at Leek, of sewing and netting silk, and these, he specially contends, should be fairly exhibited in competition with the French, Italian, and German specimens. The question we like pressure, we like pressure, reserved a power of appeal in all such cases, and will doubtless do justice to Mr. Miles Sampson's claims

The interview of M. Salladarroze de Lamornaix with Lord Granville was special by the commissioner for the French exhibitors, for the prolongation of the time for delivering in their wares His Lordship affirmed that the subject had already been discussed by the Executive Committee, and that every accommodation be afforded by them to satisfactorily meet the wishes of foreign contributors

A club, or union of manufacturers, &c., in Paris has been formed, to afford facilities to the French exhibitors, and to prevent the chance of their proceeds away any difficulties liable either at Paris or London; to accredit proper [illegible] to superintend the classification and [illegible] ment of the articles; besides the duties of watching over the interests of general exhibitors. Members are admitted on payment of five [illegible] meetings of the Academies of Arts, at Paris. MM. Matthieu and Deshais are named secretaries, who will afford every information on the uses of the club

We take it for granted that there is no subject more interesting to those of our readers who sympathise with the purposes of the Great Exhibition than a fair protection for the rights of inventors [illegible] the law at present stands, a copyright of fourteen years, and further extensible to twenty-one, is all fees, at the Registrar of Designs' Office, in Somerset House. Some time back we stated that a similar protection would be afforded at the offices of the Great Building in Hyde Park; and the Commissioners, &c., under which such a privilege is accorded in the case of useful designs.

By provisional registration under the Designs Act, 1830, a copyright for one year (which may be extended to three years, subject to the order of the Board of Trade) is given to the proprietor of any original design for the shape or configuration either of the whole or of part of any article of manufacture, such shape or configuration being applicable for the purpose or necessary for the use of any other substance. The proprietor of the design may sell the right to apply the same to an article of manufacture, but must not, under the penalty of nullifying the copyright, sell any article with the design applied thereto, until after complete registration, to be effected prior to the expiration of the provisional registration. By complete registration under the Designs Act, 1843 (6 and 7 Vic., c. 65), a copyright of three years is given to the proprietor of any new or original design, &c. In case of piracy of a design [illegible] tered, the same remedies are given and the same penalties incurred (from £5 to £30 for each offence), as under the Ornamental Designs Act, 1842. A penalty of not more than £5 nor less than £1 is imposed upon all persons falsely marking, selling, or advertising articles as registered. The following table of Fees are—for Provisional Registration: Registering design, 10s Certifying former Registration (to Proprietor of Design) .. Registering and Certifying Transfer, 10s.; Cancellation or Substitution (according to decree, or order in Chancery), [illegible]

The Complete Registration are—

Registering Design	Stamp £	Fee £	Total £
Certificate of Registration (to Proprietor of Design) ..	0	1	1
Registering Proprietor's Address	0	1	1
Cancellation or Substitution (according to decree, or order in Chancery)	0	1	1

There are also small fees for Inspections, &c., of Provisional and Complete Registrations. Persons proposing to register must bring or send to the Designs Office the title of the design, with exactly similar drawings or prints thereof; the name and address of the proprietor or proprietors, if together with the words of the other particulars, must be drawn, written, or printed upon a separate sheet of paper or parchment, and the same description of work must be drawn, written, or printed upon. Such sheet must not exceed in size 24 inches by 15 inches, and on the same side as these particulars there must be left a blank space, of the size of 6 inches by 4 inches, on which the certificate of registration will be placed. If for provisional registration, an additional similar space must be set apart for the certificate of complete registration. If such design is intended for exhibition in any other country according to the Board of Trade to be a place of public exhibition within the meaning of the Designs Act, 1850, then a third copy of the drawing or print, together with the whole of the above aforesaid particulars, must also be furnished. The Designs Acts, 1843 (6 and 7 Vict., c. 65), and 1850 (13 and 14 Vict., c. 104), give protection only to the shape or configuration of articles of utility, and not to any mechanical action, principle, contrivance, or combination of parts (except in so far as these may be dependent upon, and inseparable from, the shape or configuration), or to the material of which the article may be composed. After the design has been registered, one of the drawings will be filed at the office, and the other returned to the proprietor duly stamped and certified. When three years have elapsed, the remaining copy will be deposited in the place of public exhibition, certified as aforesaid. The Designs Office, Somerset House, is open every day between the hours of ten in the morning and four in the afternoon.

The directions respecting the registration of ornamental designs are more complex, and can be obtained at the [illegible] office

The Commissioners of Patents for the Legislative Registration of the Rights of Inventors have prepared resolutions to form the heads of a bill for that effect They propose that everything in respect of which a patent may now be granted should be registered, and that registry should extend to Great Britain and Ireland and the Channel Islands; the registration being considered merely as a record of claims, and not as any determination of rights between parties. An inventor may make declarations and rectify errors in specification at any period. Registration of inventions should be obtainable for a period of one year on payment of £5, and should be renewable for four periods of five years each, on payment of £10 at first renewal; of £20 at second renewal; of £30 at third renewal; and of £100 at fourth renewal. The principle of renewed payments is proposed as a means of testing whether an invention is in use, and of removing useless inventive rights that might otherwise be obstructive of improvements. Penalties for falsely using the title of "patent" or "registration" should be instituted, and actions for infringement of the rights of inventors should be brought in the County Courts. A fair trial should be given to the working of the proposed system of registration before any special tribunal to determine inventive rights is substituted for the ordinary tribunals. Any tribunal appealed to might refer any case for report and certificate to the registrar, assisted by competent and scientific persons. A registration adjudged to be illegal to be cancelled. That there should be only one office for the registration of inventions, &c., and the payment of fees. Every person desiring to register an invention should submit two copies of the specification of his claim, accompanied, where possible, by descriptive drawings or models. The registration of registration to be regulated by the Board of Trade An annual report of specifications registered, with proper indices and calendars, to be laid before Parliament. A collection of all the specifications should be made, calendared and indexed, and deposited for public information in the British Museum, and such collection should be printed and published. The surplus profits, after paying office expenses and compensation, should be directly applied to some public purpose connected with invention; but not carried to the Consolidated Fund

Mr J. W. Gilbart, of the London and Westminster Bank, offers (according to the *Bankers' Magazine*) a prize of £100 for the best essay on the following question: In what way can any of the articles collected at the Industrial Exhibition of 1851 be rendered especially serviceable to the interests of practical banking?" There are various departments mentioned, viz.:—Architectural models suggestive of improvement in the bank or office; inventions touching light, heat, and ventilation, which might promote the health and comfort of the bank [illegible] in the [illegible] printing or engraving which affects bank notes, receipts, letters of credit; inventions in the construction of locks, cash-boxes, and safes, with additional means of safety against fire; and, generally, all articles which can be applied to improve, cheapen, or facilitate any of the practical operations of banking

For the last few weeks (says the *Times* correspondent) all Vienna has flocked to the establishment of a cabinet-maker there in order to inspect and admire some articles of furniture intended for the London Exhibition. The beauty of the carving and the general finishing surpass anything I have hitherto seen of the kind. Among other objects is a revolving hand bookcase and secretaire, which was presented by the Emperor Francis Joseph, who intends, I hear, to present it to her Majesty Queen Victoria. A couple of days since I saw that four ground from Basnat wheat, of which the little loaves (*semmels*) are made, for which Vienna is celebrated, will be forwarded to the Exhibition. A list of the articles so selected, with the exhibitors' numbers or marks attached, will be published and all appeals will have to be made within three days of this publication. The list of goods finally selected will be entered in a book [illegible] shall be sealed, and will remain unopened until the decision of the jury attached to the Royal Commission, which will then be recorded in the book referring to the several cases to which they apply

The Mayor of Southampton is to send a specimen of carriage-building; some specimens of naval construction, a group of marble figures, specimens for preventing fouling, wear, or decay on the bottoms of vessels are amongst the contributions to which space are allotted; a silk gown, spun at Newlands, near Lymington, is also announced, together with some printed specimens of needlework and carving.

Re-arrangement of the space promised to contributors has been forced upon the Metropolitan committee, who had to accommodate 8000 exhibitors; but the [illegible] of the sectional committees have been generally very satisfactory.

The Executive Committee will assume the responsibility of extending the period for depositing goods under certain circumstances. Exhibitors who shall have so fitted up their space as to be perfectly ready to receive their wares, after a certificate to that effect has been given by the French exhibitors, for the prolongation of the time for delivering in their wares. His Lordship affirmed that the Executive Committee that they will bring in their goods on the demand of that body.

Objection is taken to the proposed painting of the colours used by Mr. Owen Jones, for the decoration of the interior of the Building. Mr. Sang suggests that the colour should be uniform, and in bronze, to convey the metallic character of the material, and to prevent the confusion which [illegible] exhibitors, &c., which is generally pronounced objectionable. The question to our minds had better be left to the artist already entrusted, whose competency in decorative art is the materials, and to prevent the confusion which [illegible] suggestion, must not be led away by the crotchets which his novel task calls forth from all quarters.

In spite of the gale on the night of the 1st, not a single sheet of glass was displaced, and the whole Building was unaffected in any way by the violence of the wind.

WINDING-UP JOINT-STOCK COMPANIES.—The following is a list of those railway and joint-stock companies now under the operation of the Winding-up Act, in connection with which calls have been made to defray liabilities. Birmingham, Bristol, and Exeter Railway; Reading Railway; Exeter, Plymouth, and Devonport Railway; Direct West-end and Croydon Railway; Galway and Lenns Grand Junction Railway; Grand Trunk, and Stafford and Peterborough Railway; London and East Coast Railway. Companies under the Winding-up Act in which a dividend has been declared at present is the Tring, Reading, and Basingstoke Railway. The general joint-stock companies in connexion with which similar calls have been made, and are in course of payment, are the Bankers' Iron Company; Boston and Thorp Arch Bath Company; Godolphin Mining Company; Kinchsken Silver and Mining Company; Kingsland, Dalston, and De Beauvoir Town Library and Scientific Institution; Kirkwall's Carriage Improvement Company; National Disinfected and Dry Measure Company, Nister Wax Iron Company; North of England Joint Stock Banking Company; Northern Coal Mining Company; Saint George's Patent Packet Company. It is calculated that between £100,000 and £200,000 have been or are being collected in the course of calls under these estates, to pay off creditors and outstanding liabilities

PROGRESS OF THE PANAMA RAILROAD.—The Panama Railroad Company are collecting numerous labourers, with a view to commence operations as soon as the dry season sets in; the surveyors, civil engineers, have gone out from the United States, and vessels laden with timber and other materials are daily arriving. No less than 28 sail, comprising vessels of all classes, have left for the general *dépôt* of the company at Navy Bay; also six steam pile-drivers. These have all gone out since the 1st of October; 14 vessels are now loading for the company at one time. The steamer *Georgeana* has sailed for the same destination. She is designed to carry free of charge the river, for the delivery and transportation of materials at various points on the line of the road, as the progress of the road requires.—*New York Herald*.

STEAM-BOAT BUILDING IN THE UNITED STATES.—The annual report of commerce and navigation gives the following aggregate of the number of steam-boats built in the United States since 1826. The decades of five years each:—From 1826 to 1829, 194; from 1829 to 1834, 304; from 1834 to 1839, 564, from 1839 to 1844, 222; from 1844 to 1849, 969: total, 2493. Two-thirds of these have been built in the west, principally in Ohio. The largest number of steamers built at one place were built in Pittsburg and its neighbourhood.

THE "GREAT BRITAIN."—This noble steam-ship has been purchased for the sum of £33,000, by Mr. Patterson, shipbroker of Bristol. Mr Patterson purchased her for the well-known firm of Gibbs, Bright, and Co., of Bristol and Liverpool, who were the agents at Liverpool for the Great Western Steam-ship Company, and who are largely engaged in the passenger and carrying trade between the United States, Australia, the Pacific, and British North America. It is intended that the large engines now on board shall be removed, and a new screw-engine of 1000 horse-power, of the Newark, "Leviathan" will convey a large number of our Transatlantic friends to view the World's Exhibition of 1851

SUPERSTITION IN THE NINETEENTH CENTURY.—"Last week," says a Sheerborn paper, "a man of the town of Axbridge sold his horse to a person of Cheddar, for the dogs. After the horse was shot and skinned, the companion of the person to whom it had formerly belonged asked for the hoof. 'What do you want it for?' said the person who had purchased it. 'Tan't I said the man, 'for 'Tom Thumb;' as he want to rarnut up.' 'What! to cure.' 'Noa, but he's a going to stick 'un in the pins, and rant 'un, for 'twas the best mar nif so be he do do that there, his horses will be better afterwards, for this is the way we've been 'bliged to kill a'than two months, and he da think he's over-looked?'"

BRECHIN.—Upwards of £170 has been subscribed towards the erection of a new church for the Scottish Episcopal Church here: and a subscription is also on foot to provide a fund for a sexton.

A forgery has been committed on the £5 notes of the Nottingham and Nottinghamshire Banking Company. A number of these notes have been passed at Derby (where two persons are in custody on the charge), Newark, and other places The forgery is lithographed, and is exceedingly well done; but the paper is very inferior None has yet been met with purporting to be issued from any of the branch banks; but they all bear the signature of "F. H. Smith" and "H. W. Wilcockson." Persons accustomed to the genuine note will easily detect the forgery.

The tradesmen at Nottingham, appeared panic-struck on Monday morning on hearing that another (the fourth) burglar had been committed, during the previous night, on the premises of Mr. Lumb, pawnbroker and jeweler, Goose Gate, Notts, from whence several hundred pounds' worth of property had been stolen, consisting of watches (gold and silver), numbering 40, a vast quantity of gold chains, rings, and plate, with different articles of superior clothing

"L'ILLUSTRATION" AND THE "ILLUSTRATED LONDON NEWS."

SHOCKING CASE OF UNFOUNDED ALARM.

We have been much amused by the perusal of an article in the French periodical, *L'Illustration*, one of the numerous family of imitators which the success of the ILLUSTRATED LONDON NEWS has called into existence, and which, in its number of last week, has indulged in the very ungracious and unfilial act of abusing its progenitor. It seems that we have excited the fears of our small Parisian friend by the announcement we have made, that during the Great Exhibition of the present year we shall publish our Journal in French and German, as well as in English. Our friend of the *Illustration* endeavours to conceal his terror at this portentous announcement under the mask of hilarity, and laughs lugubriously to think of the danger to which he will be subjected in his own domain, when we carry our resolution into effect. "The ILLUSTRATED LONDON NEWS," he says, with a pang but ill concealed under an attempt at mirth, "not contented with reigning peaceably over the three kingdoms, aspires to the conquest of the world, and to gather the laurels of Charlemagne and Napoleon. The ILLUSTRATED LONDON NEWS is going to publish in German and in French, and in a short time the Continent of Europe will be enabled to enjoy this delicate British pleasantry, which tickles the palate like a bottle of gin, and cheers the spirits like a glass of cider. Innocent Parisians," he continues, "and still more innocent inhabitants of Berlin and Vienna: you imagined that you had a sufficiency of men of talent (*gens d'esprit*) at home in your own country to amuse, or at least to divert you. Simple and silly illusion! Wit, knowledge, elegance, good taste, all that charms and enraptures are to be found in London, in the parish of St. Clement Danes:—Who would have thought it!" Having eased his overburdened mind to the extent of this overwhelming effort of his wit, our Parisian friend proceeds to assert, that the Continental people would not be, by any manner of means, amused or instructed by a translation of our Journal into French or into German; that they take no interest in the morning walks of Queen Victoria, in the afternoon airings of Prince Albert, or in the studies of the Prince of Wales or the Royal family; that they do not wish to know when Colonel Thompson will return from India, nor care in the least whether or not "Viscount Fielding is going to Rome." That *Illustration*, with that delicate and accurate perception of events in England which seems to distinguish it, thinks that Viscount Fielding has actually gone in the body to Rome—the City, and hopes to hear how many carriages and footmen he took along with him. The noble convert to Romanism will, doubtless, be as much amused at this admirable blunder as we are. The *Illustration*, after indulging in many more such remarks upon the news which appears in our Journal, and in the English newspapers generally—which it asserts to be not at all of a character to interest its readers, or indeed any persons of good taste or good sense, unless they be Cockneys—which, it says, all our readers are—makes itself merry about the scissors which it supposes perform all the editorial functions in our office; and asserts, that from beginning to end of our paper there does not appear an article—no, not even so much as a paragraph—that is worth reading! It is generous enough to admit that now and then, once in a month or so, we contrive to publish an engraving that deserves to be looked at, though not at all to be compared with any of those which from week to week appear in its own columns. It advises us, if we value its good opinion, to stick to our engravings, to the English language, and to the parish of St. Clement Danes, of which parish, by the way, it facetiously calls us the "beadle." Really, we are very sorry that we have so dreadfully shocked the nerves and "flurried the milk" of our delicate contemporary, and hope that it will speedily recover from the alarm into which it has so unnecessarily thrown itself. We did not know that it was subject to these hysterical fits. We should deeply regret if any evil consequences should ensue to it. *Pauvre petit damoiseau!* Let it take heart of grace—things are not so bad as it imagines. The *Illustration* is free to take its revenge against us. Let it publish in English, and meet us on our own ground—even in the parish of St. Clement Danes; and, to show that we bear it no ill-will—though it did its little utmost to be spiteful—we will undertake to make the announcement of its determination in our advertising columns, without charging it a *sous*. We will even pay the advertisement duty for it, and do our best to encourage it in the first attempt at anything like enterprise or spirit, which we shall have ever heard of in connection with its name. Still, with all our good feeling towards the *Illustration*, we must say that its attack upon us is somewhat ungrateful, considering the kindnesses we have done it ever since it was born, and the facilities our artists have from time to time afforded it. Surely it is a *leetle* too barefaced to deny us all merit, when it must know that it was obliged to copy our illustrations of the French Revolution, and of events passing under its own nose, because it lacked either the enterprise or the means to employ its own artists. If it cannot beat us in free competition even in its own capital, it is not handsome on its part, in a freak of alarm or of small jealousy, to abuse its benefactor. But we can forgive it; and trust that the *Illustration*, notwithstanding its present ill-humour, will make as free with our columns for the future as ever it did in the past. Indeed, we know that it will and must do so; necessity has no law. Yet we advise it with all friendliness, for the sake of its own repose, to cultivate the English language before it again criticises English newspapers. If it had done so in the present instance it might have spared its weak constitution the shock it has received, and learned that we are not going to gobble it up entirely, nor to encroach upon the dominions of the French or German press in the furious manner which it supposes. It is quite certain that neither the French nor German press can convey to the readers such full details of the Exhibition as we can; and it is equally certain that the *Illustration*, which could not illustrate the warlike doings of the Boulevards of Paris during the revolution [or the insurrection, will not be able to illustrate the more peaceful doings of Hyde-Park in London during the Exhibition. We sincerely hope that it will not be the death of our friend; but even if it be, we shall carry out our intention of publishing in French and German. The Cochin Chinese translation, which he thinks desirable, he may attempt if he pleases. But if he will take our advice he will cultivate English. Who knows, if, with a little knowledge of our language, he might not conquer us on our own ground! That would, indeed, be an achievement. Let him try. There is no knowing what good a small effort at originality might do him.

On Monday last Mr. T. B. Hobhouse, M.P. for Lincoln, attended at the Home office with a loyal address to the Queen from the Roman Catholics of Lincoln, for presentation by Sir George Grey Bart.

The splendid Rotton Park estate, near Birmingham, for a long period the property of the Boids, of Worcestershire, has just been purchased by Mr. Gillott, the steel-pen maker, for £95,000.

CHESS.

TO CORRESPONDENTS.

THETA: R M; D The prospects of the Chess Tournament are [illegible] to say, surpass the expectations of the most sanguine. [illegible] Most of those who are to be present, I believe, I [illegible] Pearce, [illegible] Williams, and [illegible] Calvi, all animated by the hope of winning from Harrwitz and Staunton, [illegible] of fame, are eagerly enrolling themselves for the lists of St. George.

Margaret.—Right as with an address We shall be glad to have the games in the Great Tournament.

JACK ROBINSON The moment a Pawn arrives at the final square, [illegible] the move, he may [illegible] any piece [illegible] without regard to the number then [illegible] board.

L. D.—Why [illegible] unnecessary work, and make yourself [illegible] Your [illegible] We have stated at least a hundred times that a player may [illegible] the solution [illegible] Queens on the board at the same time. The second Queen may be [illegible] any square [illegible] of Pawns, or by a Rook and Pawn, or by placing it on the Pawn

J. K. Sherburn.—The solution is correct, and [illegible] We have now received is correct. We shall be glad [illegible] games of your leisure attention.

S. D. P. We are particularly [illegible] to the Problems that [illegible] in the country who have been [illegible] with the subscription List on Perbenzon of the GREAT CHESS TOURNAMENT, *are not expected to return them before the end of February*

W. H. J. It is not customary in this country to warn an adversary of danger to his Queen by crying "Gare."

I. H.—There is no difference

C. F., Torquay.—Very pretty We shall be glad of a dozen neatly good. Can you favour us with the names of the other Chess-amateurs in your locality?

E. A. M. M., India. [illegible] Committee of India, which is organised for the purpose of [illegible] was that of London in carrying out the Chess Congress at the St George's Club [illegible] this spring, assumes very weak, as the Calcutta Club, [illegible] over [illegible] Calcutta Log *The members of Indian clubs are desirous of calling the attention of undertaking, either as players or subscribers. Should [illegible] no time in forwarding their names and subscriptions to Hermon Kock, Esq., Port-street, Calcutta* It is [illegible] two Match Games and Montebuller Bon-[illegible], which was to consist of the best [illegible] Games [illegible] in favour of our country-men, who won thirteen games to the [illegible] games being drawn The best of those games have been kindly placed at our disposal, and will appear shortly

SOLUTIONS of PROBLEM No. 360, by C M J, are correct All others are wrong

SOLUTIONS of PROBLEM No. 361, by H P, of Woodstock, R D S, *Euphrata*, Juventus Copperfield, B A Q A B, Dewdrop, Sandy, are correct All others are wrong

SOLUTIONS of PROBLEM No 362, by Judy, F G R, Juventus Veritas, An Amateur, R W C, H D M, Bolderdo, C H, of Graham's Town, Alpha and Omega, P R, Rajah Lee Lum, Bellary C Follero, C H, St Edmund, Drabsby, of Hotherdam, G E, J J, Hainworth, W K R, M L, of Newcastle, Bath Dub, Mr W H A B, Eton Club, Dana, M D P, R L, P S, H W, and [illegible] All others are wrong

SOLUTIONS of ENIGMAS, by T E D, Juventus, Judy, Agnes, F G R, An Amateur, Bolsdona, R D M, C M J, Dervish, P S, of Manchester, C T, Bellary, C H L, Jack, *Euphrata*, Geo, M P, Baron M, P Devny, are correct All others are wrong

*** Correspondents not replied to this week may have attention in our next.

*** Any Amateur, desirous of playing a Game, at Correspondence, may meet with an opponent by addressing "I. W., Post-office, Kidgate-alley."

SOLUTION OF PROBLEM No. 361

WHITE.	BLACK.	WHITE	BLACK.
1. Kt to Q 3d (ch)	K to his B 6th	3. Kt to Q 4th	Anything
2. Q takes R (ch)	K takes Q	4. P to K B 3d	Mate

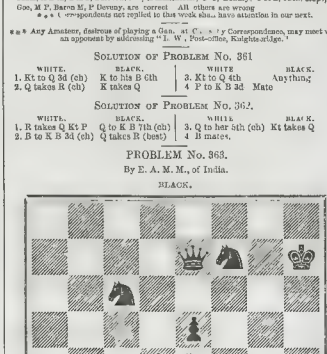
SOLUTION OF PROBLEM No. 362.

WHITE.	BLACK.	WHITE	BLACK.
1. R takes Q Kt P	Q to K B 7th (ch)	3. Q to her 6th (ch)	Kt takes Q
2. B to K B 3d (ch)	Q takes R (best)	4 B mates.	

PROBLEM No. 363.

By E. A. M. M., of India.

BLACK.



WHITE.

White, playing first, mates in six moves.

CHESS IN PARIS.

GAME between M. KIESERITZKY and Mr. SCHULTEN.

(*King's Bishop's Opening.*)

WHITE (Mr. K.)	BLACK (Mr. S.)	WHITE (Mr. K.)	BLACK (Mr S.)
1. P to K 4th	P to K 4th	14. B takes Kt	Kt P takes B (discovering ch)
2. K B to Q B 4th	K B to Q B 4th	15. K to Kt sq	P takes Q B P
3. P to Q B 3d	Kt to Q B 3d	16. R to K sq	P takes Kt P
4. Kt to K B 3d	P to Q 3d	17. R to K 4th	R to K Kt 3d
5. Castles	B to K Kt 5th	18. P takes R	P takes R
6. Q to her Kt 3d	B takes K Kt	19. Q to K 6th	K to Kt 2d
7. B takes K B P (ch)	K to B sq	20. P to K 5th	Q to K sq
8. B takes Kt	R takes B	21. Q to K B 6th (ch)	K to R 2d
9. P takes B	P to K Kt 4th	22. Kt to K 4th	P takes Q B P
10. P to Q 3d	Kt to K 2d	23. R to K Kt sq	P takes Q Kt P
11. B to K 3d	Kt to K Kt 3d	24. Kt to K Kt 5th (ch)	Q takes K P
12. Kt to Q 2d	Kt to K B 5th (a)	25. Q takes Q	and, of course, White won (b)
13. P to Q 4th	B to Q Kt 3d		

(a) Kt to K 3d looks still better

(b) Two contests between these gentlemen would be infinitely more edifying these odds were given to the superior player from want of this, another party plays up to his force, and the games between them, for the most part, are quite unworthy of their reputation

Dashing specimen of the Scotch Gambit played at the Ryde (Isle of Wight) Chess Club, Mr. HARRY WILSON giving the Queen's Rook to an Amateur.

(*Remove Black's Queen's Rook from the board.*)

BLACK (Mr. H. W.)	WHITE. (Amateur.)	BLACK (Mr. H. W.)	WHITE (Amateur.)
1. P to K 4th	P to K 4th	14. Q takes P (ch)	K to Q Kt sq
2. K Kt to B 3d	Q Kt to B 3d	15. B to K R 6th	Q to K sq
3. P to Q 4th	P takes P	(15.) Q takes B	P to Q Kt 3d
4. K B to Q B 4th	K B to Q B 4th	17. P to Q Kt 4th (b)	Kt takes P (c)
5. Castles	K Kt to B 3d	18. R takes B	Q takes R
6. P to K 5th	P to Q 4th	19. Q takes R (ch)	K to Kt 2d
7. P takes Kt	P takes K B	20. Q takes K (ch)	K takes Q
8. R to K sq (ch)	Q B to K 3d	21. P to K Kt 8th, becoming a Queen	
9. P takes K B P	B to K Kt sq	(ch)	K to Kt 2d
10. K Kt to his 5th	K B to K 2d (a)	22 Q to her B 4th	Q to K 8th (ch)
11. K Kt takes Q B	P takes Kt	23 Q to K B sq	
12. Q to K R 5th (ch)	K to Q 2d		
13. Q to K B 7th	K to Q B sq		

And White struck his colours.

(a) Q to her 3d would have been much better play in every respect

(b) The attack is gallantly kept up from the beginning

(c) This was a mistake—as Mr. Wilson easily enabled to consider that Black, after the exchange of his Q for the Rooks, could bring his second Queen back in time to prevent the fish-shaved Mate.

CHESS ENIGMAS.

No 634.—By W. GRIMSHAW, of York.

White. K at Q Kt sq., B at K B sq., Kts at K B 4th and Q 4th.

Black. K at Q 4th, Ps at Q 6th and 7th

White to play, and mate in three moves.

No. 635.—By R. B. W., of Oxford.

White. K at Q R 6th, Q at B 7th, R at K R 7th, B at Q R 2d, Kt at K 8th, Ps at Q 3d and Q B 3d.

Black. K at Q B 4th, Q at K B 7th, B at K B sq., Kts at K B 5th, K 2d, Q 3d, and Q Kt 4th.

White plays, and mates in three moves.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Earl of Chichester, it was understood, was to be proposed for the vacant office of chairman of Committees in the House of Lords next session However, it has been found that his Lordship could not possibly discharge the duties of that office along with those which devolve on him as Lord of the Lieutenancy, Commission and all intention of putting him forward has been reluctantly abandoned. We believe we are correct in stating that Lord Wharncliffe will be now proposed to fill the vacant office, with every likelihood of success.

An address expressive of the sense they entertain of the ability and discretion with which Master Dowdeswell discharged the important duties of Master in Chancery, during a period of 30 years, has just been presented to that gentleman, signed by the principal members of the legal profession

Cardinal Wiseman has received autograph letters of congratulation from their Majesties the Queens of Spain and Portugal, completing the number of Catholic Sovereigns of Europe who have addressed his Eminence on occasion of his appointment

The Hon. T. Vesey, M.P., and Lady Emma Vesey, spent a portion of each of several days last week distributing their accustomed annual supply of clothing, &c, to the poor in and about the town and neighbourhood of Abbeyleix (West of Ireland.)

On Friday morning week, a number of workmen commenced pulling down the railings and the lodge at Cumberland-gate, the entrance to Hyde-park from the top of Oxford-street. At the same time they began building a smith's forge and workshop, together with sheds for the accommodation of brick-layers and masons. On inquiry, it was stated to be the intention to erect the marble arch which had been taken from the front of Buckingham Palace upon this site.

Colonel Hugh Rose, Consul-General for Syria, has been appointed Secretary of Embassy at Constantinople. By this appointment a saving of £—00 a year will be effected, as it is not probable that the vacancy in Syria will be again filled up.

On the northern diver, shot at the mouth of the Spey one morning lately was found to have in his pouch no fewer than 19 flounders and a salmon trout. A fair morning's work the diver had made

A very large block of granite, being more than 20 feet long, of the finest quality and colour, has lately been raised by the Cheesewring Granite Company, at their quarries on the Cheesewring Hill, which is intended to be sent to the Great Exhibition of 1851.

The completion of the Bohemian and Saxon Railroad has been announced The first experimental train left Aussig on the 21st of December, and reached Prague without accident. On the 24th, the station near Teischen on the Elbe, at which the Austrian and Saxon trains meet.

His Netherlands Majesty has granted a concession to Messrs C. de Vries, D.C., Rysheversel, Fop, Smit, and Looyport, for establishing a steamboat service in Netherlands India. The contract has been in progress for some time.

Mr. Alfred Graham, one of the surgeons of the Cunard line of steamers, arrived in Liverpool on Saturday evening, in the *Europa*, from Boston, being the seventeenth trip across the Atlantic which that gentleman has made during the current year. The total distance sailed is more than 70,000 miles, equal to very round the globe. This, we believe, has never been surpassed; if it has ever been accomplished before, is doubtful

The cholera is prevalent on the Mississippi river, nearly every steamer losing a number of passengers The mortality is chiefly among the emigrants, who, moving in crowds, and evincing little regard to cleanliness, pay the penalty of their location.

A poor man, of the name of Evan Lewis, met an awful death by incautiously sleeping in an ashpit at the Margam Copper Works (Wales), on Christmas Eve. The poor fellow was found in the morning burnt to a cinder

A man named Gilchrist, lately a labourer in the employment of the North British Railway Company, was apprehended a few days since upon suspicion of having been implicated in the late robbery of the sum of £250 from the offices at St. Margaret's, on the North British Railway. He was on Tuesday committed for trial

By the arrival of the *Navigator* we have advices from the city of Buenos Ayres to the 26th of October inclusive. At that time no hostilities had commenced. In fact the news previously received respecting war in La Plata seemed to be more talk.

The Christmas week in Cheltenham, says a local journal, has been as gay as the most ardent votary of pleasure could wish for. In public, as well as in private life, the festive character of the season has been well maintained—a concert, two balls, and three steeple-chases sufficiently attest the former; while the numerous dinner and evening parties which have taken place in our wealthy and fashionable circles vouch for the latter

George William Gent, Esq., of Moyns Park, in the county of Essex, at his audit, last week, made a very liberal abatement of 20 per cent upon the year's rent of all his tenantry, &c.

The trustees of the late Colonel Cheape, of Grigenti, are now, in terms of his bequest, paying over to the infirmaries of Edinburgh, Glasgow, Dumfries, Aberdeen, and Inverness, the sums realised from his estate. It was expected that each of the charities would receive £3000; and, though the whole of the estate has not yet been disposed of, £1800 has already been allotted to each

The latest accounts from Killarney are that Mr. Daniel O'Connell is progressing favourably, under the loss of his two fingers and the [illegible]

The Duchess of Angoulême arrived at Venice on the 22nd ult. She has travelled under the name of the Countess de Marne, and is to pass the winter in that city, in the hotel of the Duke de Bordeaux

Sir Henry Bishop, who lectures in Newcastle early in 1851, presided on Saturday at a meeting there, of the Musical Instrument Commissioners (Exhibition of Industry).

A considerable seizure has been lately made on the coast between Cardigan and Newport, of tobacco, snuff, and spirits the officer who detected it being stationed at Newport

The vessel *Golden Spring*, which has arrived in the docks from Bombay, has brought, as a portion of a large general cargo of East India produce, 20 bales of cotton seed, consigned to order for Boston.

Dr. Murphy, the Roman Catholic Bishop of Cloyne and Ross, has subscribed £.60 towards the Catholic University (Ireland), Fund.

An Exhibition of fine art has just been held at Belfast, which has been most productive in the sale of works, and highly creditable to the artist contributors.

At Little Paxton a destructive fire broke out in the rickyard of Mr. John Cross, farmer, about half-past six o'clock in the evening of Christmas Day, which consumed several stacks of wheat, barley, and beans, estimated value about £600, no doubt the act of some vile but yet undiscovered incendiary

During the past week those flowers of spring, the lesser periwinkle, strawberry, and violet, have been gathered from the hedges in the neighbourhood of Liskeard, (Cornwall). Polyant-nuses and wallflowers may also be seen in bloom in many gardens there.

Her Excellency the Countess of Clarendon, accompanied by Sir William Russell, Bart., *aide-de-camp*, distributed warm clothing on Christmas eve to 250 poor persons assembled at Castle-nock glebe, county Dublin, and selected by the clergymen of the various religious denominations in the neighbourhood

Several colliers, from Kilmarnock, have been hired by the Hudson's Bay Company to proceed to Vancouver's Island, in order to work the coal mines

The snow is lying so deep in the northern parts of the department of the Corrèze, France, that the roads are blocked up. On the departmental road between Limoges and Bort it was 10 inches deep.

M. Christian Lauritz Sverdrup, for 42 years professor of philology at the University of Christiana (Sweden), has just died in that place age 176

Baron Constantine de Schnitzler, son of one of the principal bankers of Augsburg (Germany), has just embraced the Catholic faith, and intends, it is said, to take orders

The eldest daughter of Schiller, Madame Caroline Junot, died suddenly, on the 19th, at Wurtzburg, in Bavaria.

The *Fropontis*, a screw steamer, which has been running between London and the Levant, has been appointed to transport the next Cape of Good Hope mails from Plymouth.

The population of New York at present is 517,849. If Brooklyn, Williamsburg, Jersey City, Staten Island, New Brighton, &c., all built up from the surplusage of the metropolis—of which they may be regarded as the suburbs—were included, the population would amount to 700,000

Such is the state of her Majesty's highways in some parts of the village of Wem, in Cambridgeshire, at this the 19th century, that many of the inhabitants are obliged to resort to the disagreeable use of crutches, to visit their neighbours We wish the good folks of Wicken would try an[illegible] their ways

A large consignment of oranges was recently landed at Chester, into which port oranges had not yet been imported since 1830.

The British Museum was closed on Tuesday, not to re-open till the 8th inst., when the Nineveh Gallery will be open for the inspection of the public.

The noble estate of Lord Ribblesdale at Malham, in Yorkshire, comprising upwards of 10,000 acres, has just been purchased by Mr. James Morrison, of Basildon Park.

We read in one of the Belgian papers that the Common Council of Malines has appointed MM. Huain and Tuerinckx professors of painting and statuary to that town. The last named is the sculptor of the well-known statue of Marguret of Austria which adorns the Grand Place of Malines

The perseverance of Messrs. W. H. Brancker has been rewarded by the discovery of the "Orrell 5-feet seam," near Wigan, which they have long sought, despite the persuasions to desist which both friends and foes urged. The depth at which the prize has been won is 450 yards

We are informed, says the *Morning Post* of Wednesday, that Mr Sergeant Bellasis has joined the Roman Catholic Church. The Rev. Mr. Lascelles Randaye, late curate of Archdeacon Manning, has also made his profession at Margate.

WINDSOR CASTLE.—THE STATE APARTMENTS.

The *Gazette* of yesterday week contained the gratifying intelligence of the re-opening to the public of the State Apartments at Windsor Castle. As this notification is of general interest, we here reprint it:—

"Lord Chamberlain's Office, Dec. 27.—Notice is hereby given, that the works at Windsor Castle connected with the State Apartments being now completed, the State Apartments will be open to the public, as heretofore, from the 1st of January next. The State Apartments in Windsor Castle will be open gratuitously to the public, on Mondays, Tuesdays, Thursdays, and Fridays. The Lord Chamberlain's tickets may be obtained in London (gratis) of Messrs. Paul and Dominic Colnaghi, printsellers, No. 14, Pall-mall East; of Mr. Moon, printseller, No 20, Threadneedle-street; of Mr. Mitchell, bookseller, No 33, Old Bond-street; of Messrs. Ackermann and Co., printsellers, No 96, Strand; and of Mr Wright, bookseller, No. 60, Pall-mall, of whom, also, guide-books may be obtained, for one penny each. The tickets are available for one week from the day they are issued. They are not transferable; and it is contrary to her Majesty's command that payment for, or in reference to, them be made to any person whatever. The hours of admission to the State Apartments are—from 1st April to 31st October, between eleven and four; and from 1st November to 31st March, between eleven and three."

We are reminded by this re-opening to resume our Illustrations of the Royal Apartments. This we do with

THE GUARD CHAMBER,

which the visitor enters on leaving St. George's Hall.

The Guard Chamber contains a large collection of arms and armour, ingeniously disposed. Some whole length figures are clad in the armour of the personages, the name inscribed on the bracket on which each figure stands. Thus we have suits of armour once belonging to a Duke of Brunswick, 1530; Lord Howard, 1588; Earl of Essex, 1596; Henry, Prince of Wales (eldest son of King James I.), 1612; Charles, Prince of Wales (Charles I.) 1620; and Prince Rupert, 1635. At the south end of the room, is a portion of the foremast of the *Victory*, Lord Nelson's Flag Ship at the battle of Trafalgar, perforated by a cannon-ball during that sanguinary encounter. This interesting relic was in the possession of King William IV., who, upon his elevation to the Throne, had it removed from Bushy (where it had stood in his dining-room) and placed in its present position, as a memorial of the hero, whose colossal marble bust, by Sir Francis Chantrey, is placed, "Auspice Gulielmo IV.," on the top of it. On each side of this relic is one of the two brass Field Pieces taken during the late campaign in the Punjaub, and selected by Viscount Hardinge from the great mass of captured Sikh artillery, to be forwarded to England as memorials of the prowess of the British arms. These guns were cast in England; the carriages (formed of Teak wood) were made at Cawnpore; and the whole forwarded to Lahore by the East India Company, as a present to Runjeet Singh, by whom they appear to have been held in much estimation, if a judgment may be formed from the elaborate ornaments of brass and mother-of-pearl with which he has had the carriages decorated, and which do great credit to the native artists. In their present locality they may be considered as appropriate and significant companions to two small pieces of Brass Ordnance, apparently of French manufacture, formerly belonging to Dyppoo Saib, Sultaun of Mysore, and taken at the capture of Seringapatam. One of these is most elaborately and tastefully embossed, and inlaid with gold; the other is plainer and rather smaller; and both are mounted on mahogany carriages of English manufacture.

THE GUARD-CHAMBER.

Here are also placed the busts of John Churchill, Duke of Marlborough, copied from Rysbrach by Sevier; and Arthur Wellesley, Duke of Wellington, by Chantrey; having suspended over them the small banners

When Queen Anne was sitting in her closet, which commanded a fine view over the northern terrace of the Castle, she received the news of the victory of Blenheim; and for several years in that closet was deposited the banner of France

A flag of white sarcenet, embroidered with three *fleurs de lis*. It was afterwards kept in the Queen's Presence Chamber, on an elegant buhl table; but it now hangs over the bust of the hero in the Guard Chamber. The Duke of Wellington's tri-colour hangs in like manner over his bust, and the estates of Blenheim and Strathfieldsaye are held upon the tenure of these banners being presented every year at Windsor Castle—the former on the 2nd of August, before twelve o'clock, and the latter on the 18th of June.

The exquisitely wrought shield in a glass-case over the fire-place is said to have been presented by Francis I., King of France, to our Henry VIII. at their interview at Ardres, near Calais, May 31, 1520. The workmanship is ascribed to Benvenuto Cellini, and its exquisite finish is in every way worthy of that most able artificer and extraordinary man. Around its extreme edge appear some verses, which are printed in the "Penny Official Guide-book."

Two other relics of great but dissimilar interest, are also placed in this room. These consist of two chairs—one, made from an oak beam taken from "Alloway's auld haunted kirk," in Ayrshire, the scene of the demon revelry in Burns's "Tam o' Shanter." The poem itself is engraved on the brass panels, at the back of the chair, with a certificate of the genuineness of the relic.

The other chair is made from an elm tree which grew on the battle-field of Waterloo. In the upper portion of the back, over a carved representation of the village and church of Waterloo, is a Latin inscription to George IV., surrounded with military trophies, below which, immediately under a helmet supported by flags, is a descriptive English inscription

From the Guard Chamber the visitor proceeds to

THE QUEEN'S PRESENCE CHAMBER,

the ceiling of which is painted by Verrio, and in it he has again introduced Catherine of Braganza, Queen of King Charles II., as the principal figure. The Queen is seated under a canopy spread by Time and supported by zephyrs. Below these groups, Justice is driving away Sedition, Envy, and other evil genii. Thus and the ceilings of the Queen's Audience Chamber, and the State Ante-Room, are all that it was found practicable to preserve of Verrio's productions in this way, in the last extensive repair and alteration of the Castle.

The walls of this room are decorated with Gobelin tapestry, representing other portions of the history of Esther and Mordecai, in continuation of those in the Queen's Audience Chamber. In the first on entering from the Guard Chamber, Esther is seen making her request to King Ahasuerus at the banquet. The next represents Esther, who, having resolved to intercede for the deliverance of the Jews, presents herself before the King in the inner court, and obtains the grace of the golden sceptre. Then follows a representation of the contemptuous behaviour of Mordecai to Haman. These last two pieces are on the north side of the room, one on each side of the fire-place. The remaining one is at the west end, and represents the final doom of Haman.

Over the door-ways of this room are portraits of two Princesses of the House of Brunswick, each surrounded by some of the finest specimens of Gibbon's Grinch like carving. The visitor entering from the Princess Elizabeth of Brunswick, whole-length, by Daniel Mytens, the elder, 1609

On the opposite door to that by which the room is entered, hangs the portrait of the Princess Dorothea of Brunswick, whole length, by Daniel Mytens, the elder, 1609.

Over the chimney-piece (sculptured by Bacon) is a portrait of Henrietta Maria, Duchess of Orleans, by Mignard, and her two daughters, Maria Louisa and Anna Maria. The first was married to Charles II., King of Spain, and the second to Victor Amadeus II. Duke of Savoy and King of Sardinia.

THE QUEEN'S PRESENCE CHAMBER.

ANNIVERSARY FESTIVAL OF THE COMMERCIAL TRAVELLERS' SOCIETY, AT THE LONDON TAVERN.

COMMERCIAL TRAVELLERS' SCHOOL.

ANNIVERSARY FESTIVAL

YESTERDAY week (December 27), the Anniversary Festival to celebrate the foundation of this excellent institution, established for the benefit of the children and orphans of Commercial Travellers, took place at the London Tavern, Bishopsgate-street. The chair was ably filled by the Right Hon. the Lord Mayor, supported by the Sheriffs, the Mayor of Bristol, John Masterman, Esq., M.P.; Rev. H. T. Hughes; John Bagully, Esq.; R. Bagauly, Esq.; H. Teape, Esq.; Frederick Horton, Esq.; T. Meape, Esq.; Arthur Wilcocxon, Esq.; E. M. Cole, Esq., Bristol; J. G. Shaw, Esq., Bristol; — Thomas, Esq., Bristol; Robert Clarke, un., Esq.

The guests numbered about 250 gentlemen, and the galleries were graced by a goodly assembly of ladies. The musical arrangements were excellent; Miss Dolby, Mr. Machin, Mr. Young, Mr. Horn, and Mr. Land sang with great success; and a new song, entitled "Pity's Tear," written by Mrs. Cuffley and composed by Mrs. Walsh, and sung by Miss Dolby, was received with a hearty encore.

The general feeling manifested by the guests throughout the evening, gave abundant evidence of the fact, that the cause of the Commercial Travellers' Schools continues to be well supported by those whose sympathies ought naturally to be directed to the welfare of the institution.

The health of her Majesty, and of Prince Albert and the Royal Family, having been responded to,

The Right Hon. Chairman gave "Prosperity to the Commercial Travellers' Schools." His Lordship commenced his address by calling attention to the further end of the room, and the interesting scene in the gallery (where the children now receiving their education in the schools were assembled). The healthful appearance of those children offered, in his opinion, the strongest appeal to their hearts and Christian feelings; and his present conviction was, that nothing he could say or do would produce so much effect upon their minds as the sight now presented to them. But there was something more which attracted the eye on this interesting occasion. If he looked underneath the gallery, and marked the countenances of the ladies come to rejoice at this, their day of festival, he felt at once the conviction that the appeal he was about to make on behalf of the necessitous children of their less fortunate brethren would not be made in vain. It should be recollected that the institution was not designed for the purpose of granting pensions to certain persons in age or infirmity, or alleviating the diseases to which the human frame was subject, but its object was to educate the orphan and necessitous children of their brethren, and in such a manner that at some future period their position in society might entitle them to sit at the present table, fully appreciating the benefits which had been conferred upon them. (Hear, hear.) The education of the youthful population of this country was of paramount importance at the present moment, and if ever there was a period when it was necessary that the youthful mind should be properly instructed, whether in a political or moral point of view, it was at the present time. (Hear.) He was quite sure that the future prosperity of this country depended upon the education of the people; and he considered it a part of his present duty to impress this fact upon their attention, because he could not help thinking that there was no one amongst this company who had not some reason to feel interested in the success of such an institution as the Commercial Travellers' School. How many children were there whose parents (former y ties associates and companions of those now present) being removed from them by the stroke of death or misfortune, had been left to the charitable consideration of their friends? In whatever station in life such children might hereafter be placed, he trusted that they would have good reason to bless their kind friends who appeared here to-day, and that they might feel that some portion of the good they experienced had been caused by the beneficial exertions of those who had met the Lord Mayor on the 27th of December, 1850. (Hear, hear.) His Lordship concluded by reading the following letter, which he had received from Mr. George Moore, the treasurer to the institution, and which he stated was well worthy of so old and valued a friend of the Commercial Travellers' School:—

5, Bow Churchyard, Friday evening, Dec. 27, 1850

My dear Lord Mayor,—My doctor will not permit me to support you as person to-night, I therefore enclose you a cheque for thirty guineas, being ten guineas each for myself and partners, Mr. Gronnock and Copestake. When you so readily responded to my request nearly twelve months since, to preside to-night, I hoped as treasurer, I should have had the pleasure of reporting that we had raised the whole of the building fund; we have only raised two-thirds of it, and we have still about £500 to get of the £1,700. Will you, with your usual eloquence and convincing language, stimulate your guests to form deputations for the purpose of canvassing Liverpool, Leeds, Bradford, and other large towns, and which towns, I doubt not, will vie

of all commercial travellers to support to the utmost of their power this exemplary institution.

Mr. Robert Clarke, jun., in returning thanks, said:—"In consequence of the vigorous exertions you were making on behalf of the building fund, it was feared that the annual subscriptions would have fallen off; they have not, however, decreased one shilling, but, on the contrary, there has been an actual increase. (Cheers.) With regard to the building-fund, the actual amount received up to the 18th of the present month is £7601. Of this sum no less than £ 361 have been received during the past twelve months" Mr. Clarke concluded by announcing a donation of ten guineas in the name of the United Gardeners' Association. (Cheers.)

Several routine toasts were then proposed and warmly responded to, and the company separated.

The subscriptions and donations announced in the course of the evening amounted to a considerable sum.

Mr. Harker was the toastmaster

MUSIC.

LONDON SACRED HARMONIC SOCIETY

The performance of Handel's "Messiah," at Exeter Hall, under the direction of Mr. Surman, was gratifying, in many particulars. The choral body is remarkably powerful in quality as well as in quantity, the trebles and basses particularly distinguished themselves. The choruses "His yoke is easy," "The Lord gave the word," "For unto us a child is born," "Glory to God," "Lift up your heads," and the "Hallelujah," were remarkably well sung; those of "Surely he hath borne our griefs," "And with his stripes," were less successful. The orchestra, if not so strong in stringed instruments as could be desired with such a phalanx of cavaliers, executed the accompaniments steadily under Blagrove's leadership. Mrs. Sutherland has much a beautiful, expressive voice, but it is to be regretted her style is not more finished. Miss M. Williams sang the contralto part to perfection; the air "He was despised" was never before given by her with such truly devotional feeling and intense pathos. Miss Henderson, a pupil of Mr. Jolley, the organist, is a soprano of much promise. Mr. Lockey had the tenor music, and Mr. Lawler, in the absence of Mr. Phillips from indisposition, was allotted the whole of the bass solos. The Hall was crowded to excess, and the performance evidently afforded the highest gratification.

MUSICAL EVENTS.

A concert took place at the Beaumont Institution, Mile-end, last Monday night. The vocalists were Mrs. Sims Reeves (Miss Lincombe formerly), Miss Lizzy Smart, Miss Dolby, Messrs. Sims Reeves and Borrani, Miss Barfield Williams (piano), and Mr. H. A. Brown, conductor.

Mr. Albert Smith gave his "Overland Mail" last Monday, at the Music Hall, And Mr John Parry will present his "Notes" next Tuesday, at the same locality.

The performances on the Pantomimic, at the Adelaide Musical Gallery, continue to attract large audiences. The organ-playing at the Cyclorama exhibition is also one of the metropolitan musical attractions of the day.

Scribe and Halévy's new three-act opera, the "Queen of Spades," was produced at the Italian Opera, in Hadrey's "Jaive," has made his *début* at the Parisian Grand Opera, as *Arnoldo*, in Rossini's "William Tell."

The new ballet for Cerito, "Paquerette," will be produced in Paris before the end of the month. The new three-act opera "Sappho," for Madame Viardot, by Gounod, is also in preparation.

Donizetti's "Linda" has been another success for Sontag, at the Italian Opera, in Paris: Calvolari was *Carlo*; Mdlle. Lia Bertrand, *Carlotta*; Ferranti, the *Marquis*, Scarpa, the *Prefetto*; and Delle, the new barbiton, *Antonio*.

Mdlle Emmi la Grua, a pupil of Madame Ungher, who is engaged for Paris, has made a most triumphant début at Dresden in *Alice*, in "Robert le Diable:" she was to appear as *Fidelio*, *Servilia*, *Amina*, and *Zerlina*, in the masterpieces of Meyerbeer, Bellini, and Mozart

Flotow's "Catharina, die Grand Duchess" has been produced at Frankfort with the greatest enthusiasm.

Castellan is the Queen of Opera in Berlin, exciting enthusiasm in ... days, whether it be *Alice*, *Desdemona*, *Rosina*, *Zerlina*, *Amina*, or *Lucia*.

Letters from St. Petersburgh state that the season at the Italian Opera House had been enlivened by the débuts of Grisi, whose places had been very worthily filled by Mdlle. Corsini: the latter made her *début* in Verdi's "Lombardi," and has since played *Norma* and *Lucrezia Borgia*, but with no success. Fortunately, Madame Persiani's triumphant delineation of *Amina*, in the "Somnambula," and *Rosina*, in the "Barbière," had amply consoled the amateurs. Never had Persiani been heard in more beautiful voice: independently of the ovations on her representations, she received a present of the Emperor and Imperial family. Mario was singing superbly; he had played *Elvino*, *Genovese*, and *Count Almaviva*. Tamberlik, after recovering from the effects of the chicanes, electrified the audience as *Arnoldo*, in Rossini's "William Tell:" his *scena finale*, in which he gave out the *ut de poitrine* with enormous power, was followed by continued acclamations. He is to play *Roberto* in Meyerbeer's opera, for his benefit, with Tamburini's *Bertramo* and Madame Persiani's *Alice*. Mdlle. Murray had appeared as *Norma* in "Don Pasquale," the *Old Batchelor* sustained capitally by Ronzi, an admirable buffo. Mdlle. De Meric had played *Grisini* and *Perrotin* in "Linda."

M. Julien has commenced his concerts in the provinces, at Manchester, in the Free Trade Hall; and in the Philharmonic Room, at Liverpool; the attendances were great in both towns, the French drummers making their usual quantity of "effect." Mdlle Jetty Treffz, the famed M. Vivier (the horn player), M. Lavigne, Mr. Koenig, M. Collinet, Herr Sommerkamp, M. Alfred Mellon, Winterbottom, and Mr Jarrett, are included in M. Julien's company. He will give a *bal masqué* at Liverpool, and one at Manchester.

THE THEATRES, &c.

DRURY-LANE.

On Saturday was performed "The Love Chase," and the occasion was rendered note-worthy by the return to the stage of Mr. Walter Lacy, who for the first time enacted *Wildrake*. This event deserves especial notice, and Mr Lacy, by his admirable manner of supporting a peculiar and fantastic character, requiring the combination of rare qualities, has once more established himself as a public favourite. Mrs. Nisbett was *Constance*, a part which she has made so thoroughly her own that criticism on it were now affectation. Mrs. Parker, too, made her first appearance here as *Widow Green*; and, together, the comedy went off with *éclat*. The pantomime of "Cinderella," we understand, has had much manipulation since the first night as to be considerably improved in action and effect.

It is a change of performance every night at this theatre. On Monday Mr. Anderson performed *Hamlet*, when Mr. Walter Lacy, as well as her husband re-appeared on the stage. To the usual scenes of *Ophelia* she gave both point and pathos. Mrs. Terman was the *Gertrude*.

On Tuesday evening, the first part of "Henry IV" was revived. The *Prince of Wales* is one of those characters for which Mr. Anderson is peculiarly fitted, but each peculiarity fit him. It was pleasant to see Mr Vandenhoff in *Hotspur*. His vocal style brought out the fine poetry with which the part abounds, though somewhat too measured passages for the fiery youth of Harry Percy. Mr. Walter Lacy was confided to Mr. Barratt, who made his first appearances at the theatre. This gentleman's voice is bad, he has considerable humour, and altogether his performance was respectable. The play was on the whole, well cast, and the house respectable.

SURREY

This theatre has provided an extra novelty for holiday-folks, in the shape of a translated melodrama from the French, by Mr. C O'Brvan, entitled "The Countess of Tersan." The piece is not one of first-rate merit: its interest is of a ... character, and its conduct occasionally unartificial, but there is that in ... to command the attention, and is capable of amusing an unrefined audience ... opinion, and one which we have stated more than once, that, ... scenes, a respectable management, instead of starving the supposed low taste of a crowded audience, should take advantage of these immense gatherings to present pieces calculated to improve and elevate the popular mind and judgment. Were this done considerately, and with some common taste and care, we should soon have our best dramas supported by the numbers who are now supplied only with the worst. In making these remarks let us not, however, be misunderstood as intending any special condemnation of the particular piece, which on Monday night was effectively played, and proved successful.

The story of the drama, which is in three acts, turns on the fortunes of a lady, *Elise*, Countess of Tersan (Miss Cooper), who has two husbands—the first an escaped convict, *Isadore Prix* (Mr. Shepherd), and the second *Edouard*, Count de Tersan (Mr. Rouse), under the name of Manoleur (Mr W Montague). The distress of the lady has not been undeserved, for she had incurred her father's curse by marrying against his consent. But for this error she has indeed atoned, by supporting that same father in his blindness, as an unknown benefactress. This character, intensely French, but pathetic, was powerfully played by Mr. Mead. The event of the piece turns on the conduct of *Corporal Intimé* (Mr. H Widdicomb), an old soldier with a romantic vein, who circumvents a plan of assassination, of which the contriver justly becomes the victim; and thus the lady is raised of her convict husband, who is, indeed, a villain in grain, not to be touched by generosity, and repays kindness even to the saving of his own life, with the intended murder of its magnanimous agent. The part assigned to the one with which Mr Shepherd was well pleased, and he played it with considerable force. Miss Cooper also deserves much commendation for the ... lady-like manner in which she supported the distressed *Countess*, in the different and alternate phases of her character as wife and mother for she has a son, by the outcast, *Jules*, a supposed orphan, admirably played by Miss Mandlebert.

The house was crowded to suffocation, and the performance were crowned with applause.

SADLER'S WELLS.

"The Duchess of Malfi" has been reproduced for the holiday season, and attracts crowded audiences. This is taking the right course, and repaying the festival visitant with the best fare the house affords. We are glad that the expenment has been made, and have no doubt of its success.

THE COLOSSEUM.—"THE LAKE OF THUN."

The Colosseum has re-opened, having been just embellished with a new panorama—a fine specimen of tempera'd painting, which possesses the advantage of being viable during the day without the aid of artificial light. The subject of it presents Swiss scenery in its highest perfection and beauty. The artists, Messrs Danson and Son, have visited for the purpose the Lake of Thun, and painted from nature on the spot, a finished and a combination of the finest points in nature—ravine, mountain, gorge, pine forest, river, lake, canal, landslip, islet, garden, and road—all of which are artistical objects of interest in the district. terrace, promenade, castle, and similar structures. Animation is given to the pictures by well-disposed groups of tourists and other persons, variously engaged All this is further included, to quote from the official description, in a "magnificent belt of Alps, heavy glaciers, and rocks—some barren, others wooded to the top" each contributing to form a prospect "of surpassing loveliness and grandeur." To increase, if possible, the interest likely to attach to this charming picture, the proprietors have re-opened the gallery at the top of the building, from which, on a fine day, the real and living panorama of our own great metropolis can be contemplated by the visitor. This gallery used to be one of the most popular points of the Colosseum, and its restoration to the public will, we should think, increase the attractions of the establishment.

SOIREES PARISIENNES ET FANTASTIQUES.

Under this title M. and Madame Robin, from the principal Continental theatres, have commenced a series at the "Salle de Concert," No. 8, Rue Bois, 232, Piccadilly." The programme is stated to be selected from this gentleman's original experiments and inventions, too numerous to be copied from the handbill, presented at the door. M. Robin, the Martan, and Jobez Duprez of Paris, on the great reported success of which, after witnessing them, we cannot be sceptical. The conjuring and illusion are of the highest order; the sleight of hand being incomparable, and the ventriloquism of the highest and most elegant character. The saloon in which, and the stage on which, these surprising feats are exhibited, are both fitted up with elaborate taste—convenience and ornament being duly blended in the arrangement. Nothing can exceed the astonishment excited by these performances, which appear to be equally novel and unaccountable. We never witnessed anything like them before, and found it impossible to detect the mystery by which the wonders they were accomplished. For instance, on a table perfectly open on all sides, Madame Robin was placed under a large extinguisher—the covered, she was gone. The experiment was repeated with one of the musical assistants. He also vanished. A box placed on a pedestal could now be lifted by a lady's finger, and now not moved by a strong man. From beneath a glass canopy, an inexhaustible supply of liqueur (*Punch de Lafayette*) is distributed to the company; and, from a singularly thin *portefeuille*, issue engravings, and then bonnets, and then saucepans filled with parboil beans and beaver; also shawls and bird-cages, and other things too incongruous for preconception.

With these illustrations, we must conclude our account, fully assured that all who delight in having their wonder excited, will visit, during the holidays, the "Salle de M Robin."

ALBERT SMITH'S "OVERLAND MAIL"

Mr. Albert Smith continues as attractive as ever in his Overland Mail Entertainment, which he has been delivering this week at the Music Hall in Store-street. To Monday, after a provincial tour crowned with extraordinary success, he ... with ... his ... with songs and recitations, and illustrated by the pencil of Beverley, from sketches by himself and Mr. Stanfield, whose clever delineation of Malta has indeed stood him in good stead, and his wit and humorous delineation of character are exceedingly amusing. Since their former delivery in London, these lectures have acquired a fresh attraction of new representations, and the views of Marseilles, the Avignon Railway and the Diligence changing horses. The audiences have been overflowing—hundreds of persons having been unable to obtain admission.

ACTORS' BENEVOLENT FUND.—By the will of the late Jeremiah Olive, Esq., of Southampton, who died in November last, the legacy of £1000 is bequeathed to the above excellent institution.

Mr. Stocqueler is about to visit the West of England (Reading, Bath, Cheltenham, &c.), with his Views in India, which have proved so popular at Willis's Rooms.

The sale by auction of 100,000 metres of silk, destined in 1848 to be made into scarfs and colours under the Provisional Government, has just taken place at Lyons. Only one part of the goods has been sold; that intended for the scarfs being bought in. The prices obtained for the other was 9f. 40c. the metre, the original price being 8f. 50c. to 6f.

Advices from Hayti to November 24 inform us that preparations were still on foot for an attack on St. Domingo, and that the army was recruited by constant impressment. The inhabitants of St. Domingo were under an alarm from the contemplated invasion.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Business in the English Market has been very limited during the week, Consols having fluctuated between 99¾ & and 99⅞ closing at 99⅞ ⅛ for the Account. This diminution of transactions is attributable to the increasing demand for money, tending to check speculation, as well as the few investments made by the public, previously to the payment of the dividends The state of the Foreign Exchanges also continues to be anxiously watched, and, coupled with the home ... ment of dividends which commences on Wednesday, the usual reinvestments will operate in favour of a rise, unless checked by the exchanges still falling. Exchequer Bills are a few shillings cheaper, a result of the advance in the value of Money. India Bonds are also a shade lower The market at the close of the week was tolerably firm, at the following prices. Bank Stock, 213½: Reduced, 97¼; New Three-and-a-Quarter per Cent., Annuities, 98⅝; Long Annuities, to expire January, 1860, 15 5-16; New 3 Per Cent., 97⅛; India Bonds, £1000, 75 pm: Consols for Account, 99⅝; Exchequer Bills, £1000, June, 60 pm: Small, June, 60 pm

The most interesting topic of conversation in the Foreign Market during the week has been the attachment by some of the Active Bondholders of the funds destined to pay the dividends on the Spanish Coupons. These are little attention was excited on Tuesday, on Wednesday the fact caused a cessation of all business in the Bonds. A question arises from it with regard to the liability of parties who, by the purchase of Coupons, have paid for them and received the money. It is urged that the buyers take them as a matter of profit, and at all risks; but the reply is, that the advertisement of payment induced the purchasers, thereby creating a non-fulfilment on the part of the Spanish Agents. Thus the question stands at present. In the mean time it is very probable the attachment is only an assertion of right, and, in a few days, it may be withdrawn. The quotations of yesterday were as follow:—Mexican, Account, 35½; Peruvian Bonds, Deferred, 24⅝; Spanish Account, 17¾; Ditto, 3 per Cent., 30⅜; Venezuela Bonds, 2¼ per Cent., 31½; Ditto, Deferred, 11⅛; Dutch 2½ per Cent., 59 Guild., ex. d.; Ditto, 4 per Cent Certificates, 90¼

Shares have been somewhat revived by the result of the settling operating in favour of a decline. The account passed off better than was anticipated, but from the price of "Contangoes" ranging from 5 to 50 per cent, it must be evident that, without some extraordinary support from the public, the *bull* party will not be able to carry on much longer. At the end of the week prices were rather buoyant, at the following quotations:—Aberdeen, 10½; Ambergate, Nottingham, Boston, and Eastern Junction, 2½; Buckinghamshire, 17¾, Caledonian, 10⅜; Chester and Holyhead Preference, 13¾; Eastern Counties, 1¼; Ditto, New Shares, 1⅛; Ditto, Fifth Call, 1; Ditto, Five per Cent., 85¾; East Lancashire, 12½; Great Northern, 17½; Ditto, Halves, A. Deferred, 6⅝; Ditto, Halves, B, Six per Cent., 11; Ditto, Five per Cents., Prof., 14¾; Great Western, 78½; Lancashire and Yorkshire, 70¼; Ditto, F. £20, 4½; London and Blackwall, 6⅝; London, Brighton, and South Coast, 88; London and Greenwich, 11¾, London and North-Western, 124½; Ditto, ditto, New Quarters, 97⅜; London and South-Western, 75½; Manchester, Sheffield, and Lincolnshire, 26⅝; Midland, 47¾; Ditto, £50 Shares, 16½; Newmarket, 3; North British, 6⅞; North Stafford, 9⅜; Oxford, Worcester, and Wolverhampton, 17½; Reading, Guildford, and Reigate, 5; Scottish Central, 14; Scottish Midland, 7⅜; Shrewsbury and Birmingham, ... Edin., Ditto, Cass B, 6⅝; Ditto, Shrewsbury and Chester, Oswestry, 9⅛; Shropshire Union, 2½; South-Eastern, 10; South Wales, 27½; Vale of Neath, 9½; Ditto, G & E. Purchase or Preference, 6⅛; York and North Midland, 22⅜; General of France (Orleans and Versailles), 5; Namur and Liege, 8⅞; Northern of France, 13⅛; Orleans and Bordeaux, 4 x. d.; Paris and Strasbourg, 9¼.

FRIDAY AFTERNOON.—The French Funds come rather better today, and our Continental advices almost generally are favourable As no further advance has taken place in the rate of discount, speculators have shown increased firmness. The Consol Market has ruled steady, at full yesterday's closing prices. The Three per Cents, ex dividend, are 99⅝ ⅞; the Three per Cents Reduced, 97⅜; and the New Three-and-a-Quarter per Cents, 98¾ ⅞; Bank Stock, 2.3⅝; India Bonds, 76, and Exchequer Bills, 60s premium. Foreign Bonds and Railway Shares are firm.

THE MARKETS.

CORN EXCHANGE (Friday).—Up to our market late week, coastwise, the arrivals of English wheat have amounted to 3660 quarters, chiefly from Kent and Cambridgeshire, and in very indifferent condition To-day the show of samples of both red and white, on the rooftops by land and carriage fell off, was small; but quite equal to the wants of the millers. The demand must be considered rather dull, heavy, at barely Monday's reduction in the quotations. Nearly 20,000 quarters of foreign wheat having come fresh to hand, the supply on sale to-day was very large for some time past. Dry and sound parcels moved steadily at late rates, but damp and inferior qualities were lower to purchase The usual supply of barley was large. From the finest periods moved off heavily, and in some instances the currencies had a downward tendency. In malt next to nothing doing, and prices barely late rates. Although the quantity of oats was not extensive, the last trade ruled heavy, and low qualities were cheaper Beans, peas, indian corn, and flour very dull

ARRIVALS. English: wheat, 3660; barley, 4640; malt, 1110; oats, 4730; flour, 1450. Irish: oats, 1020; foreign: wheat, 9,800; barley ... ; oats, 5,140; flour, 4460

THE MOHO; OR, NOTORNIS MANTELLI FROM NEW ZEALAND.

THE MOHO OR, NOTORNIS MANTELLI.

UNIQUE BIRD FROM NEW ZEALAND.

In the ILLUSTRATED LONDON NEWS of the 15th May last, in our report of a lecture on the "Extinct Birds of New Zealand," delivered by Dr. Mantell, before the Royal Institution, allusion was made to the discovery, by Mr. Walter Mantell, of the bones of other supposed extinct species and genera of birds associated with those of the *Moa*, or *Dinornis*. Of these, the most remarkable were the skulls and other parts of the skeleton of a very large and peculiar form of the *Rail* family (*Rallidæ*), which are described by Professor Owen in the "Zoological Transactions," under the name of NOTORNIS (*Southern bird*) MANTELLI. According to the traditions of the Maoris, or natives of New Zealand, this bird formerly existed contemporaneously with the *Moa*, a large bird resembling the Swamp-Hen, or Water-Rail, which was a favourite article of food with their remote ancestors, but had gradually disappeared, and was believed to have been long since exterminated by the wild dogs and cats, which are now so formidable a pest to the colonists. This bird was called the MOHO, or *Takahé*, and described as of a black colour, with red beak and legs, and destitute of wings. No traces of the traditionary *Moho* had, however, been seen either by the natives or Europeans since the arrival of the English colonists; and the occurrence of the fossil bones of a bird apparently answering the general description of the gigantic Rail, with those of the Dinornis, in deposits of great antiquity, rendered it highly probable that the *Moho*, like the *Dodo* of the Mauritius, had become extinct within the last few centuries. Fortunately, this proves not to be the case, for a living specimen has been captured; and we have now the pleasure of placing before our readers the first representation of this *rara avis* of our antipodean colony.

This bird was obtained by Mr. Walter Mantell, a few months since, of some men engaged in the pursuit of seals among the coves of Dusky Bay, which lies on the south-western extremity of the Middle Island. It appears that these sealers had observed the foot-prints of a large and strange bird on the snow, with which the ground was thickly covered; pursuing the trail, they at length caught sight of the object of their search, which fled with great rapidity, for a long while distressing their dogs, but at length was driven up a gully behind Resolution Island, and captured alive. They kept it on board the schooner a few days, and then killed and skinned it, roasting and eating the body, which was declared to be very delicious. The skin was procured by Mr. Walter Mantell, while in good condition; and thus has been preserved for science—the, perhaps, only remaining individual of this remarkable type of the *Ralliдæ*. The identity of this recent specimen with the fossil *Notornis* was immediately recognised by Mr. Walter Mantell, and has been confirmed by Mr. Gould and Professor Owen. Its powerful and short mandibles, abbreviated wings, and strong metatarsals and feet perfectly agree with the indications afforded by the fossil skull, sternum, and other bones that are now preserved in the British Museum.

The *Notornis* is about two feet high, the beaks are relatively very short and strong; the wings are short and rounded, and their plumage is feeble, constituting but very imperfect organs of flight; the legs and feet are more adapted for the land than those of the ordinary rails. The plumage is of a rich purple colour on the neck, breast, and abdomen; on the back and wings it is dashed with green and gold; the tail is scanty and white beneath; the beak and legs were of a bright scarlet when the bird was alive. The discrepancy between the traditional account of the *Moho* and the recent bird shows that a considerable time must have elapsed since a living example was seen by the natives

This discovery is of the highest interest both to the ornithologist and palæontologist; for this remarkable form of *Rallidæ* was previously only known by its fossil remains, and would, probably, like the Dodo, have soon become all but traditional. It seems probable that living examples of some of the other supposed extinct birds may yet be met with in the imperfectly explored districts of New Zealand; but we fear there is no reason to hope that we shall ever see a recent representative of the noble ostrich-like *Moas*, some twelve or fourteen feet high, whose fossil remains have excited so much astonishment even in the scientific world. Should, however, Mr Walter Mantell's arduous researches be rewarded by the capture of a live *Moa*, in time for the World's Exhibition of 1851, we trust the Royal Commissioners will allow him space for its display, though not previously applied for. We may add that the *Notornis* has been most successfully stuffed and mounted by Mr. Bartlett, and may now be seen at Dr. Mantell's residence.

MOVEMENT FOR THE REPEAL OF THE DUTY ON PAPER.

The near approach of the session of Parliament has given occasion to the paper manufacturers of the kingdom to direct public attention to the obnoxious character and barbarising tendency of the impost on paper, the enhanced cost of which, under the operation of the Excise Laws, so mischievously restricts the diffusion of knowledge and the education of the people.

The movement was inaugurated in the provinces by a meeting at Manchester, on Tuesday, held in the Clarence Hotel, Spring-gardens, at which several gentlemen of influence were present.

Mr. T. B. Crompton (the eminent manufacturer), who was called to the chair, detailed the steps which had hitherto been taken on the subject. In proof of how little acquainted the public were with the extent to which the paper duty affected every individual in the community, he mentioned that he had that day met with an individual who was consuming £1000 worth of paper yearly, but who said he "had not the least idea that paper paid any very serious duty," and was perfectly astounded when he (the chairman) informed him that it paid not less than 40 per cent. This was not all; some descriptions of paper were taxed to the extent of 120 per cent. on the cost price. He believed that if the public, now almost ignorant on the subject, were made fully aware of the nature of the paper duty, not only would they be able to secure its speedy repeal, but, in fact, to make it a part of the next Budget. The paper manufacturers were, of course, the first to feel the effects of the tax. A man could not commence making paper without first applying to an excise officer to survey his premises, to number every room in them, and also to mark, by letter or by number, every implement which he (the manufacturer) proposed to use. The act now in force, as amended by committee, was called "A Bill to Consolidate and Amend the Laws for Collecting and Securing the Duties of Excise on Paper made in the United Kingdom:" It was passed on the 5th July, 1839, and contained 69 clauses, a great number of which were penal. Section 3 required paper-makers, before commencing business, to make "a true and particular entry in writing" of all their mills and premises, and every implement they used in the manufacture, &c. "of paper of any description, or buttonboard, millboard, pasteboard, or scaleboard," and to deliver the same to the excise officer in whose survey the mill and premises might be situated; in which entry every "engine, chest, machine, vat, and press shall be distinguished by a particular number or letter, or number and letter or letters;" in default of which, for every unentered mill or implement, the manufacturer shall forfeit £200, "together with all paper, buttonboard, mill-board, pasteboard, or scaleboard, and all materials found therein." A similar penalty was imposed in case the marks upon the several things mentioned did not agree with the entry given in; so that if the number or letters were erased by accident, the excise officer could declare the premises as unentered, and enforce the penalty of £200. The chairman proceeded to read and comment upon section 9, remarking that, under it, the labels issued by the Commissioners of Excise, to be used in the tying up of paper, were made equal in value to bank notes; as there was a fine of £10 imposed for every label delivered to any manufacturer, "and for which a receipt shall not be given, or which shall be cancelled, obliterated, or destroyed, sold or disposed of, or improperly used, or not produced, or accounted for," when demanded by the excise officer. It was often necessary to entrust a working man with 1000 of those notes at once (representing to the manufacturer £10,000), and the manufacturers were, of course, always in danger, as some of the labels might be destroyed or removed through malice, or even through the slightest negligence or inattention. By section 15, a period of 84 hours was consumed, after paper was ready for delivery into the market, before the manufacturer could send it out; in consequence of the notice required to be given prior to, and to elapse after, the weighing and charging of it with duty. This period, during which the paper was kept in the mill, was a longer one than was required for him to buy the raw materials in Manchester, send them to his mill, manufacture paper, and transport it to any part of the kingdom, if he were not interfered with. This regulation crippled the consumption of paper to an almost incalculable extent. The chairman, after referring to other restrictive and penal clauses in the act, pointed out the extent to which, despite the vigilance of the excise, frauds were constantly being committed, and said that of this the Government was fully aware, and acknowledged the difficulty of collecting the duty. Substitutes for paper were being continually produced, so nearly identical in their nature, that exclsemen could not detect the difference until told of it; but all these were allowed to pay duty free. He himself, within ten days, had placed in the hands of a Government officer a specimen of a new material, which the officer unhesitatingly pronounced to be pasteboard; but he would not, nevertheless, dare to seize three tons of it, although he (the chairman) told him where it was lying. The chairman next referred to the great number of persons who depended upon the manufacture of paper, either directly or indirectly, and urged the immense advantage which must result to them from the abolition of the paper duty.

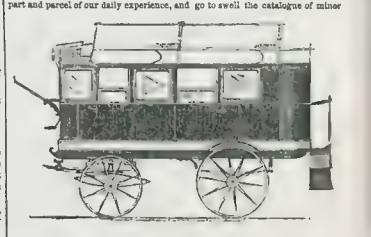
Mr Baldwin described the injurious operation of the paper duty on the trade of Birmingham.

The meeting was afterwards addressed by Mr. C. Potter and other gentlemen, and resolutions were agreed to for the commencement of a subscription, to aid the London Association, directing the secretary to communicate with all similar associations in the country, and urging paper manufacturers to solicit subscriptions from their friends generally, and to endeavour to make known the injurious operation of the tax complained of.

About £200 was subscribed by those present at the meeting.

NEW PATENT OMNIBUS.

FROM the first introduction of the Omnibus into the streets of the metropolis, the public have been unanimous in their opinion as to the small amount of ingenuity displayed by coach-builders in the construction of these vehicles. There has, however, been no lack of attempts after improvement, as the several years' lists of patents will show; but, either from obtuseness of understanding, or from obstinacy and cupidity on the part of the proprietors of omnibuses, they have neglected to profit by these contrivances; and the Omnibus of the present day differs but little from Mr. Shillibeer's first conveyance of the kind. The nuisances arising from this neglect are too sundry and manifold for us to enumerate: they are part and parcel of our daily experience, and go to swell the catalogue of minor



FRANKLINSKY'S NEW PATENT OMNIBUS.

miseries. In the same proportion, however, they render us alive to every attempt made to better the accommodation afforded by these "public carriages."

The most recent effort of this class is a new construction of Omnibus, just patented by Mr. J. A. Franklinsky, which promises to mitigate the miseries so long complained of, by insuring to each passenger exclusive protection from his neighbour. The arrangement of the interior provides each passenger with a private seat, according to the plan shown in the engraving. To this seat is attached a looking-glass, with a bell to ring for the conductor to pay attention to a speaking-pipe, through which the passenger is to speak to the conductor to stop when required.

This Omnibus will resemble a private carriage; but, should any person wish to speak to his neighbour, he has only to touch a spring, and there will open a window for that purpose.

The exterior of the Omnibus is furnished with a gallery, with steps at the end of the carriage; and along this gallery each passenger will pass to his private door. Attached to the vehicle is an apparatus by which the proprietor will be enabled to ascertain the number of passengers conveyed during the day.

Messrs Cook, Rowley, and Co., of King-street, Golden-square, and Liquorpond-street, Gray's-inn-lane, are building this new Omnibus for the patentee.

ASTLEY'S THEATRE.

Last week we were compelled, by want of space, to notice the pantomime o "Harlequin O'Donoghue; or, the White Horse of Killarney," at the above theatre, too briefly. The piece is by the author of "Bluff King Hal," and, like that, promises a very long run. All our readers who are fond of Irish legendary lore must know that *Prince O'Donoghue* was a good Prince of Ireland, who (for what cause has never yet been discovered) was doomed to ride upon the Lakes of Killarney until the silver shoes on his horse should be worn out by the waters. This is the ground-work of a very good pantomime; the author making *O'Donoghue* the good genius, and *Whiskey*, personified, the evil spirit of Ireland. *O'Donoghue* takes two lovers under his care, who, to please the *Hag of Mischief*, are to be brought to ruin by her offspring *Whiskey*, whom she disguises as *Paddy Carey*. *Lord Bullfrog*, father to the lovely *Kathleen*, determines that he who can produce the best horse shall wed her, and puts her up as a prize. *Dermot*, her favoured lover, fears not, for he possesses a horse of surpassing breed; but alas, in an evil hour, *Whiskey* tempts him, and at dice he loses his beloved steed, and with it all his hopes. At this moment, *O'Donoghue* takes pity on him, and *Dermot* promising to "stick to the water-cure," he takes him to his "Stable of the thousand steeds" at the bottom of the lake. Here he lends *Dermot* a horse to ride the race with, the next day. He does so amongst the hills of Killarney, and wins the fair *Kathleen*. But *Whiskey* is not yet overpowered, for the *Old Hag* has told him "no power but that of water can take his power away." He manages to get both *Kathleen* and *Dermot's* fairy steed into his possession, but this proves his ruin; for the horse seeking his native home, carries *Whiskey* and *Kathleen* to the bottom of the lake, and thus *Whiskey's* power is destroyed by water. *O'Donoghue*, having lent *Dermot* his own "white horse" to pursue the runaway spirit, follows to the bottom of the lake, and rescues his love, and brings her safe again to earth. Here the characters are changed, and the harlequinade begins. The scenery, by Mr. Dalby, is all good, particularly the "Lake of Killarney," which we have chosen for the subject of our illustration, at the moment *O'Donoghue* appears prancing on the waters, attended by his fairy train. The dress of *O'Donoghue*, which is nearly all silver, is very superb. Mr. Harvey and his graceful wife, are very good as *Harlequin* and *Columbine*. No fault can be found with the *Pantaloon* of Mr Revolta, and Mr. Henderson has long been acknowledged a first-rate *Clown*. The theatre has been so crowded ever since the production of "Harlequin O'Donoghue," that nightly some two or three hundred persons are accommodated with places on the stage during the scenes in the circle.

SCENE FROM THE NEW PANTOMIME OF "HARLEQUIN AND O'DONOGHUE," AT ASTLEY'S.

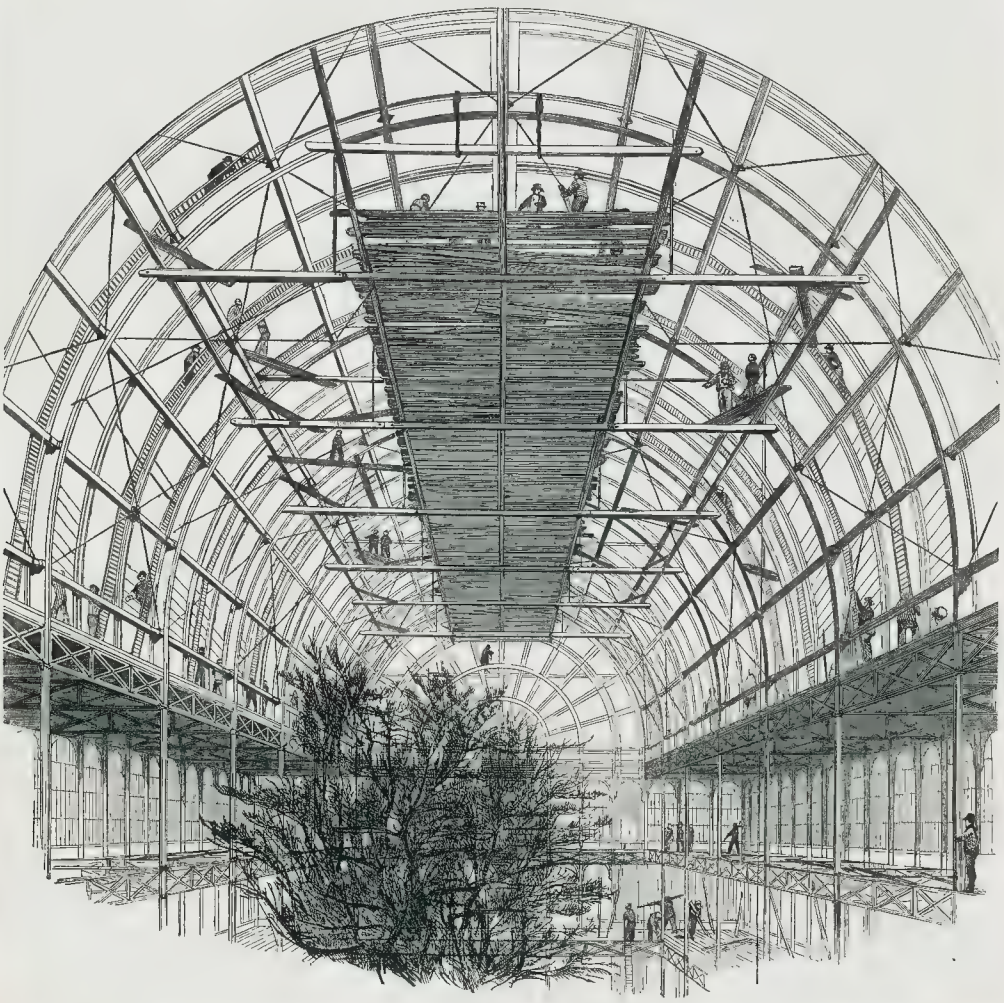
FREE-TRADE IN PAPER.

THE agitation which has been commenced for the Abolition of the Excise Duty on Paper does not appear to be sufficiently broad to satisfy a portion of the public. At the meeting convened last week at the London Tavern, though all were agreed that the tax was an evil, an addition was made to the resolution, which pledged the meeting to demand not simply the abolition of the tax upon paper, but of the taxes upon advertisements and upon newspapers. A similar spirit has been manifested throughout the country at several of the meetings which have been held. It seemed, in some of them, to be considered that the abolition of the Excise Duty on Paper was a question more interesting to the paper manufacturers than to the public, and that it was more desirable to extend the agitation to the three great divisions of the taxes on general and political knowledge, than to confine it to one. We are not of the number of those who think the abolition of the Excise Duty on Paper a mere matter of the shop, unimportant to the public; but, as friends of free discussion, and of the education of all classes of the people—which cannot be carried on as effectually as it might be, if paper be taxed—we are of opinion that the energies of the people should be concentrated upon a practicable point, and that the Government should not be allowed to justify a refusal, on the plea that too much is asked, or to go to sleep on its surplus, without being reminded of its duty upon this



THE GREAT EXHIBITION BUILDING.—VIEW, SHOWING THE RIBS OF THE TRANSEPT.—(SEE PAGE 26.)

[COUNTRY EDITION.]

great yet very simple question. The repeal of the Excise Duty upon Paper, which lies at the very root of the matter, has not received the full consideration which it merits. The working classes and their friends, anxious for cheap newspapers, have a little overrated the importance of the Stamp Duty, and greatly underrated that of the Excise Duty. As a question of Free-Trade, and of the rights of labour, the Excise Duty is infinitely more oppressive than they seem to be aware of. We endeavoured to show in our last to what an extent it interfered with the manufacture of paper, and how much it raised the price of this necessary of civilized life to all classes of consumers, including not readers and writers alone, but retail tradesmen, artisans, and manufacturers. At the interesting meeting of the town council of Birmingham, which was held on Tuesday to debate the subject, it was stated that many of the manufacturers of that town used as much as 20 tons of paper annually for packing their goods. The Excise Duty being about £15 per ton, each of such manufacturers is taxed in his business to the extent of £300 per annum for paper alone. There are few branches of the multifarious manufactures of Birmingham in which paper is not required, and the extent of the evil of this tax was made apparent by some striking examples.

Take the steel pen trade, for instance (said one of the speakers), and see the vast amount of paste-boards and paper that is used in carding and in making paper boxes. The same thing occurred in the hook-and-eye and the pin trade. Paper is also largely used in making Florentine buttons; it is used for the bags to put them in; it is used for the making the boards on which to card the metal buttons; it is used in wrapping up the foundry articles, japan goods, hinges, screws, latches, locks, bolts, candlesticks, and a great variety of other articles. For Florentine buttons, taking into account the waste, the paper tax operated as a drawback to the extent of £30 per ton on the quantity used; and in fact the paper duty alone had the effect of raising the price of common Florentine buttons nearly 10 per cent. *Papier-maché* articles paid at least £20 per ton duty. And how was it possible for Birmingham, Sheffield, and other towns, similarly circumstanced, to carry on the foreign trade, whilst in other countries there was no paper duty at all? In Paris alone it was calculated that 30,000 females were employed in the manufacture of fancy articles, and in other articles used by our manufacturers for pattern cards and other purposes, some of which were actually exported to this country

This is a view of the case to which our legislators and the public do not seem to have turned their attention; and the great importance of which no one, we think, will be found to deny. Were the tax as productive to the revenues of the State as might be imagined from such statements as these, the Government might hesitate to forego it, mischievous as its operations might be; but, as is well known, frauds are of constant occurrence, and prevent the full amount which is due to the Government from reaching the Treasury. The dishonest paper manufacturer, either in collusion with the underpaid excise officer, whom he bribes, or in defiance of his vigilance, if he be honest, finds it a matter of but little difficulty to cheat the Government of the duty. Thus, not only is the State robbed—which some, perhaps, may think no great harm, when a tax itself is immoral—but the fair trader is seriously injured in his business. Surely, even if no question of education, of literature, and of religion, were mixed up with it, the subject, if considered in this light alone, ought to recommend itself, on purely economical and commercial grounds, to a Free-Trade Ministry, and to the friends of the labouring classes. But, when, in addition to these evils, we know that, by the operation of this tax, the cheap Bibles, the cheap tracts, and cheap-books, the catechisms, and the maps of our schools are seriously enhanced in price; when the writing paper used in our business, and for the expression and conveyance, through the Post, of our wishes and our affections, is made too precious to be freely within the reach of the multitude; when the cheap publications—that might cheer the homes of the poor, and elevate the moral and intellectual character of the great bulk of the toiling classes of the community—are so heavily taxed as to be unprofitable to their projectors, unless they edit them with the scissors instead of the pen; or, what is still worse, content themselves with wretched and degrading trash, instead of the literature that refines, exalts, and ennobles—this question of the Excise Duty upon Paper becomes of far more importance than if it were a matter of trade only. It has a national, and not a partial, significance. In fact, it may be stated that there is not a class of the community whom it does not injuriously affect. The poor it deprives of one great means of education; the workman it deprives of work; the tradesman it unfairly taxes on an article essential to his business; the manufacturer it subjects to ruinous and unfair competition; the lover of books and periodicals it forces into public-houses, and into habits of intemperance, to peruse the various publications which he cannot afford to buy; the author it deprives of a market for his labour, by absorbing the fund out of which original writing could be adequately remunerated; and the richer classes, to whom the amount of the tax itself is no object, it subjects to the dangers that always menace society when the population is ignorant. It is not sufficiently known to wealthy and luxurious readers, that the tax—light as a feather upon their guinea books—is crushing, if not fatal, to the penny periodical; and that our workhouses and prisons are filled with expensive paupers and criminals, whose ranks are recruited continually, and almost exclusively, from the mass of those to whom all literature is alike unknown, and who, above all things, require instruction.

In such a matter as this, as in every other matter that is to be systematically and effectually set about, the only way is to begin at the beginning. Let the country by all means have untaxed newspapers; but, if there be difficulties in the way which cannot be speedily surmounted, and if there be differences of opinion which will prevent the settlement of the question perhaps for years—and at the present necessities of the State will not permit every injurious tax to be removed at one swoop, let the energies of the friends of Free-Trade and of Free Knowledge be devoted to some one point which they can carry. Let us have Free Paper as a beginning, and trust to time and the enlightenment of general opinion for the rest. There is unanimity of sentiment as regards untaxed paper, which there is not as regards untamped newspapers. "Do one thing at a time" is our advice to the earnest reformers who advocate untaxed periodicals. Free Paper would be so great a benefit, and would prepare the way so surely for all else that is required, that the success of any movement which might procure it for us should not be lightly endangered.

REPEAL OF THE PAPER, STAMP, AND ADVERTISEMENT DUTIES.

THE interesting and important subject of the repeal of those taxes which have so paralysing an influence on all efforts to promote the diffusion of the blessings of education and knowledge amongst the masses, has been taken up with a spirit of earnestness in all the great centres of civilization and commercial activity in the kingdom, which augurs a favourable result when the Chancellor of the Exchequer revises the taxation of the country in the ensuing session of Parliament. This week, meetings have been held in Birmingham, Leeds, and other places on the subject.

BIRMINGHAM.

On Tuesday the Town Council, presided over by Alderman Baldwin, took the question into consideration.

The chairman, who is himself a paper manufacturer, entered into some details on the injurious and vexatious nature of the present fiscal burdens on the manufacture. In the course of his remarks he observed:—

"I need scarcely point out to you that which many of you have so much case to know, namely, the unfair manner in which the paper duty presses upon merchants, manufacturers, and other tradesmen; also, to how great an extent it operates in preventing the employment of I may say thousands of persons; for, if this duty were repealed, I am convinced that I could myself be the means of finding employment for at least 50 persons within twelve months after such repeal had taken place. Now, most of you are aware that the paper duty amounts to nearly £15 per ton, and by far the great bulk of the paper that is manufactured is not sold wholesale for more than £35 per ton; so that you will see the duty amounts to nearly one-half of the price paid for the article. And, as I am anxious to confine myself to facts, I will name my own case. Last year I paid £9640 for the shape of duty, whilst the paper I manufactured did not sell for more than £24,000. And whilst I am pretty well convinced that I did not make above one-third of the paper that was consumed in Birmingham, I think that I manufactured in weight as much as was used in making, wrapping, and re-wrapping the goods that were exported from this town by our merchants, so that this would be equal to a tax of £10,000 per annum on the Birmingham merchants, besides that which these goods arrive in America there is a tariff to be encountered of about 30 per cent, which would raise the tax to something like £13,000 a year [illegible] facturers and merchants of this town alone; but, going a step beyond this, and keeping in view my estimate, which I believe to be accurate, it will be seen that there is a gross tax on the people of Birmingham on all the paper consumed in it amounting to something like £30,000 per annum; inasmuch as there is no town in the United Kingdom wherein, in proportion to its population, so large an amount of paper is consumed; for, according to our population, our fair share of the tax, with the rest of the country, would be, instead of £30,000, which we do pay, not more than £7000 or £8000. I know merchants myself who use twenty tons of paper annually in re-wrapping their goods; and keeping in view that the duty is £15 per ton, the tax paid by each of them on the article of paper alone is £300 per year; and in putting this, I have not put an extreme case, because I know that there are men consuming a much larger quantity than that which I have named. I wish the council clearly to understand that this is not a mere random statement; I have taken pains to be accurate, and to obtain something like a fair average of the quantity of paper used by our merchants and manufacturers connected with the foreign trade; also of the quantity of pasteboard, button-board, and card-board that is used, and a very little reflection will satisfy you that my estimate is a correct one. Take the steel-pen trade, for instance, and see the vast amount of pasteboard and paper that is used in carding, and in making the paper boxes; so with the hook-eye and the pin trade. Paper is also largely used in making Florentine buttons; it is used for the bags to put them in; it is used for the making the boards on which to card the metal buttons; it is used in wrapping up the foundry articles, japan goods, hinges, screws, latches, locks, bolts, candlesticks, and a great variety of other articles. For Florentine buttons, taking into account the waste, the paper tax operated as a drawback to the extent of £30 per ton on the quantity used; and in fact the paper duty alone had the effect of raising the price of common Florentine buttons nearly 10 per cent. *Papier-maché* articles paid at least £20 per ton duty. And how was it possible for Birmingham, Sheffield, and other towns, similarly circumstanced, to carry on the foreign trade, whilst in other countries there was no paper duty at all? In Paris alone it was calculated that 30,000 females were employed in the manufacture of fancy articles, and in other articles used by our manufacturers for pattern cards and other purposes, some of which were actually exported to this country

"How is it possible for Birmingham, Sheffield, and other towns similarly circumstanced, to carry on their trades with America profitably, where, when their goods arrived, there was another 30 per cent. duty added on this paper, while in other countries there was no paper duty at all? Why, it was only the other week that you passed a resolution to increase the number of cells for female prisoners in your gaol. I opposed that at the time, and said that it is far better so to educate your people that crime shall decrease than to be compelled to increase the means of the progress of knowledge which encourages ignorance, and, as a necessary consequence, crime in every shape. I say it is far better to find employment for your population than to fill them prison rooms. Give them the means of getting an honest living, and the inmates of your gaols and your workhouses will soon decrease. Repeal the paper duty and you will give employment to thousands of females. It was calculated that upwards of 30,000 females are employed in the manufacture of fancy boxes and in other articles used by our manufacturers for pattern cards and other purposes, some of which are actual y exported to this country, which they can easily do, for the cards and boxes made in Eng and often cost more than the steel pens themselves. Abolish then the tax, and give us manufacturers a fair chance of competing with foreigners."

With respect to the stamp and advertisement duty, as affecting newspapers, periodicals, and books generally, he showed that they must—"Abolish the penny stamp and abolish the advertisement duty; the last is a tax on the poor, whilst the first is a premium on ignorance and on speculation. Repeal the advertisement a column in length pays no more duty than that of the poor girl who wants a place as housemaid or cook. Repeal the stamp duty and you free the newspaper from a great deal of the restriction at present imposed upon it. Repeal the penny has more than doubled the circulation of all newspapers, wholly repeal it, and you will get a first-rate newspaper for twopence, and a very good one for a penny; you will thereby increase the circulation of every newspaper, and bringing it to the fireside, and thereby do you contribute to his mental culture and improvement? I do more than anything to elevate him in the social scale, without taking the Government duties, you will give employment to thousands, and you will be providing for your population a vast amount of employment which is now denied to them. In the United States of America there is scarcely a town of ten thousand inhabitants without its daily newspaper; in England there is not one that I know of out of the metropolis. Well, what do I deduce from all I have said to you? Why, that if the labourers and the working people could afford to buy newspapers as they ought to do, these halls would be crowded. But education and enlightenment would be extended to their children; and what more pleasant than to witness the mechanic or the labourer, when his day's work is over, sitting by his own fireside, in a tasty and joyed dwelling, in consequence of the repeal of the glass and brick duties, with a glass of sparkling, home-brewed, untaxed ale before him, listening to one of his children reading the cheap and untaxed book or newspaper, and finding in the untaxed advertisements that there are plenty of situations for those who want them?" (Applause.)

The honourable gentleman concluded by moving the following petition:—

"To the Honourable the Commons of the United Kingdom of Great Britain in Parliament assembled, the humble Petition of the Mayor, Aldermen, and Burgesses of the Borough of Birmingham.

That your petitioners are deeply impressed with a sense of the injurious effect of the excise duty on paper.

That the [illegible] duty has crippled the energies of the manufacturers—interfered with the employment of the working classes—and has operated as a bounty to foreign manufacturers, who have derived thousands of artisans of their means of support, and injuriously affected the export trade of this country while, at the same time, the trade of bringing rags daily is unnecessarily harassing and vexatious.

That your petitioners are also convinced that the stamp duty on newspapers, and the advertisement duties, are highly objectionable in principle, and operate as a tax upon knowledge, and unequally press upon many of the community.

Your petitioners, therefore, humbly pray your Grace to take the premises into your consideration, with a view to the total repeal of the above-mentioned duties. And your petitioners will ever pray &c.

The petition was adopted with the hearty concurrence of the members of the Town Council with one or two exceptions, who thought that the Town Council was not a fit place for the introduction or discussion of such topics.

The petition was ordered to be signed by the Mayor, and presented to the House of Commons by Mr. Scholefield.

LEEDS.—On the same day (Tuesday), the paper-makers of Yorkshire met at the White Horse Hotel, Leeds, for the purpose of finding out the art to the movement. Mr. Smith, of Morton Mills, near Bingley, occupied the chair, and there were present Mr. Mayhall, of Mr. Cromption's establishment; Mr. Garnett, of Otley; Mr. Martin, of Leeds; Mr. Nell, of Leeds; Mr. Mellor, of Hunsle... [illegible] On the following resolution having been propo ed—

That the paper manufacturers are assembled, under the subscription in aid of a society formed in London for the abolition of the duty on paper; and that the secretary of this society be requested to write a circular to the paper-makers, and also from other manufacturers of paper, and that every paper manufacturer be requested to make subscriptions in the counties of paper and others who may feel an interest in the removal of this vexatious, unequal, and unjustifiable tax—

Mr. T. B. Crompton, of Manchester, addressed the meeting, recommending the paper-makers to seek only the repeal of the paper duties, without reference to the repeal of the taxes on knowledge. The resolution was agreed to, as also was the following:—

That, in the opinion of this meeting, the excise duty on paper ought to be abolished for the following reasons:—First, because it offers an irresistible temptation to fraudulent traders, owing to the enormous amount of tax on the cost price of manufacture, varying as it does from 15 per cent. down to 12 per cent; second, because it impedes the manufacturer to a very serious degree, causing additional expense and delay in procuring and conveying rags into the market, and finishing the field of capital and employment, third, because, by a committee of the House of Commons, of which Sir Henry Parnell was chairman, some years ago, to take into consideration the various duties upon articles of general consumption, with the view of doing away those the repeal of which would prove most advantageous to the public interests the committee decided upon leather, glass, and paper, the two last have been abolished, whilst that on paper still remains

The sum of £65 was subscribed at the meeting; and, after thanks to the chairman, the meeting separated.

THE LEICESTER-SQUARE SOUP KITCHEN.—The following resolution has been adopted by the committee of the institution:—"The Committee of the Leicester-square Soup Kitchen, taking into consideration the favourable opportunities possessed by the clergy, scripture readers, and City missionaries of the metropolis, of acquiring a correct knowledge of the privations and sufferings of the residents labouring poor, and having carefully reviewed the evidence as to the extent to which the usefulness of their labours is impeded during the winter season by the want of means to supply the temporal necessities of the sick and afflicted, and those who are in danger, necessity, and tribulation, resolve that the [illegible] &c., be empowered to give to all deserving parishioners [illegible] for relief in the Leicester-square Soup Kitchen, and to [illegible] applications from parishioners [illegible] by the district [illegible]

FOREIGN AND COLONIAL INTELLIGENCE.

PARISIANA.

(From a Correspondent.)

PARIS, Wednesday.

THE Ministerial crisis is prolonged by no one cause more powerfully than by the distinct nation felt by all statesmen to take office at a moment when they must be inaugurated by an appeal for money. The noble manner in which the Prince has dispensed his boundless hospitalities, his numberless donations—his hand being ever open as day to melting charity—and the right royal entertainments at the Elysée, have swallowed up the last 3,000,000f. voted to him by the Assembly; and his pecuniary embarrassments are again the common subject of conversation in Paris. The President is thus compelled to shackle his next Cabinet with the clogging chain of a demand for money, and as the reception of this demand by the Assembly cannot be doubtful, it is no marvel that the Ministerial crisis should thus be prolonged.

Assuredly the President has never been so tossed upon the horns of a dilemma ever since his accession to office. In vain does he look around for a spar to float him through the wind and whirling waters which howl around him: deserted in the utmost need by those who have fattened on his bounty, his position is truly forlorn. Up to the present moment, I can positively assure you that not the slightest progress whatsoever has been made towards the formation of a Cabinet.

Despite all the turmoil in the political cauldron, the President takes his accustomed rides and drives about Paris. Yesterday, he rode up the Boulevards to the Porte de la Bastille, and on the preceding day went to the Exhibition. Last night his cousin, the Princess Mathilde Demidoff, gave a ball, at which the Prince hesitated until past two in the morning.

Mr. Lumley is performing wonders at the Italian Opera here, to whose whom deserted benches he has attracted the *élite* of Parisian society. Lablache and Mario sang splendidly in "Don Pasquale" last night, to a crowded and delighted audience. To-morrow night, Mdlle. Catherine Dupree, the daughter of the once famous tenor of the French opera, will make her *début* in "Lucia di Lammermoor" with which they will open the drama. For this crime she was justly condemned to incarceration for life. She was not an object for justice to sheath her sword, and open the portals of her prison. And yet the Minister of the Interior has this morning decreed that Madame Lafarge is to be transferred to the more comfortable quarters of a *maison de santé*

FRANCE.

The events which we noticed during the last few weeks as the most prominent features of the political aspect of affairs in Paris, since the re-assembling of the Legislative Chamber, have resulted in what they so obviously tended to—a Ministerial crisis. The various checks which the Government of Louis Napoleon received of late from the majority of its former supporters in the Assembly, appear to us in the pointed refusal of the close of last week to accord to the Minister of War the courtesy of allowing him a day to search in his office for documents to enable him to reply to interrogatories put by M. Napoleon Bonaparte, as to certain alleged unconstitutional standing orders formally issued for the guidance of the army in case of insurrection during a state of siege; and unmistakeable manner the perseverance of the majority in that spirit of bitter hostility which the affairs of MM. Vieu and Mauguin had previous invoked, that there was no alternative left to the Ministry but to resign at once; and this they did on Saturday last. Their resignation was accepted by Louis Napoleon, and all attempts to form a Cabinet to succeed them have hitherto failed.

The secondary to the Minister of War was aggravated by some attendant circumstances. The alleged obnoxious military instructions, if ever issued, [illegible], as orders much resembling them in the character certainly were during the last insurrection of Barbès, were communicated to the Parisian Chargeurier ang prior to his Minister of War becoming a member of the Cabinet; and as he could not, therefore, have had any specific knowledge [illegible], the delay asked for the purpose of inquiry was a natural and fairring one. [illegible] in order thereby to give General Changarnier an opportunity of showing his parliamentary readiness as compared with the Minister. He accordingly rose in his place, amid the applause of his partisans, denied the validity of the alleged orders, and gave the requisite explanations which M. N. Bonaparte's interrogatory required.

It appears from the latest advice a, that Louis Napoleon meets with great difficulty in the formation of a new Cabinet, all the old heads of parties holding aloof because of his refusal to accept their terms. The names of the agents of domination hitherto exercised over his Ministry by General Changarnier, in his capacity of Commander-in-Chief of the army of Paris. Another cause of difficulty arises from the necessity which will be imposed on the new Ministry of pledging itself to bring before the Assembly a proposition for an increased pecuniary grant to Louis Napoleon, to enable him to sustain the expenses of a high office in becoming style—a measure which is certain to meet with strong opposition, probably defeat, at the hands of the majority. On Wednesday, the leading members of the Right, or "party of Order," among whom were MM. Molé, Thiers, Berryer, Odilon Barrot, and Count Montalembert, met to confer, and to demonstrances of the majority of the Assembly against Regnier General Changarnier of his office, but as to no purpose, as they [illegible] Napoleon unalterably fixed in his views upon that point.

SPAIN

We learn from Madrid, under date the 3rd inst., that on the preceding day General Narvaez, and the whole of the Ministers, waited upon the Queen and tendered their resignations. The Queen, however, refused to accept them, and it appears that the Ministers consented to remain in office. It was reported that General Narvaez and his colleagues had been induced to tender their resignations in consequence of some misunderstanding with the Queen-Mother

GERMAN STATES.

At the Dresden Conference of the German powers nothing has yet been done in full assembly of "the whole House," the Committees only of the Congress having hitherto met in session.

The troops of the Confederated Powers are advancing towards Holstein to support the two Commissioners of the Confederation, who have arrived at Kiel according to advices of the 6th inst.) for the purpose of urging, and, if necessary, forcing the Schleswigians to submit to the Prussian and Danish armies, and come to a peaceable understanding with the King of Denmark.

UNITED STATES

The accounts from the States this week are of a satisfactory character; their latest dates are New York the 27th ult., and California Nov. 15. The "empire city" had been visited by a severe storm, the wind blowing with great fury, doing much damage, flooding wharves and damaging many ships.

The 230th anniversary of the landing of the "Pilgrim Fathers" at Plymouth, in New England, was celebrated with great spirit throughout the country. At New York 232 sat. Among many other distinguished guests who were present at the [illegible] vites at this celebration of "Forefathers' day," were Mr Webster and Mr H. L. Bulwer, the British Envoy, both of whom returned from Washington expressly for the purpose.

Difficulties were understood to have arisen between the American Cabinet and the Court of Madrid, the latter having advised the United States' Government not to interfere in Hungarian affairs, and the Secretary of State having justified the policy of the Executive.

Jenny Lind had reached Charleston, South Carolina, on her musical tour

From California we learn that the prevalence of the cholera was the principal topic of importance. This epidemic has raged with great severity, especially in the city of San Francisco. The mortality in that city has been about three times as great as in San Francisco, although the population is less by three quarters. In San Francisco the deaths have averaged nine a day, chiefly among the unwashed residents. It is supposed that the disease travelled across the continent with the emigrants by the overland route. Not a single case, according to the most authentic accounts, exists in Sydney.

A line of steamers between San Francisco and the Sandwich Island was contemplated, with every prospect of being speedily established.

The trial of the rioters at Sacramento city was to commence on the 16th, at Benicia. The complete acquittal of the prisoners was confidently anticipated.

During the approaching winter a larger proportion of miners than usual will remain in the mountains. This will increase the amount of gold, as heretofore, in the winter season, mining operations have been almost entirely suspended. The business of quartz mining is now attracting much attention. New veins are constantly discovered, and the most favourable results are expected from the establishment of a thorough system of scientific mining.

A fire had occurred at Sacramento city, destroying property to the amount of 40,000 dollars, including five or six buildings.

WEST INDIES

By the West India mail, which arrived during the week, we have accounts from Jamaica to December 15, from which we learn that the scourge of cholera was on the increase in Kingston, and was very fatal in other localities. At St. Ann's on the 4th days, 430 deaths had occurred, or about one-third of its population. The first house which this scourge visited was occupied by 14 persons, 12 of whom fell victims in the short space of 30 hours. Some small townships were almost depopulated. In other districts, the disease was committing its deadly ravages, though not to such a frightful extent.

The *Devizes Gazette* says that many of the inhabitants of that town who are in the habit of attending St. John's and St. Mary's Churches on Friday week, and having agreed upon it as a day of fasting in the performance of the Church service they considered desirable, also made the rector acquainted with it, the rev. gentleman has readily acceded to their wish.

PAPAL AGGRESSION.

In the necessarily brief account which we have been constrained to give of the proceedings caused by the Papal Aggression, we have endeavoured to place a perfectly fair and impartial abridgment before our readers. We have, accordingly published a notice of Dr. Wiseman's lectures, and of the addresses of the Catholics to the Cardinal, as well as of the meetings of the Protestants, and of the addresses to the Bishops. It would have been more for our interest to have taken a decided part with the majority, and published only the proceedings of the Protestants, with numerous cuts, holding up the Catholics to ridicule. Our impartiality and forbearance, however, have not enabled us to escape a spurt of venom. *The Dublin Review*, formerly edited by Cardinal Wiseman, and probably still under his influence, thanks us for introducing the ILLUSTRATED LONDON NEWS amongst those who "are had a "fling" at the Papacy, and alludes to it in any but complimentary terms. We seek no praise from the Cardinal and his subordinates, nor shall we be driven by any apprehensions to alter our impartial course, and take pains to deserve their hostility. They would have all men slaves to their dogmas; and to be independent in thought and action, is to assert a superiority which provokes their anger. We shall continue to be impartial, and endeavour to be just, though that displease the Cardinal or his mouth-piece, the *Review*.

MEETINGS.

THE NOTTINGHAM COUNTY MEETING took place at Mansfield, on Thursday week, in the Town Hall. There were about 300 persons present, including Sir Digby Mundy, the Right Hon. Edward Strutt, the Earl Manvers, Viscount Newark, Lord Henry Bentinck, M.P., Viscount Galway, M.P., T. B. T. Hildyard, Esq., M.P., J. E. Manners Sutton, Esq., M.P., Sir Thomas White, Bart., Colonel Rolleston Colonel Hill, Major Warrand, Major Coke, Captain Bates, &c. The High Sheriff in the chair.—Lord Henry Bentinck, M.P., moved an address to the Queen, of the usual character, which expressed a hope that her Majesty would be pleased to order the laws to be put in force against all those who have dared to infringe them; and assuring her Majesty of cordial support in every measure necessary to preserve inviolate the pure and scriptural worship of the Protestant faith.—Colonel Rolleston seconded the address. The Rev. C. Myers of Burnham, who said he had noticed at these meetings a great deal of rain-and-water, moved an amendment to the address, asserting the entire presumptuous conduct of the Bishop of Rome to the encouragement [illegible] assumption by the acts and declarations of Ministers, and therefore praying for their dismissal. Sir Thomas White, Bart., seconded it, and alien to the feelings of the meeting, that it found no seconder. Major Coke, of Debdale, was more fortunate; and a clause moved by him, representing to her Majesty that the Court of Rome would not have attempted this act of aggression had not encouragements been held out by many of the clergy of our own Church, who have shown a desire to assimilate the doctrines and services of the Church of England to those of the Roman communion, was adopted by the meeting. A non-desirable opposition on the part of its chief promoters; and the address was agreed to. In the course of the proceedings, Viscount Galway said that the best definition of the Puseyites he had heard was given by a very witty old lady of his acquaintance, who said that they were "Brummagem Catholics."

A MEETING OF THE ULSTER PROTESTANT ASSOCIATION took place, at its rooms, on Thursday week. Among those present were the Right Hon. the Earl of Roden, the Rev. W. G. Hanson, Colonel Wood, Messrs. J. B. Price, W. Johnston, Ballykilbeg, Captain Boyle, Venerable Archdeacon Mant, Revs. C. Boyd, T. B. Price, &c. The chair was taken, amid loud applause, and several rounds of the Rentish fire by the Earl of Roden. The noble Earl made a long speech, in which he inveighed with much bitterness against a letter written by the Earl of Carendon to Archbishop Murray in 1848 in which he speaks with great respect of the Pope, and which has also for its object of remark the conduct of the Earl of Roden also attacked the Government generally for the support and encouragement it had given to Catholicism. Resolutions were adopted expressing cordial sympathy with the Protestants of Great Britain, regretting the conduct of the Government to the necessity of repelling Papal encroachment and securing the liberties of the people; and declaring that legislative enactment is necessary for the future of the Empire, in the sense in which they are intended to be understood. Another resolution expressed confidence in the loyalty with the exertions now manifested in England for the maintenance of the Protestant Religion." In the course of the proceedings, a Mr. Cardeck, of Lisburn, denounced Lord Clarendon, in very fierce language, as a traitor, and moved an amendment, praying Her Majesty to remove him, as a pest, a disgrace, a traitor, and an enemy of the Pope, from her councils. The amendment was seconded and supported, but was got rid of, [illegible] by the previous question, and the resolutions were adopted. The meeting, though not numerous, was extremely noisy and uproarious, and Lord Carendon, it was said, would not have been allowed to enter Belfast had his character been known.

THE BELMONTER COUNTY MEETING took place on Thursday week at Bala, when the usual resolutions and address were passed. The speakers, movers, and seconders were the Hon. E. M. Lloyd Mostyn, M.P.; Richard Richards, Esq., M.P.; Watkin Williams, W. W. Lewis, Esq.; Sir Watkin Williams Wynn, Bart. M.P.; and R. Richardson, Esq. The meeting was presided over by E. H. Griffiths, Esq., High Sheriff.

AT LEEDS on Wednesday week, a somewhat remarkable meeting of the town council occurred, which did not find its way into the London morning papers till the beginning of this week. Mr. Joseph Barker (Wesleyan) moved that the Government petition Parliament to sanction no interference with the rights and liberties of the Roman Catholics of England." His thought that, according to the law of England and the law of nations, the Pope of Rome was looked at as much rank to attempt to convert the people of this country to Popery as the Wesleyan Methodists had to convert them to Methodism, or the Unitarians to Unitarianism. It would be quite enough to interfere with the Pope if he should commit any robbed, murdered, or violated some law of the empire. Mr. Robert Baynes moved, as an amendment, an address to her Majesty, praying that her Majesty will cause measures to be adopted for the defence of the Protestant religion and for resisting all attempts, directly or indirectly, to re-establish Papal power within these realms. The original motion, after some discussion, was carried by 17 votes to 15.

THE THREE DENOMINATIONS.—The deputies from the Independents, Baptists, and Presbyterians, within twelve miles of London—a body of considerable weight and influence—assembled on Friday week, when the report submitted to them contained references to the Papal encroachments to the following effect: "The committee not only profess and advocate, but have ever endeavoured to carry into effect, the great principles of civil and religious liberty; they yet view with [illegible] the aggression of the Bishop of Rome. They, however, refrain from committing the character of which the deputies are the guardians of Protestant Dissenters at the present time, manacled as their principles will lead them still to protest against the spread of Popish doctrines and practices, whether found in connexion with the Church of Rome or the Established Church of England. By several of the deputies this reference was deemed insufficient, and Mr. Carlington moved that this part of the report be expunged. After some discussion, however, the chairman, Mr. Remington Mills, said it was his opinion of Sir Fitzroy Kelly, as well as of Sir Edward Sugden, that the Papal decree was an infraction of our laws, and that no person could accept a foreign title without the consent of the Crown. The proceedings were afterwards fixed as was.

THE CORNWALL COUNTY MEETING was held on Tuesday, at Bodmin. The High Sheriff (Mr. W. Darby) presided. There were also present Sir C. Lemon, M.P., Sir C. Trelawny, the Hon. G. R. Fortescue, Rev. R. W. W. Pendarves, M.P., Mr. J. T. A. Robartes, M.P., and a large assemblage of influential gentlemen and freeholders of the county. Resolutions were passed condemning the Papal aggression of the Constitution in Church and State. The Hon. G. W. Fortescue seconded the motion. Mr. J. W. Elliot, though opposed to Puseyism, could not consent to interfere with or curtail the liberty of his Roman Catholic fellow-countrymen, and therefore proposed an amendment to the effect that, viewing the late hierarchical appointments by the Bishop of Rome in this kingdom as purely and essentially spiritual, their legislative suppression would be inconsistent with a [illegible] religious liberty; and an address to her Majesty, [illegible] to that question, to be laid respectfully before the Archbishop's see. The amendment was seconded by Mr. E. Stephens; but, after several speeches, was supported by only one hand, and lost. Another amendment, moved by Captain Thompson, expressive of the disapprobation of the honours conferred on Irish Roman Catholic prelates, and of the grant to Maynooth, was also lost, and the address carried by an overwhelming majority. The meeting joined in "God save the Queen," and broke up.

THE LAY MEMBERS OF THE CHURCH OF ENGLAND OF ST. PAUL'S AND ST. BARNABAS' held a meeting on Wednesday, at which they resolved to address the Bishop of London to put an end to the Romish practices still carried on at the parish

EVENTS

THE LADIES OF DOVER have sent an address to her Majesty, assuring her of their loyalty, and they ask for measures to proclaim the nation's abhorrence to the indignity offered to her Majesty and the people by the Pope. The address was received very graciously by her Majesty.

DOCUMENTS.

THE CLERGY AND ARCHBISHOP OF YORK.—In the morning papers of Tuesday and Wednesday published an address of the clergy of the East Riding of Yorkshire to the Archbishop of York, and his Grace's reply. The clergy reprobate the authority of the Pope, who, it is contended, has introduced into the Archbishop's see, by bestowing on a stranger the title of Bishop of Beverly, and they protest, as citizens, against the interference with the Royal prerogative; while the Archbishop does little more than reiterate their address, with approbation of its sentiments, and alludes to Cardinal Wiseman as a possible occupant of the Pal al throne, whose elevation might, without vigilance, tend to the peace and endanger the liberties of the country. His Grace seems to rely on the determined spirit of resistance already manifested in the country to repress further encroachments. The documents do not require from us a more [illegible]

THE ARCHBISHOP OF YORK AND HIS CLERGY.—We have received from the Archbishop of Canterbury, of which the following are the principal passages:—

> We the undersigned Archbishops and Bishops of the United Church of England and Ireland, have seen in the public prints a document entitled "An humble Address of the Archbishops and Bishops of the Church of [illegible] to [illegible] Archbishop of Canterbury, as the [illegible] Bishops of the Church of England, approach your Majesty. It is with a [illegible] apprehension, that we have observed the title by which [illegible] Bishop of Rome, together with the suffragan Bishops of the two provinces of [illegible] have thus designated yourselves in addressing our Sovereign—a title which, we beg [illegible] say, is unknown to the law of the land, and which [illegible] assumption of [illegible] first article of Union between England and Ireland. Your Grace is aware that by the statute 5 and 6 Geo. III., c. 67, it is enacted, "that the Church of England and Ireland, as now by law established, be united into one Protestant Episcopal Church, to be called The United Church of England and Ireland." The liturgy of our Book of Common Prayer, and the Form of Ordaining Priests, bear these solemn testimony to the incorporation of the two Churches into one, and to the designation by which that one Church is to be known.
>
> We have painfully felt that of late years, as well in legislative as in [illegible] ecclesiastical affairs, many [illegible] occasions, a disposition has been manifested to regard the Irish provinces of the United Church as if they did not form an integral portion of the one Church of the nation. We are unquestioning that the Irish branch of the Church is peculiarly exposed to the attacks of its enemies; and we are on that account the more appreciative of any step being taken which has a tendency, even in appearance, to disassociate our provinces and dioceses from that [illegible] community with which it is our happiness, and we hope our safety, to be identified.
>
> We deem that to assume to the Church, in which we bear office, to ground as far as in our power against a separation being made between the ancient sister Churches of the National Church, which were most solemnly and authoritatively united together into one, [illegible] Church of England and Ireland, is a grievous error. We, the undersigned, Richard Dublin; Thomas Armagh; Richard Bagot, Bishop of Oxford; Thomas Bickersteth, Bishop of Ripon; Edward Hereford; Thomas Kaye, Bishop of Lincoln; Henry Lichfield and Coventry; Edward Harold Browne, Bishop of Ely; Charles Thirlwall, Bishop of St. David's; Connop Thirlwall, Bishop of Saint Asaph; Samuel Wilberforce, Bishop of Oxford and Winchester; Henry Bickersteth, Bishop of Rochester; Richard Durnford, Bishop of Chichester; Charles Sumner, Bishop of Winchester; Thomas Turton, Bishop of Ely; Charles Baring, Bishop of Durham; Hugh Percy, Bishop of Carlisle; Richard Chevallier, Bishop of Worcester; Henry Phillpotts, Bishop of Exeter; Thomas Musgrave, Archbishop of York; Edward Grey Hawkins, Provost of Oriel College, Oxford; Thomas Jackson, Dean of Christ Church; Henry Alford, Dean of Canterbury; Richard Chenevix Trench, Dean of Westminster; Samuel Hinds, Dean of Norwich; Thomas Gaisford, Dean of Christ Church; Henry Hart Milman, Dean of St. Paul's; Francis Close, Dean of Carlisle; Richard Jenkyns, Master of Balliol College, Oxford; Charles Richard Sumner, Master of the College of St. Mary Winchester; Edward Bouverie Pusey, Canon of Christ Church; Thomas Mozley, Canon of Worcester; Thomas Vowler Short, Canon of St. Paul's; Henry Melvill Gwynne, Canon of Windsor; Henry Alford, Canon of Canterbury; Thomas Dale, Canon of St. Paul's; Charles Girdlestone, Canon of Bristol; Thomas Rees, Canon of Bristol; Thomas Hall Caine, Canon of Chester; Thomas Garnier, Canon of Worcester; Thomas Dudley Fosbroke, Canon of Gloucester; Thomas Hankinson, Canon of Chester; Thomas Hill, Canon of Worcester; Thomas Hall Caine, Canon of Chester; Thomas Garnier, Canon of Worcester; Thomas Dudley Fosbroke, Canon of Gloucester; Thomas Hankinson, Canon of Chester; Thomas Hill, Canon of Worcester; Thomas Rees, Canon of Bristol; Thomas Mozley, Canon of Worcester; Thomas Vowler Short, Canon of St. Paul's; Henry Melvill Gwynne, Canon of Windsor; Henry Alford, Canon of Canterbury; Thomas Dale, Canon of St. Paul's; Charles Girdlestone, Canon of Bristol; Thomas Rees, Canon of Bristol; Thomas Hall Caine, Canon of Chester; Thomas Garnier, Canon of Worcester; Thomas Dudley Fosbroke, Canon of Gloucester; Thomas Hankinson, Canon of Chester; Thomas Hill, Canon of Worcester; Thomas Rees, Canon of Bristol; Thomas Mozley, Canon of Worcester; Thomas Vowler Short, Canon of St. Paul's; Henry Melvill Gwynne, Canon of Windsor; Henry Alford, Canon of Canterbury; Thomas Dale, Canon of St. Paul's; Charles Girdlestone, Canon of Bristol

NEW IRON BRIDGE AT ST. PETERSBURG.

CAST-IRON BRIDGE AT ST. PETERSBURG.

In this age of Iron, its employment in almost every description of structure is a measure of wise economy. The city of St. Petersburg has just received an addition of this class, in a cast-iron Bridge across the Neva. A metal bridge, is not, however, a novelty in St. Petersburg; for several of the canal bridges are of cast-iron, and some are on the suspension principle.

This last new structure is a beautiful embellishment to the city which, many years since, was said to equal the united magnificence of all the cities of Europe. In the accompanying View, the Artist has shown the Bridge, with the broad and lofty granite build ngs on the quay, thus forming a very effective *coup d'œil*.

The building of this Bridge has been an engineering work of great difficulty; the unstable nature of the mud bed of the river having hitherto been an insurmountable obstacle to the very necessary formation of a permanent communication between these two portions of the city. This has, however, been effected by driving piles into the river bed, and filling up the interstices with stones. Thus a solid foundation has been obtained to support the weight of the granite piers, and to resist the pressure of the vast and rapid volume of water which, by the contraction of the river, has here acquired a depth of 30 feet.

The entire length of the Bridge is 1100 feet, or nearly so; the centre arch being 156 feet span. The arches at one extremity rest on a massive pier constructed at 100 feet from the northern shore, with which it is connected by two bridges moving on pivots, to allow the craft to pass up and down the river.

The Bridge was completed on the 21st of November last, and was opened by the Emperor in person, after the priests had performed the ceremony of consecration, &c. A large concourse of people followed his Imperial Majesty over the Bridge, and crowded round to testify their regard and affection; while others seized the traces of his carriage, and drew him along amidst the acclamations of the multitude.

It is remarkable that this day was the 25th anniversary of the Emperor's accession to the throne—a day considered fatal to Russian Monarchs—and yet his confidence was so great, that he ventured without an escort, and attended only by his staff, who were almost immediately separated from him by the throng; not a soldier was to be seen in the neighbourhood.

The Emperor, in very flattering terms, thanked the merchants of the place for the assistance they had rendered him in this costly undertaking; he also conferred a decoration and a General's epaulettes on Kelbitz, the engineer officer under whose superintendence and direction the Bridge had been built.

We have to thank our obliging Correspondent (K. B.) at St. Petersburgh, for the sketch of the new structure.

IRON RAILWAY VIADUCT AT MANCHESTER.

THIS stupendous Viaduct has been erected for the joint station, at Manchester, of the London and North-Western and the Manchester, Sheffield, and Lincolnshire Companies; and carries the railway traffic over the goods-station of those Companies, with which it communicates by hoists. It consists of an immense platform, 700 feet long, 35 feet wide, with three lines of rails, and twenty-one turn-tables, is constructed almost entirely of iron, supported by large cast-iron girders resting on Doric columns, and surmounted by a beautiful entablature, forming, at top, the enclosure of the station towards Sheffield street. The Viaduct extends across Store-street, for communicating with a large range of warehouses, by a bridge of 68 feet span, formed of a series of wrought-iron tubular girders, constructed upon a new and improved principle. The whole forms the most extensive and novel structure of the kind in the kingdom. The cast-iron beams and the turn-tables are made of Stirling's patent toughened cast-iron. The work has been constructed and carried out by Messrs. Robinson and Russell, of Millwall Iron Works, London; from the designs of Mr. Alfred Stee, the engineer of the railway companies. It consists of 36 columns, 20 feet in height, each weighing 6¼ tons; and 193 girders, weighing 443½ tons; 43 pieces of entablature, each 5¼ cwt.; besides cornices, parapets, wall-plates, &c.; the entire weight of cast iron in the Viaduct being 974¾ tons; of wrought iron 40 tons: total, 1014¾ tons.

Viewed from Store-street, it is a very imposing and ornamental structure.

NEW IRON RAILWAY VIADUCT, AT MANCHESTER.

F I N E A R T S .

THE COPPERSMITH AND HIS WIFE—PAINTED BY SCHLEISNER.

THIS interesting picture of familiar life is painted by Schleisner, and the property of Ludwig, ex-King of Bavaria: and is described as in the private gallery of modern paintings in the Palace of Schleissheim, about seven miles from Munich. The incident represented is an old coppersmith, who is reading, or rather attempting to read, a letter; his wife is listening, as well as reading, to judge by her expression, the welcome news. The smith has left off work to devour the intelligence; around him are the implements of his trade, and a few copper vessels. The composition is clever and effective, and the incident is one of those pleasing touches of domestic life which are sure to find response in many hearts.

Possibly this picture may have been removed from the Palace of Schleissheim, for, since the completion of the Pinacothek at Munich, the private gallery has been stripped of the choicest portion of its contents, to furnish out the metropolitan collection; and it is now reduced to little better than a large lumber-house.

MUSIC.

FOREIGN MUSICAL NEWS

Scribe and Halévy's "Queen of Spades" has proved a trump card for the Théâtre de l'Opéra Comique. The plot, although exceedingly complicated, is very interesting. M. Scribe has taken M. Mérimée's translation of a romantic story by Pouchkine, the Russian poet, who was killed in a duel with a Frenchman, and has spun out three acts of a drama, combining the fantastic with the terrible, the pathetic with the comic. The dramatic imbroglio exacts the deepest attention—a strong recommendation for a Parisian audience, but which we in London might call tiresome. The main incident turns on the possession of a secret at cards, by the *Countess Doria d'Olporoski* (Mdme Ugalde), by which winning is reduced to a certainty. The aforesaid secret was that of the Empress Elizabeth, who cheated her courtiers by her knowledge of the three, ten, and the Queen of spades. The *Countess* is courted by *Prince Colonel Zananow*, a gambler, in order to obtain her card secret; but she is attached to *Constantine Nelidoff*, a son of a disgraced Minister, whose children lose their rank: and this *Constantine* is serving as a sergeant in the army, and insults the *Colonel*, his superior officer, is condemned to work in the salt-mines. After a variety of adventures, *Constantine* and the *Countess* are married, the secret proving to be a mere *ruse*, ruining the swindlers who tried to cheat at play with its supposed infallibility. Halévy has composed an overture. Battaille is *Zananow*, the chief of the miners: Boulo, the tenor, *Constantine*: Coudere is the *Colonel*, Ricquier is the banker, *Kalenberg*: and Mdlle. Meyer, *Lisaveka*. The concerted pieces of the gambling scenes were extremely effective.

Madame Sontag played last week at the Théâtre Italien, in Paris, *Norma*, in Donizetti's "Don Pasquale;" *Lucia* and *Norma*, in the "Figlia de. Reggimento" in the first opera, Lablache, Calzolari, and Colini were included in the cast.

Balfe, the composer, was in Paris, but will return to London for his Exeter Hall Concert, on the 27th inst.

Whilst London remains without a National Opera, the arrangements for a *third* lyric theatre are almost completed in the French capital. The locality will be either the Théâtre Historique or the Vaudeville. It must be recollected that the Government supports, by large grants of money, the Grand Opera and the Opera Comique, and that a vote of money will, no doubt, be obtained for the third undertaking. And yet in our metropolis, with a population of two millions—with the finest choral and orchestral talent in the world—with many distinguished leading vocalists and most eminent composers—there is not a single theatre devoted to English opera. Our writers are distributed in every direction: Sir H. R. Bishop is a lecturer; John Barnett is a singing master at Cheltenham; Vincent Wallace is in America; Balfe is obliged to produce his works in France or Germany; Edward Loder and Macfarren are teachers; Sterndale Bennett gives pianoforte lessons; Henry Smart is an organist, &c.; and our singers either go abroad or are confined to the concert-room. And yet, if there were a lyric establishment properly organised, there are available, as *artistes*, Miss Catharine Hayes, Miss Clara Novello, Miss Birch, Miss Louisa Pyne, Mrs Sims Reeves (Miss Lucombe), Miss Bingley, Miss Miran, Miss F. Horton, Mrs Weiss, Miss Poole, Miss Annie Romer, Miss Bassano, Mrs D King, Miss K. Fitzwilliam, Mrs. E Seguin, Mrs. A. Newton, Miss Lanza, &c., Messrs Sims Reeves, Travers, King, Barker, Harrison, Rafter, Allen, Borrani, Weiss, Bardini, Whitworth, Drayton, Ledler, Phillips, &c.; besides a host of untried talent.

Mr. Frederick Gye is in Berlin to make arrangements for the opening of the fifth season of the Royal Italian Opera, Covent-Garden. Mario, the tenor, who appeared last year at that lyric establishment, has just made a very successful *début* in Paris, at the Grand Opera, as *Arnold*, in Rossini's "William Tell."

A new opera, entitled "Malek-Adel" the same subject treated by Costa, at her Majesty's Theatre, some years since—has been produced at Seville, composed by Ventura Sanchez. We learn from Madrid that Madame Frezzolini and M Barroilhet had delighted the *habitues* of the Oriente, in Bellini's "Beatrice di Tenda." The "Barbiere," with Alboni, Gardoni, and Ronconi, was looked forward to with the most intense interest.

Signor Schira has been engaged to compose a grand opera for the Royal Theatre in Turin.

MUSICAL EVENTS

The London Operatic Concert Company of 6[illegible] performers, under the direction of Signor Lanza, gave their first concert on Wednesday night, at the Music-Hall, Store-street. Signor Lanza's "grand comic operatic serenade," "Hamet and Zeliena; or, Stratagem for Stratagem," was sung, supported by Mdlle. Lanza, Mrs. Durand, Messrs T. Williams, W. A. Payne, Durand, Drayton, Mattocks, and Read. Mr. H. Grisbach was the leader of the band. In the miscellaneous [illegible]ion, Mrs. A. Newton, Miss Eliza Ward, Mr Bridge Frodsham, and Master W[illegible]d. A new serenata, by C. S. Herve de la Meriniere, called the "[illegible]ty," and a new operatic *descrttissement*, by a popular composer, are [illegible]

Miss Charlotte Pearson gave a *soirée musicale* on Thursday, assisted by the Misses Bassano and Messent Mr Herberte, and Signor Marcuesi

Next Wednesday, at St Martin's Hall, at the third of Mr. Hullah's Monthly Concerts of Ancient and Modern Music, four compositions by M. Charles Gounod, of Paris, will be performed for the first time. This is the composer whose opera of "Sappho" for Madame Viardot is now in preparation at the Grand Opera in Paris.

In the musical obituary of the past year are the names of Alexander Piccinni, Pavesi, Guénerie, Circa, de Feltre, composers; Alizard, Botelli, Chaix, W. Seguin, and Mesdames Branchu, St Aubin, Gavaudon, Boulanger, Bessin, Sarah, Jansenne, Grassini, Duños, singers. Mdme. Dulcken, Lyon, A. Schilling, Pedro Soler, Joseph de Blumenthal, Moritz Ullmann, instrumentalists.

As an illustration of our remarks, elsewhere, on the disgrace attached to this country of not having a National Opera, we have to record the most brilliant triumph achieved by Miss Catherine Hayes, on her *début* at the chief theatre in Rome, on the 26th ult. (St. Stephen's night); she appeared as *Elvira*, in Bellini's "Puritani," and after the "Polacco," Miss Hayes was called for three times; and after the *scena* "Qui la voce," which created quite a *furore*, again and again did she receive ovations. Four times the usual prices were paid for admission, and the Apollo Theatre was crammed to excess.

Mdlle Lucciola, a vocalist, who is stated to possess a most extraordinary voice—a pure tenor in quality, will make her *début* at Mr. Balfe's forthcoming concert at Exeter Hall.

The Sacred Harmonic Society will repeat Mendelssohn's "Elijah" on the 20th instant.

THE THEATRES.

The only theatrical event of the week is the attempt made on Monday at DRURY LANE, in the character of *Coriolanus*; which, though wanting in fire and rapidity, was distinguished by elaborate care and polish. Mrs. Weston performed *Volumnia* in a respectable manner. But this reproduction of plays for a single night, with but little attention to the *mise en scène*, far from fulfils, in our opinion, the great aim of a national dramatic establishment.

Mr. H. Russell was to have read, on Tuesday, the First Part of "Henry IV.," at St. Martin's Hall; but, owing to an inveterate hoarseness, he was compelled to dismiss his audience. Much as we lament the occurrence, some pains we think, should have been taken, as Mr. Russell's cold seems to have been of long standing, to prevent the loss of time incurred by an unnecessary attendance on the part of audience and critics.

MINUTE PENMANSHIP.—We have just seen a very remarkable specimen of minute caligraphy, being *ninety-seven of the Psalms of David*, written in whole-length portraits of her Majesty and Prince Albert, and a host of accessories, forming a *tableau* of 20 by 48 inches. The writer commences with the 1st Psalm, and extends to the 97th, thus including 1471 verses. The whole has been designed and written by Alfred Richard Smelling, a biscuit-baker, of 20, Vauxhall-street, Lambeth, who states the labour to have occupied him six entire months. It has been shown to her Majesty and Prince Albert, who were graciously pleased to express their admiration of its extraordinary minute ingenuity. It is intended for display at the Great Exhibition.

PROPOSED RAILWAY IN EGYPT.—The route to be taken on starting from Alexandria is parallel to the Mahmoudieh Canal, along the embankment which separates Marenna from Lake Maddieh, as far as the point where the canal bends to the east: and then, avoiding the more cultivated districts, the line should skirt the Desert east of the Natron lakes, and finally terminate at the village of Ghiseh, opposite old Cairo. Of the materials necessary for the construction of a railway, Egypt, unfortunately, possesses but few: timber and iron, the most important of all, there is absolutely none; all must be imported from more favoured countries; but, while these materials are not found on the spot, as it were to compensate in some measure for the deficiency, the climate is most propitious to their preservation: the unpainted lattice windows of Cairo shew this; there are plenty of them to be seen upwards of 100 years old, and still in perfect preservation. The life of an unprepared sleeper in this climate may be fairly estimated at from 35 to 40 years; the principal cause of the durability is the extreme dryness of the air, Egypt being situated in the rainless district of Africa.—*From pamphlet by Aston Key, C.E.*

CALENDAR FOR THE WEEK

SUNDAY, JAN. 12.—1st Sunday after Epiphany.
MONDAY, 13.—Old New Year's-day. Plough Monday.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 11, 1851.

THERE has been another "crisis" in Parisian politics within the week, the full violence of which has not yet subsided, and which may produce results of the utmost importance. The Assembly, hostile to the President, set up against him many months ago a rival and unconstitutional power, in the person of General Changarnier, the Commander-in-Chief. Over his acts and opinions, whatever they may be, it throws the shield of its protection. There seems to be some doubt on the subject of General Changarnier's real sentiments; although there is a confident belief that Republicanism in the sense of the Constitution finds no favour in his sight. Whatever they may be, he has been placed in the position of rivalry and antagonism towards the recognised and constitutional head of the State. If Louis Napoleon desire to maintain the Republic, the Algerine General is pitted against him in the mind of the Assembly, as the man, who shall, when the hour is ripe, overthrow the existing system. If Louis Napoleon be suspected of a design to overturn this same unpopular system, and to re-establish the dynasty of the Bonapartes, the same General Changarnier is the man whose name is in the mouths of all the members of the majority, and who is thrust into public notice as he who shall prevent the consummation. In no case can the Government of the country be properly carried on while such an anomalous and powerful position is held by a man like Changarnier. Louis Napoleon must either get rid of him, or sacrifice, not alone his future prospects, but his present respectability and usefulness as the chief magistrate of the Republic. The quarrel has often been on the point of breaking out; but the mutual fears of all parties has hitherto taught them forbearance in action, if not in speech or thought. The various compromises that have been made from time to time have proved as many failures; and the dispute has at length come to an issue, of which the importance and gravity have been augmented by all the past-up bitterness and ill-feeling of the past. The circumstances which have brought about the explanations in the Assembly and the resignation of the Ministry are in themselves trifling, almost ludicrously so. The over-officiousness of a police agent, and the non-payment of a bookseller's bill by an insolvent member, have brought the Executive and the Legislative powers of the Republic into collision, and left the President without a Ministry, or the power of choosing one, in accordance with what he may conscientiously believe to be the real necessities of the country. Between him and the Assembly, there is, from this moment, open warfare. Neither can trust the other; and, between the two belligerents rides General Changarnier on his war-horse, with his sword drawn—the pet of the sulky legislators —and abiding his time unless he be disarmed in the interval) to turn the squabble to the account either of his own personal ambition or to that of one of the two Monarchist parties. Monk or Cromwell, whichever he is to be, he stands forth at the present moment the most powerful, the most dangerous, and the most unconstitutional public man in France.

The "howsomever" of the French Constitution—the awkward word very aptly expresses the awkward thing—has often been evident within the last two years, but was never more flagrantly displayed than it is at this moment. Its founders—men of mere theory—never imagined the case that arose almost before the Constitution was a month old; and its whole existence up to this time has been a succession of make-shifts. The great and fatal defect seems to be the recognition of two equal authorities

neither of whom has power, in case of irreconcilable dispute, or difference of opinion, to reduce the other into submission, or to appeal to the country. The President—elected for four years—must work with an Assembly elected for the same period, whether he like it or not whether it will put confidence in his Ministers or not—whether it will aid him or thwart him in his measures—and whether, or not, it give satisfaction to himself or to the country. There is no safety-valve for the imprisoned steam of political hostility. It must generate, increase, and burst. What was essential to the proper working of the Constitution, was a power on the part of the President to dissolve the Assembly, and appeal to the country for its final decision, if he found that it would be impracticable and impossible, in the exercise of his own duty, that he should act along with it. That power was not accorded; in all probability the case was not foreseen by the *têtes montées* of the Provisional Government and the theorists, who derived their inspiration from them, in the concoction of the document; although it might have been supposed that the experience of other constitutional states might have warned them of the necessity of making such a provision. The probability therefore is, that the President—driven into a corner by the gratuitous insolence of the Changarnier faction, and by the unjust hostility of the Assembly, and finding it utterly impossible to carry on the Government in the face of such a combination against him—will, unless some hollow truce be agreed upon to adjourn the difficulty, appeal to the country—not by dissolving the Assembly, which he cannot do—but by resigning his own functions, which he can. The necessary appeal to the nation would thus be made without a revolution. Whether it would not be the first step towards a revolution if, under such circumstances, the President were re-elected, time alone will show. Whatever be the immediate result, it is evident that there can be no real stability in French politics, as long as the present Chief Magistrate and the present Assembly remain together in power. They will not, because they cannot, coalesce; and one or the other must go to the wall. Upon every successive occasion of dispute between them, their future concord becomes more and more hopeless.

THE Revenue returns do not show the surplus that was anticipated, but they nevertheless exhibit a state of national prosperity in the highest degree satisfactory. Notwithstanding the remission of a portion of the duties on sugar and on foreign spirits, which came into operation in July last, and the abolition of Excise duties on bricks, amounting to nearly a million, and the reduction of the stamp duties to a large extent during the last parliamentary session, the quarter just ended has been nearly as productive as the corresponding quarter of last year. After all these deductions there has only been a decrease on the year of £126,089; but this decrease is apparent, not real; and turns out, on examination, to signify—extraordinary items being duly allowed for—an increase of £164,942. In the Excise department—that which proves more than any other the social condition of the people—there has been a positive increase on the year of upwards of a quarter of a million sterling. During the year the people have been fully employed, and almost every branch of business has been prosperous. Cheap food and abundant occupation have been the rule, and the exceptions have not been as to food, but simply as to occupation, and so "few and far between" as scarcely to merit notice. Thus, although imposts have been largely reduced or altogether abolished, the Revenue, in all its principal departments, either remains the same, or manifests a tendency to increase. There could not be a more satisfactory proof of the policy of still further reducing all imposts that impede the free exercise of industry. With fair play and free scope for the energies of the people, the Revenue keeps up to its *maximum*. It should be the business, therefore, of statesmen to reduce all anti-commercial and anti industrial taxation to its *minimum*. They certainly do not want for past facts or actual experiments to encourage them in such a policy.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

The hospitalities of the season have been dispensed by her Majesty and the Prince Consort, during the past week, with their accustomed munificence. His Royal Highness the Duke of Cambridge arrived at the Castle on Monday, on a visit to his illustrious relatives. Among the other noble and distinguished personages who have had the honour of participating in the Court festivities, we may mention the Premier and Lady John Russel, and Lady Caroline Lavesson Gower, the Duchess of Sutherland, the Speaker and Mrs. Shaw Lefevre, his Excellency Senor Isturiz, his Excellency the Marquis d'Azeglio, the Marquis of Abercorn, Lady Fanny Howard, Earl and Countess Cowley and Countess of Jersey and Lady Clementina Villiers, the Earl of Strafford, Viscount and Viscountess Rosenby, Lord and Lady Stanley (of Alderley), &c.

Her Royal Highness the Duchess of Kent, who has recovered from her recent slight indisposition, has dined at the Royal table.

The Queen and the Princes took early walking exercise on the slopes around the Castle on Sunday morning, and afterwards the Royal Family and gentlemen of the Court, and the domestic household, attended Divine service in the private chapel of the Castle.

Shooting and hunting have formed the pastime of the Prince Consort during the week, and his Royal Highness [illegible] several times accompanied by the guests enjoying the Royal hospitality

Lord Waterpark has relieved Lord Camoys in his duty as Lord in Waiting to the Queen, and Mr. R. Grimsby Gore has relieved Lieut.-Gen[illegible] Bowater in the duty as Groom in Waiting to his Royal Highness Prince Albert. Mr. Wyse has relieved Colonel the Hon. Charles Grey in his duty as the Equerry in Waiting to her Majesty, and Lieut.-Colonel Francis Hugh Seymour has relieved Colonel Bouverie in his duty as the Equerry in Waiting to his Royal Highness Prince Albert.

We are happy to announce that her Royal Highness the Duchess of Gloucester was considered much better on Thursday.

Her Royal Highness the Duchess of Kent, attended by Baroness de Speth, arrived at Clarence House, St. James's, at half-past eleven o'clock on Wednesday morning, from her residence, Frogmore. Her Royal Highness paid a visit to her Royal Highness the Duchess of Gloucester, at Gloucester House, and in the afternoon left town, on her return to Frogmore

The Duke of Newcastle, according to the latest accounts, remains in a very precarious state of health

The Marchioness of Clanricarde and Lady Emily de Burgh have gone on a visit to the Duke of Portland, at Welbeck Abbey, where a family circle are staying.

The Earl de Grey purposes to give a grand ball at Wrest Park, his splendid seat in Bedfordshire, on the 17th inst. The noble Earl has arrived there from town, and is surrounded by a select circle.

WINDSOR AND ETON SAVINGS BANK.—By the lamented death of his Royal Highness the late Duke of Cambridge, the honorary office of president of this excellent institution became vacant, and the trustees and managers considered that they should best consult the interests of the depositors, and the feeling of the inhabitants of the locality, by soliciting his Royal Highness the Duke of Wellington to accept the appointment. The unanimously practical and judicious method adopted by the Prince in the various offices which he fills is well known. His Royal Highness very properly sees that, although an office may be, in point of emolument, honorary, it carries with it a moral responsibility which no well-regulated mind can refuse to acknowledge. The name of a Royal or noble president is a tower of strength to a deserving institution, extending its usefulness, and conferring substantial benefits on the contributors; and, the noble hand, appealed to an undeserving institution, it may inflict grievous injury. When, therefore, Prince Albert was solicited to take upon himself the post of President of the Windsor Savings Bank, he considered it a sacred duty to attend to the stability of the institution, and the manner in which its business was conducted. On Monday last, his Royal Highness, accompanied by Colonel [illegible] paid a somewhat unexpected visit to the Bank during the hours while deposits are received and paid. On his arrival, the only parties present were Mr. T. A. Moore and Mr. Lacey, as managers in attendance, and Mr. W. Wright, the actuary. His Royal Highness examined the method of receiving money, accounting for the money, the mode of keeping accounts, and other particulars, and to the well satisfied remark of the actuary, that he was graciously pleased to intimate his acceptance of the office of president.

MARRIAGE LAW REFORM ASSOCIATION.—At a meeting of gentlemen interested in the repeal of Lord Lyndhurst's Act, held at the Chapter Coffee house, on Wednesday, January 8, it was resolved to form an association forthwith, for its exclusive object the repeal of the law prohibiting marriage with a deceased wife's sister.

THE ENGINEMEN OF THE NORTH-WESTERN RAILWAY.—A correspondence has been published between Mr. Gyll, the chairman of the London and North-Western Railway Company; Mr Smith, the chairman of the locomotive committee of the directors; Mr Allcard, the manager; and Mr M'Connell, the locomotive superintendent, from which it appears that the first-named gentleman declined to interfere in behalf of those drivers who have received notice to quit the company's service. Mr. Gyll, in his letter (dated Jan 4) to Mr. M'Connell, says: "I most sincerely regret the position in which [illegible] first themselves involved, by their obstinate refusal to attend to the warning and advice which I gave to the deputation from them. At that interview, in the presence of Mr. Stewart, I pointed out to them the blindness and impropriety of their proceedings. That, without a single cause of complaint touching them personally, they were arraying themselves against their employers, to the detriment of the public service, to the possible ruin of themselves and families, and to the annoyance of the directors, and reminded them that I had on a former occasion interfered to serve them. They admitted that my promises and arrangements made on that occasion had been fairly and fully carried out, and that they were entirely satisfied with their situations; nevertheless, they not only hesitated to give me an assurance of their willingness to continue in the quiet and regular performance of their customs, but, on the contrary, they gave me clearly to understand that, unless the demands of the enginemen on the northern division were complied with, the drivers on the whole division must, and would, make common cause in opposing the regulations affecting the engineers of that division. I told them then that the consequence of their proceedings would be the engagement of new men, and I did not hesitate to say that it was an act of great injustice to those men, were I to ask the locomotive committee to dismiss them, in order that I might keep the places of the company men who by their own acts, after warnings, have exhibited a spirit destructive of all confidence, and of all order and discipline. I must therefore decline to take any further step in the matter, except to refer before the locomotive committee, through you, the separate cases of the men, in the order in which the committee may, should they see fit, as opportunity occurs, replace them on the staff of the company."

DARING BURGLARY IN SUSSEX.—On Thursday morning week, about three o'clock, the mansion of the Misses Farncombe, called Dowland House, near the village of Uckfield, Sussex, was broken into by seven armed men, whose faces were disguised with nightcaps and crape. The fellows secured the lady and their servants in one of the upper rooms, and, whilst some of them kept guard, the others proceeded to ransack the premises. They entered all the house nearly two hours, regaling themselves with ham, cheese, bread, wine, and spirituous liquors, when they took their departure, getting clear off with their booty, consisting of silver plate, marked "F" value £200; two gold watches, a quantity of costly jewellery, gold snuff-boxes, &c.; one £10 and seventeen £1 bank of England notes, and about £50 in gold and silver. A reward of £[illegible] offered for the discovery of the robbers. The apprehension of six men, who, there is good reason to believe, were parties to the burglary, has speedily followed the commission of the crime. The apprehension of three of these was accidental, and took place on the evening of the burglary on another charge. The names of these were John Hamilton, John Smith, and James Smith. They were at a village called Groombridge, when they were taken into custody on a charge of having taken a sovereign from him. In the meantime the police of the Tunbridge Wells district [illegible] received intelligence of a burglary committed at a Mr. Kenward's, at Hartfield, and directing the whole party suspicious characters, proceeded to search them, and found upon them a £5 note of the Lewes Bank, a coat, umbrella, and mask. These were taken to Downlands, and the coat and umbrella were at once recognised by the butler and housekeeper of the Misses Farncombe. Two more, named Hillyer and Morgan, were [illegible] after a desperate resistance, by the Guildford police, in a [illegible] and several of the articles stolen from the house at Downlands [illegible] Another man, named Joseph Carter, was taken at Woking, on whose person was also found part of the stolen property, and a pistol loaded with slugs. Morgan has been identified by the butler as the man who knocked him down with the pistol, and Carter as the man who kept guard over him. The scene of the robbery was at no great distance from Frimley, where the Rev. Mr. Hollest was so

METROPOLITAN NEWS

BIRKENHEAD DOCK TRUST.—A meeting of the bondholders in the Birkenhead Trust was held at the London Tavern on Thursday evening, Mr. George Carr Glyn (a late sheriff) in the chair, at which it was resolved to authorise and support an application of the Dock Company to Parliament, for the purpose of raising an additional capital of £250,000, with a guarantee of a dividend of 5 per cent on the works; and so to amend the constitution of the Board of Trustees as to give the bondholders a greater control over the management and expenditure of the funds.

ROYAL FREEMASONS' SCHOOL FOR FEMALE CHILDREN.—The annual meeting of the subscribers and friends of this charity took place on Thursday, at the school, Westminster-road; Mr. W. V. Reading in the chair. The report stated that there were five candidates to be elected in April next. There were 65 children in the house at present, who were boarded, clothed, and educated; and out of the 600 who had been brought up in that establishment, there had not been a single case in which they had not turned out to the perfect satisfaction of their employers. The building committee made a most favourable report. The committee had effected the purchase of two acres of land for a new school at Wandsworth Common, close to the Clapham Station, and it was their intention to build a most efficient schoolhouse. The report was adopted, and a vote of thanks to the chairman concluded the business of the meeting.

BUTCHERS' CHARITABLE INSTITUTION.—The annual meeting of this charity was held at the Freemasons' Tavern, on Thursday evening, Mr. Sharp in the chair. The report congratulated the subscribers on the continued prosperity of the society, and on the fact that his Royal Highness Prince Albert had graciously consented to become the patron of the society. The income had reached £21 to its funds. The subscription during the past year had amounted to £1389 15s., and the anniversary dinner had produced to the society £918 13s 6d. During the past year, ten additional pensioners were elected. £300 had been invested in the purchase of £314 9s. 2d. Three per Cent. Consols, which increased the funded property of the society to £12,064 7d. The total income of the past year had been £2359 15s. 3d., and the expenditure (including £1091 16s. 3d. paid in pensions) £1687 10s. 4d.; leaving a balance of £672 1s. 11d. in favour of the society. The report was adopted; some disturbance made in the bye-laws; and the officers of the society for the ensuing year elected. The meeting then separated.

THE NEW MAYORALTY.—The Lord Mayor and the Lady Mayoress have taken up their residence at the Mansion House. Her Ladyship commenced the new year by receiving a family party at dinner on New Year's Day, and has issued cards of invitation for a dinner to be given to the Aldermen and their ladies on the 31st of January, and for an evening party on the 4th of February.

REPRESENTATION OF FINSBURY.—Mr. Wakley, M.P., at a meeting for promoting the repeal of the window-tax, held at Islington on Tuesday, observed, with respect to the representation of Finsbury, that in the last session, when the question of the window tax was moved, his hon. colleague, Mr. Duncombe, was a-most, it might be said, on his death-bed: and he was now so ill that he (Wakley) did not like to refer to it, and could only say that the honourable man must deplore his state; but it must be hoped that they would see him appear again in health and spirits. For himself, he (Mr. Wakley) had only to say that his state was satisfactory, indeed, he had gone through the fatigues of parliamentary labour for many years had struck his nervous system, and rendered him incapable of performing his duty; and he had already intimated that if, in the coming session, he found himself still incapable of attending to his duties in Parliament, he should resign his seat. He was bound in honour to take that course, and did not shrink from the avowal of it."

REPEAL OF THE WINDOW DUTY.—A numerous meeting of delegates from the different metropolitan parishes took place on Wednesday evening, in Marylebone Court-house, for the purpose of making arrangements for a deputation to wait on the Chancellor of the Exchequer, on the repeal of the window duty. Lord D.C. Stuart, M.P.; General Sir De Lacy Evans, M.P.; Messrs. Thomas Wakley, M.P., W. Williams, M.P.; James Wyld, M.P.; and J. Bunnett, the new member for St. Marylebone, were present. The chairman addressed the meeting, when several resolutions in accordance with the object in view, were agreed to.

THE NEW BRIDGE AT BATTERSEA.—Preparations have begun for making piles for the erection of the proposed suspension-bridge between Chelsea and Battersea. The bridge, which is to be constructed for carriage as well as foot-traffic, is to be commenced on the north side of the

yards below the gardens in front of Chelsea Hospital, and is to cross the river in a direct line in front to the old Artisans' Red House, a little above the ferry and Ranelagh Gardens, Godfrey sportsmen. The Red House is to be pulled down entire

elegant approach is to be made on the side of it and the gardens attach

On the south end of the bridge

is to be constructed running in a direct line from the new note chapel of St. Barnabas. Six or seven of the piles have been put down, and a pile-driver, on a large, is in active work, driving the seventh or eighth piles are intended to protect the piers on either side, while in the course of erection, from the velocity of the tide, and from the collisions of the barges, steamers, and other craft navigating the Thames. The bridge, when finished, will be a most ornamental structure; not a spade has as yet been put in the ground to make the new park, and the only appearance of alteration that can be seen is that of a new bank in course of being raised by the Water Company. It is to be hoped that the Commissioners will be enabled to commence the making of the park without delay, for, until it is finished, the bridge, when erected, will be of little advantage.

PRINTERS' DRAMATIC SOCIETY NEW YEAR'S SOIREE.—The first anniversary of this society was held at Anderton's Hotel, on Saturday evening, Mr. W. H. Wills, who filled the chair, in the absence of Mr. Bradbury, explained the purport of the society. It took its rise from the circumstance of so many of the operative printers having fallen victims to the cholera epidemic, which occurred a year or two ago, leaving their widows and families in a state of comparative destitution. To commemorate the success of the society, a pleasant evening was arranged at Anderton's Hotel, Fleet-street, for the members and their wives and families. A very agreeable party was thus assembled, who were entertained throughout the evening by the vocal and dramatic efforts of a number of professional friends, the whole, which in many instances would have done no discredit to regular professionals.

EARLY CLOSING.—On Monday evening, a meeting of the assistant and shopmen in the drapery establishments, comprising the hours of evening closing, took heaters of the City of London, denominating the Early-closing Association, No 32, to dictate bill. Several of the young men from various drapery establishments, who are already liberated as early as six o'clock in the evening were present. Wanted was unanimously called to the chair, and complained of the great apathy of the assistant hosiers, and said that the association had effected much during the past year, in the opinion of the public, and the employers had become more favourable; but it was impossible to achieve the battle of early closing without the co-operation of the young men. It was a necessary, and that the apathy of the young men was the strongest of all bonds of the debasing and demoralising effects of the late-hour system. The resolution was then adopted; and Messrs. Haward, Wicks, and other gentlemen addressed the meeting, recommending that the secretary should personally canvass the employers as the most effective course. Mr. Lidwell agreed to wait on several employers, and said it was intended to request the clergy to preach for the cause, and also to present London, in order to call the attention of the numerous visitors in the ensuing spring, and thus prevent late shopping. This and much more might be done if young men had the moral courage to encourage home—having the employers, the public, the clergy, and the press in their favour.

WESTMINSTER IMPROVEMENTS.—Considerable progress has been made by the Commissioners of the Westminster Improvements in the construction of the new street, to be called Victoria street, which will extend from the Broad Sanctuary to Westminster-bridge, and from thence to Vauxhall Bridge-road, passing through Millbank, in Dorset, on the north and south sides of the street, the

ers for three new houses, which are nearly all covered. The formation of roadway and the footpaths are also commenced. The houses will be of a second class, and the street about fifty feet in width. At the west end, adjoining the Westminster Prison, a row of splendid edifices has been built. In the neighbourhood of the new street, at the east end, are the baths and washtric. There will be on the premises two large plunging baths, about sixty warm and cold baths, with lavatory and washing departments.

THE BRITISH MUSEUM.—On Wednesday the British Museum was reopened to the public; it will continue open every Monday, Wednesday, and Friday, from ten till four o'clock, until the 31st of April, and from the 7th of May until the 31st of August from ten till seven o'clock, and for the remainder part of the year from ten till four. The works not yet being complete in the western galleries, the Assyrian antiquities at present in their temporary place in the basement. The celebrated Grand Staircase, by Sir Robert Smirke, is also for the present placed in the vestibule. The idea of erecting a wall in front of the Museum, facing Great Russell-street, has been abandoned. The railing is now to be enclosed by an ornamental palisade, having a central and two other gates, fronting each wing.

BRITISH MEDICAL FUND.—A large and influential meeting of the profession in London was held at the Bath General Hospital, on the 23rd ult., in support of this society. Amongst the gentlemen present were Drs Hall Davies, Falconer, Clark, and M'Dermot; Messrs Norman, Soden, Hale, Brace, Cox, Lambert, Stone, Hanham, Sandy, F. Stocker, W. T. G. Stockwell, Perry, &c. Resolutions, expressing high approval of the objects of the fund, and pledging it to be worthy of the support and confidence of all large, were unanimously agreed to. Meetings of a similar kind in the principal towns throughout the kingdom

RIVE ROBBERIES AT KENSINGTON.—Much alarm and excitement among the nobility and gentry resident in the vicinity of Kensington, and extensive robberies committed there of late. The premises, No 28, Lower Phillimore-place, Kensington, have been entered, and silver plate, value £100, a large quantity of jewellery of the most costly description, gold watches, and about £7 in money carried off. The house No 1, Scarsdale-place, was also entered, and a large quantity of valuable jewellery abstracted; and, notwithstanding the exertions of the police, no clue can be gained as to the perpetrators.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST.—On Thursday, the annual meeting of the governors of this charity was held at the Mansion House; John Masterman, Esq., M.P., in the chair. The minutes of the last court having been confirmed, the secretary read the third annual report After expressing gratification at the prosperity and increased use ulness of the institution, the document proceeded to state, that, during the year just ended, 3873 persons had obtained relief from the charity, making a total since its establishment of 7489. The receipts during the year were £5693 13s. 9d., exclusive of £31 9s 11d., balance of the previous year's account. The expenditure (besides about £30 on account of the new building) amounted to £5277 15s. 9d., thus leaving a balance of £3816 9s. 11d. to the credit of the institution. The patients enrolled for the proposed new hospital at Victoria Park afforded accommodation for 80 in-patients, as well as the necessary arrangements for the out-patients' department. The cost of erecting the central portion was estimated at £9000, and the considerable sum of £3000 more would be completed at once; the contractors were rapidly completing the enclosure of the ground with stone coping and iron railing, agreeable to the requirements of the Commissioners of Woods and Forests; and it was expected that the building would be commenced during the ensuing summer. The report, after announcing that her Majesty and his Royal Highness Prince Albert had become patrons of the institution, concluded with hoping that an active and general co-operation might be accorded to promote the success and well-being of the hospital. On the motion of Sir J. Forster, seconded by Mr. R. E. Gurney, the report was unanimously adopted; and a vote of thanks to the medical and other officers, and to the worthy chairman, closed the business of the meeting.

LICENSED VICTUALLERS' ASYLUM.—On Wednesday evening a ball took place in the London Tavern in aid of the funds of this valuable institution. The attendance was unusually large, upwards of 700 ladies and gentlemen being present. The licensed victuallers have now the largest trade system in England, and probably in the world, as the number amounts to 12,000 separate dwellings of three rooms each, and 147 inmates. They each each recipient 5s. a week when he is entirely destitute, and if he has other means they add enough to make it that amount. If he is a married man, they allow his wife to live with him, and make the weekly allowance

ROYAL HUMANE SOCIETY.—On Wednesday, the usual half-yearly meeting of this society was held at the office, 3, Adelaide-street, Strand, Mr. E. Bedwell, M.P., in the chair. The minutes having been confirmed, the secretary read a statement, from which it appeared that, since July last, 96 cases had been referred to the Committee, comprising 108 persons, of which five were beyond recovery, and 24 were attempted suicides. The cases in Hyde-Park were 18, of which 13 were successfully treated, and five found drowned. The total cases referred to the Court during 1850 were 202, of whom ninety-nine were successfully treated, and 11 only were beyond recovery; 32 of the cases were attempted suicides. In the same period, the Court had awarded 11 silver medallions; 35 bronze medals; seven of thanks on vellum; 13 ditto on paper and parchment; and 12 pecuniary rewards. A letter was read from Baron Knesebeck, accepting the office of vice-patron, on behalf of his Royal Highness the Duke of Cambridge. This office it was known had been long held by his late lamented father, and his Royal Highness was accordingly elected as the vice-patron. Thanks were next voted to the president, the vice-presidents, the treasurer, the trustees, the trustees, the chaplain, the auditors, the medical officers, and the honorary secretary of the Brighton branch; and the various officers having been re-appointed for the ensuing year, the court proceeded to consider several disputed cases, when silver medals were awarded to several parties for praiseworthy deeds. The secretary next read the financial statement, showing the receipts for the year to have been £2297 7s. 6d., and the expenditure £2198 18s 3d., leaving a balance of £98 12s. 3d. in hand. There had been 284,506 bathers in the Serpentine last year, among whom there had been 15 suicides, only two of which proved fatal. The number of bathers was about 40,000 less than the previous year. A vote of thanks to the chairman closed the proceedings

A FORTUNATE FOUNDLING AND PROVIDENT BOARD OF GUARDIANS.—At a meeting of the St. Pancras board of guardians, last Tuesday, the master's report stated that a girl, aged 17, who had been twelve years in the workhouse, left the house in consequence of her having suddenly come into possession of £1750. Several guardians inquired whether she could not be compelled to reimburse the parish for the expenses of her keep, &c. Mr. Cook, the vestry clerk, said that, if authorised by the board to do so, he would endeavour to recover the sum expended upon her support; and he was accordingly ordered to adopt measures to indemnify the parish.

CRUELTY TO A SERVANT.—THE CASE OF MR. AND MRS SLOANE.—At the Central Criminal Court, on Wednesday, before Mr. Justice Patteson and Mr. Justice Talfourd, Mr Clarkson said that, with respect to the trial of the two persons named Sloane, against whom the Grand Jury had on the previous evening returned a true bill for maiming and cruelly treating a female servant in their employ, he had to make an application for the postponement of the trial to the next session. The application was grounded upon an affidavit made by the attorney for the prosecution, which stated that, in consequence of the great public excitement which had been created upon the subject, the defendant was unable to go abroad without risk of personal violence, and that his life, and the life of his wife, were threatened by persons who came to the court to consult his counsel. In addition to this circumstance, he might also state that the indictment was of a very peculiar character, and one which, in the opinion of the defendant's counsel, required the most proper attention; and upon these facts he trusted the court would think it reasonable that the trial should be postponed.—Mr. Huddlestone said, he was instructed by the Society of Guardians for the Protection of London Union to prosecute in this case, and they were very anxious that it should be disposed of as speedily as possible, and he could not consent to the application. He should, however, readily leave the suggestion that had come from their Lordships upon the subject; but he submitted that the defendant ought to appear at all events, and plead to the indictment.—Mr. Justice Patteson said it was one of the most painful duties of a judge that the defendant could not go about the streets without danger of personal violence.—In answer to a question by the Court, Mr. Clarkson said that he appeared for the male defendant only.—The Recorder said, he understood that when the bill was found by the Grand Jury, Mrs Sloane would surrender to take her trial.—Mr. Clarkson denied that there was any such understanding.—Mr. Huddlestone said, he was certainly informed by Roe, the officer, that when he was endeavouring to serve the warrant upon Mrs. Sloane, he was informed that she would surrender if the Grand Jury found a true bill against her. He suggested that, if the indulgence prayed for was granted, Mr. Sloane ought to enter into securities for the production of his wife.—Mr. Clarkson said he knew perfectly well where his wife was; and there was no doubt that she was under his control; and it appeared to him that measures should be taken to enforce her appearance.—Mr. Justice Talfourd said he did not see how, upon the facts, and after it was stated that the defendant could not go about or consult his counsel without endangering his life from the violence of the people, they could refuse the application for the postponement of the trial, and they considered it would be hardly consistent with the interests of justice to refuse such an application. The Court, at the same time, would have been glad if any steps could be taken to secure the attendance of the other defendant: but, as she had not been taken into custody, they had no power to order any recognisances to be entered into with that object. The trial, therefore, was postponed until the next session, but their recognisances for the appearance of the defendant at the next session. The bail having gone through the necessary formalities, the case was ordered to be postponed to the next session, and it was agreed that it should stand on the Judge's list.

FATAL RAILWAY ACCIDENT.—An accident of a fatal character took place on the line of the East and West India Dock and Blackwall Junction Railway, on Sunday night, near the station at Limehouse, between the Commercial-road and Maiden-lane. A poor fellow, named Henry Harris, aged 30, residing in Alpha [illegible]-lane, who was employed on the line as waterman, was going [illegible] from home, about half past ten o'clock on the down line, when a [illegible] pilot engine, which passed over his body and mutilated it in a frightful [illegible] The skull was dreadfully fractured, and death must have been instantaneous.

ANNUAL RETURN OF FIRES IN LONDON.—On Monday morning, Mr. Braidwood, the superintendent of the London Fire Engine Establishment, [illegible] his report of fires which had occurred in the metropolis during the past year, before the managing committee, at the chief station in Watling-[illegible] Braidwood described the number of premises totally destroyed and considerably damaged as being 674 in number, including those which occurred in Mark-lane, the City, and which was not entirely extinguished for nearly two months. The property destroyed on that occasion was roughly estimated at upwards of £200,000, but the insurances would cover the greater portion of [illegible] nor could anything likely to be depended upon be gleaned as to [illegible] of the misfortune. The next fire of any importance was that which occurred on the night of the 27th of January, near the Southwark Bridge-road. Although the engines of the brigade were stationed immediately opposite and the turncock was on the spot in less than two minutes after the alarm was given, more than half-a-million sterling worth of property was burnt down and houses seriously damaged. The next district which suffered, and that to a serious extent, by fires, was Bermondsey. From the 17th of October to the 31st of December, a great number of very alarming and devastating conflagrations happened, which laid in ruins a vast amount of property. Amongst the buildings described as considerably damaged was the Traveller's Club. The number of terms the number of buildings slightly injured as being 621, whilst in the preceding year they were only 582, showing an increase of 39. The total number of premises entirely destroyed and seriously damaged in 1849 was 1203, which is more than last year. The total number of fires of all kinds last year was 803, whilst in 1849 they were only 838, showing an increase of 30 fires during the past twelve months. This is also more than the year ever known. In the year before they were only 76. The chimneys on fire last year were 98; in 1849 there were 88. The number of fatal fires last year was 17, and the number of lives lost 18, whilst the number of persons who perished from the same cause in the preceding year was 26, which shows a decrease of eight last year. The total number of calls for assistance during the past year was 1958, whilst in 1849 the calls were 1693, showing an increase of 265. The origin of a great many fires cannot be accounted for: a great number, however, are returned as being caused by sparks, gas, lucifer matches, smoking tobacco, drunkenness, and accidents of fireworks. Of the latter nearly 100 houses were seriously damaged, as well as the parochial school and a spacious church in Spitalfields a few months since.

ANOTHER DESTRUCTIVE CONFLAGRATION AT BERMONDSEY.—On Tuesday morning, about a quarter past one o'clock, the immediate neighbourhood of the Grange road, Bermondsey, was the scene of another destructive [illegible] tery building, from 60 to 80 feet long, occupied conjointly by Mr Warren, a parchment manufacturer, and Mr. Thacker, cooper, situate in Little George-street South, Grange road, Bermondsey, within a short distance of the scene of the several other devastating fires that have so frequently alarmed the inhabitants of the neighbourhood. The fact was speedily communicated to the various fire stations, but in spite of the most strenuous exertions of the firemen it was not until half-past two o'clock that the further progress of the devastating element could be arrested, and not until the greater portion of the manufactory in which the misfortune originated was partially if not entirely destroyed, and the furniture belonging to several of the surrounding neighbours broken or seriously damaged by hasty removal and water. It is understood that the property destroyed was insured.

"A DAY OUT THERE."—On Sunday morning, a startling discovery was made by police-sergeants Harris and Jones, of the L, or Lambeth division, viz. that of a cavern occupied as a place of refuge by young thieves, under the terminus of the London and South-Western Railway, in the Vauxhall-road. Lambeth, which led to the capture of five of the delinquents. Some time since a lad was apprehended on suspicion of stealing some bread, and when he returned home to his parents, from interrogatories put to him, it appeared, that it turned out that he had become connected with a gang numbering about twenty or twenty-two, who were known to each other as the "Twenty Thieves." They had obtained a living by prowling about the New-cut, Waterloo-road, and the terminus of the railway, and stealing whatever they could lay their hands upon. The lad also informed his mother, that, on one occasion, they cooked a leg of mutton in their cave, which was under one of the arches of the railway, and to get to it they were forced to crawl through a small hole in the brickwork. The mother repaired to Tower-street, and informed Mr Inspector Fowler of what her son had related to her: and, about two o'clock in the morning, the two police sergeants, whilst examining the arches nearest the vacant piece of ground in the small York-road, perceived the marks of footsteps, which appeared to lead to a small hole; they descended through this opening, where they found a den fitted up in the manner the lad had stated, and, in it five persons, who are well-known thieves. They were all apprehended, and, at the Southwark Police-court, on Monday, were committed for various terms of imprisonment, on a charge of trespass The cave, which had a portable fireplace in it, was most ingeniously fitted up, having a cooking apparatus, and nearly everything required for domestic use.

BIRTHS AND DEATHS.—Births registered in the week ending Saturday, Jan. 4:—Males, 829; females, 763: total, 1592. Deaths during the same period:—Males, 693; females, 676: total, 1369. Taking ten corresponding weeks, during the first in each of the last ten years (1841-50), it will be seen that the present return shows a greater number than in any year except 1845, when the deaths rose to 1417; and 1847, when they were 1441, during a week of low temperature (the mean reading of the thermometer having scarcely exceeded 29 deg.) In 1848 the deaths of the week amounted to 1364, when the mortality was aggravated by influenza, which had not disappeared with us rapidly on the decline. The average of the ten weeks 1167, which, if corrected for increase of population, becomes 1273. The zymotic or epidemic class of fatal diseases, which in the present return numbers 339 cases, exhibits little difference when compared with the previous week: but the class comprising affections of the respiratory organs shows a considerable advance, the deaths therein enumerated having risen from 264 to 291, a result probably due to unseasonable warmth and moisture of the weather. It will be observed, with a mean daily temperature which has been throughout the week much higher than is usual at this season, having ranged from 8 to 14 degrees above the average, that whereas bronchitis, pneumonia, and phthisis (or consumption) were fatal in 120, 90, and 124 cases respectively in the previous week, they have now been to 159, 101, and 147. Diseases of the organs of respiration, exclusive of hooping-cough and phthisis, were fatal in the aggregate, last week, to 321 persons, whilst the corrected average is only 237. Amongst epidemics, scarlet fever carried off 4 children, and 4 men who had turned 20 years of age; measles, 29 children; scarlatina, 14; hooping-cough, 38; and croup, 9. Typhus destroyed 42 persons of various ages (rather more than the average); influenza, 5; erysipelas, 14; diarrhœa, 19. A case of cholera—described as Asiatic, is recorded, of which the particulars are given as follows.—On the 30th of December, at the Mile-end Workhouse, a female, aged 66 years, a native of Asiatic (24 hours)." He had been sent to the Shadwell to the workhouse, of which he had been an inmate three years, he was a paralytic, and was suddenly seized with cholera on Sunday. But the sum of mortality during the 24 hours ending last week, is, as before, considerably swelled by more than the fair contingent of cases on which inquests have been held, many at earlier dates, and a great majority of which fall under the several descri, heart disease, or aneurism, burns and scalds, hanging and suffocation, drowning, fractures, contusions, and other injury. Six persons died from poison, among whom was an infant, on the 26th inst., to which the nurse had given Dover's powders, and the medicine having been inadvertently administered for the mother. Of 27 persons who met death from burns or scalds, 21 were children, and in 16 cases the accident occurred from the clothes taking fire. Of 14 persons who were drowned, and 46 from fractures, &c., 36, of which 16 were by falls on the streets, or from windows, stairs, and scaffolds; 2 by falls on board ship, 3 by horses and carriages, 2 by machinery, 1 by a fall of a wall, and 1 by a limekiln, and 2 were children in bed clothes. Nine children died for want of breast milk: a mean from privation, besides a child of 7 months "from disease of the head and want of proper food." Twenty-four cases of intoxication, besides two who received fatal injury while in a state of intoxication.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean reading of the barometer was above 30 in. on Sunday; the mean of the week was 29.791 in. The mean daily temperature fluctuated between 44° and 52°; and on each day of the week it was considerably above the average, [illegible] on Sunday the excess being 8° [illegible] on Monday, 11°6°; on Wednesday, 13°9°; on Thursday, 12°1°; on [illegible], 7°1°; and on Saturday, 6°1. The mean of the week was 47°1°. The wind was generally in the south west.

DR. LAYARD.

THE enterprising traveller, antiquary, and scholar, has recently returned to England, after his long and laborious exploration of the ruins of ancient Nineveh. We need scarcely add, that he is reception by the *literati* and *savans* of the metropolis has been of the most cordial nature; for energies directed to so highly intellectual an object as have been Dr. Layard's, must ever command for their possessor the warmest welcome in the best-informed circles.

With the rich fruits of Dr. Layard's researches, the public have become familiar through their frequent representation in the ILLUSTRATED LONDON NEWS. We have sought to picture the most attractive specimens of each cargo which from after to reception as possible; and we are fully convinced that such early illustration has been the direct means of popularising the interest and value of these speaking relics of ancient art. We have reason, therefore, to believe that the accompanying Portrait of the gentleman to whose energies we are indebted for these accessions to our national Museum, will be equally acceptable.

Austin Henry Layard is descended from a noble Protestant French family. He was born at Paris, during a temporary visit of his parents to that metropolis, on the 5th of March, 1817. His father, who was the son of the Rev. Dr. Layard, Dean of Bristol, filled a high civil office in Ceylon, between the years 1820 and 1828. He took great interest in the circulation of the Scriptures among heathen nations. He was a man of considerable classical learning, and of refined tastes. During the youth of his son, he lived at Florence, where he made a valuable antiquary during the tours to the stores of the Pitti Palace, and of the Tribune. He thus became familiar from his infancy with the languages of Tuscany, and formed his taste for the fine arts and literature. Among the models of painting which surround which he lived, and in the rich libraries which he frequented. In the manner did he add a thorough knowledge of modern languages to a competent share of ancient Greek and Latin learning. Mrs. Layard, the mother of the juvenile, without knowing he acquired it, a power over his pencil, which long lay dormant; and which was called forth, if not summoned into existence, by the appalling sight of those with the noblest sculptures and the finest inscriptions, trampling into dust before his eyes. No draughtsman had been provided to help him, and had he not instantly determined to arrest by the quickness of his eye, and the vigour of his pencil, those fleeting forms which were about to disappear for ever, many of the finest remains of ancient art would have been irrecoverably lost.

On his return from Italy to England, Dr. Layard was urged by the bent of his genius for travel, but his thirst for knowledge, his love of adventure, and his foreign tastes and habits, led him, after a brief artlessship, to follow the native bias of his mind. He accordingly set out, in company with an early fellow-student, in the year 1839, and, accompanied by a friend, he visited Russia and several of the northern kingdoms. Having sojourned for some time in Germany, and several of the United States on the Danube, he made transit over the German language, and of several of the dialects of Transylvania. From Dalmatia he passed into Montenegro, where he remained a considerable time, assisting an English friend in the task of preparing the materials of his semi-diplomatic subjects. Travelling through Albania and Romelia, where he met with numerous adventures, he arrived at Constantinople, about the end of 1839. Here he remained a long time, and some rather important, and different occasions in the East, and he spent some years in these interesting regions, adopting the costume, and leading the life, of an Arab of the Desert, and acquiring a thorough knowledge of the languages of Turkey and Arabia. Early in 1840 or 1841, Dr. Layard transmitted to the Royal Geographical Society, an Itinerary from Constantinople to Aleppo, which does not seem to have been published and in the seventh volume of the Journal of that Society, we have an account of the journey which he performed with Mr. Ainsworth, in April, 1840. He travelled in Persia in the same year, and he penetrated a journey for the purpose of examining mounds, and some other remains of interest in the Bakhyari mountains, to which Major Rawlinson had drawn the attention of the Geographical Society. With this view, he left Ispahan in the middle of September, in company with Schiffeer Khan, a Bakhyari chief: and having crossed the highest part of the great chain of Mungasht, he visited the ruins of Manjanic, which are of considerable extent, and near which those of Los Bassam tures visited also the ruins in the plain of Mel Amir, and he copied some of the cuneiform inscriptions. The sculptures on the four tablets adjoining the natural cave, two colossal figures on which represent priests of the Magi, appear to be of ancient date. In crossing the hills to Susan, he was attacked by a tribe of Dinarunis, and robbed of his watch, compass, and other articles; but having complained to the Chief, and insisted on the re

turn of every missing article, he received back the whole of his property. It had been his practice to traverse these mountains quite alone, and he was never attacked or insulted, except on this occasion, when the country was in a state of war. He found scarcely any remains at Susan to indicate the site of a large city. The Tomb of Daniel is a comparatively modern building of rough stones—(it is said to be of mud in another place) and containing two apartments. In 1842 and 1843, Dr. Layard seems to have spent a considerable time in the province of Khuzestan, an elaborate description of which he communicated through Lord Aberdeen to the Royal Geographical Society. It was during these various journeys that Dr. Layard prepared himself for the great task to which his life and talents were to be devoted. In his wanderings through Asia Minor and Syria he had scarcely left a spot unrodden which tradition hallowed, or a ruin unexamined which was consecrated by history. His companion shared his feelings and his zeal. Unmindful of danger, they rode along with no other protection than their arms. They tended their own horses, and, mixing with the people, they acquired their manners and their language.

In his lately published travels, Dr. Layard says:—"I had traversed Asia Minor and Syria, visiting the ancient seats of civilisation, and the spots which religion had made holy. I now felt an irresistible desire to penetrate to the regions beyond the Euphrates, to which history and tradition point as the birth-place of the Wisdom of the West."

With these feelings, Dr. Layard looked to the banks of the Tigris, and he longed to dispel the mysterious darkness which hung over Assyria and Babylonia. He, accordingly, made preliminary visits to Mosul, inspected the ruins of Nimroud and Koyunjik, and, fortunately, obtained an interview with Sir Stratford Canning at Constantinople, when on his way to England. Sir Stratford immediately discovered and appreciated the character and talents of Mr. Layard. His knowledge of the East, and of its manners and languages, recommended him in a peculiar manner to the notice of our Ambassador, who persuaded him to remain with the embassy, and employed him on many important occasions. Sir Stratford took a deep interest in the excavations made by the French Consul, and he permitted and aided Mr. Layard in carrying on those interesting researches which we have already described. During Mr. Layard's stay in England he suffered sev[illegible] from the monthly recurrence of an ague[illegible] fever, caught [illegible] the damp apartments which he was obliged to inhabit at Nimroud; but, notwithstanding this indisposition, so unfavourable to intellectual pursuits, he prepared for the press, during his short stay in England, "Nineveh and its Remains," 2 vols.; and the drawings for the One Hundred Plates; besides, for the British Museum, a volume of Inscriptions in the cuneiform character. *

The works with which Dr. Layard has enriched the British Museum, and which he excavated among the tents of the Kurd and the Arab, and in the neighbourhood of desolate Turkish villages, date from a period immediately subsequent to the second birth, as it were, of the human race—the days of Noah after the Deluge.

Dr. Layard's book is divided, in the first place, into the account of his excavations, and of the various incidents which befell him in the progress of them, together with those wild, shifting, nomade, and predatory scenes which have replaced the massive civilisation of older days; and, in the second place, into as luminous an investigation as the extreme scantiness of the materials permitted him, of primitive Assyrian history.

With reference to the excavations, the fruit of these will be, to a great extent, appreciated by a visit to the British Museum, and an *understanding* examination of the rescued monuments

The subject of ancient Assyrian history, which these monuments illustrate, is a vast study. Dr. Layard himself, when alluding to the scanty and fabulous notices which alone can be gleaned from the Greek writers, justly observes, that "Nineveh had almost been forgotten before history began." Indeed, what we call antiquity entered not upon its infancy until that remoter antiquity had not only perished in fact, but to a great extent in remembrance. Two thousand two hundred years ago, Xenophon beheld mighty ruins, of which he could not read the meaning, in those localities. Until Dr Layard's recent labours, a man might have carried all that remained of Babylon and Nineveh in a little handbox. Even now, the true history of Nineveh is alone to be sought in a few sculptures, bas-reliefs, seals, cylinders, and in the partly-obliterated cuneiform inscriptions on a few stones, bricks, and tiles. Nothing satisfactory can be learned from the pages of the various ancient writers who have touched upon the subject. The history which Herodotus promised is either lost, or never was written. Diodorus Siculus, Plutius (the Byzantine), Ctesias, Aristotle, Eusebius, Moses (of Chorene), Berosus, Strabo, Abydinus, Nicolas (the Damascene), Castor, Polybistor, Justin, Suidas, and *the Syncellus*, are all but lights "making the darkness visible."

One thing is certain, that a gigantic civilisation had passed away before "ancient" civilization dawned. And what is still more remarkable is, that the ruins of that previous politeness and art are the more perfect, and beautiful, and wonderful, exactly in proportion as they are the more remote in date. The earliest of these ancient sculptures are invariably the most correct and severe in form, the most noble in design, the most exquisite in finish and execution.

In the *Museum of Classical Antiquities*, the first Part of which has just reached us, is the following interesting communication from Thomas N. Lynch, Esq., dated Bagdad, November 17th, 1850 :—"The information you have received, that 'the history of Assyria will shortly be read from the architectural designs and sculptures on the bas-reliefs which decorate the walls of the palaces at Koyunjik and Nimroud, is correct; but, as you rightly conjecture, these sculptures have no references to architectural subjects. But the communication you have received merely signifies that the sculptures are disposed in architectural arrangement. In fact, few, if any, delineations of architectural structures have been met with which can in any way show the progress of the art, or illustrate its history during the period in which these monuments were erected. In the central pyramidical mound at Nimroud an immense massive wall has been discovered, but whether it was the outer wall of the palace, or one of the inner walls, it is difficult to determine. The stones, as in all the ancient work, are of immense size. The obelisk and the arch were known to the architects of Nineveh, but the column and capital appear to have been invented subsequently. Square turreted castles are of constant occurrence in the bas-reliefs of both places. Though both sites have been completely excavated by Dr. Layard, still it is impossible to say what was the precise shape of either of the palaces, the height of any room, or their exact form; and it is still more hopeless to determine what was the external appearance of the entire building. The British Museum will shortly contain all sculptures of importance that have been discovered; but the sameness of the sculpture, and the quantity of duplicates discovered in the same palace, are surprising; and I must concur with Dr. Wall in the opinion that too much value has been attached to the cuneiform inscriptions, even should they become correctly deciphered."

AUSTIN HENRY LAYARD, LL.D., DISCOVERER OF THE NIMROUD SCULPTURES.

The accompanying portrait is from a highly finished print, lately published by Messrs. Colnaghi, Pall-Mall East, and engraved from the original picture by H. W. Phillips, in the possession of Mrs. Austen.

* The substance of these biographical particulars is from an eloquent paper in the *North British Review*, No. XXI., the writer of which has the privilege of personally knowing Dr. Layard.

"THE AFRICA" MAIL STEAM-SHIP.

THIS splendid vessel, which has been recently added to the Cunard line of Mail Steamers, is a twin ship to the *Asia*, whose performances have proved her to be one of the fastest vessels afloat. She was built by Messrs. Steele and Co., of Glasgow. Her dimensions are as follows:-

Builder's measurement:—

	Ft.	In.
Length of keel fore and raks	267	0
Breadth of beam	40	6
Depth of hold	27	6
Tonnage 2128 78-94ths		

New measurement:—

Length on deck	265	0
Breadth on dittu at midships	37	8
Depth of hold at ditto	27	2
Tonnage 2226 24-100ths		

A pair of side lever engines of 814 horse nominal power. Diameter cylinders, 95 inches x 9 feet stroke; paddle-wheels, diameter, extreme, 37 feet 7 inches, and 36 feet 10 inches effective; 28 floats, 9 feet 2 inches x 3 feet 2 inches, three sets of 28 arms, 8 floats in the water at 19 feet draft of water. Four fine boilers, 20 furnaces; bunkers to hold 890 tons of coals; 36 hands in the engine-room. The *Africa* is built of the best British oak, and planked double [illegible] and inside, and between the frames is filled up, from the keel to the gunwale, with rock-salt, to preserve the vessel from [illegible] dry rot. The number of her berths enables her to carry 180 passengers. She is manned by a full crew of chosen men—giving about one-third to each department. The quantity of coal she is estimated to carry is 900 tons; and she has capacity for the transit of 600 tons of cargo, not including the stores of ship and passengers. Fitted up for carrying guns, the *Africa* can at any time be transformed from the peaceful original into an Admiralty ship of war. The saloons and berths are fitted with an evident regard at once to elegance and utility: there is nothing the most refined taste could desiderate, as there is nothing wanting which could add to the comfort, convenience, and pleasure of the passengers. The *Africa* is commanded by Captain Byrne.

By the United States mail, received on Monday, we learn that the *Africa* arrived at New York on the 22nd ult., after a very stormy run.

The following is the copy of the log of the *Africa's* first outward voyage to New York:—

Oct. 26.—Wind northerly. 0.15 P.M., received mails; 0.31, set on full speed; 1.45, pilot left. Fine weather.

27.—Wind N W 2 20 P.M., passed Cape Clear. Light airs and fine weather, increasing to strong breezes with heavy squalls and rain.

28.—Wind N W Lat. 51 32, long. 14.33. Strong gales and squally, with heavy head-sea. Distance run, 194 miles from Cape Clear.

29 Wind N W. Lat. 51.48, long. 20.18. Strong gales and squally, with heavy head-sea Distance run 323 miles.

30 Wind N.W to W Lat. 51.43, long. 25.20. Strong gales and squally, with heavy headses. Distance run 300 miles.

31.—Wind S W to W. Lat. 51.18, long. 31.18. Strong gales, with very heavy squalls and rain Distance run 279 miles

Nov. 1 Winds S.W to N W Lat. 50.34, long. 35.43. Strong gales, with very heavy squalls and head-sea. Distance run, 173 miles

2 Wind N W. Lat. 49.35, long. 40.30 Strong breeze, with squalls and rain. Distance run, 183 miles.

3.—Wind N.W. Lat. 48.30, long. 44.53. Fresh breezes and cloudy, with a heavy sea from the northward Distance run, 198 miles.

4.—Wind N W. to W S W Lat. 46.30, long. 1.02. Fresh breezes and hazy, with a heavy rolling sea Distance run, 275 miles.

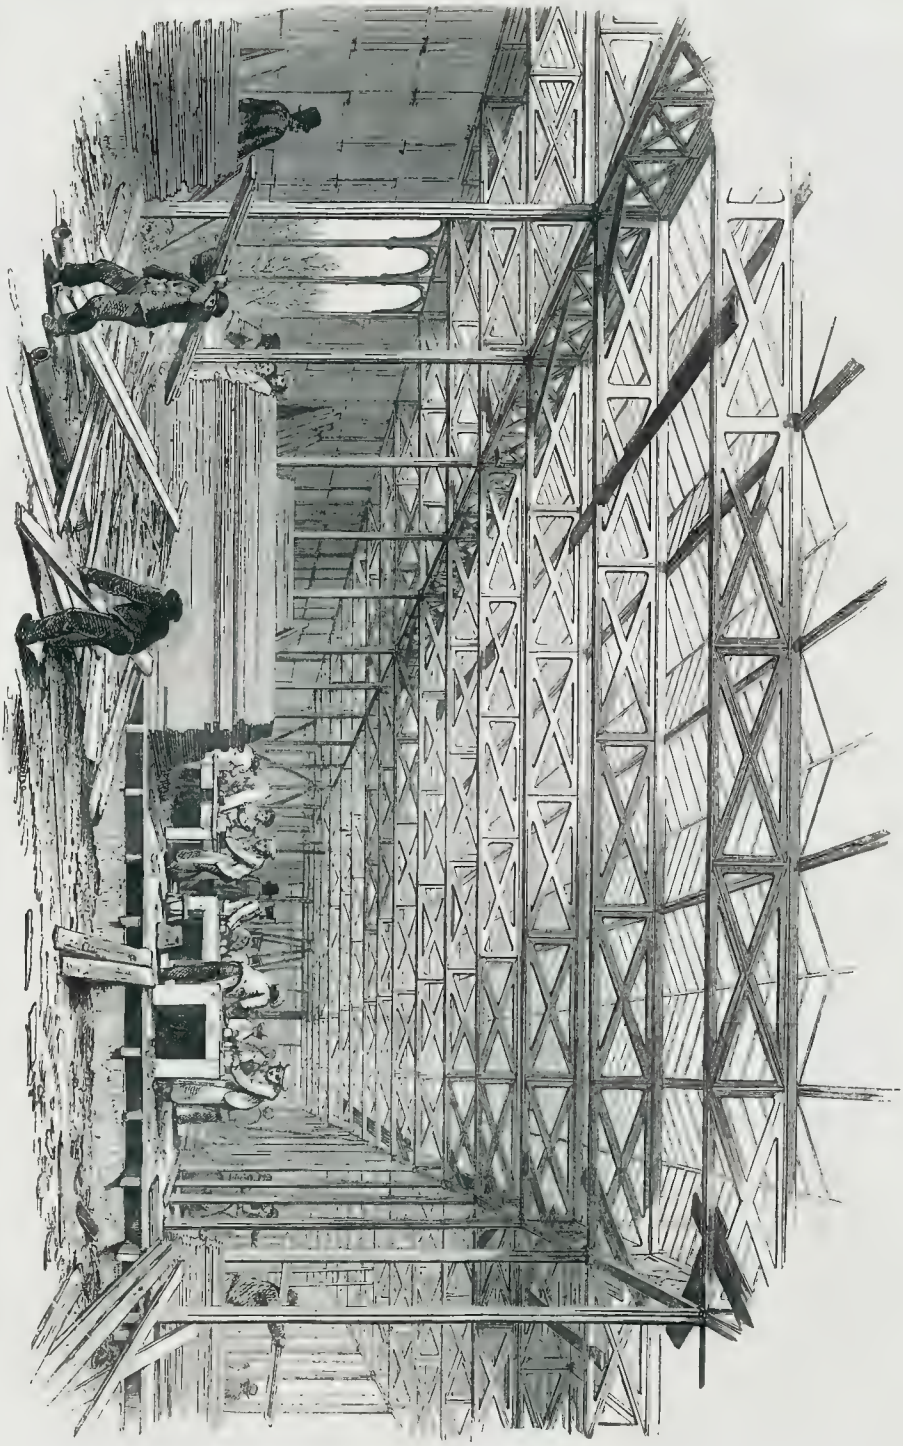
5.—Wind N. to S.W. and N.E. Lat. 44.06, long. 56.04. Moderate variable winds, and hazy weather. Distance run, 329 miles.

6.—Wind N.E. to N.W. Lat. 41.36, long. 64.30. Moderate and fine throughout. Distance run, 321 miles.

7.—Wind variable. Lat. 40.33, long. 1.12. Light variable winds, and fine. 11 0 P.M. stopped the ship, Sandy Hook bearing W N W., about eight miles; 8.0 A.M., passed the Royal mail steam-ship *Asia*. Distance run, 310 miles.

8.—8.0 A.M. arrived at the dock, Jersey city.

THE CUNARD UNITED STATES MAIL STEAMER "AFRICA."



THE GREAT EXHIBITION BUILDING.—THE SOUTH AISLE LOOKING WEST.

THE GREAT EXHIBITION BUILDING.—DETAILS OF CONSTRUCTION

(*Continued from page 8.*)

THE ROOF OF TRANSEPT.

IN our Number of December 14th, at page 452, we gave an account of the mode adopted by the contractors of raising the massive ribs or principals, which, with the intermediate ribs and purlins, form the skeleton of the Roof of the Transept. In the present Number is a representation of the under side of the Roof of the Transept, showing, in a more forward state, the "ridge and furrow" plan of covering it with glass which is altogether so ingeniously contrived that no stoppage to the free passage of the rain-water to the lead flats can take place.

The principals or main ribs are placed at intervals of 24 feet, from centre to centre, and are made up of three planks, two of 2 inches in thickness and the middle one 4 inches thick, with a moulded piece on the under side 2¾ inches thick, and two 11-inch planks at top, each one inch thick, and nailed together to form the gutter-board, the whole being firmly connected together by wrought-iron bolts passing through belts of the same material running at top and bottom of each rib.

In order to form the ribs with the proper curvature, each plank, 13½ inches wide, was cut on one edge to its proper segmental form, and the two complements cut off were nailed to the lower or straight edge of the plank; the whole being put together so as to break-joint throughout, the length of each section so cut being about 9 feet 4 inches

The preparation for the reception of the ends of the purlins was on this wise: the two wide planks were cut across so as to form a cavity to admit the ends of the purlins, the parts of the planks thus separated being connected together by cast-iron plates. The openings thus made were filled in temporarily with wooden blocks, until the joiners were ready to fit in the ends of the purlins.

In order to show that every part of the works of the "stupendous structure" has been matter of much thought and careful calculation, we need only mention here, as a further illustration, that the strength of every purlin has been duly calculated according to its relative position in the arch: thus, the three uppermost purlins, having the greatest strain on them, are each 12½ inches in depth by 4½ inches in width; while the four lower purlins on each side, having gradually less strain to bear, diminish regularly in depth to 9 inches, all having the same width as those at the crown; whereas the lowest one on each side of the arch, being nearly horizontal, is increased to a scantling of 9 inches by 6½ inches.

Between each pair of main ribs are two intermediate ribs, or, as called in ordinary roofing, *common rafters*, 4 inches deep by 3 inches wide. On the top of these are gutter-boards, in two thicknesses, as those described for the main ribs. The gutters, each 9 inches wide, are formed by two splayed fillets, let into and nailed securely to the upper side of the boards. These fillets also serve as abutments for the skylight bars, which are of the same section and size as those for the skylights in other parts of the building. Each bar is nailed at the lower end to the fillet, and at the upper end to the ridge piece, which is formed of three pieces of fir, one above another, the lower section being 4 inches wide by 1½ inches thick; the middle piece, 2 inches by 1 3-16ths inch; and the upper piece, 2 inches by 1⅛ths inch—the latter having a groove on each side to receive the glass. The three thicknesses are necessary in order to suit the curvature of the arch. The lower end of each ridge-piece is carried down to, and rests on, the lead flat.

Condensation gutters are formed in this roof, as in the roofs of the aisles and avenues, but by a different method. A sloping fillet is nailed on to each side of the gutter-board, and continued from the springing of the arch on one side to the corresponding point on the other. With a view to retain the ridges in their places, wrought iron rods of ⅜th inch diameter extend from the purlins to the underside of the ridges.

In order thoroughly to carry off the rain water from every part of the roof, all the skylight bars are fixed to slope towards the ridge to the gutter, and the water collected in each curved gutter is carried into a sloping trough at bottom, and thus discharged on to the lead flat, which is sloped towards the water-heads at tops of the hollow columns. Looking at the roof from the flats, the effect is that of herring-bone appearance. The glass used for the skylights of the Transept is the same as that described for other parts of the building; but every piece of glass requires to be cut at each end to suit the angle formed by the sloping sash-bar, and the ridge-piece and gutter-board respectively.

Temporary ladders fixed to suit the arched roof are used for fixing the ridge-pieces, skylight bars, &c.; but, in order to facilitate and expedite the glazing of this roof, travelling scaffolds are used, which are raised and lowered at pleasure by means of pulleys and ropes worked by the power of four men working a crab engine, placed on the lead flat contiguous. Each traveling scaffold is formed with sides and ends, and has boxes, in convenient positions, for the glass, putty, and tools; the whole running on small iron friction-rollers, such as the tops of the ridge-pieces which serve as rails: without such a contrivance the glazing of the roof of the Transept would have been almost an endless job. In the View of the underside of the Transept Roof workmen are shown in every position some suspended, while others are on the ladders, or on the lead flats adjoining.

THE GREAT FANLIGHTS.

In the View, already referred to, is shown one of the two large Fanlights which terminate the north and south portions of the Transept, and which form such prominent features in the principal elevations of the Great Industrial Museum.

Cast iron would have been too heavy for windows of so large a size, it was therefore, determined by the contractors to form them chiefly of wood; and the manner in which this is so admirably carried out we shall endeavour to describe. As these Fanlight Windows form the ends of the Roof of the Transept, which is 72 feet in width, from centre to centre of its supporting columns, on either side, so the radius of each Fanlight is half of the above width, or 36 feet. The whole is formed of a bottom plate, four semi-rings, and eleven radial bars, all of wood, together with a central portion of open cast-iron work.

The cast-iron ring is formed of 14th-inch deal sides, ⅜ths inch bottom, and 2-inch top, made up of two plates, the whole being nailed firmly to angle-fillets within. The cross section of this ring is 2 feet 5 inches by 12 inches. In front of this ring is attached, by counter-sunk screws passing through blocks, a flat semi-elliptical hollow moulding of cast iron, 10 inches in width, and having a projection of 4 inches, which gives a finish to this part of the building, and corresponds with the general outline of the design. Stiffening pieces, 9½ inches wide by 2 inches thick, are fixed inside the rings throughout, forming so many cord lines. The second ring is framed in a similar manner to that already described, but is only 10½ inches in width; it is also furnished with a cast iron moulding, ¾-inch thick, as above

The third and fourth rings are of solid deal, 12 inches wide by 3½ inches thick, with a hollow cast-iron splayed projecting piece screwed in front thereof, to correspond with the general form of the chamfered lets, each made up of three thicknesses, in order to obtain the proper curvature, are nailed to the several rings to form stops for the glass.

The radial bars are framed into the several rings and secured at bottom to the cast-iron ornamented central portion of the window. Each radial bar is solid, having a scantling of 12 inches by 4½ inches at its upper end, and tapering to 2½ inches in thickness at its lower end, at a distance of 4 feet from the centre of the window; chamfered fillets 3 inches in width, and 2¾ inches in width, and tapering to 1 and 3-16ths inch at four feet from the centre of window, are fixed to each side of the radial bars. The semi-rings and radial bars are firmly [illegible] at their intersections by triangular blocks of elm, [illegible] each of the four angles, and bolted together by two 1-inch bolts running diagonally through the blocks, the whole being further strengthened by angle irons 3 inches wide by 3-16ths of an inch thick, corked into wooden segments, and screwed to the radial bars. The central semicircular division, 8 feet in diameter, is formed of open cast-iron work, in seven compartments, six placed radially around the seventh, which forms a curvilinear panel, whose projecting rim corresponds with the six radial divisions. The radial bars are all firmly fixed to the cast iron central compartment; the twenty-four upper compartments are all splayed at their angles, and the lower twenty-four compartments are finished with hollow cast-iron semicircular heads; the horizontal plate forming the lower part of the frame of the fan-light is of fir, 12½ inches wide by 9 inches thick at each end, but tapering towards the centre to 5½ inch; its upper side at the ends is two inches above the springing line of the arch. The sash-bars are of similar size and section to those of the vertical lights of the galleries, having a groove on either side to receive the glass; the glass is of the same description as that used in other parts of the building, being connected together at their meetings with leaden junction pieces. The whole is surmounted with an ornamental cast-iron frieze, somewhat similar to that shown in the View of part of the South Front, at page 432 (Dec. 7), but not nearly so pleasing to the eye of the critic.

THE FLOORING.

ALL the floorings of the Great Industrial Palace, with the exception of the floors of the offices and galleries, consist of 1¼-and-a-half deal floor boards: each board is of the usual width of 9 inches. For special reasons, the boards are not placed close together, but are separated by a space of ⅜ of an inch. In a paper lately read by M. Paxton, on the general design and construction of the great building, he says, in reference to this kind of flooring:—"It is very economical, dry, clean, pleasant to walk upon; admits of the dust falling through the spaces, and even when it requires to be thoroughly washed, the water at once disappears betwixt the openings, and the boards become almost immediately fit for visitors. The joists are of fir, 9 inches by 3 inches, and 2 feet 5 inches from centre to centre; the joists rest on transverse sleepers, 18 inches by 3 inches; the sleepers are supported by vertical deal struts, which rest on the base plates of the cast iron columns. The area of flooring for the central aisle alone amounts to upwards of 31 acres.

ROOFING

The width of the south aisle from centre to centre of columns is 24 feet; and of the avenue running parallel therewith, 48 feet; the height of the columns, from the top level of the floor to the underside of the girders, is 22 feet 3 inches; the weight of the columns, having only the roofs to support, varies from 6 cwt. to 9 cwt. each; the cast-iron girders of the two side aisles, fixed at intervals of 24 feet from centre to centre, are each 23 feet 4 inches in length, and fit into sockets formed in the upper part of the columns; the depth of the girders throughout is 3 feet; deal-framed gutters, which are made up of 1¼ inch deal sides secured to a bottom of the same material, and 2¾ inches in thickness, rest on the tops of the transverse girders; the internal width of the gutters is 5 inches, and the greatest depth 8½ inches, being formed with false bottoms, laid to a proper inclination to carry off the water: the interior and exterior of the gutters receive the first coat of paint before being fixed in their places. These transverse gutters, which are fixed at intervals of 24 feet, from centre to centre, receive the water from the "Paxton" gutters running in parallel lines longitudinally throughout the whole building, the ends of which are notched on to the sides of the transverse gutters. As already fully described at page 434, the longitudinal gutters are all cut out of the solid wood by machinery, at Chelsea. The double-grooved skylight bars are notched on to the longitudinal gutters at bottom, and at top against the solid ridge-pieces; being secured at both ends by nails, bolts for which are made by the drilling machinery described at page 8, No. 483. Both the longitudinal gutters and also the ridge-pieces are cambered throughout the whole of the roofing; the former being made to retain their form by tension rods screwed up to a cast-iron shoe at each end, and passing under the eye at the bottom of each of the two cast-iron saddles, which are 9½ inches long. The top of each of these saddles is of circular form, 4 inches in diameter, and is properly secured to the under side of the longitudinal gutter. The skylight bars, cut out by machinery, as already described at page 401, are formed with grooves to receive the glass: the advantage of this system is the security it affords to the putty, being not so much exposed to alternations of weather as when fixed into ordinary rabbated bars. The length of each *square* of glass is 49 inches, and its width 10 inches, and its weight 10 oz. to the foot superficial.

In order to subdue the light which would be admitted to the interior of the building from so large a surface of glass, it is intended to cover the whole of the exterior with stout canvas. This will also preserve the glass from the destructive effects of hail-storms*, although it has been abundantly proved to be strong enough to resist any hailstones which fall in this country. It has already had a pretty good test with regard to heavy rain.

In the temporary offices at the present entrance the skylights are covered with canvas; and, even at this season of the year—barring the fogs—the subdued light is not disagreeable.

The above description of roofing will apply to the 48-feet avenue adjoining the south aisle; the only difference being the increased number of skylight gutters, ridge-pieces, &c.; and the substitution of the wrought-iron trusses for the cast-iron trellis girders which span the side aisles transversely.

GREAT INDUSTRIAL EXHIBITION OF 1851.

SOME a stream of visitors of all grades as flowed through Hyde-Park, last Sunday, the 5th inst., had never been remembered by "the oldest" park keeper; led by the beauty of the day, and the attractions of the palace itself, the unbroken throng would itself round the precincts of the building so thickly that the ordinary pathway was obstructed to any pedestrian who did not sympathise with the gazing propensities of the crowds around. From the north bank of the Serpentine, the view of the noble building destined to be the shrine of industry of the present year, is extremely imposing, and the lofty trees, with their deep shadows, which somewhat interrupt the aspect of the length of the building, add to its character and eminence in a picturesque sense. Our subscriber, and the public will receive a print of this view in next weeks ILLUSTRATED LONDON NEWS.

The contest respecting the decoration of the interior is by no means quieted: the advocates for employing a bronze colour are warmer than ever, relying for their strong plea on the *unfitness* character of the material, and substitution of the whole of the columns, as they, in fact, if you paint them in colours used for wooden poles. Employ iron grey, with a relief in gold, exclaims another party. We ourselves heard a third counsellor suggest a *bamboo cane* tint, to preserve the *lightness of the structure*. Mr. Owen Jones himself evidently asked the opinion of more than twenty of the principal architects, house decorators, &c., and found that no two agreed in their advice before it made his own appearance. We repeat our opinion, that Mr. Owen Jones is acknowledged to be thoroughly informed on the subject, his responsibility at once not be interfered with: the opinion of a committee is generally patchwork, temporising, vague, and indicative that of an honest, well informed man goes clearly and fearlessly to the mark. Meaning, Mr. Jones has been anything but a different one to suggestions poured upon him, though he remains true to his own principles

The large entrance at the south end of the transepts is far advanced: the lobby, 72 feet wide by 48 feet deep, is reached by three steps as wide as the transept itself; folding doors, eight feet wide, will open into the interior of the building. The large detached elm structure, up to the handsome window of the transept will be found within the lobby.

* It is the opinion of scientific men, and of those who have most studied the effects of lightning, that this building has, in each of its supports, a perfect lightning conductor, which communicates directly with the earth, and is, therefore quite safe.

The advance in the work during the past week has been confined principally to the laying down the flooring in various directions; together with the erection of the transept

We are glad to hear it at Mr. Henderson, one of the contractors, will contribute a paper to the Society of Arts on the amount of labour expended on the erection of the "Crystal Palace." Such a statistical summary should certainly be preserved; and if the mechanical forces also engaged could be ascertained, and compared into an equivalent of human labour, the wonders of the ancient power employed in the ancient temples, &c., would sink into nothing the floors of the building in Hyde-Park.

Deputations from Leeds, Huddersfield, Bradford, &c., headed by the indefatigable Mayor of Bradford, especially waited on the Executive Committee to express their views and wishes respecting the fitting-up of the counters, tables, &c.; but, finding that the arrangements in progress would so admirably meet the convenience and accommodation of all, description of contributors, they satisfied, expressing their hearty satisfaction and concurrence with the plans laid down by the Executive Committee.

Preparations to receive the goods of exhibitors have been duly proceeded with. As we have previously stated, all articles must come in free of carriage, &c., with the name, residence, and class of exhibitor and his contributions. After having been sorted, the goods will be removed to their allotted space by shippers and Messrs. Several men of which highly efficient service have been already attached to the staff of the Executive Committee. The several departments for foreign countries will be separated from each other. Exhibitors will be informed of the time when they may unpack and arrange their goods, and will receive a permit or pass of admission to the building for the necessary time occupied in arranging their wares, &c. A clear passage, eight feet wide, or two of five feet each, is to be allowed in every twenty-four feet of width. Tables and counters in geometrical figures have been experimentally arranged, to convey some idea of the arrangement of the space for exhibitors. The following notice, which is highly important to all contributors, will be read with interest:—

Messrs. Fox, Henderson, and Co., the contractors, have to announce that they are prepared to receive and unpack articles for exhibition, take charge of the packing cases &c. work, and keep in order machinery and models, to supply glass-cases, stands, &c., of particular kinds, to furnish and fit up open cases or shelves, and decorate stalls according to the wishes of the Exhibitors, on conditions just and at prices to be agreed upon, and to which estimates will be given on application, and to afford every facility generally in those arrangements which deserve upon the Exhibitors themselves, and respecting which they are permitted by the Commissioners to exercise their own taste and judgment. Foreign Commissioners, Local Committees, and Exhibitors are requested to communicate their wishes as early as possible to Messrs. Fox Henderson, and Co

ORDER FOR FITTINGS TO BE FITTED UP BY THE EXHIBITOR.

Messrs Fox, Henderson, and Co., Builders, Westminster.

Please to prepare the space allotted me in the Building (with counter and shelves), according to the accompanying plan, cover the same with calico, velvet, cloth, &c., and prepare glass-cases; and I will discharge the cost of doing so when complete.

Exhibitor's signature ..... Address .....

NOTE. The Executive Committee upon receiving a request, and a copy of the plan and superficial area thereof, from any exhibitor, will cause the space required to such exhibitor to be fitted up in his own way; and his arrangements, if compatible with the convenience of other exhibitors and of the general design, will be duly attended to. In the manner, if it is wished to exhibit together the products of a particular town or district, all such productions, if they can fairly be said to be of the same class, will be arranged together in the ultimate decision, where it is reasonable or not, must be referred in each case with the discretion of the Commissioners.

Processes of manufacture may be exhibited in a sufficient number of articles, however cumbrous, but they must not exceed what may be actually required.

In all cases where the production of an individual are matured together, his [illegible] of the [illegible] arrangement of them will be completed with as far as possible, but the exhibitor must defray the necessary expense himself. Glass cases, fixtures, and other peculiar conveniences for the display or protection of the goods exhibited, must in like manner be provided by the person requiring them.

Should any exhibitor desire to employ a servant of his own to preserve or keep in order the articles he exhibits, or to explain them to visitors, he may do so after obtaining permission from the Commissioners. Such persons, however, will in all cases be forbidden to obtain orders or to canvass for employment.

Machines, or trains of machinery in motion, may be [illegible] worked, as far as practicable, under the superintendence of the [illegible] and when need the Commissioners will also fix a steam engine not exceeding 30 lbs per inch, gratuitously to the exhibitors, and convey it in polished pipes to such parts of the building as require steam-power. Parties sending machines, or articles requiring to be driven by steam, should send word what power is required to enable steam-engine, to which a steam pipe can be laid on. The above will apply to all, one man from one-horse to six horses; beyond which power it is presumed no single branch of manufacture or machine will require a steam-power. As regards machines too small to require an independent portable engine, arrangements will be made to place them in connexion by wood-work with a steam in action with some stationary engine, also sent for exhibition in motion. Exhibitors proposing to exhibit portable steam-engines should understand that their engines must be completed with all other machinery, unless the owners of the steam-engines object to such use

Arrangements have been made to supply water at a high pressure gratuitously to exhibitors, who will have the privilege of adapting it to the working of their machinery, &c.

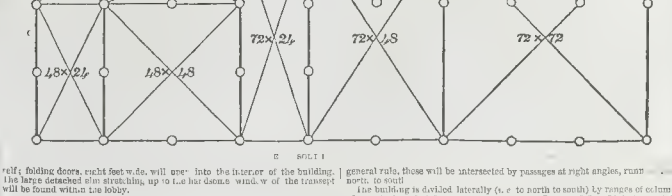
The Commissioners, accordingly, will, confidence, resign to the exhibitors themselves the proper exhibition of their goods, and the responsibility of taking the necessary preparations for displaying them, subject only to general rules conducive to the interest of all parties. The Executive Committee are desirous of pointing out that great success attended the arrangements of the same description of articles being as much as possible in combination in the fitting up of their spaces, and in arranging for the cleaning, watching, and general superintendence of the respective articles.

Messrs. Fox, Henderson, and Co., the contractors for the building, are prepared, if such should be the wishes of exhibitors, to construct counters, shelves, [illegible] stands, and every necessary fitting for the proper display of the articles to be exhibited, and to lend or sell glass-cases where required.

Every exhibitor who desires to attend himself, or by his representative, during the Exhibition, must obtain permission to do so from the Executive Committee. He must declare the sitting or standing a case for each attendant from the superficies. Door or counter space allotted to each, but he will be allowed to make up the deduction by building up and arranging these goods properly and compacted for admission on the sea, one above the other, without the boundary of his allotment, to any height that he pleases, under 18 feet from the floor

There will be a central passage, forty-eight feet wide, a corridor at the north and at the south side, each twelve feet wide, and two intermediate passages of eight feet, all running from the east to the west ends of the building. As a general rule, those will be intersected by passages at right angles, running south to south

The building is divided laterally (i. e. north to south) by ranges of columns of twenty-four feet from centre to centre. Spaces of 24 x 24 feet, as at A, A; 24 x 24 feet, as at B and C; or 48 x 48 feet, as at D; and, in some cases, of 72 x 24 feet, as at E; or 72 x 48 feet, as at F; or 72 x 72 feet, as at G, running from north to south, may be arranged according to the wishes of the exhibitors, provided always, that in each oval space there shall be at least one entrance



and exit passage of eight feet, running from north to south, or else two entrance or exit-passages of not less than five feet each for every space of twenty-four feet; and that no communication from east to west between any such spaces shall be established without special leave of the Executive Comm itee in writing.

The exhibitors of the United Kingdom to whom space has been allotted by their various local committees, and whose names have been duly returned to the Executive Committee, will be arranged into the thirty classes. A certain space will be allotted to each class, and specific places to subdivisions in the &c., and finally to each exhibitor. Spaces of the requisite dimensions will be set apart to receive the productions of the colonies and each foreign country. And the charge of these departments, as well as the arrangement of the productions, will be handed over to each great representative nation of colonies or foreign country. The length of the floor and counter spaces will be regulated by circumstances, the width of them may vary from one to sixteen feet; the height of the counters should be generally about two feet six inches.

The wall or hanging space, will be obtained, either with or without counter in connexion, between the columns running from north to south. The space or partition space, if required to be solid, may be built up to any desired height. The hanging space for light goods may be obtained by suspending lines between the columns and from the girders in the galleries. The wall, or hanging space, may be of any height under forty feet; and experiments in this building have shown that it is desirable that hanging fabrics shou. l, as a general rule, be of not less than twenty feet drop.

All communications on the subject of arrangement must be in writing in the first instance, addressed to "M. D. Wyatt, Esq., at the Building for the Exhibition, Kensington-road, London," and marked at the top of the sheet "Arrangement (Raw Produce)," or "(Machinery)," or "(Manufactures)," or "(Fine Arts)," marking also which of the thirty classes to which the letter; and the Executive Committee request that they may not be moved up with communications referring to other departments.

A report (ably discussed and translated by the *Morning Chronicle*) on the contributions from the several states of the Zollverein has been published by the Royal Prussian Commission, respecting the first great division of their contributions, namely raw products. In the mineral kingdom, wrought and unwrought ores, which is largely exported from Upper Silesia, will be sampled in considerable variety; pig-iron, bar, and rolled iron, rough steel-iron, and iron-wire from the Rhine, Bonze, Westphalia, Silesia, and Nassau. Ores and lead and antimonial ores from Anhalt, Westphalia, Cologne, and Coblentz: copper from saxony; cobalt, gold, and silver wire from Mansfeld; coal, anthracite, and lignite from Hesse, and the Rhine; quicksilver, alum, and chemicals, and dye-stuffs from Prussia and Saxony appear in the list. Clays, bricks, pottery of Northern Germany, earthenware from Hanau; with the enormous and fine bricks of Bergzabern; glass and porcelain from Saxony, Berlin, and other places, will be added; together with all kinds of stones, marbles, granites, precious stones, agates, meers, amm, and amber.

In the vegetable kingdom, flour, groats, barley, vermicelli from Munich, Berlin, Saxony, and Silesia; starch from Brunswick, Saxony, and Berlin; mustards, oil-cakes, dried and preserved fruits, vegetables, meal preserves from Erfurt, Halt, Berlin; with wood and timber from Wurtemberg, &c.; balsams, perfumes, specimens of wood, madder, indigoes, &c., and dyes from Cologne, Erfurt, Dusseldorf, and Muhlhausen; and, indeed, most valuable products in flax, tanning, and printing. Flax and hemp from Silesia, sponges from Berlin, timber from Friedeberg, and sounding-boards for pianofortes from Bavaria; various descriptions of products employed in clothing and building; glass and enamels; Westphalian hams, Saxony and Silesian wools and fleeces, together with raw silk and substances employed in spinning and weaving; leathers, skins from Baden and Bavaria, Frankfort, &c., and the east-ern provinces; with parchment, glues and gelatine, with processes and ingredients in tanning, will be forwarded. Glues, charcoal, dye stuffs, and substances used for domestic purposes in the manufacturing of tools and colour close the list of contributions in the first department. Throughout Germany, the officers of state, the art and trades unions, and the special commissions in Berlin, Munich, Stuttgardt, Dresden, Brunswick, Wiesbaden, and Frankfort have zea ously promoted the interests of the Great Exhibition; and it appears that there are 1572 applications from the artistic and industrial producers within the Zollverein.

Holland will contribute naval models from Rotterdam; Delft will send its well known earthenware and carpetting, the Hague promises carved wooden furniture, silver articles, &c.; and Leyden, says the report, will send its woven blankets and woollen manufactures; velvets, wax candles painted glass, railway improvements and machinery, &c., are to come from Amsterdam; pipes, terracottas, and Chinese imitations, from Gouda productions, woollen bazes, linen, calicos, and glass are named from other districts.

The Bombay public have not had an opportunity of inspecting the contributions from the distant presidency. The Khan of Kelat has been solicited to committed boxes of the special and valuable products of his territories; and the committees have been zealous in preparing their collections in Scinde, Ahmedinyge, and Kattywar, for shipment by the next of January. At Bengal the public was admitted to view the articles *en route* from the mofussil hood of that Presidency. Dacca muslins, shawls, silver filagree work from Cuttack, gold and silver ornaments, jewellery from Delhi, Lucknow, Patna, and Benares, and weapons and armour from Dholepore, vegetable and cotton products probably accompany this collection

A deputation of the provincial manufacturers have addressed the Executive Committee. Additional rentes to the Exhibition are suggested, such as direct communication with the South Western Railway at Nine Elms; the Great-Western at Paddington, the London and Brighton at Camden-town, and the Great Northern at Kings-cross. The deputation offered to submit a scale of charges, &c., and it was determined to assemble the whole of the Metropolitan omnibus proprietors to discuss the various points connected with the Great Western passenger traffic, anticipated during the summer months. The *Morning Chronicle* suggests, very sensibly, that the destination and fare should be conspicuously inscribed on the panels of the vehicles, and that jewellers, pastry cooks, and refreshment rooms, should display the names of streets being in the neighbourhood of the Exhibition, by the *Cygnus*, now in the London Docks.

Dunstable, Berry (Lancashire), Liverpool, East Retford, Poole, Portsea, Carlisle, Market Rasen, Leicester, Wimborne, and Nottingham are bestirring themselves with the visiting club arrangements. Several manufacturing firms of the second town have resolved to advertise, in local journals, determined to accompany their workpeople, if the majority of hands in their employ decide to visit the Exhibition.

The Southampton deputation to the American Minister respecting the selection of Southampton as the landing port for the American contributors, were received by the gentleman of his sympathy and concurrence with their request that every support and the ship charges might be borne by the Government, which, as pleasing an interchange of courtesies had taken place two years ago. The directors of the dock will forego all dues, and the Mayor personally guaranteed, with the various municipal officers, together with the immunity of the goods along the South-Western Railway from all carriage expenses.

When the great mail steam-ships across the Atlantic are to be altered so as to carry additional passengers. The *Pacific* is at present in hand at New York, undergoing improvements, &c. for that purpose. Montreal and Quebec have displayed an additional spontaneous zeal of 100 packages, for the Exhibition, by the *Cygnus*, now in the London Docks.

Mr. Cubitt, the eminent builder, has just left for America and back at first-class prices of £20, allowing six weeks' stay in the States. Rumour says that 100 gentlemen have subscribed £5000 among themselves, to hire a first-rate vessel for the transit, on board of which they shall reside, receive visits, and give entertainments during their stay at the American metropolis. It is reported, have been made for running a packet daily from New York after the opening of the Exhibition.

All who take an interest in the success of the Exhibition will be glad to learn that the Government are going to bring in a protective measure for the rights of inventors who shall contribute by their skill and ingenuity to the collection of the "Exposition of All Nations." Lord Granville Somerset has promised the bill then proposed for the same purposes, and which, by provisional registration, was to have secured inventions from piracy as effectually as if an actual patent had been obtained. This would be reduced by the more common especially, as we have notified, to foreign exhibitors; and though the bill only provides a temporary protection, that that too for contributors to the exhibition, we may rest assured that it will be the source of much good to the cause of an improvement in all departments of art and industry facetiously termed "the patent laws." The Society of Arts—especially its reform-of-patent-law committee—and other associations in the same direction, together with the public press, may congratulate themselves on the success which promises to attend their efforts in exposing the grievances and hardships which have for years so imperiously restricted the progress of the working classes.

Some 10,000 visitors are promised from Vienna. Arrangements are to be made for the convey of this multitude by the South Eastern Railway, whose directors have been addressed by the Austrian commissioner on the subject.

A society has been established in Madrid to convey persons to Paris and London during the Exhibition; they will be allowed a month's trip, and the charges for the excursion will include all expenses of visiting the theatres and places of amusement at both capitals. The Minister of Commerce in Paris is to open a credit for 488,000 francs—about £19,500. (If the Legislative Assembly approve of the proposal), to defray the expenses connected with the transport of French contributors. This gossip respecting the Continental exhibitors is principally from the reports of the *Art Journal*.

A new proper let, to supersede the use of both paddles and screw, is to be contrived from Bridgewater, which is to make a vessel to turn within the space which its length would describe in a circle.

The Chocswering Granite Company, at their quarries near Liskeard, have raised a block of granite seventy feet in length, of the finest quality and colour for the Great Exhibition. Its weight is nearly 300 tons!

Sir John and Lady Buller have presented Mrs. Clark, the Honiton lace manufacturer, with 200 guineas each to produce the finest specimen of her art in the shape of a deep flounce.

M. Soyer, justly indignant at the unfounded assertion by several of the London press, that Gore House was to be converted into an hotel, with the grounds in the style of Cremorne, repudiates such a destiny for that mansion, and declares—"It will be my study to devote this establishment entirely to the display of the gastronomic art, where I am now making preparations to accommodate thousands of persons daily at my Symposium of all Nations"—an expression worthy of Vatel himself

THE ILLUSTRATED LONDON NEWS.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Earl of Dunraven has resigned the representation of Glamorganshire and accepted the Chiltern Hundreds, in consequence, as he says, in his farewell address to the electors, of the responsibilities and duties connected with this country, which have recently devolved upon him, forbidding him to hope that he could continue to fill the position of their representative with that assiduity which their important interests require.

The Queen has granted pensions on the civil list of £100 a year each to Mrs Belzoni, the aged widow of the celebrated traveller, and to Mr. Poole, the author of *Paul Pry*, and of several contributions to periodical literature, who is, we regret to hear, in great suffering and poverty.

The preliminaries of an approaching Royal marriage have been arranged between his Highness Prince George of Mecklenburgh-Strelitz and the Grand Duchess Catherine of Russia. The Hereditary Grand Duke and Duchess now in this country, are expected to be present at the nuptials, which will probably take place in March

Mr. J. A. Curtis is appointed her Britannic Majesty's Consul (without salary) at Colonne.

St. Stephen's, Walbrook, for the first time after its complete renovation, was opened on Sunday. The Lord Bishop of London preached in the morning, and the Rev. Dr. Croly in the afternoon. A liberal collection was made at both services

During the last few days a curious stone coffin, containing the remains of two persons, has been discovered upon the premises of Messrs. Palmer and Sons, builders, 69, in the Ride, Bartholomew-close, City. In consequences of the absence of the lid in the sarcophagus, it is impossible to say at present, even approximately, who may be its tenants.

At the Knutsford Quarter Sessions an application was made by Mr. Case for £300, the amount for incidental expenses incurred in sustaining an extra force of military and police while executing certain warrants at Birkenhead, arising out of the late disturbances

The *Carlisle Journal* records a storm and flood of unprecedented height at that place, as well as in the north and Appleby, on New Year's-day. We are glad to learn, however, that the damage caused by inundation has been much less than might have been expected from its magnitude

Died, at Bishop Auckland, county of Durham, December 27, 1850, Thomas Milburn, born October 11, 1748, and consequently 107 years and three months old. He had been an agricultural labourer, and was in the possession of good health and all his faculties until a few weeks previous to his death

The *Rokeby*, from the Mauritius, just arrived at the port of Bristol, encountered on her homeward voyage a fearful storm, in which the captain, the chief mate, and the crew were washed overboard. The captain and mate perished, but by the active exertions of the men were again thrown upon deck, and were thus almost miraculously preserved. The *Rokeby* was safely brought in to her destination by the second mate.

At a meeting of the Town Council at Leeds on Wednesday, a committee was appointed to consider what steps should be taken to secure the erection of a new town hall and other corporate buildings, an attempt to raise the required sum by subscription having failed.

The vessel *Cyprus*, just arrived in the docks from Montreal and Quebec, has brought 113 packages of articles officially declared to be intended for the great Exhibition of all Nations in Hyde-park.

At a recent meeting of the Commissioners of Sewers, Sir J. Burgoyne, said that as strictures had been made in the newspapers on the calling of a sewer (the Victoria sewer), after the name of her Majesty, he would remark that it had never been done, the sewer in question having, as was customary, derived its name from that of the street in which it was made

Oberlin College, United States, has lately awarded diplomas to eight young ladies, one coloured, who had completed the ladies' course. The degree of A.B. was conferred upon eleven gentlemen and one lady, and that of A.M., in course, upon nine gentlemen and one lady. Three gentlemen and two ladies completed the theological course: and it is stated that one of the latter expects to devote herself to pulpit labours

Ninety boats of Boulogne, of 2478 tons, with 979 men on board, have been this year engaged in the herring fishery on the coast of Scotland; they have brought home 17,566 tons of salt herrings.

The Rev. Arthur Kaye Hincks has written a letter to the *Evening Mail*, denying that his nephew, the Rev. George Mostyn, has joined the Roman Catholic Church

The recent arrivals of American built ships from China, with entire cargoes of tea, have just been followed by another arrival of the same kind. The American ship *Roman*, of 774 tons burden, has arrived in the London Docks from Canton, with an entire cargo consisting of 16,000 packages of tea, consigned to order, which is admissible by virtue of the relaxed laws of navigation and importation to entry for home use.

The engine-drivers and firemen at the Swindon and Bristol stations of the Great Western Railway a few days ago presented one of the guards (Mr. Henry Painter) with a handsome silver snuff box for his unremitting exertions in forwarding the trains at the stations, thereby enabling them to run at one uniform speed, and hence effect a saving of coke to the company

The whole of the property stolen from the premises of Mr. Lamb, Goose-gate, Nottingham, has been discovered entirely through the vigilance of the town police. It was found in a bag, buried in a pool in Long-hedge-lane Three men are now in custody on suspicion.

The late Mrs. Bethune Morison, of Naughton, has bequeathed to the five schemes of the Established Church of Scotland, viz. the Home Mission for Promoting the Education of Females in India in connection with the Established Church of Scotland, £300; to the Dundee Royal Infirmary, £500; to the Dundee Orphan Asylum, £100; to the Dundee Institution for the Blind, £100; Industrial Schools, Dundee, £100; to the Home or House of Refuge for Females in Dundee, £500.

The *Revue des Théâtres* says—"Some days before her death, which took place lately, Mdlle. Eliza Forgeot, ex-directress of the Théâtre Francais at London, was conversing with some friends, when some one having knocked at her door, her *femme de chambre* whispered something in her ear. 'It is my *marchande de modes* come to try me on a new dress.' said the actress, 'will you come to see it?' She then led the way to her dressing-room, and her friends who followed her were surprised and pained to see that the new gown was a coffin. The coffin was in rosewood, lined with white satin, and was placed against the wall. She entered it to try it. 'Yes,' she said, smiling, 'it fits well, and I am pleased with it.'"

On Monday an accident occurred at the building for the Exhibition in Hyde-park to two of the glaziers, named J. Butt and W. Greenlaw. The men were engaged at work on the machine, or swinging stage; they were pushed out, and fell with the scaffolding to the ground. They were conveyed to St. George's Hospital, where it was ascertained they had received most extensive injuries, having struck and bounded from girder to girder in the fall. They now lie in a very dangerous state.

At the last meeting of the Newport Town Council, a memorial, in reference to the excessive differential duties imposed by our Gallic neighbours on our great staple commodities, iron and coal, compared with those levied on a more "favoured nation," received the names of the entire board.

Owing to the last very unsuccessful season, it was anticipated that there would be a great fall in the rent of the Tay salmon fishings this year; but upon those of the Earl of Wemyss, the reduction is only about £200 upon a rental of £2800. The total amount this year was £2100.

The American packet-ship *Empire State* recently encountered very severe weather on clearing the Channel, and two men were required at the wheel. One being called away, the man left in charge was immediately overpowered, and received a severe blow or the back of the leg from a handle of the wheel. The limb became much swollen, and mortification ensued. The vessel returned to the river on Saturday last, and arrived on Monday, and on Thursday the man, whose name is Berry, was taken to the hospital, where his limb was immediately amputated. He lies in a very precarious state

The corporation of King's College Hospital propose to introduce a measure in the ensuing session, enabling them to hold lands for the purpose of the college, for providing sites for the hospital, for approaches thereto, and for pulling down the present buildings.

On Monday, a bankrupt named Dyson (lately a draper in Bradford, Yorkshire), having refused to give satisfactory replies on his examination in the Bankruptcy Court at Bradford, as to the disposal of his money and stock-in-trade, was committed to prison by Mr. Commissioner Skirrow and his examination postponed *sine die*

On Tuesday last Her Majesty's Government offered a reward of £30, in addition to the £30 previously offered by the guardians of the West London Union, for the apprehension of Mrs Sloane.

According to the *Daily News*, the Rev. Sir Frederick Ouseley, Bart., and Sir John Harington, Bart., both of Oxford, are said to have seceded from the Established Church. Sir John Harington was Mr. Bennett's churc. warden.

It is calculated, by those who have paid attention to the subject, that the traffic of the London and North-Western, which, at that season, is usually also one of the largest in the kingdom, will be doubled during the months of June and July next. It is expected, for instance, that the traffic of the London and North-Western, which, at that season, is usually about £80,000 per week, will not be less than £160,000 per week.

General Cabrera (Count de Morella) and the Countess de Morella have munificently subscribed the sum of £20 to the funds of the Leicester-square soup-kitchen.

The Postmaster-General has given orders that all the town-receiving houses in the kingdom shall resume receiving registered letters, a practice which had for some time ceased

A new method of stopping railroad trains has recently been discovered in the United States—electricity is the means used. The plan contemplates the arrangement of a galvanic battery on the locomotive, under the seat and hand of the engineer, with a rod running thence to each wheel in the train, connected with the different clogs of brakes, and to be connected with the battery at a touch, so as to apply simultaneously and instantly any desirable amount of pressure to every clog.

Mr. Sirrell, the gold refiner, who was tried for receiving stolen goods, and acquitted, has, it is said, commenced legal proceedings against Mr. Lund, of the metropolitan detective force, for compensation for loss occasioned by reason of closing his premises.

IRELAND

RELIGIOUS DISABILITIES.—Preparatory to a meeting which some of the Irish members of Parliament propose holding on the eve of the approaching session, with view of devising some means of obviating what they suppose to be a threatened invasion of the religious liberty of Roman Catholics, the following declaration of members of the Legislature has been issued:—"We, the undersigned, deem it our duty, at this present juncture, to declare our unalterable attachment to the principles of civil and religious liberty, and our determination to oppose, by every constitutional means, any measure tending to interfere, by legislative enactment with the discipline or doctrine of any religious the Queen's subjects—M. J. Blake, Castlereagh, M. E. Corbally, W. Stanley Crawford, J. T. Devereux, W. Fagan, J. Fagan, R. M. Fox, H. Grattan, J. Greene, R. Keatinge, C. Lawless, W. Torrens M'Cullagh, N. V. Maher, W. Maxwell, T. Meagher, G. H. Meagher, J. O'Brien, T. O'Brien, M. O'Connell, A. O'Flaherty, the O'Gorman Mason, G. Gosseley Higgins, M. Power, R. Barke Roche, J. Reynolds, J. Sadlier, Fras. Scully, J. H. T——."

THE DUBLIN CORPORATION.—The new era which has entered upon by this body, in consequence of the enlargement of its powers, is to be inaugurated on the 21st inst. by a grand banquet, to be given by the recently elected Lord Mayor (Alderman Guinness), with a splendour hitherto unusual at civic banquets in Dublin. It will take place in the vast circular building called the King's-room, attached to the Mansion-house, erected in 1821, on the occasion of the visit of George IV. The invitations include the nobility, the principal resident gentry, and the clergy of the various religious denominations, and they amount to nearly one thousand. The Lord-Lieutenant, the Lord Chancellor, Sir Edward Blakeney the Lieutenant-General commanding the forces in Ireland, and several other public functionaries, have accepted the invitation. A communication has been received from the Earl of Roden, apologising for his inability to attend. The Roman Catholic Archbishop of Dublin (Dr. Murray) excuses himself on the ground of advanced age; but several of the clergy, Protestant, Roman Catholic, and Presbyterian, are to be present.

THE CULTIVATION OF FLAX.—The Poor-law guardians, in some of the southern and western unions, are actively co-operating with the gentry and farmers in measures for the extended cultivation of flax, and the establishment of suitable buildings for its preparation, and markets for the sale of the fibr

FREEHOLD INVESTMENTS.—On Monday a meeting was held in Dublin for the purpose of establishing an Irish Freehold Land Investment Society, somewhat on the plan of the society of that kind which has been established in England. The object is to take advantage of the opportunity which the Incumbered Estates Commission affords of purchasing land in large quantities, and on moderate terms

A Dublin Excursion Club has been formed, to insure cheap transit to its members to the Great Exhibition of All Nations

IRISH MEDICAL CHARITIES.—A very numerously attended meeting of physicians and surgeons attached to the hospitals and dispensaries in different parts of the country, was held in Dublin, on Monday last, at the Royal College of Surgeons, for the purpose of taking into consideration the very critical position of the medical charities of Ireland, and also to urge the necessity of immediate legislation upon the subject. Dr. W. Kingsley, of Roscrea, presided Several resolutions were adopted, including one expressing approval of the Medical Charities Bill brought in last session by Sir Wm. Somerville

DESTRUCTIVE FIRE IN DUBLIN.—On Sunday morning last, a fire of a very destructive character took place in the extensive coach factory of Messrs. Hutton, in Dublin. The flames were discovered at an early hour in the morning, and it is supposed that the fire had been smouldering from some time in the preceding (Saturday) night, when a spark from the forge may have ignited some timber; but the moment the fire was discovered, the flames spread with amazing velocity, and a great portion of the extensive premises fell a prey to the conflagration. Every possible effort was made to stay the valuable property, but the amount destroyed exceeds that of the insurance by from £8000 to £10,000. The establishment was insured in the National Insurance Company. The premises consisted of two quadrangular buildings with an open yard in the centre of each, one of which was destroyed. A man only slightly injured. Several of the fire-engines played from the latter on the burning premises, and were plentifully supplied with water from two tanks situated within the premises. They continued to work up to Monday evening. In the course of Monday numerous visitors, including Judge Perrin, Mr. Commissioner Curran, Alderman George Roe, and other members of the corporation, called on Mr. Hutton, and expressed their condolence with him upon the calamity which had befallen him

The *Limerick Reporter* gives the following fatal and lamentable result of a Christmas trick:—"On Christmas night, a dreadful occurrence took place within six miles of Kilrush. Bridget Hough dressed herself in men's clothes, and having blackened her face, went to her father-in-law's house to have some diversion. Her brother-in-law was taking care of the house, as her father was not at home; he had a loaded gun in his hand, and when he saw, as he thought, the man blackened, he presented the gun at his brother-in-law and fired, and lodged the contents of it between her shoulders [illegible]. Once There was an inquest held on her body, and the verdict returned was 'Manslaughter against Michael Hough,' deceased's brother-in-law."

NATIONAL SPORTS.

THE steeple-chase calendar, as we mentioned in our last, is blank for the current month, now our customary fixtures—numerous as we could have wished, from the continued openness of the weather; near as we have only six second Lydiard and Otterhurn meetings, both commence going on Wednesday, and the regatter, up to the Oxford and Cambridge boat-race, and nearly three others without fixed days. Both February and March promise to be busy months.

MONDAY.—The betting this afternoon afforded only the following short [illegible] tions

CHESTER CUP.

30 to 1	Aged Sheuse (t)	14 to 1	[illegible]
40 to 1	Wallflower	14 to 1	[illegible]

HARE HUNTING.

If I could have persuaded myself to ride on the turnpike-road to the three-mile stone and back again, I should have [illegible] had [illegible] no less of a pack of harriers.—PETER BEARSLEY.

There are few persons at all familiar with sporting literature who have not seen the above paragraph quoted in disparagement of those agents of woodcraft, called, in flippant parlance, "currant jelly dogs." There are not many, perhaps, who are aware that the sentence which succeeds it in Letter the Tenth of this great authority on the Chase altogether alters the reading, and shows the purpose of the writer to have been a compliment to Hare Hunting:—"I think Peter Bearsley to my own particular standing in the country would Hare Hunting is so bad that it is more extraordinary I should have been versed in it so long, than that I should forsake it now." Take the question of this rural sport for a thesis, and the last passage furnishes its exposition The chase of the fleet and [illegible] creature, which is the quarry of the harrier, is wholly influenced by the scene of action

Poor is the triumph o'er the timid hare.

sings the poet Thomson, which, without the assistance of chronology, proves that he never rode up to the "Brooksnis" five-and-twenty minutes with a will from Newcombe Tye. With that pack, or its neighbour, the Brighton Harriers, over the favour of this sport, one could be content to find it very inviting. Hare Hunting in wide woodlands, and Hare Hunting on upland downs, bear no more resemblance to each other than does a horse-chestnut to a chestnut horse. It is one thing to hunt up to puss through the labyrinth of her spirit's rambles, and another to whip her out of a tuft of furze when the morning is at close quarters with the noon. "Tray, the like is not to be had nearly," says Beckford, "have amusement in seeing the hare trained to perform: it is of great service to hounds; it gives them their goodness to the huntsman more than any other hunting, as it discovers to him those faults in their nature which he can best correct." But I confess, I seldom judged it worth while to leave my bed a moment sooner on that account. I always thought Hare Hunting a could be taken as a ride after breakfast, to get us an appetite for dinner, but I never knew any one who made a meal of it, as you spoil it."

Ah, Peter! Peter! why didn't you find out that such is the way to spoil all manner of hunting. Had you done this and proclaimed the fact, what a world of trouble you would have prevented saving the [illegible] of the conquerors' room! Why, man, since your corne y quarto came out at ancient Sarum, there has been a library published upon hunting—a collection as big as that at the British Museum. Hare Hunting, of course, finds no place in such exposé to be [illegible] treatises of scent. No, no—don't "make a business of it;" but when the clerk of the weather vouchsafes a southerly wind and a cloudy sky," with not rain or frost, should fate pass you in a direction of open downs with a pack of harriers of the right sort within reach (something, for instance, like the *ensemble* of the Artist which accompanies this hint), put on your boots and go there to see—what Dame may send. Do [illegible] and—should occasion require, you may give a helping hand by bearing in mind the six [illegible] suggestions. Hares are said to foresee a change of weather. This, however, is certain, that they are seldom found in places much exposed to the wind. In enclosures, they more frequently are found near to a hedge than in the middle of a field. They who make a profession of hare-finding are directed by the wind where to look for their game. With good eyes and nice observation [illegible] enabled to find them in any weather. You may make forms, and hares will sit in them. It is said to have been a common practice with shepherds on the Wiltshire Downs; and, by making them on the sides of the hills, they could tell a

HARE HUNTING.—THE MEET.

a distance off whether there were hares in them or not. Without doubt, people frequently do not find hares, from not knowing them in their forms. "When the game is found, ye cannot be too quiet." That's bad. With one's heart in one's mouth, it's a terrible trial to sit "like patience on a monument." Well, at all events, don't shout—don't halloo. An air upon the piano is a pleasant accompaniment to a cup of after-dinner Mocha, in a snug drawingroom; but the "Great Exhibition Quadrilles," executed by Jullien's band under the same circumstances, would be quite another affair.

Beckford winds up his notice of Hare Hunting with a postscript *apropos* of eat-

[illegible]

time. At the close of a hard run by the Devil's Dyke, Lord —— was seen by a friend sitting upon his horse in the attitude of one who muses. "A wrinkle on the noble science of the currant dogs?" said the observer, interrogatively. "Yes," answered the Peer, abstractedly; "Yes, hot; serve your jelly quite hot, in a silver sauce-tureen."

FIRING AT THE APPLE-TREE IN DEVONSHIRE.

Amongst the scenes of jocund hospitality in this holiday season, that are handed down to us, is one which not only presents an enlivening picture, but offers proof of the superstition that still prevails in the western counties. On "Twelfth Eve," in Devonshire, it is customary for the farmer to leave his warm fireside, accompanied by a band of rustics, with guns, blunderbusses, &c., presenting an appearance which at other times would be somewhat alarming. Thus armed, the band proceed to an adjoining orchard, where is selected one of the most fruit-

[illegible]

Here's to thee,
Old apple-tree!
Whence thou may'st bud,
And whence thou may'st blow,
And whence thou may'st bear

Apples enow!
Hats full!
Caps full!
Bush[illegible]
Ac[illegible]

The cider jug is then passed round, and, with many a hearty shout, the party fire off their guns, charged with powder only, amidst the branches, sometimes frightening the owl from its midnight haunt. With confident hopes they return to the farm-house, and are refused admittance, in spite of all weather, till some lucky wight guesses aright the peculiar roast the maidens are

[illegible]

honour of "king for the evening," and till a late hour he reigns, amidst laughter, fun, and jollity. The origin of this custom is not known, but is supposed to be one of great antiquity.

The Illustration is from a Sketch by Mr. Colebrooke Stockdale.

FIRING AT THE APPLE-TREE, IN DEVONSHIRE.

MR. JOHN PARRY.

On Tuesday evening Mr. John Parry repeated his "Notes, Vocal and Instrumental," at the Store-street Rooms, to a crowded audience. The various imitations and musical conceits in this entertainment are truly amazing; and the performer's powers of description by means of the pianoforte are unbounded. Amongst the most striking features are his excellent impersonation of a Welsh girl, in which he sings a Welsh song with remarkable success; and of a music-master and his grand opera of "Douglas," with an overpowering "crescendo chorus," and the pastoral ballad of "My Name is Norval;" his imitations of amateur vocalists, and young lady pianists; his clever impersonation of an Artist, with an instantaneous change of costume (*See the Illustration*); a visit to the Park, with drums and fifes, and the march of soldiers imitated by rattling the keys; a visit to Astley's, and the "rapid act of horsemanship;" the bear's *runaway* accompaniment on the wires of his den at

MR. JOHN PARRY—THE ARTIST.

the Zoological Gardens; and a host of other pleasantries. This entertainment is very superior to the first.

NOOKS AND CORNERS OF OLD ENGLAND.

THE GOSPEL OAK, AVINGTON

This venerable tree stands in Hampage Wood, close to the deer-park of Avington, in the parish of Avington, Hampshire, late the property of the Duke of Buckingham and Chandos, now in the possession of John Shelley, Esq. It is impossible to ascertain the age of this ancient relic; but that it was standing long before the Conquest, is certain. The "Gospel Oak" of Hampage has unaccountably escaped the notice of Milner and Dutty, the historians of the neighbouring districts. This appears the more strange from a detailed account given by the former of a most material portion of its traditional history. In his "History of Winchester," he recounts that Walkelin, relative and chaplain of the Conqueror, by whom he was made Bishop of that diocese, undertook the great work of rebuilding the cathedral and the adjoining monastery at his own expense, the former edifice having been destroyed by the pagan Danes. It was a great undertaking; but an incident which took place in the course of the work, is related as a proof alike of the ready wit of the Bishop and the generosity of the Conqueror. The prelate, finding himself much distressed for timber, applied to the King for such supplies as he might be pleased to afford. William, without much reflection, told him he might take as much timber from his wood of Hampage, in the neighbourhood of Winchester, as he could cut down and carry away in three days. The Bishop resolved to avail himself of the grant to its utmost limit, and accordingly collected all the woodmen of the country, and cut every tree of the forest, with the exception (as will hereafter appear) of the subject of the present Engraving, and carted all to Winchester within the prescribed time. The King happened to be then absent from the city, but, returning over the eastern downs, a few days afterwards, he observed to his attendants with astonishment, "Have I lost my senses? Certainly, I thought I had a wood here adjoining to Winchester!" Being informed of the proceedings of his cousin Walkelin, he was greatly incensed at his conduct, and was with difficulty appeased.

Long before the Conquest, and for some subsequent centuries, there were religious houses in the valley of the Itchen; one of them was a priory at Yavington, in the parish of Avington, very near the north end of Hampage Wood; and the portion of tradition omitted by Milner, but there handed down from father to son is, that when the Prior and his monks heard of the Conqueror's grant to Walkelin, they, with others, petitioned the Bishop that this old oak (old at that time) might be spared, in consequence of the Gospel in the early days of Christianity in this country having been preached under its wide-spreading branches. Their petition was granted, and the interesting ruin

GOSPEL OAK AT AVINGTON.

still stands, a striking monument of the longevity of the oak and of the piety of our ancestors. It is now dead, the last small branch having, in the past year, shed its last leaves. The present Lord of the Manor, Mr. Shelley, anxious to preserve as far as possible so precious a relic, has girded it with an iron belt, which may keep it standing many years longer.

THE SALLE DE ROBIN, PICCADILLY.

SALLE DE ROBIN.

The excellence of M. Robin's *Soirées Fantastiques* induces us to recur to the subject, and to present an illustration of what may justly be called one of the great situations in his most popular drama of illusion. The scene is one of simulated *clairvoyance*. M. Robin leads on Madame blindfolded, and seats her on an ottoman in the centre of the stage, fronting the audience; having done which, he traverses the platform from the stage to the boxes, and gathers from the assembly watches, trinkets, rings, and other articles, and calls upon the supposed *clairvoyant* to describe them, which she does without hesitation, and with the most perfect exactness. The distance, and all other circumstances, seemed to preclude collusion; but as, of course, there is acknowledged illusion in all the wonders exhibited at these *soirées*, it would be ridiculous to suppose any other ground for the appearances than a previous arrangement and perfect understanding between all the parties concerned.

M. Robin's audience is largely on the increase, and it becomes clear that his present *salle* will not suffice to contain the numbers that nightly will be attracted to performances so elegant in all manipulated qualities, and calculated to excite so much surprise. The greatest wonder still continues to be that most surprising trick—which he claims as his own exclusive invention—"la double vue de Madame Robin," as he calls it. How the lady, and the gentleman who follows her, are conveyed away from under the cylinder, without observation, placed as they are on a flat table, open all round, passes our imagination to conceive. We have now witnessed the trick twice, and watched every movement in its exhibition, and cannot detect the slightest clue to the solution.

It would, perhaps, add to the interest of the exhibition, if M. Robin would indulge the audience with an interpreter, as his explanations escape wholly those who are ignorant of French, and deprive them, of course, of the full pleasure arising from the *soirée*. Both he and Madame are, however, we perceive, acquiring the use of some English phrases, and introduced them where they could on the evening when we were present. They will do well, at any rate, to cultivate this habit, and may, in a comparatively short time, be thereby able to render the whole performance intelligible to their audience. It may be remarked that M. Robin distributes, at one part of the *soirée*, a number of farts and other trifles, out of a well-stored cornucopia, and also a quantity of "*punch de Lucifer*," fabricated in a small but apparently inexhaustible bowl. This liberality, and the good humour with which he conducts the whole *séance*, alike conduce to the immense popularity of these really curious and deserving Parisian novelties.

THE REVENUE.

The usual official Abstract of the Revenue Returns for the year and quarter ending the 5th inst., have been published, from which it appears that there is a deficiency on the quarter of £109,428, which is accounted for in the following manner:—

DECREASE.		
Customs	.. ..	£123,925
Stamps	.. ..	50,139
Property Tax	.. ..	30,664
Miscellaneous	.. ..	38,017
		£242,745
From this must be deducted the		
INCREASE.		
Excise	.. ..	£90,503
Taxes	.. ..	24,192
		114,695
Imprest and other Moneys	.. ..	7,189
Repayment of Advances	.. ..	10,307
		133,317
Net decrease	.. ..	£109,428

On the other hand, for the year ending with this quarter, there is an increase of £164,922; and the amount of surplus revenue in hand at this time, after providing for the charges on the Consolidated Fund, and for the payment of supply-services in Great Britain, is no less than £1,012,817.

CUSTOMS REVENUE OF LIVERPOOL.—The revenue of the Customs of Liverpool, for the present quarter, is slightly in decrease of the last, the amount being £816,734, received this quarter, against £850,333, received in the corresponding quarter of last year; the actual deficiency being £33,599. This deficiency on the quarter, a deficiency being also found to exist in the accounts for the United Kingdom, may in part be attributed to the reduction of the duty on sugar, which came into operation on the 1st of October last. Revenues for Liverpool for the year was, in 1849, £3,479,202, against £3,360,264, showing a decrease in the year of £107,916.

SAVAGES AT SEA.—Captain Daley, the commander of the *Jeremiah Garnett* (which lately arrived at Liverpool from Shanghai), reports, that, on the 7th of September he fell in with two canoes, which contained 19 savages, of a copper colour, tattooed all over, and in a state of nudity. By signs and other means of interpretation it was gathered from them that they had been blown out to sea 13 days previously from the Islands of St. David's. They were received on board the *Jeremiah Garnett* and fed, but one of the poor wretches died the same evening. Captain Daley bore up for St. David's (which lies off New Guinea), and there landed them.

NELL GWYN.—The Coal-yard in Drury-lane, a low alley, the last on the east or City side of the lane, and still known by that name, was, it is said, the place of Nell Gwyn's birth. They show, however, in Pipe-lane, in the parish of St. John, in the city of Hereford, a small house of brick and timber, now little better than a hovel, in which she is reputed to have been born. That the Coal-yard was the place of her birth was stated in print as early as 1721, and was copied by Oldys, a curious inquirer into literary and dramatic matters, in the account of her life which he wrote for Curll. Of the early history of Nell little is known, and that little with no great degree of certainty. Still less is known of the rank in life of her father and mother: her father, it is said, was a fruiterer in Covent-garden. She speaks in her will of her "kinsman Cholmley," perhaps the nearest relation she then had. Her mother, who lived to see her daughter a favourite of the King, and the mother by the Merry Monarch of at least two children, was accidentally drowned in a pond near the Neat Houses at Chelsea. Whatever was the condition in life in which she was born, her bringing up, by her own account, was humble and degrading enough. The Coal-yard, infamous in later years as one of the residences of Jonathan Wild, was the next turning in the same street to the still more notorious and fashionably inhabited Lewknor's-lane.—From Mr. P. Cunningham's piquant "Story of Nell Gwyn," in the *Gentleman's Magazine* for the present month.

CALIFORNIAN GOLD.—Another "big lump" has been received in this country from the mines of California, whence it was taken by a young man, John Hughes, of Ardglass, county Down, Ireland. It weighs 18 lb 13 dwt., and is of rare purity.

Mr. Love, the Polyphonist, on the evening of New Year's Day, gave his admired entertainment, before a large company, at Stanwick Park, the seat of his Grace the Duke of Northumberland; the party numbered about 300, and on the following evening a still larger number were present; on each occasion the apartment being fitted up with a stage and gallery, like a theatre.

GIGANTIC HORNS FOUND IN CUMBERLAND.

The accompanying Sketches are from a pair of Gigantic Horns, recently found on Burgh Moss, near Carlisle.

The outer horn or surface has quite perished, and all that remains is the heart of the horn and the intervening part of the skull. This is quite petrified, and the depth at which it was found (being 17 feet beneath the bed of the Eden) are strong evidences of its great age. The flexion of the Horns, and the dimensions, seem unquestionably to indicate some animal of the Urus (mentioned by Cæsar, book vi.) or *Bos primigenius spaceus*, and may, at some remote period, have been brought down by the stream from the ancient forest of Inglewood.

A B	Distance between the points of the horns	.. .. ..	2 feet 1½ inches.
S G	Length of the convex surface of horns	.. .. ..	2 „ 9½ „
G H	.. ..	.. .. ..	0 „ 8 „
B G	B A	.. .. ..	6 „ 4 „
F F	.. ..	.. .. ..	1 „ 0 „
M N	Extreme width of the horns	.. .. ..	3 „ 2½ „
F G	Circumference of the horn	.. .. ..	1 „ 3 „
	Weight of the whole, 3 st. 10 lb		

These dimensions refer to Fig. 1, which best shows the peculiarities of the horns.

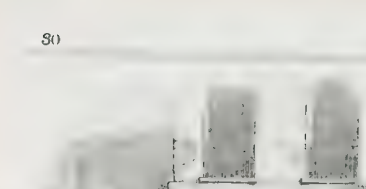
GIGANTIC HORNS FOUND IN CUMBERLAND.



SINGULAR ACCIDENT IN HUNTER-STREET, BRUNSWICK SQUARE.

On Thursday morning, at half-past ten o'clock, the following singular accident occurred in the above locality. A "Hansom" cab was proceeding through Judd-street, when the horse, taking fright at the "monster organ," started off at a rapid rate, and on reaching the last house on the left-hand in Hunter-street, bolted upon the pavement, and, throwing down the iron railings, fell into the area, with the cab upon him, and there lay for three-quarters of an hour; it requiring four hors and chains to extricate the cab from this position; the driver, a blind one, quietly walking up t steps. The driver of the cab jumped from his seat at the first start of the horse, and fortunately escaped hurt

COUNTRY NEWS.

NEW PLAN OF EDUCATION.—On Monday, at Manchester, a meeting of an influential character was held in the Mayor's Parlour, at the Town Hall, on the subject of education. It comprised the Dean and a large number of the clergy, with the principal Dissenting ministers and the leading merchants and manufacturers of the town. The meeting was called by the Rev. G. Richson, c ark in orders of the Cathedral, to consider a plan drawn up by himself and some members of the Church Education Society, "to show the practicability of consolidating an effective system of local education on the basis of plans now in operation." The Reverend the Dean took the chair, and the resolutions were proposed and seconded by Mr. Robert Gladstone; the Rev. Mr. Poore, Dissenting minister; the Rev. Mr. Gwythor, Dissenting minister; Mr. C. E. Cauley, the Rev. Hugh Stowell, and the Rev. S. Osborne, Wesleyan Minister, the latter stating "we must stick to our principles, but give up our prejudices," and were spoken to by the Rev. W. Birley, Mr. James Heywood, M.P., Mr. Richard Brier, and others. The principal features of the plan are to make use of the unoccupied room in schools of the various religious denominations in Manchester and Salford to provide for the contingent expenses by a local rate not exceeding 3d in the pound, and the management to be by committees elected out of their own members by the municipal councils of the two boroughs. The religious convictions of all parties are to be respected and equally protected, by a guarantee that, in all existing schools admitted into union with the district committee, no creed or formulary shall be taught to children, to which their parents or lawful guardians may, in writing, object.—Resolutions to this effect having been passed, and Joseph Peel, Esq., having consented to become the honorary secretary, the meeting resolved itself into a general committee, after a deputation was appointed to wait upon the Lord Bishop of Manchester, to request that his Lordship would obligingly assist a committee in its efforts to carry the resolutions into effect. A sub-committee was appointed to consider the details of the measure, and report thereon.

MANCHESTER FREE LIBRARY AND MUSEUM.—On Wednesday, a meeting was held in a large building, situated in Campfield, Manchester, recently belonging to the Socialist party, but which has, through the exertions of the Mayor of Manchester, been purchased for the establishment of a Free Library and Museum. The Mayor occupied the chair, and observed that he held in his hands a list of 76 firms, who had liberally contributed towards a fund of £1000 to the promotion of the object. The alteration contemplated in the present building would cost from £1700 to £1800 at the lowest figure, the total cost then being £4500. For the entire completion and purchase of the building they would require about £7500, and £6300 of that amount had already been subscribed. He hoped that by July next they would be enabled to open the institution with a library of 13,000 vols., 8000 being for reference, and 5000 for circulation. The Ten Hours Bill had placed at the disposal of the people much leisure time, and it was their duty to see that this time was well and profitably employed. He (the Mayor) heart that day, that in the free library established in Peel-park, Salford, at least 24,000 vols had be n read during the year, and at least 54,000 people had a ess of the news-room and institution generally. The Bishop of Manchester and that he entirely concurred in every observation made by the Mayor. Within the last few weeks he had received invitations from nine mechanics' institutions, and, although his engagements had prevented him from attending more than one or two of them, still, from inquiries he had made, he found that these institutions were progressing, and that the books generally read were of the most useful and beneficial character. His Lordship moved the following r

[illegible] heard with much satisfaction the statements made by the Mayor in [illegible] many steps which have been taken to establish a public free library and [illegible] ...ing such an institution is calculated to be extremely beneficial to the community [illegible] ...sive of most important and beneficial consequences, and that it is deserving of the cordial support of all classes.

The Rev. W. Huntington seconded, and Joseph [illegible] ...ton, M.P., supported the resolution. The latter gentleman suggested [illegible] ...he voluntary contributions should be entirely devoted to the purpose of [illegible] ...ks, and that a rate be laid in conformity with the act recently passed. After describing the mode of accomplishing this, he said that he felt assured that the cordial support of the rate-payers would be given. The meeting was afterwards addressed by Mr Adshead, Mr Thomas Bazley, president of the Chamber of Commerce, and the Very Rev. the Dean of Manchester. A committee was appointed, and a vote of thanks to the Mayor having been proposed by the Lord Bishop and seconded by Mr. J Brotherton, M P, the meeting separated

PROPOSED SAILORS' HOME IN SCOTLAND.—A public meeting was held on Monday, in the Mariners' Church, Leith, to consider the advantage of Sailors' Homes, and the propriety of establishing such an institution at that port, and to hear Captain W. H. Hall, R.N. and F.R.S., on the subject. Captain Hall, late commander of the Samarang war-steamer during the last China war, and since the termination of the war he has been instrumental in establishing sailors' homes at various ports in England and Ireland Liverpool, Dublin, Portsmouth, Belfast, &c. He is at present on a tour through Scotland, with the view of establishing similar institutions at the various ports in the country, and he has already visited Glasgow, Greenock, Stornoway, Inverness, Banff, Peterhead, Arbroath, Kirkcaldy, Aberdeen, Montrose, Dundee, and other ports, where steps have been taken to carry the views of the gallant Captain into effect.

DISFIGUREMENT BY MEANS OF BRANDING.—On Monday, at the Blackburn police court, Mr Rogerson, a surgeon of that town, was brought before the magistrates for examination under the following circumstances: For some time previously, Mr. Rogerson has been greatly annoyed by "runaway [illegible] at his house; and on Sunday week hearing a forcible pull at the bell, he immediately ran out, caught a lad, named Wiliam Woods, and locked him up in his surgery from a quarter to half an hour. Then he got some caustic, and [illegible] ...d, whilst he branded on his forehead the letter R. Mr. Rogerson was [illegible] ...he 1st and 2nd Vic., cap 68, wherein it is enacted, "That whosoever shall cast, throw upon, or otherwise apply to any person, any corrosive fluid or other destructive matter, with intent to burn, maim, disfigure, or disable, or to do some grievous bodily harm, shall be guilty of felony." It was stated that more than one person had received medical men, the mark would never be [illegible] ...and from the lad's forehead during his life. Mr. Rogerson contradicted this, and stated that all appearances would be entirely obliterated in about twelve months. Dr Hartley was of the same opinion. Mr Eccles (the magistrate) said that whether the mark would be then obliterated or not made no difference, he should be under the painful necessity of ordering Mr. Rogerson to enter into recognizances to appear at the next Lancashire assizes. Mr. Rogerson, seeing the serious position in which he was placed, applied for an adjournment in order to consult a legal adviser, which was granted, the defendant entering into recognizances to appear. The punishment for the above offence [illegible] ...for life, and not less than 15 years' imprisonment, with or without [illegible] ...courts

[illegible] ...century, who was recently detected in [illegible] ...at the sessions last week, sentenced

THE WINDOW-TAX.—A meeting has just been held at Exeter, at which it was resolved to petition Parliament against the tax

EXTENSIVE ROBBERY OF JEWELLERY.—On Monday morning the perpetration of a most extensive and extraordinary robbery was discovered on the premises of Messrs Clark and Morris, silversmiths, Church-street, at the corner of Tarleton-street, Liverpool. The facts of the case appear as follow: Messrs. Clark and Morris closed their shop about eight o'clock on Saturday night. Everything was made secure, and every precaution taken to [illegible] ...and doors, and bolts could do so. On Monday morning, shortly [illegible] ...the shop was opened by Mr. Clark, who was astonished to find the stock in the utmost confusion. A quantity of morocco and [illegible] ...ive cases were strewn upon the floor, and everything appeared to have been ransacked or disarranged. The shop of Messrs. Clark and Morris has a double frontage, in Church-street and Tarleton-street. The firm also occupy a cellar, which is entered [illegible] ...p-door, from the back part of the shop. This door was found open, and an iron plate [illegible] ...for security against the partition wall of the next cellar, and been partially bent down so as to admit the body of a man, the brickwork behind having been removed to a corresponding [illegible] ...ng cellar is used for storing coals by Mr. Jones, who occupies offices in [illegible] ...street. On examining the premises, it was found that at the back of Messrs Clark and Morris's premises, and the entrance to Mr Jones's cellar is at the end of a ground floor passage, at the side of the stairs. The wall of the passage which adjoins Messrs Clark and Morris's shop is protected by [illegible] ...bars, strange to say, at the entrance to the cellar had been completely [illegible] ...d. The lock of the door to Mr Jones's cellar appears to have been picked, and also that of the door communicating with the street. The burglars then sawed the bars of the partition on wall alluded to, bent down the iron plate, and thus gained access to the cellar. In the shop itself the show-cases had been opened, and seals, watch-keys, brooches, chains, studs, rings, and [illegible] ...were strewn about in great confusion [illegible] ...and rosin cases therein had all been emptied of valuable articles of [illegible] ...and upwards of thirty [illegible] ...cases, as well as [illegible] ...sets of studs were also rifled from them. It is estimated that gold watches and chains to the value of £600 were stolen; and diamond [illegible] ...valued at £300, which were only received last week, having been [illegible] ...by a customer, were also missing. Besides these, a variety of studs, [illegible] ...and other articles were carried off. Altogether, the loss is [illegible] ...at £1000. It appears to have been disturbed, for they left behind a case of valuable diamond rings, and several other [illegible] ...all of which were conspicuously placed. Their object appears to have been to take only those things which were portable, and might be readily concealed about the person. Many conjectures [illegible] ...have been hazarded as to the precise way in which the robbery was perpetrated [illegible] ...but that the thieves must have been concealed in Mr. Jones's cellar on Saturday night; whilst others are of opinion that the burglars did not commence their operations till Sunday [illegible] ...suppose. Suspicions characters were [illegible] ...As yet, the police have not been apprehended; but [illegible] ...is presumed that they will soon be in the hands of the police.

COLLISION ON THE LONDON AND NORTH WESTERN RAILWAY [illegible] ...which several coal-trains and other passengers have sustained considerable injury, took place on Saturday, on the line of the London and North-Western station at Bexmoor [illegible] ...before three o'clock a goods train, in consequence of the defective state [illegible] ...was put into the Bexmoor station, and remained there while the necessary pairs were [illegible] ...At this time the Liverpool express, which [illegible] ...ve at Euston-square at four o'clock [illegible] ...and the stoppage [illegible] ...made were hoisted at the station [illegible] ...ex the express train came in sight, and the driver (Newlands) [illegible] ...the stopping-s[illegible] ...some distance before reaching the station. [illegible] ...train does not stop at Bexmoor, but immediately on seeing the signals, which was answered [illegible] ...driver, the guard, who was in the break-carriage [illegible] ...knowing that the steam [illegible] ...shut off, jump [illegible] ...out of the carriage, they have escaped favourably [illegible] ...not having completely cleared the engine, was found on the [illegible] ...some time supposed to be dead, but stimulants [illegible] ...applied, he became better, but he has sustained some painful lacerations and other injuries to the legs. Twelve or fourteen persons were more or less injured [illegible] ...gentleman had the bone of his right eye severely cut about the face, and others received contusions [illegible] ...with the exception of the gentleman first [illegible] ...caused by the fall[illegible] ...a shower of rain a short time previously, and which prevented [illegible] ...sting, it is believed the express train would have been stopped before reaching the goods train at the station. [illegible] ...coal-carts were run on to the goods train, and the passengers having been properly attended to, came to town with the express.

The parochial board of Urquhart, in the Scotch Highlands, having appointed a committee for the purpose of considering the expediency and practicability of introducing the cultivation and manufacture of hemp and flax, and other subjects of industrial employment for the people of Glen Urquhart and [illegible] ...they have reported favourably thereon, and stating that they are satisfied that the soil and climate of the district are peculiarly well adapted to successful cultivation of hemp and flax.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The English Market has been dull during the week, business, both speculative and real, having been hunted. Fluctuation has not exceeded ¼ per cent, the Ministerial crisis in Paris having tended to check the rise which had taken place upon the payment of the dividends. The opening price of Consols on Monday was 96¾ [illegible] ...¼ per cent. Stock proving rather more scarce on Thursday, the market assumed a firmer tone, and 96⅞ became the quotation. Exchequer Bills, which had receded during the preceding week, have attained the higher quotation, the present state of French affairs deterring large investments in stock at the present higher rate of funds. [illegible] ...not been much dealt in. Money continues in demand both in and out of the house. In the Discount Market a rise of [illegible] ...per cent. [illegible] ...the close of the [illegible] ...214; Reduced, 97[illegible] ...Stock, 96[illegible]; New Threes [illegible] ...20 Years, October [illegible] ...India Bonds, £1000. 77 pm., Ditto, under £1000, 75 pm., Scrip 3[illegible] ...Stock, 107½; Ditto, New Annuities, 96¼; Consols for Account, 96⅞; Exchequer Bills, £500, June, 59 pm., Ditto, £500, June, 59 pm., Ditto, Small, June, 59 pm.

In the Foreign Market there has been but little alteration, and prices consequently have not quoted any changes exceeding a fractional one; Mexican, Buenos Ayres, and Russian Stocks being the exceptions. The arrival of the Pay [illegible] ...a decline in the bonds, which have ranged from [illegible] ...to ¼. Buenos Ayres Stock has fluctuated about 1 per cent., and Russian Stock has advanced about ½ per cent. In the other securities there was but little doing when the market closed, [illegible] ...Bonds, Small, 89; Ditto, New, 1829 [illegible] ...Grenada Bonds, ¼ per Cent; 16 ex div., Ditto, Deferred, 3[illegible] ...ex Jan Coupons [illegible] ...15½; Ditto, Small, 35; Peruvian Bonds, 4½ per Cent., [illegible] ...¼ per Cent., 96¾ ex div; Spanish, 3 per Cent., [illegible] ...2½ per Cent., 37¾; Ditto, [illegible]

The Share Market does not close with the buoyancy that marked the commencement of the week, but as the Account day approaches a declining market appears probable. In renewing the Deferred Bonds now falling due, [illegible] ...to ¼ on some instances to ¼, has been demanded, and accepted, thereby clearly indicating the improved value of Money. The market at the close of the week was heavy, at the following rates:—[illegible] ...Junction, 27; Buckinghamshire, 17¾; Chiltonforan, 10¾; Chester and [illegible] ...head, 16¾; Ditto, Pref., 14¾; East Anglian (£25 L. and L. and D.), 3¾; Ditto (£5), Seven per Cent [illegible] ...1¾; Eastern Counties, 6¾; Eastern [illegible] ...6¾; Ditto, Ditto, Scrip, Guaranteed Six per Cent., 16¾; Great Northern, 17; Ditto, Halves, A, Deferred, 6¾; Ditto, Halves, B, Six per Cent., 11¾; Ditto, Five per Cent., Pref., 12¾; Great Western, 78¾; Lancashire and Yorkshire, 47¾; Ditto, Fifths, 4¾; Ditto, New, 1½; Ditto, Six per Cent., 1½; [illegible] ...ption, and South Coast, 8¾; Ditto, New, Guaranteed Six per Cent., 140; London and North-Western, 1.[illegible]; Ditto, ditto, New Quarters, 20¾; Ditto, Ditto, £10 Shares, M. [illegible] ...B (c), 8¾; London and South-Western, [illegible] ...Manchester, Sheffield, and Lincolnshire, 27; Ditto, New, £10 [illegible] ...rence, 1¾; Midland, 48; Ditto, £50 Shares, 16¾; Newmarket, 3¾; Norfolk, 9¾; North British, 8¾; Ditto, Preference, 4¾; Oxford, Worcester, and Wolverhampton, 1[illegible]; Reading, Guildford, and Reigate, 9; Shrewsbury and Birmingham, Class A, 8¾; Shropshire Union, 5¾; South-Eastern, 23½; Wear Valley, [illegible] ...1, 27¾; Ditto, New, Newcastle, and Berwick, 18¾; Ditto, Ditto, Purchase or Preference, 7¾; York and North Midland, 22¾; Boulogne and Amiens, 6¾; Luxembourg, 2¾; Namur and Liege, 15¾; Northern of France, 14¾; Orleans and Bordeaux, 9¾; Paris and Orleans, 36; Paris and Rouen, [illegible] ...Rouen and Havre, 10¾; Sambre and Meuse, 9¾.

THE MARKETS.

[illegible] ...We have again to report the arrival of a very small supply of English wheat for our market, coastwise as well as by land carriage. As most of the sales are short of stock, the demand has ruled active, at full prices. Fine foreign wheats have sold readily, at late rates. Barley, in the middling and inferior kinds, has been of dull sale for grinding, but barley has commanded full currencies. Grinding and distilling oats have had a downward tendency. [illegible] ...nise, peas, and beans have undergone no material change. [illegible] ...of French and American flour having been forced for sale, the [illegible] ...qua sale have fallen off.

[illegible] ...and Kent, per 38s to 44s; ditto, white, 38s to 40s; Norfolk and [illegible] ...ditto white, 36s to 38s; rye, 28s to 30s; grinding barley, 20s to 22s; [illegible] ...malting ditto 24s to 30s; Norfolk and Lincoln malt 42s to 46s; brown ditto, 44s to 46s; Kingston and Ware, 50s to [illegible] ...per 56s to 60s; Yorkshire and Lincolnshire feed oats, 16s to 20s; potato ditto, 18s to 24s; Scotch [illegible] ...per 20s to 24s; Irish [illegible] ...per 18s to 22s; ditto, old, [illegible] ...per 24s to 28s; maple, 28s to [illegible] ...white, 27s to 28s; beans, [illegible] ...per 24s to 28s; Suffolk, 26s to 32s; Yorkshire and Yorkshire, 25s [illegible] ...Kingston Danish red wheat, [illegible] ...white, [illegible] ...per [illegible] ...Danish red wheat, [illegible] ...white, [illegible] ...per [illegible] ...sacks, 45 to [illegible] ...per quarter. Flour, American, 20s [illegible] ...24s per barrel; French, 28s to 30s per sack.

The Seed Market.—Clover, linseed, and rapeseed [illegible] ...to good request, at full prices; other [illegible] ...in demand, [illegible] ...at late rates.

Linseed, English, [illegible] ...54s to 56s; Baltic, crushing, 42s to 42s; Odessa, [illegible] ...per quarter. Coriander 18s to 20s per cwt. Canary, [illegible] ...white ditto 44s to 48s per [illegible] ...per last of ten quarters. Linseed cakes, English, £6 [illegible] ...per ton. Rapeseed cakes, £3 15s to £4 0s per ton. Canary, 12s to 15s per [illegible] ...English clover-seed, [illegible] ...to 56s per cwt. Coriander 18s to 20s per cwt. Tares, [illegible] ...extra, up to [illegible] ...Foreign, red, [illegible] ...to [illegible] ...extra, 40s to [illegible] ...white, [illegible] ...to [illegible] ...extra.

The prices of wheaten bread in the metropolis are from 7d to 7½d, of household flour 5d to 6d per 4lb loaf.

Imperial Weekly Average.—Wheat, 38s 10d: barley, 24s 6d; oats, 16s 6d; rye, 28s 8d; beans, 32s 7d; peas, [illegible].

The Sun Weekly Average.—Wheat, 39s 8; barley, 24s 1d; oats, 17s 1d; rye, 28s 10d; beans, 32s 6d; peas, [illegible].

Mark Lane, Monday.—Barley, 1s 6d; oats, 1s 3d; rye, 1s 6d; beans, 1s 6d; peas, 1s 6d.

TEA.—Privately, the demand has fallen off, and common sound Congous may now be had at 1s to 1s 0½d per lb [illegible] ...parcels having been sold at 1s 1d. Good and fine Congou [illegible] ...very scarce, supplies having been [illegible] ...to the hammer, prices have given way about 1d per lb this week [illegible] ...5,285 lb Pekoe and Souchong sold at 1s 2d to 1s 3d per lb. Common [illegible] ...ds to 4ds, heavy, 4½d per cwt. Land [illegible] ...allowed to [illegible] ...and Java.

SUGAR.—[illegible] ...firm and P V C on the spot is worth 37s 3d to 37s 6d per cwt [illegible] ...were sold [illegible] ...at 37s per cwt. Refined [illegible] ...at 39s per cwt, with a good demand. In other [illegible] ...

COFFEE.—[illegible] ...for ruin has fallen [illegible] ...and no [illegible] ...Ceylons, 1s 6d and 1s 6½d; fine, 1s 6d to 1s 7½d per gallon proof Brandy and [illegible] ...

SPIRITS.—[illegible] ...47s to 48s 6d, clover ditto, 48s to 54s 0d; and straw, 21s to 41s per load.

HOPS.—Heading Hartley, 14s; West Wykam, 12s 6d; Lambton, 16s 6d; Stewart's, 16s 9d [illegible] ...10s per ton.

Hops.—Fine colony samples are in fair request, at full prices, but all other kinds move off [illegible] ...

COTTON.—On the whole, our market is very firm, and late rates are well supported. The [illegible] ...of wool on hand is under [illegible] ...

The supp[illegible] ...moderate [illegible] ...

WOOL.—Our markets has ruled heavy, while [illegible] ...

TALLOW.—[illegible] ...and Yorkshire, 4s 6d to 4s 6½d, [illegible] ...

OILS.—[illegible] ...Colonies and Foreign, 34s to 34s 6d, [illegible] ...

PROVISIONS.—[illegible] ...per 8lb, to stink the offal [illegible] ...

Victuals and Landenhall [illegible] ...ne beef and mutton are in fair request at full prices. Otherwise the demand is heavy.

Beef, Prime, 3s 6d to 4s; [illegible] ...ast mutton, 2s 6d to 3s 10d, veal, 3s 6d to 3s 10d; pork, 2s 8d to 4s; per 8lb, to stink the offal.

Victuals and Landenhall [illegible] ...ne beef and mutton are in fair request at full prices. Otherwise the demand is heavy.

Beef, Prime, 3s 6d to 4s; [illegible] ...ast mutton, 2s 6d to 3s 10d, veal, 3s 6d to 3s 10d; and pork, 2s 6d to 4s 0d per 8 lb. by the carcase.

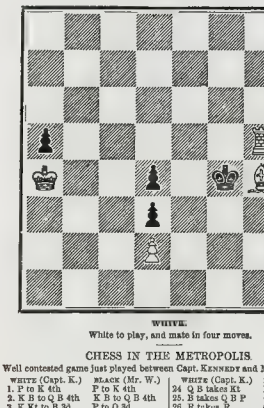
PROBLEM No. 364.

By W. GILBY, Esq.

BLACK.



WHITE.

White to play, and mate in four moves.

CHESS IN THE METROPOLIS

Well contested game just played between Capt. KENNEDY and Mr. WYVILL, M.P.

WHITE (Capt. K.)	BLACK (Mr. W.)	WHITE (Capt. K.)	BLACK (Mr. W.)
1. P to K 4th	P to K 4th	24 Q B takes Kt	Kt takes Kt
2. K B to Q B 4th	K B to Q B 4th	25. B takes Q B P	Q R to Q B sq
3. K Kt to B 3d	P to Q 3d	26. R take a R	Q takes R
4. P to Q B 3d	Q Kt to B 3d	27. P to Q Kt 5th	Kt takes K Kt P
5. Castles	K Kt to B 3d	28. R to K B 3d	Q to K 8 th
6. P to Q 4th	P takes P	29. Q to K B 5th	Q to K R 6th (ch)
7. P takes P	K B to Q Kt 3d	30. K to K 3d	R to Q B 3d
8. Q Kt to B 3d	Q B to K Kt 5th	31. Q to K 4th	Q takes K R P (ch)
9. P to Q 5th	Q Kt to K 4th	32. K to K B 3d	Kt to K B 3d (e)
10. K B to K 2d	B takes Kt	33. Q to K 3d	K to K B square
11. B takes B	Q Kt to Q 2d	34. Q to K B 3d	Q Kt to K 4th (ch)
12. K B to K 3d	Castles	35. K to K Kt 2d	R to K 2d
13. K to Q R 4th	K Kt to Q B 4th	36. K to B 3d	Q to K Kt 3d (ch)
14. Kt takes B	Q R P takes Kt	37. K to K R sq	Kt to K 4th
15. P to K B 4th	Q Kt to Q 2d	38. Q takes Q Kt P	Q to K B 3d (d)
16. K to K B 3d	R to K sq	39. Q to Q 8th (ch)	R to K sq
17. Q to B 2d	Q Kt to K B 3d	40. Q takes Q	Kt takes Q
18. P to Q Kt 4th (a)	K Kt takes K P	41. B to Q B 5th	R to Q Kt sq
19. Q B to Q Kt 2d	B to K 3d	42. P to Q B 4th	Kt takes Q Kt P
20. K R to K sq	Q to K 2d	43. B takes Kt	R takes B
21. P to K Kt 4th	P to K R 3d	44. P to Q R 7th	

And Black resigns

(a) White must now lose a Pawn, play as he may. If he had moved K B to K sq, his adversary could then have captured the Q P with impunity
(b To guard against Black, on his next move, playing K to K Kt 4th
(c) We should have preferred playing Q to K B 4th, which, if we mistake not, would have given Black much the better game
(d) This move at once changes the whole aspect of the game, as it enables White to force an exchange of Queens, and remain with a winning position

CHESS BY CORRESPONDENCE.

The following somewhat novel variation of the King's Gambit has been forwarded to us by Mr. Max Lange, of Magdeburgh, by whom it was played in correspondence against Mr. Lichtenstein, of Glogau.

WHITE (Mr. M. L.)	BLACK (Mr. L.)	WHITE (Mr. M. L.)	BLACK (Mr. L.)
1. P to K 4th	P to K 4th	25. Q to K B 6th	Kt to K B 3d
2. P to K B 4th	P takes P	26. Q to K 6th	Q to her sq
3. K B to K 2d	K B to K 2d (a)	27. B takes Kt	Q takes B
4. P to Q 4th	K B to K R 6th (ch)	28. Q takes K R P (ch)	K to his B sq
5. K to B sq	K Kt to K B 3d	29. Q to K R 8th (ch)	Q takes Q
6. Kt to Q B 3d	P to Q 4th	30. R takes Q (ch)	K to his Kt 2d
7. P takes P (b)	Kt takes P	31. R takes R	R takes R
8. Kt takes K t	K B to K Kt 4th	32. R to K sq	B to K B 2d
9. Kt to K B 3d	Castles	33. R takes R	B takes R
10. P to Q Kt 3d	Q takes Kt	34. K to his 3d	K to B 3d
11. B to Q B 4th	Q to K B 4th	35. K to his 3d	K to B 4th
12. Q to K 2d	P to Q 3d	36. P to K Kt 4th (ch)	K to B 3d
13. B to Q 3d	Q to K 3d	37. K to his 4th	B to K B 2d
14. Q to K 4th	P to K B 3d	38. P to Q B 4th	B to K 3d
15. Kt takes K B	Q takes Kt	39. P to Q 5th	P takes P
16. P to K R 4th	Q takes K t	40. P takes P	B to Q 3d
17. B to K 2d	Q to K Kt 5th	41. P to K Kt 5th (ch)	K takes P
18. B to K 3d	Q to K B 4th	(c)	
19. B to his 3d	P to Q B 3d	42. K to his 5th	P to Q Kt 4th
20. Q B takes P	Q to her R 4th	43. P to Q 6th	P to Q R 4th
21. Q to K sq (c)	Q to her Kt 3d (d)	44. B to Q 5th	P to Q R 5th
22. Q to her 2nd	P to K 3d	45. P to Q 7th	P takes B
23. P to K R 5th	Kt to Q 2d	46. P to K 8th (e)	K to B 5th
23. B to Q 6th	K R to K sq	And Black resigned.	
24. P takes K Kt P	R takes P		

*** These notes are by Mr. Max Lange

(a) It is not so easy as it appears, perhaps, to find out in this new variation of the King's Gambit such a defence as will secure to the second player the Gambit Pawn The usual method of defending the King's Bishop's Gambit, whilst confining the

WHITE.	BLACK.	WHITE.	BLACK.
2.	Q to K R 5th (ch)	4. K to B sq	P to K Kt 4th, &c.,

seems to be inexplicable in this variation, if we consider the following continuation:—

5. P to K 5th	P to Q 3d	11. P takes K Kt P	Kt takes P
6. P to Q 4th	P to K B 3d	12. Kt take Kt	Q takes Kt
7. P takes K B P	Kt takes P	13. B to K R 3th (ch)	K to Q sq
8. K Kt to B 3d	Q to K R 3d	14. Q to K B 3d	B to K 3d
9. P to K 4th	Kt to K 5th	15. P to K Kt 3d	B to K B sq
10. K to K sq	Q to K Kt 3d		

Winning the Pawn with a good game After long meditation, I have found the following continuation to be the best for the second player

5. K B to K 2d	Q to K R 5th (ch)	9. P to K R 4th	P to K R 3d
6. K to his B sq	Q to K B 3d	6. P to K 5th	Q to K Kt 3d
8. Q Kt to B 3d	P to Q B 3d	10. P takes Q P	B takes P
8. P to Q 4th	P to Q 3d	11. Q Kt to K 4th	B to K 3d
7. Kt to K B 3d	P to K Kt 4th	12. B to Q B 4th	

I do not see any stronger move, but Black now plays Q B to K B 4th, preserving his Pawn with a good game.

(b) So far than moving on the K Pawn.
(c) This curious move is the only one to preserve the attack.
(d) Black seems to fear exchanging Queens, which he ought not to fear.
(e) This was the decisive move, which Black seems to have overlooked.
(f) Quite decisive in White's favour.

THE GRAND CHESS TOURNAMENT.

Subjoined is a complete list of the noblemen and gentlemen in London and Paris who have agreed to co-operate for the purpose of carrying into effect the projected Congress of Chess Amateurs from All Nations during the coming spring:

GRAND EXPOSITION DE 1851.

ANALYSE CRITIQUE DES STATUT, LOI ET REGLEMENTS NOUVELLEMENT RENDUS POUR GARANTIR UN DROIT DE PROPRIÉTÉ PROVISOIRE SUR LES DESSINS-MODÈLES DES ARTICLES DESTINES A L'EXPOSITION DE 1851.

UN acte du Parlement et certains réglements qui en sont la conséquence ont paré au danger qui, sans cette précaution, pouvait atteindre le plus grand nombre des exposants à la prochaine et grande Exposition de 1851. Les articles d'ornement et d'utilité, généralement de modèles curieux et de dessins originaux, que les exposants vont bientôt livrer à nos regards, couraient le danger d'être copiés par le premier venu, le jour même de l'ouverture de l'exposition, et ces copies pouvaient être vendues avant que les propriétaires n'aient eu la chance de réaliser le bénéfice juste qu'ils ont le droit d'attendre, en livrant plus tard au commerce. et à leur profit, leurs modèles et dessins.

La loi, telle qu'elle était, n'offrait à ce mal qu'un remède coûteux et quelquefois inutile. Selon cette loi, les dessins d'articles d'ornement et d'utilité obtiennent un droit de propriété complet, à la condition de les faire enregistrer au Bureau des Dessins et de payer un droit assez lourd. Ce droit de propriété garantit les dessins-modèles et les articles fabriqués d'après ces dessins, non seulement dans leur exposition mais encore dans leur vente. Maintenant, comme la vente des articles n'est pas le but que l'on se propose d'atteindre dans la prochaine Exposition, il serait inutile de chercher une garantie s'étendant jusqu'à la vente. On a donc adopté un mode de garantir un droit de propriété temporaire pour un an ou dix-huit mois, à peu de frais et, même, sans frais éventuels, sur un plan simple et qui, sans nul doute, atteindra parfaitement le but proposé. Afin de rendre la chose claire pour chacun, surtout pour les exposants étrangers qu'elle touche matériellement, nous nous sommes proposé d'expliquer ici en détail et aussi complètement que possible, d'abord, l'ancienne loi encore existante, et, ensuite, la nouvelle loi, greffée comme elle l'est sur la première.

Cependant, avant d'entrer dans notre sujet, nous voulons qu'il soit bien clairement compris que la loi établissant le droit de propriété sur les dessins-modèles, dont l'ancienne soit la nouvelle, n'a rien de commun avec la loi concernant les brevets d'invention. La distinction entre l'une et l'autre est positive et nette. L'invention pour laquelle on est admis à prendre un brevet, est une nouvelle manière de travailler ou de manufacturer des articles du commerce, sans avoir égard à leur forme ou à leur aspect; tandis que le dessin qui peut obtenir le droit de propriété, consiste dans l'application d'un modèle nouveau, ou d'une forme originale, à tout article de costume, d'ornement, ou d'usage quelconque déjà découvert et fabriqué. Il ne faut pas oublier cette distinction en consultant la loi que nous allons expliquer, car cette loi, encore une fois, ne regarde que les dessins-modèles, et nullement les brevets d'invention, qui sont une garantie bien autrement difficile à obtenir et bien autrement coûteuse.

LOI SUR LE DROIT DE PROPRIÉTÉ DES DESSINS-MODÈLES TELLE QU'ELLE ETAIT AVANT LE NOUVEL ACTE.

Nous commencerons par la première loi sur le droit de propriété des dessins-modèles, encore existante. Cette loi repose sur deux actes du Parlement, l'un de l'an 3 et 6 du règne de Victoria, c. 100, appelé "L'Acte des Dessins," daté, 1842," et l'autre de l'an 6 et 7 du même règne, c 65, et appelé "L'Acte des Dessins-modèles, 1843." Nous énumérerons d'abord les articles sur lesquels l'ornement; le second, qui est un amendement au premier, et qui le développe, se rapporte aux articles d'utilité

En ce qui concerne les ornements, le droit de propriété est garanti—pour des termes plus ou moins longs—(voir la table ci-dessous) sur tout dessin nouveau et original (excepté les dessins mentionnés dans les actes concernant le droit de propriété en matière de gravure), que le propriétaire désire avoir. Tout ce que le dessin nouveau et original soit applicable à l'ornement de tout article de manufacture, ou de toute substance artificielle ou naturelle, ou moitié artificielle et moitié naturelle, soit que le fit dessin soit applicable au modèle, à la forme ou configuration de l'ornement, ou qu'il puisse servir à la fois à deux ou plusieurs de ces fins, et par quelque moyen qu'il puisse être ainsi employé, soit par l'impression, la peinture, la couture, le modelage, la fonte, la broderie, le tissage, la bosse, la gravure, soit en coloriant, ou par tout autre moyen quelconque, manuel, mécanique ou calmique, seul ou combiné.

Quant aux articles d'utilité, le droit de propriété est garanti pour trois ans sur tout dessin nouveau et original pour la forme ou configuration, soit du tout ou seulement de quelque partie de tout article de manufacture se rapportant à un but d'utilité, que soit de métal ou de toute autre substance.

Ce droit de propriété confère aux auteurs ou propriétaires des dessins d'articles d'ornement ou d'utilité, la propriété exclusive de ces dessins, soit qu'ils les destinent à l'exposition ou à la vente, soit qu'ils en fassent l'usage qui leur convient.

L'acquisition de ce droit de propriété dépend de l'enregistrement, sous certaines conditions, au Bureau de l'Enregistrement des Dessins, et du payement de certains droits, qui varient de chiffres en raison de la durée du terme.

Toute personne qui, sans une autorisation écrite par le propriétaire enregistré, viole un tels roit de propriété, encourt la peine de payer, pour chaque violation, une somme non excédant cinq livres sterling, et ou dessus de trente livres sterling, au propriétaire, qui peut obtenir cette pénalité soit par une action devant la loi, ou sommairement devant deux justices de paix. Outre cette pénalité, le propriétaire peut, s'il le préfère, intenter une action pour le recouvrement des dommages qu'il a soufferts par la violation de son droit de propriété.

On peut voir ci-dessous, dans la table qui suit, les différents termes et les différentes taxations, spécifiés par chaque, du droit complet de propriété accordé à l'auteur ou au propriétaire de tout dessin nouveau ou original pour tout article de manufacture de quelque substance que ce soit, par cet enregistrement conformément aux actes de 1842 et de 1843 sur les Dessins.—

ARTICLES D'ORNEMENT:— Class.	Articles.	Droit de Propriété	Enregistrement. Taxation. £ s. d.

	POUR LA FORME DES ARTICLES D'UTILITÉ	3 ans	... 10 0

Par le nouvel acte de l' an 13 et 14 du règne de Victoria, chap. 104, s. 9, le Bureau de Commerce peut ordonner que la durée du droit de propriété sur les dessins d'ornement de toute classe, pour être étendue à une période n'excédant pas trois ans nées, le droit de p opriété des articles d'utilité n'est pas compris dans cette disposition. Dans la table ci-dessus les damas ont obtenu cette extension de trois ans, conformément à un ordre du Bureau de Commerce, daté du 5 Novembre, 1850.

DROIT DE PROPRIETÉ EN MATIÈRE DE SCULPTURE.

Avant d'arriver à la nouvelle loi, il devient nécessaire de mentionner aussi la loi qui protégeant la sculpture. Par les actes qui règlent le droit de propriété en matière de sculpture, l'un de l'an 38 du règne de George III., chap. 71, et l'autre de l'an 54 du même règne, chap 56, toute sculpture nouvelle et originale, modèle, copie ou fonte de la figure humaine, du buste ou d'une partie quelconque du corps humain, ou d'un animal, ou d'une partie d'un animal, ou, de tout autre sujet quelconque d'invention en sculpture, ou de tout bas et bas-relief représentant l'un des sujets sus-mentionnés; ou toute toute d'après nature de la figure humaine, ou d'une partie du corps humain, jouit d'un droit de propriété de quarante ans, à dater du jour de la première publication, à ce droit, un nouveau droit de propriété de quarante années est accordé à l'auteur, s'il est encore vivant à l'expiration du premier terme, et s'il n'a pas vendu ou s'il ne s'est pas défait de son premier droit de propriété. La condition du droit de propriété en matière du sculpture consiste simplement en ce que l'objet produit doit porter, avant sa publication, le nom du propriétaire et la date de la publication. Les actes sus-mentionnés n'exigent aucun enregistrement ni aucune autre formalité pour garantir ce droit de propriété. Nous allons parler tout à l'heure de l'enregistrement, pour garantir ultérieure.

Toutes violation de ce droit de propriété en matière de sculpture est redressée par une action devant la loi, avec doubles frais de procédure, pouvu, cependant, que cette action soit intentée dans les six mois, de quatre semaines chacun, qui suivent la découverte de l'offense. Nous verrons bientôt combien la nouvelle loi donne au sculpteur des moyens plus sommaires, à la condition pour lui d'accomplir certaines formalités ultérieures.

LA NOUVELLE LOI.

Cette loi est créée par un acte du Parlement rendu au mois d'août dernier Cet acte est de l an 13 et 14 du règne de Victoria, chap. 104, et est appelé "Acte des Dessins modèles, 1850." Cet acte ne rappelle nullement la première loi contenue dans les deux actes ci-dessus des Dessins-modèles de 1842 et 1843, et les deux actes règlant le droit de propriété en matière de sculpture, mais, au contraire, elle étend cette loi et l'amende. La nouvelle loi, cependant, est principalement, particulièrement et expressement rendue en vue d'expositions comme celle de 1851, et l'on peut dire avec vérité qu'elle a été uniquement motivée par cette grande Exposition, bien que ses effets ne se bornent pas seulement là

Le but réel de cette nouvelle loi est de protéger contre la contrefaçon les dessins-modèles d'ornement et d'utilité présentés à l'Exposition, et de les faire jouir, pendant le temps de leur exposition, du bénéfice ces lois concernant le droit de propriété, sans forcer leurs auteurs ou propriétaires, qui n'ont pas en vue une vente immédiate, aux frais qu'entraînerait, inutilement pour eux, l'obtention de ce droit complet.

Nous allons maintenant donner cette loi en détail.

Par la nouvelle loi, c'"Acte des Dessins-modèles, 1850," un droit de propriété provisoire d'une année—qui, par ordre du Bureau de Commerce, peut être étendu a une période n'excédant pas six mois—est accordé a l'auteur ou au propriétaire de tout dessin-modèle d'ornement ou d'utilité, mentionné dans la table ci-dessus. Nous pouvons aussi bien énumérer encore ces dessins:—

I. DESSINS ORIGINAUX POUR ORNEMENT :—
1. Articles composés entièrement ou principalement de métal.
2. Articles composés en'ièrement ou principalement de bois.
3. Articles composés entièrement ou principalement de verre.
4. Articles composés entièrement ou principalement de terre-cuite, d'ivoire, d'os, de papiermaché, ou autres substances solides non compries dans les classes 1, 2, 3.
5. Papiers de tapisserie.
6. Tapis, toiles à tapis, et toiles cirées.
7. Schalls (modèles imprimés).
8. Modèles (non imprimés).
9. Laine filée, fil, ou chaîne (imprimé).
10. Tissus (modèles imprimés), excepté ceux inclus dans la classe 11.
11. Tissus, articles d'ameublements (modèles imprimés).
12. Tissus (modèles non imprimés).
Tissus, damas, &c.
13. Dentelle et tous les autres articles.

II. DESSINS NOUVEAUX ET ORIGINAUX pour la FORME ou CONFIGURATION, du tout ou. de partie de tout article de manufacture, cette forme ou configuration se rapportant à quelque but d'utilité, que ces articles soient de métal ou de toute autre matière.

Ce droit de propriété provisoire est accordé à la condition stricte qu'il n'y aura pas de vente ni d'exposition pour vente. Si le propriétaire de ce droit vend, expose ou offre en vente quelque article, substance ou objet auquel son dessin est appliqué, il perd son droit de propriété provisoire. Il peut, cependant, vendre, transférer son droit et la propriété du dessin lui-même, sans altérer le droit de propriété.

De plus, le propriétaire ne perd pas son droit de propriété en montrant ou en exposant son dessin, ou l'article auquel le dessin peut avoir été ou peut être appliqué, dans toute place, publique ou particulière, *dans laquelle les articles ne sont pas vendus, ou exposés en vente, et où le public n'est pas admis gratuitement*, ou dans toute autre place qui aura été préalablement certifiée par le Bureau de Commerce comme étant une place d'exposition publique dans les limites de cet acte La publication d'un compte-rendu, ou la description d'un dessin dans tout catalogue, papier, journal, périodique, ou autrement, ne détruit pas le droit de propriété.

Il est bon d'observer que ce droit de propriété cesse à la fin des douze ou dix-huit mois garantis, et qu'alors aucune sorte de droit de propriété ne peut être ultérieurement obtenu pour le même dessin. Mais, *en tout temps pendant et durée*, ce droit de propriété provisoire peut être converti en un droit de propriété complet sous les conditions ci-dessus Acter des Dessins de 1842 et 1843, par l'enregistrement et le payement de la taxe conformément à ces statuts et règlements du Bureau des Dessins

Toutefois le droit de propriété provisoire est soumis à un enregistrement et au payement d'une légère taxe.

L'enregistrement requis sera suffisamment expliqué par les réglements publiés par le Bureau des Dessins, 4, Somerset Place, Somerset House, Londres. L'extrait suivant est un abrégé de ces règles :—

DESSINS QUI N'ONT BESOIN D'ÊTRE RÉSERVÉS.—Quiconque se propose de faire enregistrer un dessin pour ornement doit apporter ou envoyer au Bureau des Dessins: 1. Trois fac-similé exacts, dessinés ou imprimés, de ce dessin. 2. Le nom et l'adresse du propriétaire auquel reçoit ses certificats.

Les copies peuvent consister en échantillons d'articles réels (excepté les tapis, les toiles-huilées, et les schalls de laine), lorsqu'il en peut être fait aisément, comme dans le cas de papier de tapisserie, de calicot imprimé, etc.

DESSINS D'UTILITÉ.—Quiconque se propose de faire enregistrer un dessin d'utilité doit apporter ou envoyer au Bureau des Dessins les renseignements qui suivent: 1. Les fac-similé exacts, dessinés ou imprimés, de ce dessin, dessinés ou imprimés. 3. Le nom et l'adresse du propriétaire, ou des propriétaires, ou leur raison sociale. 4. L'indication du but d'utilité auquel la forme ou configuration de tout article doit servir. 5. Une description intelligible le renseignement précédent. 6. Une indication courte et distincte de telle partie ou de telles parties qui ne seront pas neuves ou originales

Toute personne voulant faire enregistrer un dessin-modèle, obtiendra des renseignements complets au Bureau des Dessins, 4, Somerset Place, depuis dix jusqu'à quatre heures

Après l'enregistrement du dessin, l'article fabriqué d'après ce dessin doit porter, comme garantie du droit de propriété provisoire, les mots : "Enregistré Provisoirement" avec la date de l'enregistrement.

La taxation pour l'enregistrement provisoire est d'un shilling pour les dessins d'ornement, et de 10s. pour les dessins destinés aux articles d'utilité. L'enregistrement doit se faire au Bureau des Dessins, 4, Somerset Place, entre onze et trois heures. Mais, pour ce qui regarde les dessins de 1851, les mesures importantes qui suivent ont été prises : "Lorsqu'il sera certifié que les dessins enregistrés ne seront pas exposés dans un but de spéculation, les frais de taxe seront rendus; et à partir du 1e février, 1851, au lieu d'aller faire enregistrer leur dessin au Bureau de Somerset House, les exposants pourront le faire dans le bâtiment de l'Exposition, Hyde Park, sans payer aucune espèce de taxe."

Les formes et conditions ci-dessus une fois remplies, et le droit de propriété provisoire étant acquis, le propriétaire est engagé contre la contrefaçon ou imitation frauduleuse aussi efficacement que s'il était placé sous la protection des Actes des Dessins de 1842 et 1843, c'est-à-dire que le contrefacteur encourt une pénalité de 5 à 20 livres sterling, soit par une action devant les cours supérieures, soit sommairement devant deux justices de paix, ou, même, si la partie lésée le préfère, par une action contre le délinquant, en recouvrement des dommages soufferts

Il est bon encore de faire remarquer que, dans tous les cas de contrefaçon ou d'attaque à un droit d'auteur, la partie lesée, ou se croyant lesée, peut recourir à la Cour d'Equité ; et arrêter d'un coup, par une simple injonction, les operations des contrefacteurs.

AVANTAGES ACCORDÉS PAR LA NOUVELLE LOI AU DROIT DE PROPRIÉTÉ EN MATIERE DE SCULPTURE

Ce droit de propriété, comme nous l'avons vu ci dessus, peut être obtenu sans enregistrement; mais, alors, la violation de ce droit, conformément aux Actes qui règlent le droit de propriété en matière de Sculpture, ne peut être redressée que par une action devant la loi. Par la nouvelle loi, l'Acte des Dessins, 1850, la même protection accordée aux dessins-modèles—c'est-à-dire, une pénalité de 5 à 20 livres sterling, et les moyens sommaires de procéder contre la contrefaçon—est également accordée à toute sculpture nouvelle et originale, à tout modèle, fonte, ainsi que le détail en est donné ci-dessus dans les Actes du droit de propriété en matière de Sculpture, et, encore, aussi les quatorze ou vingt huit années accor ées par les Actes concernant la Sculpture au droit de propriété en matière de Sculpture ne dépend ni de la vente ni de l'exposition pour vente. Il est entièrement indépendant de cette condition, imposée aux dessins, et est, en fait, absolu. La seule condition exigée pour obtenir toute protection ultérieure, consiste dans l'enregistrement au Bureau des Dessins, ce qui se fait en envoyant au chef du Bureau une copie ou description du Sculpture suffisante pour en établir l'identité, avec le nom et l'adresse du propriétaire, ou le nom ou raison s'elle sous laquelle il peut commercer. Après l'enregistrement, l'article doit porter, en addition de ces mots, "Enregistré," et la date de l'enregistrement. Les frais d'enregistrement pour un article de Sculpture sont de 5 livres sterling

Pour l'exécution desquelles conditions les renseignemens qui suivent, émanant du Bureau des Dessins, comme, pouvant être utiles aux exposants

Toute communication pour l'enregistrement des dessins peut être faite ou par la Poste, ou, autrement, en s'adressant "Au Chef du Bureau des Dessins des Sculptures, Bureau des Dessins, 4, Somerset Place, Somerset House, ou par toute autre voie; et, pourvu que le port d'envoi soit payé ainsi que le montant de la taxe, ou que l'on joigne à l'envoi un mandat sur la Poste, payable au Bureau de Poste, 190, Strand, Londres, à M. James Hill Bowen, Esq., les dessins seront dûment enregistrés, et le certificat d'enregistrement sera envoyé franc de port aux propriétaires. Les timbres d'affranchissement pour lettres, les mandats sur des banquiers ou des autres personnes, les billets des banques de province et d'Ecosse, l'or qui ne pèse pas le poids, ne pourront être acceptés pour le payement de la taxe. Le Bureau des DESSINS, No. 4, Somerset Place, Somerset House, est ouvert chaque jour, depuis dix heures du matin jusqu'à quatre heures du soir, temps pendant lequel toutes personnes désirant rechercher des dessins déjà enregistrés de onze à trois heures ; à partir de trois heures, on ne reçoit plus d'argent pour enregistrement. On peut se procurer au bureau les renseignements nécessaires pour l'enregistrement des dessins concernant les articles d'utilité.

Enfin, nous appellerons encore l'attention du lecteur sur ce fait important, que le droit de propriété provisoire est insuffisant pour les cas qui requièrent la protection d'un brevet d'invention—circonstance regrettable, lorsqu'on considère l'avantage, dans le Comptoir Moderne, *et se fran considérables qu'on encourt*, lorsqu'on veut sujourd hui obtenir un brevet d'invention dans ce pays. Pour ce qui regarde la loi des brevets d'invention, cela exigerait de longues explications A cet égard, ainsi que pour de plus amples détails au sujet du droit de propriété des auteurs, on peut s'en rapporter aux ouvrages de Godson et de Peter Burke.

THE ILLUSTRATED LONDON NEWS.

No. 465.—VOL. XVIII.] FOR THE WEEK ENDING SATURDAY, JANUARY 18, 1851. [SIXPENCE.

THE "CHANGARNIER" CRISIS.

The word "crisis" has been so often misemployed, especially with regard to French affairs, as to have lost much of its significance. There have, in fact, been so many alleged crises which have turned out to be no crises at all, that the world is loth to believe in a new one. Yet, the events of the last week in Paris have, in reality, deserved the name. Whether the crisis be really at an end at the time at which we write, it is impossible to say; but, pending or completed, the circumstances which preceded and must follow it will necessarily occupy a prominent place hereafter in the page of French history.

Since the observations were penned which appeared upon the subject in our last week's publication, the President has succeeded in forming a Ministry, and that Ministry have supported him in dismissing General Changarnier from his dangerous command. The General has been as coolly superseded as if he had been a corporal, and Paris has rather enjoyed than resented his disgrace. Contrary to the expectations that were in all probability entertained by that large party of politicians forming the majority of the Assembly, who have no confidence in one another, or in the Republic whose faithful servants they have sworn to be, the public opinion of the capital, and, as far as it is yet known, of the provinces, has supported Louis Napoleon. Though claiming to be the friends of order, the members of the Parliamentary majority have allowed their hatred of the Revolution, and their jealousy of the President, to betray them into a position the very opposite of that which they desired to hold; and they stand before the country convicted in the most palpable manner of a series of gross political blunders. Louis Napoleon, who, on the contrary, has made no secret of the fact, that he has no respect for that article of the Constitution which forbid his own re-election, has acted in this dispute with the most scrupulous observance both of its letter and its spirit, and has greatly strengthened his previous position. The temperate manner in which he has upheld the dignity of his office has procured him many new friends, without the sacrifice of any old ones; and, in the merely personal matter of his ambition to make himself Consul, Emperor, or President for life, he has gained an advantage over all his opponents, very sensibly diminished the chances of a Legitimate or an Orleanist restoration, and deferred *sine die* the realization of the daily diminishing hopes of all other aspirants to the Presidential chair.

But as if it were not enough for the Assembly to be placed in one dilemma, it has rushed into a second. It might have been thought that such cool heads as those of M. Thiers and M. de Remusat might have been of better service to it. Having been shown to be in the wrong, in setting itself up as a power irresponsible to the country that elected it, and unnecessarily, as well as injudiciously, hostile to the President and the Executive Government, it should have had wisdom enough to refrain from making bad worse. But its first step, after its defeat, has still further tended to diminish the confidence of men of business, and of that politically colourless, but large body of shopkeepers and traders of France, who consider a full till the best of blessings, and who long for a firm and orderly Government, whatever be its principles, as the surest means of attaining it. That class of persons, instead of seeing in the Assembly the upholder of the law, sees in it an unruly party, a violent knot of intriguers, who would rather indulge in political revenge than assure the repose of the country. Acting under the influence of irritated feeling against the President and his Ministers for an act which, it must be remembered, was as strictly legal and constitutional as it was imperatively necessary, it has, by a large majority, appointed a select committee to inquire into the state of the Executive Government for doing what, in the exercise of its discretion, and on its responsibility to the country, it was bound to do.

The position held by Changarnier—the tacitly recognised Monk of two parties, or the Cromwell of another—was totally incompatible with the authority, if not with the existence, of the Executive Government. The result of this ebullition of pique on the part of the Assembly cannot well be otherwise than discreditable or injurious. It will either end in smoke—in which case the Assembly will be in a worse position than before—one that will verify the truth of the saying of Talleyrand, that "*un ridicule est pire qu'un crime*;" or it will place itself in more direct and open hostility to the Executive Power—in which case it will expedite a solution, which might well have been postponed until the term prescribed by the Constitution for its own re-election. It was at one time proposed that General Changarnier should be elected President of the Assembly, in lieu of M. Dupin, in order that he might annoy the President in a new capacity; but, as the General cannot speak, and knows nothing of the forms of the Legislature, and as people began to laugh at the mere notion, the idea was abandoned. The next resource thought of for making him a thorn in the side of the Government was to appoint him to the command of a force for the protection of the Assembly; but as this bore too much the appearance of a direct challenge and incentive to civil war, the idea fared no better than its predecessor. The third course—that of appointing a committee to inquire into the state of the nation—was consequently adopted as the safest piece of spite that the Assembly could perpetrate.

Thus the Assembly has played a losing, and the President a winning game. The one has exhibited mistrust and vindictiveness, together with want of principle, want of faith, want of cohesion—want of everything, in fact, which should have combined to give it a hold upon the respect or affection of the French, or the good opinion of neighbouring nations. The other, on the contrary, has shown strong faith in himself and in his destinies, if in nothing else—together with true courage, and a most admirable tact and coolness. We know of nothing more remark-

able in history than the manner in which he has triumphed over his own antecedents, which were those of hair-brained rashness rather than of common sense, and in which, since he has been placed in the high and perilous seat of power, he has shown his rare proficiency in the difficult art of government. Friends and foes have been alike astonished; and the latter, however much they may have learned to hate, have ceased to scorn him, or to hold his talents in contempt. The history of the first Napoleon is scarcely more marvellous than that of the second. Three short years have transformed an exile and an adventurer, almost without money and without friends, and with a character the very reverse of reliable either for prudence or wisdom, into the chief of a great nation—playing a successful part amid difficulties that might task the highest genius and the most consummate skill triumphing over all obstacles—making the most experienced of his opponents look foolish—and taking advantage of every false move on the part of others, to make his own position surer. We expressed the same opinions with respect to him at an earlier period of his career; and all that has since taken place has but tended to confirm them. Louis Napoleon will, in all probability, attain the object of his ambition; but then, and then only, his real troubles and difficulties will begin. It is much easier in such times as these, and amid such a people as the French, to attain dominion, than it is to keep it; and once President for life, or Consul, or Emperor, or by whatever other title he may be called upon to govern, the enmities that are now bitter will become bitterer, and all the partisans of Legitimacy, Orleanism, and Red Republicanism will vie with each other in their hatred. Yet it may be his fate to plot the French nation over this transitional period of its history, and to fit it for the enjoyment of that constitutional liberty which it loves so dearly, but which it in no way comprehends. Such a mission would be indeed a great and a useful one; but it is one that would be more likely to receive the posthumous rewards of history than the gratitude of the existing generation.

THE NEW BOSTON PACKET-SHIP, "DANIEL WEBSTER."

THIS handsome vessel has recently been added to Messrs. Train and Co.'s splendid line of packet-ships, running between Liverpool and Boston, U. S.

The *Daniel Webster*, 1500 tons burthen, is of fine model and taunt and rakish rig. She is in length, from head to taffrail, 18 feet; her midship beam is about 40 feet, but, being very fine, and having well rounded lines fore and aft, she looks a "clipper complete," while her ample bearings, gained from a long length of flooring, tell very well her capability for carrying "the measure." Her depth of hold is 24 feet from the main deck. In the bows she is not unlike the *Ocean Monarch*, to replace which vessel she has been constructed. At the 16 feet water-line, which is about her draught, she is "sharp as a wedge," but rising she becomes full, giving plenty of room to work her head-sails on deck. The stem is richly carved, and terminates by a figure of the great statesman from whom she has taken her name emblazoned on her trail-boards. He holds in his right hand a scroll, comprising the articles of the constitution. On the counter-sterns is the American eagle and the English lion, with other emblematic carvings. The *Daniel Webster* may be termed a three-decker, if not "something more." She has a poop, running from aft to near the main-hatch, and there is but little space left between that and a further continuation, which is carried chock forward. Both are connected by gangway bridges. On this deck the ship is worked without inconvenience either to the crew or passengers. Beneath the poop on the main deck is the cabin, a handsome apartment, fitted elegantly in rich deep veined mahogany, with columns relieved with gold. The "ceiling" is white and gold. The cabin is lighted from four stern ports and a deck sky-light. The state-rooms here are roomy and comfortable. Immediately forward is another saloon for superior second-class passengers, the state-rooms in which are constructed for eight persons. It will accommodate about 140. Beneath the forepart of the "spar" deck there is a string of rooms in the centre adapted to various purposes. There are an ice-house, two hospitals, surgeons'-room, store-rooms, [illegible] commodious cabin, second cabin, saloons, and steerage galleys, &c., and on each side are permanent deckrooms built up to the bulwarks, while the passengers on this deck will be fully protected from the weather, there is abundance of air, light, and ventilation. The lower deck is fitted with iron berths, divided into two compartments—steerage and second cabin. It will accommodate about 200 persons. Below this is the "timbering" for another deck, which might, if made available should circumstances ever require.

The *Daniel Webster* is a first-class American-built ship: her keel is of Live-oak, 18 inches deep by 24 wide. Over this are two solid timbers, each 16 inches square, bolted through and through with bolts alternately copper and iron, each 14 inches in diameter.

She has two sister kelsons, fifteen inches square, and her bilge keels are of heavier dimensions. Her apron, stem, stern-post, indeed, her whole frame-work, is of white oak. Forward she has seven breast-hooks and "pointers" of huge dimensions. Her timbers are packed as close as possible. The guardboard strek is seven inches thick, and proportionably strong to the wales. The ceiling, which is of yellow pine, is four inches, increasing to the lower-deck clamps, where it is eight inches thick. There are in the lower hold seven beams running athwart ships, which are all kneed off above and below. The deck beams throughout the craft are of southern pine, sixteen inches by twelve: they are six feet apart, and are plentifully interspersed with carlings of great strength. The hanging and lodging knees are all large and well formed; and the fastenings, diagonally as well as direct, are numerous and excellent; while in point of finish, from head to stem, this noble vessel is not surpassed by anything afloat. Wherever there is anything that would have appeared unsightly or heavy, it is relieved with bold carving, touched with gold; and everything of the kind—in "hurricane" decks being painted white, the effect is as great as it is novel. She is well spurred. She made the distance from Boston to Cape Clear in thirteen days ten hours. On the Liverpool to Boston days ten hours, averaging at times during some days of her passage eleven knots per hour.

All the modern improvements have been adopted, in order to the more easy working of the vessel, and to ensure safety. Amongst these improvements may be mentioned Robinson's patent steering apparatus, and pumps worked by hydraulic pressure, so constructed that they can be worked under any circumstances, and can never become choked; besides which, they would be adequate to keep the vessel afloat in almost any conceivable case of difficulty.

The *Daniel Webster* was built by Mr Donald Mackey, of East Boston, at a cost, we learn, of 50,000 dollars. She is commanded by Captain Howard, a gentleman long and advantageously known in the American trade

NEW MONEY ORDERS.—The orders now issuing from the General Post office contain an important alteration which has been made in the printed rules. Hitherto it has been necessary that a money order should be presented for payment before the expiration of two calendar months from the date of issue, to prevent its becoming a lapsed order; but with respect to the new money orders, it is necessary that they should be paid before the second calendar month, or they become lapsed. If, therefore, one of the new orders should be presented just before the second calendar month has expired, and through any error on the part of the Post-office cash cannot be obtained until the second month has expired, the order becomes a lapsed one, although it has been presented within the given time. In the new money orders there is a similar alteration of the rules respecting the twelvemonth's grace allowed to the holders of money orders before all claim on the Post-office is barred, payment of such orders ceases

THE CARDINAL AND THE QUAKER.—When Mr. LIDGETT, editor of the *Quaker*, formerly a Yorkshire Quaker, joined the Church of Rome, he addressed a pamphlet to some of his quondam co-religionists, entitled "Reasons for becoming a Catholic." A member of the Society of Friends, Mr. Lupton, entered a reply to the production in question, giving it the appellation of "Reasons for not becoming a Catholic." The latter book has remained in oblivion for some years, but the occurrence of the present agitation induced Mr. Lupton to forward a copy to his eminence the Cardinal, and Mr. Lupton received the following reply:—"Cardinal Wiseman begs respectfully to acknowledge the receipt of Mr Lupton's pamphlet and MS. remarks, all of which he has attentively perused. He does not see that they can call from him any observations beyond an expression of his sincere wish that every one would treat religious subjects with the same calmness and gentleness as Mr. Lupton exhibits. Truth would then soon overturn prejudice, falsehood, and passion P.S. Mr Lupton's letter only reached us since a few days back. 35, Golden-square, Jan. 8, 1851." The letter is in the handwriting of the Cardinal, and bears an official seal duly signed a Cardinal's hat.

The Waterford papers notice the continuous progress of emigration from that port. On Friday week, the *Albert* and *Mary*, Liverpool packets, left the river with nearly two hundred persons on board, bound for America

THE ILLUSTRATED LONDON NEWS.

FOREIGN AND COLONIAL NEWS.

FRANCE

The Ministerial crisis was terminated (as we noticed in our Postscript of last week) in the re-constitution of the Cabinet, in the following manner: MM. Baroche, Fould, Rouher and Parrieu remain in office; while the new members are—Foreign Affairs, M. Drouyn de Lhuys; War-Office, General Regnault de St Jean d'Angely; Finances, M. Ducos, representative of the people; Public Works, M. Magne, late Secretary of Finance; Commerce, M. Bonjean, member of the municipality and department of the Seine. The decree by which the National Guard are the troops of the First Division were united under one command has been revoked, and the post hitherto held by General Changarnier has thus been abolished. M. Changarnier retiring from all command for the present. General Perrot takes the command of the National Guard, and the troops of the First Division are commanded by General Baraguay d'Hilliers; M. Carlier, the Prefect of Police, remains at his post

The Brussels dispatch, by Louis Napoleon throughout this trying occasion, and the success of that measure, while they have added largely to his popularity with the great body of the people, have provoked still further the ill-will of the majority in the Assembly, who, on the formation of the new Cabinet, and the dismissal of Changarnier being announced, immediately passed a resolution, on the motion of M. Remusat, that a Select Committee should be named to report on the course requisite to be taken under existing circumstances. A "Committee of Safety" (for such it was) was accordingly nominated, and on Tuesday night it made its report to the Assembly. From this document it would appear (as was previously evident to every unbiassed mind) that the country is safe, and that, without approbation of the facts anterior to the message, but without considering that these acts have justified a refusal of support. Three members were ready to join in a vote of general want of confidence, but refuse to motive it upon an act which has put an end to an important power, against which they always protested. Six members have proposed a formula of want of confidence, founded upon the misconstruction by the Ministers of the constitutional condition of relations between the two powers." Eight members were against and seven in favour of a resolution thus conceived—"The National Assembly, while acknowledging that the Executive Power has made use of an incontestable right, but blaming the use which the actual Cabinet have made of this right, declares that the former Commander-in-Chief has preserved all the esteem and confidence which the Assembly testified towards him in the vote of January 3."

The latter resolution was the one accepted by the Assembly for discussion, and then at last fixed for the debate. The principal point discussed during the day was that read by the Minister of the Interior, who replied to M. Monet; that gentleman having contended that the Constitution gave the Assembly a power over the Executive, and that the latter, having repeatedly shown determined signs of hostility to the former, the Assembly was justified in withdrawing its confidence from Ministers; the Minister of the Interior denied this statement, and affirmed that the Government had always been anxious to act in conformity with the views of the majority in the Assembly. He then condemned that part of the report which insinuated that the Cabinet had endeavoured to shelter itself under the acts of the President of the Republic. Ministers wished not to avoid any responsibility, and they were ready to accept and avow their full acceptation of the acts of the President. With regard to the favourable opinion entertained by the Assembly of General Changarnier, he could assure the Chamber that that expression of feeling caused not the resignation of Ministers. The revocation of the double command held by General Changarnier had been determined upon for some time past, and upon the ground that so exorbitant an authority emanated to the creation of a third power in the state; besides which, such command was always looked upon as liable to lead to civil war in the country in case of threatened disturbance, and not when in a state of tranquility As for suspicions, expressed about the re-establishment of the monarchy, there was not the least foundation for them Such projects were altogether impossible, and could not be entertained. The President and his Ministers would abide honestly and firmly by their engagements

M. Jules de Lastoyrie believed that there had been a design, both on the part of the President and of his Ministers, to obtain a prolongation of his powers, and that pr[illegible] had brought forward the [illegible]

The [illegible] was not yet closed Should its results prove hostile to the new Ministry, it is thought that they likewise will resign.

The impression is that the Constitutional Supplementary Commission who sat in Paris during the recess—which it was thought contained matters the publication of which would compromise the late Ministry and Louis Napoleon, as to certain supposed designs of the latter to the Imperial throne—on the ruins of the Republic—have been given to the world, but they reveal nothing whatever in support of such a design

Amongst the rumours of the change of Ministry produced in Paris, was one to the effect that the post of Ambassador at London was offered to M. Lamartine, which, however, it was added, he was not likely to accept.

Allan Lasby, (whose name formed the subject of a criminal trial recently has dissented from his appeal against his sentence of imprisonment. In the letter which announces this resolution he declares himself the instrument and victim of an intrigue conducted by M. Yon. He is about to publish a pamphlet dedicated to the Irascible Questor of the Assembly, M. Baze

SPAIN

Intelligence received, vid Paris, by telegraph, announces the sudden resignation of the Spanish Ministry, and the immediate departure of General Narvaez for Bayonne, on his way to Madrid. The cause and end to this event are not even remotely hinted at in the communication referred to.

GERMAN STATES

From Dresden, under date the 13th inst., we learn that, though nothing certain on the subject transpired from the Conferences, a general impression prevailed that the character of the future Executive powers of the German Confederation had been decided upon by Austria and Prussia

According to this statement, the Central Power will consist of nine embodied States, with eleven votes, of which Austria and Prussia will have four votes. A military force of 134,000 men will be placed at the disposal of this Federal Executive

SCHLESWIG-HOLSTEIN.

The accounts from Hamburg and Kiel this week convey the very satisfactory intelligence, that the Duchies have submitted to the terms imposed on them by the Austrian and Prussian Commissaries of the German Diet, and that the hostilities with Denmark have, therefore, definitively ceased

The Holstein Commissaries of the Provisional Government of Holstein a peremptory delay of two days, to accept or reject the conditions signified in the name of the German Governments. That delay expiring on the 11th, the Provisional Government submitted on the 10th, to the decision of the Chamber of Representatives at Kiel, the acceptance or rejection of the five following propositions:

1. Immediate cessation of hostilities against Denmark.
2. Withdrawal of the army of Holstein from the part of Schleswig, in abandoning all its position on the frontier
3. Dissolution of two-thirds of the army
4. Dissolution at least of the Assembly of the Chamber of Representatives.
5. Immediate relinquishment on the part of Holstein of a commission of armament and defence.

The Chamber of Representatives had a very stormy sitting; and, after a debate which lasted from half past eight on Friday night to half-past five o'clock on Saturday morning, the five points were adopted by a majority of 47 to 28 It was remarked that the Duke d'Augustenburg, a member [illegible] and one of the principal movers of the revolution, spoke at some length in favour of submission, and led by his vote several members who were before undecided. After this memorable sitting, H Hensler, the chief of the war party, gave in his resignation, and immediately left Kiel. Count Reventlow will provisionally direct the public affairs of the country until the installation of the Government of the [illegible] Confederation

On Saturday the following proclamation was issued by the Stadtholderate:—

PROCLAMATION OF THE STADTHOLDERATE.

[illegible] Holsteiners, The treaty of peace of July 2, 1840, recognised anew the rights of our country, and left to the Duke of Augustenburg his hereditary strength The Confe[illegible] Bund having now decided to carry out that peace, with the promise to guarantee the rights of Holstein, and the still-subsisting relations between Schleswig and Holstein, it has become the duty of the Stadtholderate to order a cessation of hostilities and it has placed the rights of the country under the protection of the German Bund. The Stadtholderate thanks in the name of the country [illegible] their glorious examples of bravery and perseverance [illegible] to take measures for the installation of a new Government [illegible] Holsteiners, you will maintain your reputation of order and [illegible]

The Stadtholderate of the duchies of Schleswig-Holstein

REVENTLOW, FRANCKEN, KROHN, REHBOFF, FONTENAY

Kiel, Jan. 11, 1851.

UNITED STATES

Advices to the 1st instant, from New York, throw further light on the diplomatic disagreement which has arisen between Austria and the United States. The cause of the dispute is the assistance rendered to the Hungarian refugees, and promised to Kossuth by the Americans, which Austria regarded as contrary to the law of nations, and opposed to the American principle of non intervention, and in all respects objectionable. She has, therefore, it is understood offered, through the whilom, and [illegible] Chevalier Hülsemann, to withdraw her Consul and Ambassador, [illegible] Mr. Webster, secretary of State, has returned a decisive reply, to the effect that the United States ever had been, and ever would be, regarded as an asylum for political refugees, especial y those of a Republican character; that if Kossuth and his companions came they would be received and welcomed; and that if, under such circumstances, which were strictly consonant with the spirit of the constitution of the United States, the diplomatic agent of Austria should demand his passports, they would be immediately given to him. Thus the matter at present rests, M. Hülsemann waiting for fresh instructions from Europe

Amongst the more lamentable news, we regret to find announced the melancholy loss of Captain Knight, the commander of the packet-ship *Ivanhoe* (New York liner), on his passage out to New York. The ill-fated gentleman was washed overboard

The news from Nicaragua is startling The disputes between the Consul, Mr. Chatfield, and the authorities at the greater township, Grass, was, by the latest accounts (the 18th of November), seemed to be inevitable. The port, as also San Salvador, had been blockaded by the British squadron. The precise cause of the movement does not exactly appear, but it is said in another account that the ports of Nicaragua are only menaced as yet, on account of an alleged seizure of the property of a merchant of Mosquito. Nothing very serious is likely to grow out of the affair

INDIA.

A telegraphic despatch from Trieste has been received this week in advance of the usual antelopatory overland advices.

The news thus conveyed is scarcely worth the trouble of such excessive haste. By it we learn that although the greater tranquility prevailed throughout India, a trifling encounter had lately taken place at the Kohat frontier, between the British troops, under Major Taylor, and the Wuzerees; the latter were repulsed by the British troops, and only one wounded

Malignant fever and dysentery are decimating the troops in the Punjaub. The negotiations respecting the Caloolie Rajah have come to a standstill

In Java peace prevails; but in the adjoining seas piracies are still being perpetrated

On Thursday, the usual despatches reached town; but they add nothing of moment.

AUSTRALIA

We have accounts from the Australian Colonies, viz. New South Wales, Port Philip (Victoria) and Van Diemen's Land, to the 5th of October, which are of considerable interest. The question of convict importation agitates all of those districts, and they have engaged in a strong and combined movement against the further extension or continuance of the convict system; a grand Colonial Anti-Convict League having been formed to raise the question throughout the whole of the Australian colonies, all of which are deeply interested in the matter. At Hobart Town, the arrival of the *Nile* with convicts on board had caused great excitement, and stimulated the movement very much, especially as it was stated that seven other vessels were intended for the colony; and the members of the League for that district had taken the following pledge:—

"We solemnly pledge ourselves neither to hire nor employ, directly or indirectly, convicts, made or bonded servants, ticket-of-leave men, pardoned convicts, or ticket-of-leave men, and whether sent under the present or any other system of transportation, which shall arrive in the colony after the present date

Meetings of the colonists had been held at Hobart Town, Launceston, Adelaide, Port Philip, Sydney, and other places, at which resolutions of the same character were unanimously passed. There had also been meetings of the various governments, from which it appears that a determined opposition will be organised against the further continuance of the system

The colonists appear to be warmly interested in the subject of free emigration, and committees have been formed for the purpose of providing for the reception of all who might arrive out, so as to afford them necessary assistance on their landing, to enable them to obtain situations, or to further their views in assisting them to become settlers

From Adelaide (South Australia) we learn that the needlewomen who arrived by the *Duke of Portland* obtained immediate engagements

On the 27th of July, the *Sophia* arrived at Adelaide, from Plymouth, in three calendar months, bringing 245 free emigrants. The voyage was a prosperous one

There are strong reasons for believing that the discovery of coal in the vicinity of Dodsbiul Island Bay will become available.

COUNTRY NEWS.

REPEAL OF THE WINDOW DUTY.—On Tuesday the citizens of York assembled in public meeting, presided over by the Lord Mayor, in the guildhall, and agreed to the following resolution, and a petition to Parliament founded thereon:

That, under the present laws for the assessing, levying, and collecting the taxes on air and light, [illegible] and combined, the sum of about £1600 per annum is annually paid by the householders of the city of York; that, in the judgment of this meeting, such taxes are unjust [illegible] promotion of the health of the humbler classes, both in this city and throughout Great Britain,

Amongst the speakers on the occasion were Mr. J. G. Smith, M.P.; Mr. M. Milnes, M.P.; Dr. Laycock, &c

REPRESENTATION OF BEDFORDSHIRE. On Saturday, a meeting took place at the George Hotel, Bedford, and it was carried that Colonel Gilpin should support the request of all then present, a requisition was prepared, and on Monday morning it was in course of signature. Colonel Gilpin is the present high sheriff of the county, but it is expected he will have completed his term of office before the election takes place. Other candidates are talked of, but no address is out at present.

SIR JOHN HARROUP'S MONUMENT.—The *Ulverstone Advertiser* of the 5th inst. says:—"Whilst we are at press, we are glad to hear a merry peal from our old church bells, announcing that the last stone of Sir John Harroup's Monument, Tower Hill, has been successfully raised; many remain there in his honour for ages to come. By the kindness of Mr. Harrowby, of the Admiralty, the workmen are being regaled within it, Hats are flying from the church steeple, on the snapping, and, appropriately, one over the cage in which Sir John was born."

A beautifully sculptured monument to the memory of the Rev. Dr. Steward has been erected in the chapel of Addingham Church

MARRIAGE WITH A DECEASED WIFE'S SISTER.—A public meeting, presided over by the Mayor, to petition Parliament to repeal the law which prohibits marriage with the sister of a deceased wife, and legitimatises the offspring of such marriages, was held in the Town-hall, Birmingham, on Tuesday evening, and was very numerously attended The address and a petition to Parliament was moved by the Rev. J. C. Miller, who vindicated the right of a certain number to come forward in such a cause as the present. An amendment to the effect that no petition should be presented was then moved by the Rev. H. P. Gray, Warden of Queen's College, who had, after mature deliberation, arrived at the conclusion that such marriages were repugnant to the Word of God. The Rev. J. R. Mackenzie seconded the amendment. Richard Spooner, Esq., M.P., then, in a lengthened address, explained the reasons that had induced him to vote in the House of Commons for the repeal of the law, entered upon a cursory examination of the arguments on both sides, and declared himself quite unsatisfied by the arguments adduced by the opponents of the bill, finally expressing his determination again to vote for the repeal of the law. The Rev. J. C. Miller having replied, the amendment was put and lost, only a very few hands being held up in favour. The petition was then carried by a great majority

DESTRUCTION OF PROPERTY BY FIRE IN MANCHESTER.—Not less than six fires have occurred in Manchester during the past week. One which occurred at the extensive cotton-spinning and manufacturing establishment of Messrs. Robert Marsland and Co., Ancoats. Messrs. Robert Marsland and Co. are spinners and doublers, and their premises, called the Ancoats-lodge mills, consist of three manufactories, and the fire originated in the [illegible] the middle and principal building being 150 feet long and consisting of six stories and an attic. It was in this larger building especially with spinning machinery, that the fire originated. It was about a quarter past six o'clock in the evening—the work-people having left their employment at six—and immediate assistance was brought into requisition, but the flames, notwithstanding the most strenuous efforts, destroyed nearly one half of the larger mill, and the two top stories of the remainder, including the entire roof. The whole of the walls are standing, except a small portion of the top of the western side. The other buildings upon the premises have not suffered, except from water. The amount of damage done by the fire is estimated at about £8000, which, however, is subject to reduction when the insurances and thirty hands will be thrown out of employment by the calamity. The cause of the fire is not known. On the same night, [illegible] out in a mill belonging to Messrs. Shawcross and Co., Pimmill Brow, which terminated in the partial destruction of the building. The fire, it is supposed, originated in the top story, but from what cause cannot yet be ascertained. Whilst a number of the firemen were at work, one of the men employed on the top of the staircase in laying the [illegible], a portion of the building gave way, just clearing the edge of the staircase, and leaving it erect, with the brandreth standing upon the top of it, and they were obliged to remain in this perilous position for some time before they could with safety descend. The property is insured for £5000, but the loss, it is stated, will be much greater than that. The other fires were not of any magnitude.

MORMON EMIGRATION.—On New Year's-day fifteen families departed from Sheffield on their way to the Valley of the Great Salt Lake, the El Dorado of the Mormon expatriation. They purpose proceeding [illegible] teams up the river as far as Council Bluff, 900 miles north of St. Louis. They will then prepare for the overland journey across the plain to the Salt Lake Valley, a distance of 1000 miles, which has to be performed in waggons. Besides the fourteen from Sheffield, parties are also going by the same vessel from Birmingham, Manchester, Wisbeach, and other places in London.

The Lord Mayor, pursuant to ancient custom gave on Plough-Monday an elegant entertainment to the various City officers, including the governors of the City prisons, and several of his private friends.

METROPOLITAN NEWS.

METROPOLITAN TYPOGRAPHICAL WIDOW, ORPHAN, AND NOMINEE SOCIETY.—The first annual general meeting of the members of this society was held on Saturday evening, at the British School-Rooms, Hatton-garden, Holborn-hill, Mr. Thomas Lane, for the purpose of receiving a report of the committee on the state of the society for the past year, for the re-election of the officers, and to make such alterations in the rules as would render them in conformity with the recent alterations of the Friendly Societies Act. Mr. Harwell, of the *Daily News*, took the chair. The report was highly encouraging to the members. It stated that during the year 1850 seventeen had enrolled themselves as members, and that several donations had been received in behalf of its funds, amongst which were particularly mentioned £27, the net proceeds of an amateur dramatic performance at the Queen's Theatre, Dean-street, Soho; and £5 : the proprietors of the *Daily News*, £2 2s ; and various small donations amounting to £14 9s. The rules, as agreed to on the 14th of December, 1849, [illegible] several meetings, had been submitted to Mr. Tidd Pratt, and, as published [illegible] for age had been furnished by Mr. Neison, the actuary, when [illegible] proved of the same, and the society was duly enrolled on the 26th [illegible] ary, 1850. The report stated that there had been a progressive rise in the [illegible] mbers. The society had been deprived of ten members by death, and the widows of six of them had received the benefit of the fund, the other four members having succumbed to the attacks of fatal diseases, viz., consumption. The treasurer's statement showed the total receipts of the year to be £451 18s. 6d.; the expenditure (including £197 10 s. six widows), £ 45 9s. 6d.; leaving a balance invested in the funds of £206 9s. The report concluded with a hope that in a short time they should see the whole of the compositors engaged in the metropolis united in one strong phalanx of benevolent brotherhood. The report was adopted. The following gentlemen were then unanimously re-elected trustees of the society for the year ensuing: Luke Hansard, Esq., Mr. John George Chapman, and Mr. Alfred Stephen Jackson. The late members of the committee were re-elected, with four exceptions, whose resignations were filled up by the nomination of [illegible] Gardiner.

THE SURREY FREEHOLD LAND SOCIETY.—A special general meeting of this society took place on Monday evening at the Canterbury Tavern, Brixton; F. Haines, Esq., in the chair; to determine whether the system of privately purchasing lots of land should be continued, or whether it would be more advisable to promote the prosperity of the society, and also to decide upon the rate and mode of payment of interest by members obtaining allotments. The secretary [illegible] read the report, from which it appeared that the society had adopted the plans of interest adopted by the National and Birmingham Freehold Land Societies, strongly recommending the system of the latter. It was moved by Mr. Stewart, seconded by Mr. Pratt, and carried unanimously, that the system of general ballot be adopted. Mr. R. S. Pearce, honorary secretary, strongly argued in favour of the plan of charging interest, recently adopted by the Birmingham society, and moved the following resolution, which was seconded by Mr. Plumptre, and carried unanimously: "That, in [illegible] the Surrey Freehold Land Society shall pay interest at the rate of 5½ per cent. per annum upon the balance due by him at the time [illegible] shall continue to pay such interest upon such balance until the whole of the same be liquidated. The interest to be placed to the credit of the unallotted shareholders after the expenses of the society are paid."

REPEAL OF THE WINDOW-TAX.—On Monday evening a crowded [illegible] at the ratepayers of Marylebone, composed of gentlemen of all shades of political opinion, was held, by permission of the vestry, in the spacious and elegant house, for the purpose of organising final measures with a view to the total and immediate repeal of the window-tax. Resolutions deprecatory of the window-tax were carried unanimously, and a considerable subscription list for the organisation having taken place, thanks were voted to the chairman, and the meeting [illegible]

GENERAL BENEVOLENT ASSOCIATION.—The third annual meeting of this charitable institution was held at the London Tavern on Monday. Dr. J. Little presiding. The chairman having briefly opened the proceedings, the secretary proceeded to read the report, from which it appeared that during the past year [illegible] persons had been relieved after the most careful investigation. The modes of administering relief were similar to those in some cases tools and materials for work were provided, and in others small shops and baskets. The system of clothing in some cases decent clothing was given, to enable deserving persons to procure employment. The great drawback to more extended success was want of funds, and, under [illegible] circumstances, the committee had thought it desirable to alter the rule which forbade more than three-fourths of the annual subscriptions being devoted to any purpose but that originally contemplated, and to limit the grants to the whole of the annual subscriptions and interest of money from the reserve fund should be so applied, with the exception of a sum not exceeding one-tenth of the subscriptions for general purposes. They further recommended that all life subscriptions and donations should be set aside as a reserve fund. During the past year, 134 subscriptions and two life governors had been added to the list of contributors. As a proof of confidence reposed by the committee in the society, it must be stated that during the past three years the expenses had not exceeded £ [illegible] d. per annum. The entire receipts for the past year had been £91 7s. 6d. The expenditure required for purposes of relief was £5 4s. for expenses, leaving a balance of £36 19s. 2d. Mr. Warwick moved the adoption of the report, complimenting highly the charmess of its statements. Mr. E. Henry seconded the motion, which was carried unanimously, and, after some short discussion respecting the details of the charity, the proceedings terminated.

GRAND COURT OF WARDMOTE.—On Monday, the annual Grand Court was held at Guildhall—the Right Hon. the Lord Mayor in the chair for the purpose of the appointment of the ward officers elected for the ensuing year, and the presentments of the various ward inquests. The proceedings were [illegible] who have been in the habit of refusing to take out their freedoms, although repeatedly applied to by the authorities.

BROMPTON HOSPITAL FOR CONSUMPTION.—At the meeting of the board of governors on Saturday it was stated that the prospects of the Bazaar in aid of the Building Extension Fund, to be held in Cavendish-square in the [illegible] during the season of Prince Albert, several ladies of distinction had already consented to hold stalls on the interesting occasion. The number of patients at present in the wards of the hospital exceeds ninety, the out-door relief averages something above one hundred and twenty daily. The clinical lectures on the nature and progress of consumption, and the means adopted for its alleviation, were commenced by Dr. Theophilus Thompson, F.R.S., of Bedford-square, and had caused much interest.

THE BRITISH ELECTRIC TELEGRAPH COMPANY.—Under this title [illegible] has been incorporated by 13 and 14 Vict., c. 86, with the more immediate object of introducing into this country the recent discoveries and improvements of Mr. Highton, who has nearly twenty miles of wire in [illegible] London, and, we believe, in the ground, as part of the telegraph system of the [illegible] North Western Railway Company. The British Electric Telegraph Company have it in contemplation to effect a [illegible] communication with [illegible] across a narrow part of the channel, and the north-east coast of [illegible] The distance is small, and the depth of water great; the tides are extremely bold, and there is no danger of interference from shipping. Owing to the depth of water, and the distance from the coast, the wires will be out of reach of deep water, the disturbance and rubbing produced by the action of the waves will be wholly disregarded. The insulated wires will be effectually protected by other wires laid around them, according to the patent specification of Mr. Highton, and carried out in such a manner as will place them beyond all risk of [illegible] The operations, objects, application of capital, and sources of income of the British Electric Telegraph Company are to be as follows, viz.: 1. The construction of telegraphs for the Government, for railway companies, and for [illegible] 2. The working of telegraphs by the Government, or by railway management, such telegraphs being worked and maintained by the owners. 3. The maintaining in efficient working condition telegraphs, whether erected by the British Company or by other persons by contract for annual payments. 3. The [illegible] property of, worked and maintained by, the British Electric Telegraph Company, for the transmission of intelligence at a fixed tariff, or upon terms to be [illegible] upon. The capital of the company is at present fixed at £100,000, to be raised in 4000 shares of £25 each.

CONFORMATION OF THE SONS OF THE CLERGY.—A meeting of a very gratifying character was recently held of the governors of this corporation, at their house, 2, Bloomsbury-place on the occasion of distributing the Christmas remunerations to popular orators and others. Sir H. Inglis, Bart., treasurer; J. W. Freshfield, Esq., High Sheriff of Surrey, treasurer; the Rev. Sir H. D. Inglis, Bart., the Rev. Dr. Spry, Dr. Vivian, Canon Jennings, &c., and other governors were present. The cases of seventy nine poor clergymen, most of whom have large families, and are suffering under various afflictions to which "flesh is heir," were investigated, and relieved by donations, acceptable at all times, but peculiarly so at this season of the year. Besides, annuities were also granted to widows and aged single daughters of deceased clergymen, and for apprenticing and placing out in the world both sons and daughters of clergymen. The corporation received their quarterly dividends on Monday, at the close of the Festival, a most useful auxiliary, handing over the whole of its collections to the corporation for distribution, can be traced to a still earlier date. The former received, but the latter is almost entirely dependent upon voluntary subscriptions and donations, which, we much regret to hear, have of late years been falling off, in consequence of the numerous claims put forth by new philanthropic societies, which are daily springing up.

INCOME TAX APPEALS IN THE CITY OF LONDON.—Tuesday morning, the Commissioners of Income-tax and General Purposes opened their Court, [illegible] Bunhill-row, for the purpose of hearing appeals from parties against their assessment under the Income-tax Act, 5 and 6 Vic., c. 35, for the year ending 5th day of April, 1851, respecting the profits arising from professions, trades, and offices, under schedule D. The Commissioners will take the appeals from the different parishes in the City by rotation, alphabetically.

THE ILLUSTRATED LONDON NEWS.

VIOLENCE AND ATTEMPTED ROBBERY IN THE STREET.

Attacks of this kind are become more numerous than is at all agreeable to the minds of those whose business keeps them out at night to a late hour. On last Saturday night, or rather Sunday morning, about a quarter past one o'clock, as Mr. T. O. Wiggs was proceeding homeward down Manor-place, Walworth-road, carrying with him the proceeds of the day's business at his shop, in Lambeth-marsh, he was suddenly assailed from behind by a man on the back of the iron field Holborn. The instrument. Mr. Wiggs and his son, about nine years of age, by whom he was accompanied, raised a cry of "Murder," and the blows were repeated. The assailant, finding that the cry of fellow-men was not to be silenced, made his escape. On a policeman, attracted by the cries, who took him into custody. No weapon was found on him, but a gutta-percha whip stock was picked up at day-light, marked with four notches, and supposed to have been used as a weapon. A well-dressed young fellow, named Charles Wood, and, on being taken before the magistrate at Lambeth police-office, on Monday, he described himself as an omnibus driver (badge 8893), living at No. 20, Bull-yard, Bermondsey-road, New Holborn. The evidence of the police constables who captured him was heard in support of the charge. Mr. Wiggs, who was unable to attend, in consequence of the violence he had suffered, sent his son. The prisoner had, however, a solicitor in the assistant. The instrument of assault was produced by the police: it was a "life-preserver" of a novel shape; at one end was a large lump of lead, while the body, which was of Indian rubber, was tapered off so as to resemble a fishing-rod; and when the latter, or tapered end, was twisted round the wrist, the weapon, in the hand of a person of ordinary strength, was sufficient to knock down a bullock, and of the most formidable description. The place where the "life-preserver" was found was exactly fourteen yards from where the constable had stopped the prisoner, who, in coming to the place where Mr. Wiggs was struck by whom he was apprehended, must have passed the spot. The prisoner has been tried for housebreaking; and his brother "Jack," who escaped from the *Warrior* hulk about six months ago, is one of the most desperate characters in England. The prisoner was remanded.

On Wednesday, the prisoner was again brought before the magistrates, when Mr. Wiggs attended and gave evidence. He said: I crossed the road to Manor-place, and there I found two men close behind me. I turned round and heard them whisper to each other, and immediately I received a blow at the back part of my head with a fishgeon or "life-preserver," which I parried off and instantly received another blow on the head, and that I believe was given by the other man, not the one who struck me first, because it followed so quickly. I defended myself as well as I could, and struck out, but they seemed anxious to close upon me. I backed from them into the middle of the road, where they followed me, and I received a third blow on the head from the man who gave me that as well as the first blow. I called out "Murder!" and my little boy who was with me also called out and ran away, and one of the men left me. The prisoner is the one who commenced the attack on me. I had a scuffle with him during which I received several severe blows on the shoulder from him.

Mr. Fairbrother, surgeon, said: The wounds were of so dangerous a character that I had to remain with the prosecutor until six o'clock in the morning. I had to wait until reaction took place, and then to bind him.

Mr. Elliott: You considered the prosecutor's life endangered by the injuries you have described?—Witness: Most certainly so.

The son of the prosecutor, a fine little fellow of nine years of age, had a narrow escape, as the ruffian who is still at large struck him a desperate blow on the head with some heavy weapon; and had his hat not been of so stout a material, he would no doubt have had the spoon to call out as loudly, or at all, and by this means have saved the life and property of his father.

The prisoner, who declined offering anything in his defence, was committed for trial.

ANOTHER STREET ATTACK.

—On Monday, an athletic young fellow, named Robert Burtel, wearing a smock frock, was placed at the bar of Southwark Police-court, charged with knocking down and attempting to rob Mr. William Rebiet, a printer. The complainant, on the preceding night, when walking along Bermondsey-street, Horsleydown, received a blow on the face when, on his falling a poker at him, and as he became alarmed, he commenced crying out, and heard one of the women call aloud "Bob," upon which the prisoner rushed out of a dancing-room, and struck him, knocking him down on the face when, knocked him down in the mud; while he was lying on the ground he felt his assailant's hand in his pocket, and immediately called out "Police." The prisoner attempted to make his escape, but a person stopped him, and a policeman confirmed the statement. He had found the poker at the place indicated, and added that the street in question was one of very bad repute. The prisoner was committed for trial.

ST. ANDREW'S, HOLBORN, PROTESTANT DISTRICT SCHOOLS.

—On Wednesday evening a preliminary meeting was held on the subject of the establishment of Dissenting District Schools in the parish of St. Andrew's, on the borders of the Bedford and Rugby Estates." It was stated by Mr. Stephen Pearson that suitable and eligible premises having been found available in the district of Trinity Church, Gray's-inn-road, it was proposed to establish there a school for children of both sexes, under the supervision of an experienced school-mistress of sound Protestant principles. Several influential gentlemen engaged to form a committee.

ADULTERATION O. PEPPER.

—On Wednesday, at the Court of Inland Revenue, before H. I. Stephenson, Esq., C. J. Norris, Esq., and Charles Forester, Esq., Thomas Christie, the proprietor of very extensive pepper establishments in Bishopsgate-street the Commercial-road East, and Whitechapel, was charged on three informations with adulterating pepper. The Court found him guilty, and imposed a fine of £300, being £100 for each offence, [illegible] and was fined in the penalty of £ 60.

THE MARBLE ARCH.

—The arrangements for the erection of the marble arch at the Cumberland-gate entrance to Hyde-Park will, it appears, be carried into effect with an extraordinary degree of despatch. The necessary excavations for the foundations were commenced on Saturday night, in order to facilitate the prosecution of the works.

CITY DISPENSARY.

—On Wednesday the half-yearly meeting of the subscribers to this charity was held at the offices, Queen-street, Cheapside. From the report read on the occasion, it appeared that since the date of the opening of the institution, there had been 206,979 patients cured and relieved by its means; and that upwards of 8500 visits had been paid at patients' own homes. Cases of accidents have at all times been carefully attended, without letters of recommendation. During the past year 1849 the average number of patients was about 3500; in 1847 it increased to 7531; and in 1848, to 9037: in 1849, it amounted to 9731. By the medical report for 1850, it would seem that there were on the list of January of that year 913 patients under treatment, and that there had been altogether admitted during the twelvemonth 9137, which makes a total of 10,050. Of these, 8991 had been cured and relieved, 56 had died, 33 had been discharged for irregularity, and 897 remained under treatment on the 31st December. By far the largest portion of the patients were females, principally the wives and children of labouring men. The committee reported that they had funded the legacy of £103 mentioned in the last report, to have been left by Mr Peacock; and the stock of the charity now consists of £1178 4s. 9d. Three-and-a-quarter per Cent. Reduced, and £6 5s. per Cent. Consols, the dividend on which will be received free from income tax. There has been an increase in the annual subscriptions, and the receipts for the year 1850 have amounted to £534 1s 2d. of which there remained, at its close, a balance in favour of the charity of £19 11s. 2d.

SUNDAY TRADING IN BERMONDSEY.

—On Wednesday evening, a general meeting of the master-butchers of Bermondsey and of the metropolis was held at the Horns Tavern, Bermondsey-square, for the purpose of taking into consideration the provisions of a bill about to be introduced into Parliament, by Mr. Williams, M.P. for Lambeth, for the better regulation of Sunday trading as far as possible. Mr. J. Hayman presided, and stated, that from communications which he had had with about 500 butchers, he was convinced that they were almost to a man in favour of the principle of the bill to enforce entire closing on the Sabbath. They well knew that if such a measure were passed, it would have a most beneficial effect in preventing the working-classes from wasting their money on a Sunday. The bill, he understood, consisted of two clauses. The first contains a general prohibition against selling, bawling, crying, or publicly offering, or exposing for sale in any shop, warehouse, market, thoroughfare, or other place within the metropolitan police district or the city or liberties of London, [illegible] goods, chattels, effects, matter, or thing whatever (the excepted articles are afterwards stated.) The second clause continues the existing statutes as to taverns, steam-packets, club-houses, &c. The third takes away the responsibility of servants. The exempted articles are limited by the fourth clause to be—medicines or drugs for medicinal purposes; milk before nine in the morning, and after one in the afternoon; tea, coffee, ready-dressed food, or other refreshments, in any coffee-shop, &c., before ten in the morning, and after one in the afternoon, or at any period of the day to lodgers or residents; meat or fish, before nine, between May and October; fruit, pastry, &c., before nine and after one; newspapers, before ten and after one; and cigars and tobacco. The fifth clause prescribes the penalties on conviction:—5s. for the first offence; from 5s. to 20s. for the second; and from 20s. to 40s. for the third: only one penalty to be incurred in a day under the several clauses. The sixth clause authorises the goods of hawkers to be seized, recoverable on payment of 1s. By the seventh clause, no articles, except meat, fish, poultry, fruit, pastry, or ice, can be delivered after ten o'clock. The remaining clauses relate to the enforcing of the act, and the recovery of penalties. It is to come into operation on the 1st of June. The several clauses were discussed *seriatim*, and appeared to meet with general approval, and a resolution was come to, affirming the necessity of some legislative enactment for securing one day's rest in seven.

BLACKFRIARS-BRIDGE.

—On Monday the Corporation Committee appointed to inquire into the most efficient means for securing Blackfriars-bridge against further subsidence paid an official visit to that structure. It was found that the sinkings had been checked by the works lately carried on at the piers, and no further damage is anticipated. The model of an iron stay, which it is proposed to apply to the arches, was inspected and approved. It is expected that the necessary repairs on the road of the bridge may be completed without closing the bridge.

LONDON JOINT STOCK BANK.

—The half-yearly meeting of the shareholders of this company took place on Tuesday, at the offices, Princes-street, City, George Moss, Esq., in the chair. The report stated, that, including £6340 brought forward from June last, the net profits to be appropriated amounts to £28,674, which enabled the Directors to declare a dividend at the rate of 5 per cent per annum, and a bonus of 3s. 6d. per share, leaving a balance of £374 to be placed to the credit of the guarantee fund, which, with that added, amounted to £.37,10. The report was adopted, and, after the re-election of four of the directors, a vote of thanks was given to the chairman and board, and the meeting separated.

ROYAL ORTHOPŒDIC HOSPITAL.

—A meeting of the committee and friends of the above valuable institution was held on Tuesday, at the board room of the hospital, in Bloomsbury square. Some interesting answer brought forward regarding the prevalence of contortions and deformities among the poorer classes, and, from the statistics adduced, it would appear that rickets, curvature of limbs, lateral curvature of the spine, club foot, &c., existed to a most lamentable extent among all classes, but more especially among those subject to privation, cold, and neglect. Since the formation of the Royal Orthopœdic Hospital, twelve years since, upwards of 10,000 individuals, suffering under inflictions evidently of the utmost severity, have received medical and surgical assistance, and out of that number, it is gratifying to record that no fatal or permanently injurious cases have occurred. There are 700 patients now under treatment, and 300 cases are necessarily compelled to wait admission, owing to the want of accommodation. The circumstances of the very many urgent and severe cases constantly being brought forward, the committee of management have opened a building fund, with the view of providing a more efficient accommodation for the future requirements of the crippled poor. In furtherance of this benevolent undertaking, a fancy bazaar on a very magnificent scale is about to take place, under the patronage of the Duchess of Cambridge, the Grand Duchess of Mecklenburgh Strelitz, Lady Jane Sexton, the Countess of Warwick, the Countess of Howe, and a long list of the most beneficent of the fair nobility of England.

ADULTERATION OF COFFEE.

—A microscopic examination of thirty-four different qualities of coffee sold in London has lately been made, which showed that with three exceptions the whole were adulterated. Chicory was present in thirty-one instances, with the frequent addition of roasted corn, beans, or potatoes, and in some cases the quantity of coffee was not more than a fifth of the whole article.

BURGLARY AT THE LAMBETH MONEY ORDER OFFICE.

—On Monday morning the premises of Messrs. Buck and Woolton, of the money-order office, 33, Mount street, Westminster Bridge-road, were entered by burglars, who remained unperceived on the premises long enough to pack up considerable property for removal. About half past three the shopmen were alarmed by an unusual noise, and proceeding to ascertain the cause, disturbed the burglars, who fled over the backs of the houses at the rear of the premises, and effected their escape without carrying off their booty. This is the second time that these premises have been burglariously invaded within these few months.

SHORTLY before one o'clock on Tuesday morning a fire broke out on the premises of Mr. J. Murray, tallow chandler and oilman, 49, Bridge House-place, Newington-causeway. The inmates were fortunately assisted to make their escape from the window, but the fire could not be stayed, and the back rooms, the shop front, and warehouse, and several of the front rooms had been burnt out.

BIRTHS AND DEATHS.

—In the week ending Saturday last, the births of 792 boys and 785 girls, in all, 1580 children, were registered. The average of six corresponding weeks in 1845-50 was 1396. The deaths numbered 1023. In the corresponding week of the previous year (1841-50), the average was 1162; compared with which, the present return exhibits a favourable result. And if it could be safely assumed, notwithstanding the effects of various epidemics, that the population has increased nearly at the rate of 2½ per cent., the annual rate of increase observed in London between the two censuses of 1831 and 1841), and the above average were proportionally augmented, the return would show the public health to be in a very satisfactory point of view. But it will be found on examination, that, in five out of the ten corresponding weeks, the returns differ little from that of last week, or fall much below it, whilst an excessive mortality presents in other years of the series, the deaths rising to 1439 at one period, when influenza was in the ascendant; and to 1600 when bad sewers and other causes of disease, as well as the [illegible] were in operation. The mortality from small-pox, measles, scarlatina, and hooping-cough, 28, 29, 14, and 35, respectively, in the last week there were 16, 21, 16, 43; scarlatina, 9, 6, 6, 8; and now stands at 8, 6, 6, 7, 6, 8. Hooping-cough shows a decrease, and has declined in the two weeks from 48 to 35; erysipelas from 14 to 2. Amongst complaints which assume an epidemic character, influenza alone shows [illegible] decrease, having fallen from 29 cases in the week, the number reaches less than half that number. In connexion with these cases of typhus, which prevail [illegible] in three different parts of the metropolis, the registrar-general [illegible] notes in the circumstances in which these diseases occurs [illegible] re a filthy and overcrowded court," which had been repeatedly complained of as the nursery of disease. At another place, "miserable huts," which had been constructed without regard to [illegible] or drainage, and [illegible] third case, a small brick room is described, where six persons had been [illegible] and into which the rain could penetrate either by means of the chimney or [illegible] channel. Fatal cases arising from affections of the respiratory organs (exclusive of hooping-cough and phthisis) are diminished from 231 in the former week, to 219 in the last; and amongst these, laryngitis from 1, to 4, bronchitis from 182 to 136, pneumonia from 161 to 96, and asthma from 37 to 27. In the same period, phthisis exhibits a decrease from 147 to 123. On the 7th of [illegible] St. Giles-in-the-fields, and the Union Workhouse, Newman, who had [illegible] count, died, as stated in the medical certificate, from "old age and debility," having reached the extraordinary age of 105 years. Mr. Packer, of [illegible] Row, adds, this woman retained full possession of all her faculties until within a fortnight of her death." It is not stated, as is desirable in such cases, whether so singular a fact rests on the authority of a parish register or other sufficient evidence.

METEOROLOGICAL OBSERVATIONS.

—At the Royal Observatory, Greenwich, the mean daily reading of the barometer, which had fluctuated on the 8 four days of the week, [illegible] inches on Wednesday, and then rose gradually to 29 998 inches on Saturday. The mean of the week was 29 635 inches. The mean daily temperature was lowest on Monday and Thursday, when it was about 38 5 degrees. It was highest on Saturday, when it rose to 48 2 degrees. The mean of the week was 42 2 degrees. On every day the temperature was higher than the average of the same day in ten years. On Tuesday and Wednesday the mean was above 47 degrees above and average; on Friday, 8 degrees, and on Saturday, nearly 12 degrees. The wind was south, and on the last four days was in the south-west.

DEPUTATION TO ENGLAND FROM THE CAPE OF GOOD HOPE.

THE affairs of the Cape of Good Hope have been for [illegible] long period in a very unsettled state; inasmuch that the colonists had, at the date of the last news received from Cape Town, dispatched a special mission to the mother country for the redress of [illegible] grievances. On Saturday, the 21st last, was the day fixed for the departure of the mission from Cape Town; and it was attended with a valedictory scene of unusual interest, which the obliging Correspondent has enabled us to represent. At about three o'clock, a large concourse of the inhabitants assembled at the Town House.

The Chairman (Mr. Jarvis) commenced the business of the day by stating that the object was an interesting one, and a most important one, Wednesday. In consequence of the approaching departure of Mr. Fairbairn, the board had adjourned, in order to meet him here previous to his embarkation. He submitted the following resolution of the board, which he proposed for the adoption of this meeting:

That, in accordance with the desire expressed by the resident householders and ratepayers of the municipality of Cape Town and Green Point at their several meetings, held on the 2d and 12th instant, and confirmed by the resolutions of the municipalities and ratepayers of the districts of Beaufort, Caledon, Malmesbury, Uitenage, Graaff-Reinet, Riversdale, Worcester, Paarl, Stellenbosch, and George, respectively, as appears from the documents hereunto annexed—[illegible] the inhabitants of the municipality of the district of Cape Town hereby authorise and appoint, for themselves, as well as for and on behalf of the great, influential, and respectable majority of the inhabitants of this colony, who have so requested it, Sir A. Stockenstrom, Bart., and John Fairbairn, Esq., as a deputation, to represent, jointly and severally, to our gracious Sovereign, and to the British Parliament and people, the grievances, wants, and wishes of her Majesty's loyal and faithful subjects in this settlement; and to consent, and, if need be, to pray her Majesty to sanction the following heads of a Constitution for the colony of the Cape of Good Hope. (The draft Constitution as already published.)

The resolution was unanimously adopted, with great applause. The Chairman then introduced Sir Andries Stockenstrom, Mr. Fairbairn, and Mr. Brand, who were greeted with enthusiastic applause. Silence having

PHAETON. ARETHUSA.

THE EXPERIMENTAL SQUADRON.

ing been at last procured, Mr. Jarvis presented to Mr. Fairbairn a box containing the draft Constitution prepared by the four popular members, with the numerous petitions and resolutions of various municipalities in support of the draft. Mr. Jarvis made a short but impressive address to Mr. Fairbairn, on the important charge which had been entrusted to him —to lay the wants, the grievances, and the wishes of the colonists before her Majesty and the Imperial Parliament; and he more particularly directed the attention of Mr. Fairbairn to the assistance which he might expect to receive from the Colonial Reform Society. Mr. Fairbairn briefly expressed his sense of the confidence which had thus been placed in him, and stated his intention not to return to the colony till he had satisfied his constituents; an announcement which was received with loud cheers. Then advancing a step, and amidst a profound silence, Mr. Fairbairn, evidently much affected, said, "Gentlemen, for a short time I bid you—farewell!" "God bless you!—God bless you!" burst from the excited multitude, who then hastened into the square to escort their representative to the place of embarkation.

Mr. Fairbairn proceeded on foot, supported by his colleagues and friends, the chairman and commissioners of the municipality, a number of the most respectable and influential inhabitants of the city, and escorted by a crowd of between two and three thousand people assembled to render the last mark of respect to their ancient leader. It was a mark of public esteem and honour never before shown to any man in this colony, except, perhaps, to Sir Benjamin d'Urban. On the arrival of the procession at the North Wharf, a brilliant scene presented itself to view. All the numerous flag-staffs of the building-yards and stores (with one solitary exception) were decorated with ensigns and flags; a saluting battery had been thrown up alongside the wharf, while upwards of 45 sailing and rowing boats, profusely ornamented with the gayest flags, were in waiting to continue the procession by water, all the crews being dressed in holiday costume. The boat prepared for Mr. Fairbairn's use was distinguished by having the city banner in the bows and the union jack at the stern. On his putting foot into the boat, the assembled multitude gave three farewell cheers, and the battery then fired a salute of 21 guns, while the band in one of the boats struck up a march. All the boats then put off for the *Madagascar*, which was lying under topsails ready for sea. The day was remarkable fine, and the scene particularly exhilarating, the sun shone brightly, and a gentle breeze carried the boats rapidly along. On the arrival of the procession alongside the *Madagascar*, the boats drew up, and Mr. Fairbairn ascended the quarter-deck, where he bade adieu to his numerous friends, who regularly stormed the decks of the noble Indian, to the no small trouble, we suspect, of her good-natured commander. The band alongside in the meanwhile played "Rule Britannia," "Home, sweet Home," "Should auld acquaintance be forgot," &c., until it became time to depart. The crowd then slowly left the ship; but not until many had taken personal farewell of Mr. Fairbairn, and cried "God speed him." Then assembling around the ship, the crews and passengers of the gay little fleet all stood up, and waving hats and handkerchiefs, gave one cheer more for Mr. Fairbairn, which "one cheer more" was continued at intervals as they made their way towards shore, and long after they were unable to distinguish the person of him into whose hands they had entrusted their dearest interests.

THE EXPERIMENTAL SQUADRON.

THE spirited scene of the accompanying Illustration is best related in the words of a Correspondent to a Devonport journal, relating, from her Majesty's ship *Leander*, Lisbon, Dec. 17, 1850, several trials of sailing by the *Leander*, *Phaeton*, and *Arethusa*.

"During the summer we had several trials on a wind, with scarcely enough wind to keep the sails full; the *Phaeton* then had the advantage, but very little of the *Arethusa*. On the 5th of November last we left Lisbon, and for several days we were either becalmed or had light airs; but at 10.30 A.M. of the 18th a change took place; the sky became overcast. At 11.30 the Commodore made signal to try rate of sailing on a wind. By this time there was a stiff royal breeze. All the frigates had a beautiful start. About 8 P.M. (the wind still increasing) the *Phaeton* was obliged to take in her royals. At this hour the *Arethusa* gained about one and a half to two miles; at 4 P.M. the *Phaeton* hoisted a signal, 'I cannot carry on;' for no other reason than the *Arethusa* was laughing at her to windward. 4.30—signal to take station, and reefed topsails and courses, blowing very fresh, which continued during the night. At 8 o'clock the following morning (18th November) there was a good sea up, with about half a gale of wind. 8.20—Commodore made signal to *Phaeton*, 'What sail can you carry?' Answer, 'Double-reefed topsails, reefed courses, and topgallant sails.' A similar signal to *Arethusa*. Answer, 'Single-reefed topsails, whole courses, topgallant sails, and reefed royals, if I require them.' 8.40—signal, 'Prepare to try rate of sailing with all possible sail.' At 9.40 we started, the *Phaeton* with double-reefed topsails, reefed courses, and no topgallant sails, as per signal to the Commodore; the *Arethusa* carried the sail as before-mentioned, per signal. At the instant we started, the *Phaeton* was on the lee bow of the *Arethusa*, and the other frigates far astern, and to leeward. It was a splendid sight: in about forty minutes the *Arethusa* brought the *Phaeton* on her lee quarter. It was laughable to see the wind's eye frigate (*Phaeton*) occasionally making a clear jump out of the water, like a flying fish escaping the pursuit of a dolphin. Finding herself going so fast to leeward, and astern of the *Arethusa*, she sent hands aloft to loose topgallant sails; fortunately for the crew, it was not done. The *Arethusa* at this time, being about one mile to windward, received a very heavy squall, and heeled over to it in beautiful style. After the worst of it passed the *Arethusa*, every eye was turned to the *Phaeton* to leeward, anxious to see how she would receive it; when, the instant it caught her, she became a complete wreck, carrying away her jibboom, port bumpkin, a portion of her cutwater, and topgallant sheets: it was melancholy to look at her—the sea occasionally making a clean break over her. Commodore made signal to close reef topsails and courses, blowing very heavy. Commodore then made signal to *Phaeton*: 'When will you be ready to continue the trial?'—Answer: 'I don't know.' Commodore: 'Can you keep your station?'—Answer: 'No.' A telegraph of some length of time took place between the Commodore and the *Phaeton*; at last she was ordered to Plymouth or Portsmouth, as most convenient, to repair £2000 damage, whilst the *Arethusa* did not strain a rope. The *Phaeton* left us about 4 P.M. of the 19th, in the Bay of Biscay, where we knocked about with heavy weather for several days. When we arrived again in Lisbon, on the 27th, we were anxiously waiting the arrival of the mail from England, to hear if she had arrived safe. The *Phaeton* is a beautiful vessel in fine weather, and it is a pity that she should be sent out of the English Channel in the winter season to encounter rough weather."

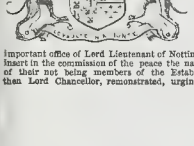
DEPARTURE OF THE DEPUTATION FROM CAPE TOWN FOR ENGLAND.

THE LATE DUKE OF NEWCASTLE.

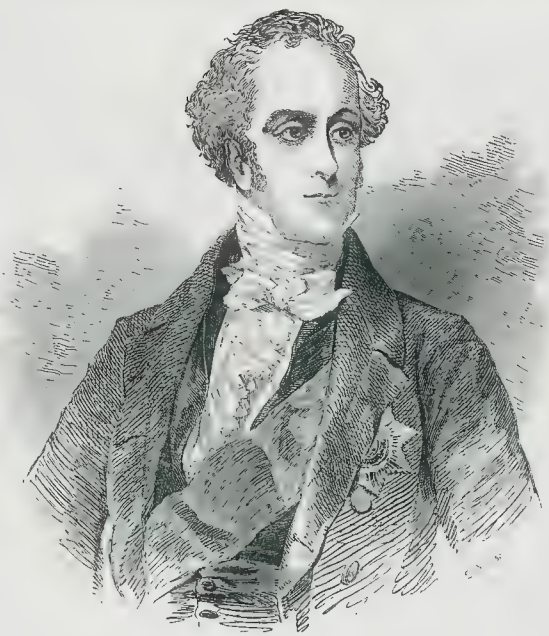
HENRY-PELHAM-FIENNES-PELHAM CLINTON, fourth Duke of Newcastle, K.G, died at Clumber Park, Nottinghamshire, aged 66, on the afternoon of Sunday last, the 12th inst., after a long and painful illness. His Grace was representative, in the male line, of the ancient and eminent baronial family of Clinton, on which an Earl's coronet, with the title of Lincoln, was conferred by Queen Elizabeth, in 1572. By female descent, he derived from the distinguished houses of Pelham and Holles, by both of which the Dukedom of Newcastle had been enjoyed. That high honour he inherited at the decease of his father in 1795, being then but ten years of age. Shortly after, he was sent to Eton, where he remained till 1803, when, joining his mother and stepfather, General Sir Charles Cranford, in taking advantage of the brief peace of Amiens, he ventured on a continental tour, but, in consequence of the renewal of hostilities, he was detained a prisoner for four years. In 1807, shortly after his return to England, he married Georgiana-Elizabeth, only child of Edward Miller Mundy, Esq., of Shipley, county Derby, M.P., by Georgiana Lady Middleton, his wife, daughter and eventual heiress of Evelyn Chadwick, Esq. This marriage brought a great accession of wealth to the Newcastle family. The lady was only just eighteen, and is stated to have possessed estates of the annual value of £12,000, together with a personal fortune of nearly £200,000. By her, who died September 20th, 1822, at the early age of thirty-three, his Grace had a numerous issue. The Duke's political career is chiefly distinguished for unbending consistency and determined hostility to the progress of liberal opinions. To use his own words, "his sentiments, such as they were, were ever openly expressed; true or false, they were his own—the result of reflection; not formed hastily, not the adoption of party, not borrowed with an easy indifference from the more fertile storehouses of others will, but the plain, unbiassed, dispassionate, and independent conviction of his own mind."

"My object (we quote from the Duke's "Thoughts in Times Past, tested by Subsequent Events") was to fulfil the duty required of me; and to accomplish this end by no other means than such as my searching conscience could most sacredly and scrupulously approve. Thus, then, was I trained into acting upon conscience. I endeavoured to discover the truth; and, if I failed, it was not from want of intention, but from want of capacity. On looking back to the past, I can honestly assert, that I repent of nothing that I have done. *Veritas nulla re-formem.* Such has been the cradle of my opinions: time may have matured them, and given them something like authority; at all events, the sentiments which might have been originally doubtful are now routedly confirmed. My mind within me is as the needle to the Pole—on no point more decisively than that I cannot be a Reformer, and that, from conviction, as well as from affection, I am a Conservative." It is scarcely necessary to remind the reader, that, a few years previously, his Grace had offered the most unflinching opposition to the passing of the Reform Bill; had been, in consequence, exposed to all the rancour of popular wrath; and had had his fine old Castle of Nottingham burned to the ground by a furious mob.

The Duke had equally opposed Catholic Emancipation, the Repeal of the Test Act, and any alteration in the Corn Laws. He recorded his vote against Queen Caroline, arrayed himself against the Canning administration, and supported the Coercion Bills for Ireland. These opinions he ever after maintained; and however much men may differ from them, all upright minds must concede to the departed nobleman respect for his conscientious principles, and admiration for his unbending honour and public consistency. Suffice it to add, that, long after his Grace's political error are forgotten, his private worth, his high English spirit, his generous disposition, and his kindness of heart will be remembered, and his name will ever form an honourable link in the ancestral roll of the illustrious family from which he descended.



For many years the Duke held the important office of Lord Lieutenant of Nottinghamshire; but having refused to insert in the commission of the peace the names of two gentlemen, on account of their not being members of the Established Church, Lord Cottenham, then Lord Chancellor, remonstrated, urging the obvious grounds why the nomination of Government should be complied with. But the Duke was inexorable, and replied indignantly by a stern refusal; whereupon, he was superseded in the Lieutenancy by the Earl of Scarborough. At the time of his death his Grace was Custos Rotulorum of Newark, Steward and Keeper of Sherwood Forest and Folewood Park, and High Steward of Retford. He was also Doctor of Civil Law, and patron of eight livings. His hereditary possessions spread widely over the county in which he resided, and he greatly increased their extent by the purchase of the Duke of Norfolk's magnificent manor of Worksop. None of the Duke's daughters are married. His eldest son, so well known as the Earl of Lincoln, is now fifth inheritor of the Ducal coronet; he is in his fortieth year, and was married in 1832, to Lady Susan-Harriet-Catherine-Hamilton-Douglas, the only daughter of the Duke of Hamilton; by her, from whom he is divorced, he has four sons and one daughter.



HIS GRACE THE LATE DUKE OF NEWCASTLE, K.G.

GRAND NAVAL FUNERAL OF CAPTAIN SIR HENRY MARTIN BLACKWOOD, BART., OF H.M.S. "VENGEANCE," PORTSMOUTH HARBOUR

On Saturday last, at Portsmouth, at one o'clock, the preparations for the public funeral accorded to this late gallant and deeply regretted officer were commenced. The troops in the garrison—the 28th, 82nd, Royal Marine Artillery, the Royal Artillery, and the Royal Engineers—were marched down the High-street, and halted near the George Hotel; and they then formed in line to the Royal Victoria Pier. The sailors, petty and warrant officers of H.M.S. *Vengeance*, then took up their station, and were followed by officers of both the services, from the Cadet up to the Port-Admiral, and from the Ensign to the Colonel Commanding-in-Chief. At one o'clock, the body was removed from Mr. Mitchell's, in the High-street. The coffin was covered with a superb union jack, supported on either side by captains of the Royal Navy, and borne on the shoulders of the gallant seamen of the ship. The bands of the 82nd and 50th Regiments then commenced the "Dead March" in "Saul;" and the *cortège* proceeded. On the arrival at the Victoria Pier, the barges and boats of the ships were in attendance to receive the Body and the *cortège*. The band of the 82nd and the guard of honour occupied the first boat; in the second were the Body, and the pall-bearers and mourners; in the third, officers of Navy and Army; and the fifth, sixth, seventh, and eighth boats were likewise filled by the officers of the united service. On either side of the principal barges were escorts of boats, all having the white ensign half-mast. The procession crossed the harbour's mouth, the bands playing the "Dead March," and the *Vengeance* commenced firing "minute guns." The appearance of the ship in mourning had a solemn effect, the yards were lowered, and all signs of white were obliterated.

The procession was met on landing at Haslar jetty by the corps of Royal Marines, under Colonel Commandant Menzies (all the officers wearing crape round the arm), and the 30th Regiment of the line. They formed in single file on each side the road to the hospital and burial-ground, about 400 men of the former corps forming the firing party, and following the procession, preceded by the two bands playing the "Dead March."

The two Turkish captains commanding the vessels of war belonging to that country, now lying in Portsmouth Harbour, met the *cortège* at Haslar jetty, and, accompanied by Captain Sir Godfrey Webster, Bart., joined the procession.

The body was received at the chapel at Haslar by the Rev. Mr. Dunne, the chaplain, and the Rev. Mr Vick, of Forton.

The service for the dead having been performed, and the body conveyed to the burial-ground, it was consigned to its last resting-place, and the ceremony was concluded by three volleys fired by the Royal Marines.

The principal mourners who walked in procession were Captain F. Blackwood, of the *Victory*, and Robert Blackwood, brothers of the deceased; two sons of the deceased, one of whom is a naval cadet in the *Vengeance*, and several other relatives.

The following naval and military officers walked in procession:—

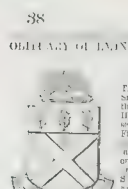
The Commander-in-Chief, Admiral Sir R. Capel; Rear-Admiral Prescott; Captain-Superintendent Sir Edward Parry; Colonel Lewis, R.E., commanding the garrison in the absence of Lord Frederick Fitzclarence; Captain Chads, of the *Excellent*; Captain Henderson, of the *Hawthorn*; Captain Sir James Stirling, Captain J. P. P. Wallis, Captain Robertson, Captain Fitzroy, Captain Frederick, Captain Crispin, Captain Sir W. Wiseman, Captain Hand, Captain Robinson, of the *Arrogant*; Captain Jerningham, Captain Matheson, of the *Britannia*; Colonel-Commandants Menzies and Gibson, R.M.A.; the Colonels of the regiments of the line and the officers of the Royal Engineers and Artillery; Flag-Lieutenants Cochran and Aplin; Major Harvey, A.D.C.; Major Purvis, the officers of all the ships in the harbour, and also a number of officers on half-pay, &c., were present.

The decease of this gallant officer at so early a stage of life—just in his prime of manhood—has occasioned the greatest sympathy. He was much beloved by all who had the honour and pleasure of his acquaintance, especially by those officers who had served both with him and under him. He has left a widow and ten children, whose melancholy bereavement cannot be expressed by words.

A procession of boats upon so melancholy an occasion has not been witnessed for a number of years in Portsmouth. The accompanying Illustration is from a sketch by Mr. R. H. C. Ubsdell.

GRAND NAVAL FUNERAL PROCESSION OF CAPTAIN SIR HENRY M. BLACKWOOD IN PORTSMOUTH HARBOUR.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.



SIR HENRY MARTIN BLACKWOOD, BART.,

CAPTAIN R.N.

The death of this gallant officer is ju[illegible] St. Henry was the [illegible] son of the second [illegible] the late Admiral the Hon. Sir Henry [illegible]art., K.C.B., G.C.H., who was senior lieutenant of the *Victorious*, on the memorable First of June, and commanded the *Barfleur* at Trafalgar. [illegible] father's profession, and emulating his noble [illegible]ces, the Baronet whose death we record entered the Royal [illegible]n 1814, and, after the usual gradations of p[illegible]ot, obtained post rank in 1827. Subsequently [illegible] served as Commodore in the East Indies.

Sir Henry [illegible] 11th Jan. 1801, and married, [illegible]ber, 1834, [illegible]ia, youngest daughter of [illegible]q., by whom he leaves issue.

JOHN HAVILAND, M.D., REGIUS PROFESSOR OF MEDICINE IN THE UNIVERSITY OF CAMBRIDGE.

DR HAVILAND died at his residence, Trumpington-street, Cambridge, on the 8th inst. He was born in 1785, only son of John Haviland, Esq., of Gundenham, by Mary his wife, daughter and co-heir of Samuel Glover, Esq., of Dunham, Notts. His family was a junior branch of the ancient Guernsey house of De Havilland, which, originally of Norman extraction, has been established in the Channel Islands since 1176. In a charge, [illegible] Sen. of England, still extant, granted by Edward IV., in the first [illegible] of his reign, the King confirms the ancient constitution of the island and Guernsey, and adds many new privileges, in consideration of the gallant [illegible] the heavy losses sustained by "Le Sieur Thomas de Havi[illegible]and other gentlemen of Guernsey, in recovering Mont Orgueil Castle, in Jersey from the French.

Dr Haviland completed his education at St John's College, and graduated as twelfth Wrangler in 1807. In 1814 he was elected Professor of Anatomy, which he held until appointed Regius Professor of Medicine. For many years he practised as a physician at Cambridge.

His death was somewhat [illegible]den, though he had previously suffered from constitutional infirmity. He married, March 31, 1815, Louisa, youngest daughter and co-heir of the late Rev. George Sparke, of the Isle of Ely, and by her had issue Margaret Anne, and seven issue five sons, the eldest of whom, the Rev. John Haviland, Vicar of Pampisford, co. Cambridge, is married to Harriet, third daughter of the Marchese di Spareto.

EDWARD DARRELL, ESQ., OF CALEHILL.

The family of Darrell was founded in England by one of the companions in arms of the Conqueror, and the name of its patriarch appears in the Roll of Battle Abbey. Numerous divergent branches were planted in various counties, and have flourished in all: the principal was those of CALEHILL and SCOTSTON, in Kent; of Sessay, in Yorkshire; of Littlecote, in Wilts; of Pagenham, in Sussex; and Trewornan, in Cornwall.

Mr. Darell, of Calehill, died at his seat in Kent, on the 13th inst., aged seventy-four. He was son and heir of Henry [illegible]rell, Esq., of Calehill, by Elizabeth [illegible] and daughter of Sir Thomas [illegible], Bart.; and great-grandson of John Darell, Esq., of Calehill, by Olivia his wife, daughter of Philip, Viscount Strangford. He married, 2nd March, 1802, Mary Anne, daughter of Thomas Balcock, Esq., of Muscoats, and leaves issue several children.

R. S. DAVIES, ESQ., F.R.S., F.A.S.

THIS gentleman, F.R.S. London and Edinburgh, F.A.S., and a Professor of Mathematics in the Royal Military Academy, Woolwich, died on the 31st inst., at Broomhall, Cottage, Upper Sheen Gate, Sheen, Surrey, in the 57th year of his age. Mr. Davies was a very accomplished mathematician, and the author of several works on mathematics, [illegible] astronomy, and astronomical instruments, in different branches of science and literature. He was also a member of the claims of the more humble aspirant to mathematical honours. [illegible] and advice were liberally bestowed, as in many [illegible] testify.

ALEXANDER MACDONALD, ESQ.

ALEXANDER MACDONALD was well known to the public as an expert and zealous antiquary. He was one of Mr. T. Gibson's best [illegible] assistants in the preparation of the "Acts of the Parliaments of Scotland," and other works, undertaken by the Record Commissioners. He was long a most active member of the Society of Antiquaries of Scotland; and the library and museum of that body owe much to his industry and [illegible]. He edited several volumes for the Maitland Club, to which he contributed a very useful book, "The Register of Ministers in the year 1567"—the earliest extant record of the [illegible] appointments of the Reformed Church in Scotland. Mr. Macdonald [illegible] supplied the materials of Sir Walter Scott's [illegible] "Waverley Novels." Mr. Macdonald held for many years the [illegible] of the Register of Deeds and Protests in Scotland. As a private gentleman, he was very popular, on account of his kind and [illegible] and his death occurred recently, is generally and sincerely lamented.

WILLIAM HOWISON, A.R.S.A.

THIS well-known engraver was born at Edinburgh, in 1788, and was educated at George Heriot's Hospital, leaving that institution [illegible] and entered to an engraver, of the name of Wilson. It was as a boy, [illegible] remarkable for that industry, perseverance, and punctuality which distinguished him throughout life. He never received any instruction in drawing, but what he acquired for himself during the period of his apprenticeship. He had engraving which brought him into notice. This was that from the picture of "The Curlers," which he did for Mr. Harvey. On the completion of this work, Mr. Howison was elected an [illegible] of the Scottish Academy—the only instance, we believe, of a [illegible] conferred on an engraver. Mr. Howison was [illegible] duce some of the most famous pictures [illegible] as the "Vicar [illegible]" by Sir William Allan, [illegible] Communion" by Harvey. At the period of his death he was engraving for the "First Interview [illegible] Amurrans," after Thomas Ford, for the Association for the [illegible] of the Fine Arts in Scotland. Such was his anxiety to have this engraving finished at the stipulated period, that he frequently worked from twelve to fourteen hours a day upon it. This unremitting toil no doubt led to the premature loss of his sight. He died after a short but severe illness, on the 20th ultimo, at his residence, Frederick-street, Edinburgh, and was interred in the Grey Friars' Churchyard.

Mr. Howison was remarkable for his extreme simplicity and engaging manners; qualities which [illegible]quired for him friends both among the young and old; and which, with his [illegible] talents, obtain his demise to be generally regretted.

DEATH OF SIR HENRY CLAUDE LORAINE, BART.—We regret to

announce the demise of the above baronet, who [illegible] Ramsay, Isle of Man. He was [illegible] son of Henry [illegible], Esq., and is succeeded in the baronetcy by his [illegible] Loraine, of Northumberland.

DEATH OF LORD WILLIAM SOMERSET.—We deeply [illegible] announce the death of Lord William Somerset [illegible] and uncle of the Duke of Beaufort, who [illegible] on Tuesday [illegible] his residence in [illegible], after a severe illness of several weeks duration.

We regret to announce the death of a writer whose genial and sportive pen has delighted thousands. Maxwell, the Irish novelist, and author of innumerable humorous sketches in the periodical literature of the day, expired on the 29th December, at Musselburgh, near the Scottish capital.

DEATH OF A CELEBRATED RACER.—Died, on the 8th of January, at Brownstown House, Paddock, Curragh, Kildare, the celebrated racer Sir Gregory, at the age of 20 years, the dam of Birdcatcher, Tough-as-bullet, Georges, May-boy, &c. She was also the grandam of Mickey Free, The Baron, Cyrenaic, &c. She was interred with all due honours, and a suitable monument will be erected over her.

NAVAL AND MILITARY INTELLIGENCE

THE BRAZILIAN FLEET.—Admiral Grenfell left Liverpool on Wednesday, to take the command of the Brazilian fleet, in anticipation of a war between Brazil and Buenos Ayres.

NAVAL SAVINGS.—It is calculated that during the past year the sum of £16,000 has been saved by dockyard changes, and removals in the naval service.

COMMISSARIAT DEPARTMENT.—It is now positively stated that reduction in the branch of the service is to be continued, and not only are no new appointments of clerks to take place, but every opportunity for reducing will be taken, advantage of.

IRISH CONSTABULARY.—The Inspector-General of Constabulary, Sir Duncan McGregor [illegible] Hall Inniskillen), has directed that [illegible] ordinary throughout Ireland shall perform the duties of billet [illegible] instead of orderlies.

THE CAPTAINS' GOOD-SERVICE PENSION.—[illegible] service pension of £100 per annum, which [illegible] ed to the Lords of the Admiralty, for the promotion [illegible] of Admiral has been conferred by Sir [illegible] [illegible] now serving as commander [illegible] about to return to England [illegible] Commodores Bennett [illegible] [illegible] years of age.

The vacant [illegible] Hospital has been conferred upon Lieutenant John [illegible] Lonet (.807). Lieutenant Lonsdale was in the service since 1791, and has served afloat and ashore for [illegible] years.

FATAL FEVER ON BOARD HER MAJESTY'S SHIP "SCORPION."—Accounts from the *Scorpion*, surveying vessel Lieutenant-Commander Laurence, stated at St. Thomas's, December 19, [illegible] a fatal fever had broken out on board that ship, and that one of the [illegible] Lieutenant William Mooney (1844).

Five o'Clock: and every Evening at [illegible] (LECTURE), from Seven till Half past Ten.

TO CORRESPONDENTS.

[illegible] MESSAGES. A memorial to the Queen, presented through a member of the H[illegible] of Commons, [illegible] on the grounds on which the change of name is sought, is the usual [illegible] to [illegible] obtain the rest of the Royal Assent. The subject [illegible] amounts to about [illegible] guineas.

[illegible] ARCHITECTS. The Royal Institute of British Architects was [illegible] at the College of Arms, Doctors' Commons.

[illegible] THE ROSE OF ENGLAND. Extract from the time [illegible] the first Lancastrian and Yorkish contests: [illegible] "The Rose of England [illegible] from the time [illegible] the Windo[illegible] appeared in [illegible] [illegible] [illegible]

journal, from which we borrow these details, "to find a band of able-bodied labourers, with the right stuff in them, though it probably had never been very skilfully brought out; and he got instead an hospital of decrepit people, infirm, some of them from age, and others from want, who had never used a spade in their lives, and containing an alarming proportion of women and children, affected with epidemic and contagious diseases. The worthy man saw his mistake at a glance, and wisely consulted, perhaps, his own and his neighbours' self-preservation by sending back the Carrs outcasts to the care of the Highland Committee, and the charitable institutions of Edinburgh." This is but a repetition, on a somewhat smaller scale, but in an equally deplorable manner, of the Irish misery, and it requires identically the same treatment. Emigration, which some speak of as the great remedy, will not even alleviate such a disease as this; for these are not the class of people that will voluntarily emigrate, or that would be received by any colony if conveyed in large numbers; and a compulsory deportation of the people would not, we suppose, be tolerated, or even recommended. The evil is too deeply rooted to be of easy treatment; but, difficult or the reverse, it demands the careful and immediate attention of the Legislature. There must be something greatly wrong in the agrarian laws or social circumstances of the West Highlands of Scotland, as well as in Ireland, when a formerly brave and self-supporting people are reduced to this state—when the resources of the land are undeveloped—and when the sea, teeming with nutritive food, to be had for the taking, offers its wealth to them in vain. We trust the subject will not be lost sight of because the sufferers are less clamorous than the Irish have been; and that a wise Government will not suffer the Celtic population either to be rooted out of the land altogether, or to remain in it, a source of perpetual misery to themselves and to all around them, without at least making some enquiries which shall show us the reason why.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

Her Majesty the Queen and his Royal Highness Prince Albert continue, we rejoice to learn, in the enjoyment of excellent health. The Queen has taken frequent drives with the Royal children in the Windsor Park, and the Prince Consort has enjoyed the diversion of shooting almost daily, in the Royal preserves.

On Monday, his Excel ency Genera. Radowitz arrived at the Castle on a visit to her Majesty and the Prince Consort.

On Tuesday, the Earl of Aberdeen, Sir George Grey, and the Right Hon. T. B. Macaulay were added to the Royal circle Her Royal Highness the Duchess of Kent dined with her Majesty and the Prince the same evening.

On Wednesday, the Rev Frederick and Mrs. Anson were the only additions to the Royal dinner-party of the previous day

The Duchess of Norfolk has relieved the Marchioness of Douro in her duty as Lady in Waiting upon her Majesty.

Her Royal Highness the Duchess of Gloucester was going on favourably, on Thursday, at Gloucester House.

His Royal Highness the Duke of Cambridge enjoyed the diversion of shooting in Richmond Park, on Saturday morning last

We are happy to announce the safe *accouchement* of Madame Van de Weyer, the wife of his Excellency the Belgian Minister. Her Excellency gave birth to a daughter on Saturday last, at the residence of the Legation in Portland-place.

The Earl and Countess of Glengall have left Bretby Park, the seat of the Earl and Countess of Chesterfield, on a visit to the Marquis and Marchioness of Londonderry, at Wynyard Park.

The Earl and Countess of St. Germans have been passing the holidays in comparative retirement in Port Eliot.

The Earl and Countess of Clarendon left town from a Continental tour

The Earl and Countess of Eglinton leave Eglinton Castle, Ayrshire, next week, to make a series of visits *en route* to town, for the waiting of Parliament

The Earl and Countess of Portarlington are passing the holidays in Paris

The Marchioness of Hastings and Captain Yelverton have been called suddenly to Dublin, by the serious indisposition of the youthful Marquis of Hastings

Lord John Russell gave a Cabinet dinner on Wednesday, at his residence in Chesham-place The Ministers present were the Lord Chancellor, the Marquis of Lansdowne, the Earl of Minto, Viscount Palmerston, Earl Grey, the Chancellor of the Exchequer, Sir John Hobhouse, the Earl of Carlisle, the Right Hon Henry Labouchere, the Marquis of Clanricarde, and the Right Hon. Fox Maule.—The noble Lord and her Ladyship had a second dinner party on Thursday night, the guests at which included the Earl and Countess [illegible] Lord [illegible] Sir Robert Peel, Sir [illegible], the Right Hon. [illegible] Mr Hawes, M P., Mr Labi, and Mr Charles Dickens.

PARLIAMENTARY BANQUETS.

LORD JOHN RUSSELL (the First Lord of the Treasury), as leader of the Ministerial Party in the House of Commons, has had invitations issued for a grand Parliamentary full-dress banquet, at his official residence in Downing-street, on the 3rd proximo, to the several members of the Administration and Court, having seats in that Assembly

THE MARQUIS OF LANSDOWNE (the Lord President of the Council) will give a grand full-dress Parliamentary dinner on the 3rd proximo, at Lansdowne House, to a large party of Peers.

LORD STANLEY (who is expected to arrive in town on the 1st of next month) will give a sumptuous banquet to the Duke of Richmond and a numerous circle of Protestant Peers on the 3rd of the ensuing month, at his mansion in St James's-square

THE SPRING CIRCUITS.

The following is the arrangement made for the Spring Circuits:—

HOME CIRCUIT. Lord Campbell and Mr. Baron Parke

WESTERN CIRCUIT.—The Lord Chief Baron and Mr. Baron Martin.

NORFOLK CIRCUIT.—Lord Chief Justice of the Common Pleas and Mr. Justice Erle.

MIDLAND CIRCUIT.—Mr. Baron Alderson and Mr. Justice Coleridge.

OXFORD CIRCUIT.—Mr. Justice Patteson and Mr. Justice Talfourd

NORTHERN CIRCUIT.—Mr. Justice Cresswell and Mr. Baron Platt.

NORTH WALES AND CHESTER CIRCUIT.—Mr. Justice Maule

SOUTH WALES AND CHESTER.—Mr. Justice Williams, who will, after proceeding through South Wales, join Mr Justice Maule at Chester

VACATION JUDGE.—Mr. Justice Wightman.

A Cabinet Council was held at half-past two o'clock on Thursday, at the Foreign Office. The meeting was very fully attended by the members of the Ministry, and sat for three hours

WINTER CHARITY.—It was a time when the easy, comfortable man, troubled with fitful sense of human suffering, gives from his abundance; and, whilst benefiting, feels almost ashamed that, with such widespread misery around round him, he has all things still, all things grateful. The smitten spirit asks wherefore he is not of the multitude of wretchedness; demands to know for what especial excellence he is promoted above the thousand, thousand starving creatures in his very tenderness for misery, taxes his privilege of exemption from a woe that withers manhood in man, bowing him downward to the brute. And so questioned, this is given in modesty of spirit—in very thankfulness of soul. His alms are not cold, formal charities; but reverent sacrifices to his suffering brother. —*St. Giles and St. James, by Douglas Jerrold*, he first part of a collected edition of whose writings has just appeared, beautifully and tastefully printed.

FATAL WRECK.—The *Nautilus* screw-steamer, of London, struck on the Sterries Platters, off Holyhead, at 11 A.M., on Wednesday morning, and went down almost immediately. She steamed and three steamers were lost in the long boat, the master, mate, and one seaman succeeded in making the shore in a small

M. Banquiet, the Belgian artist, with whose skill in portraiture our readers are [illegible] has just returned to the metropolis, after six months' sojourn on

In consequence of the retirement of the Earl of Dunraven from the presentation of Glamorganshire, an address has been issued by Sir George [illegible], who offers himself to the suffrages of the electors on Conservative, Protestant, and anti-Papal principles.

On Monday morning a fire, involving a serious loss of property, broke out in the premises belonging to Mrs. Burch, known as [illegible] Tavern [illegible] of the following

[illegible]

[illegible]

POSTSCRIPT.

THE PAPAL AGGRESSION.

THE SUFFOLK COUNTY MEETING, presided over by the Earl of Stradbroke, and called by him as Lord-Lieutenant of the county, in pursuance of a requisition signed by all the chief men of the county, was held at Stowmarket on Thursday. It was numerously attended; and the Dukes of Grafton and Rutland, and other gentlemen, apologised for their absence by letter. Lord Rendlesham moved the first resolution, denouncing the act of the Pope, and Sir P. Broke seconded it An amendment, moved by Mr. Tacon, of Eye, and supported by Mr. Walsh, declaring perfect freedom as to religion to be the birthright of Englishmen, was supported by only six persons. The other speakers were the Rev. Mr. Maberley and the Rev Mr. Clowes, Mr. Long and Mr. Bevan, in favour of the usual course of proceedings. Mr. Ray, a Dissenter, attacked the Church Mr. Preston found no supporter for an amendment, "that no system of religion should be paid by the State." An amendment condemning the Puseyites was well supported, but lost. After much debate and confusion, an address of the usual description was carried almost unanimously

THE BISHOP OF DURHAM, in a reply to an address from his clergy, draws up a catalogue of the most objectionable points in the Papal doctrine, as follows 1. The claim of the Pope to universal empire over the Church of Christ; such a claim not being supported in the smallest degree by the text usually brought forward (Matthew xvi. 18, 19). 2. Transubstantiation, and the refusal of the cup, in the holy communion, to the laity. 3. Divine honours paid to the Virgin Mary, the invocation of saints, and the worship of images. 4. The doctrine of purgatory, and the power of a priest to procure relief from its penalties. 5. The grant of indulgences. 6. Restraint upon the use of the Holy Scriptures, amounting to prohibition. 7. The unnatural extent to which celibacy is enforced. 8. The pretence that miracles are even now performed in the Church of Rome. 9. The offering up of public prayers in a foreign tongue, little understood, with a disposition to discourage all education, except on a most narrow and exclusive principle. 10. The most dangerous of all is the confessional, pregnant with evil, moral and social, both to priest and penitent. The bishop believes it may be necessary to provide some restrictions upon the introduction and circulation of Papal bulls in this island, and to prohibit the assumption of episcopal titles conferred by Rome and deriving the name from any place in this country; and desirable to forbid the existence of monastic institutions, and the residence of any Jesuits in the country.

METROPOLITAN SANITARY ASSOCIATION.—On Thursday a deputation from the Metropolitan Sanitary Association waited upon Sir Charles Wood, Chancellor of the Exchequer, at his residence in Downing-street, for the purpose of presenting a memorial urging him to take immediate measures to ensure the total abolition of the tax on windows. The deputation consisted of the Rev. C. Hume, rector of St. Michael's, Wood-street; J. Nicholay, Esq.; Dr Bushman; W. Rogers, Esq., barrister-at-law; C. F. J. Lord, Esq.; C. R. Walsh, Esq.; W. D. Bruce, Esq., F.S.A.; T. Abrahams, Esq.; and Dr. Barnett, the honorary secretary. After the object of the deputation had been enforced by various arguments, Sir Charles Wood replied by stating, that the deputation were aware that it was his duty to listen to the statements made to him, not to give any opinion. At the same time he assured the deputation that the memorial presented to him should receive due consideration.

SMITH O'BRIEN.—From the journals lately received from Van Diemen's Land, and which come down to the end of September, we learn that Mr. Smith O'Brien had arrived at Hobart Town, by the steamer, from Port Arthur, and had accepted a ticket of leave on his *parole* not to leave the colony Ulin, the party implicated in assisting Smith O'Brien to escape, by giving him a passage in the *Victoria* cutter, had managed to get clear off with his vessel without paying the fine (£50) in which he had been amerced

REPEAL OF THE WINDOW-TAX.—A public meeting of the inhabitants of the parish of St. Anne, Westminster, was held on Wednesday evening, at the theatre (late Miss Kelly's), Dean-street, Soho, for the purpose of petitioning Parliament in favour of the total, immediate, and unconditional repeal of the window-tax: Mr. Joseph George Godwin, sen., churchwarden, in the chair. The resolutions proposed were agreed to.

MYSTERIOUS OCCURRENCE AT THE REGENT'S CANAL DOCKS.—On Thursday afternoon, as a man named Robert Apling was leaving up the wheel on board the *Lovely*, a vessel recently arrived from Germany, a discharge of fire-arms was heard, and Apling exclaimed, "My God, I am shot," falling back immediately a corpse. A surgeon was quickly in attendance, and discovered that a shot had entered the right breast, leaving an orifice the size of a shilling. Up to Thursday night all efforts to ascertain whence the shot came, or by whom it was fired, have been fruitless

WRECK.—The English Government mail steamer picked up, on Wednesday night, in mid-channel, on her passage from Dover to Calais, a boat belonging to a French ship that was wrecked during the gale off Lorient. Seven men had taken refuge in the boat, without food of any kind, without covering, without a rudder, and scarcely a stitch of canvas for sail. Seven of the unfortunate men perished in the first or second day; and when the steamer fell in with the boat the sole survivor was in the last stage of exhaustion. The conduct of the captain and crew of the steamer is spoken of in high terms.

On Thursday morning a boiler exploded at Holme-house Colliery (Wigan), causing the death of two persons, and injuring some others. The boiler rebounded from its bed a distance of several yards. The boiler-house was completely destroyed. Portions of the brickwork were driven a distance of 300 yards.

LATEST FOREIGN NEWS.

FRANCE.

According to the intelligence received from Paris yesterday (Friday), the debats on the report of the "Committee of Public Safety" had not been brought to a close. On Thursday, the principal speakers were MM. Berryer (Legitimist) and Lamartine (Republican).

M. Berryer took a review of the Republic from 1848, to prove that the Monarchical party, so called, had saved the country from ruin. He highly disapproved of the Ministry in dismissing General Changarnier, though he questioned not their constitutional right to do as they had done; but that act exhibited a tendency to a change of policy dangerous to the peace of the country.

M. Lamartine addressed the Assembly in favour of the Government

The Courts of Law have pronounced the liberation of M. Mangnin by the Assembly to have been unlawful. The Assembly is, therefore, in collision both with the executive and the judicial powers

M. Lamartine has contradicted the rumour of his having been offered the embassy to London by the President of the Republic.

SPAIN.

Advices from Madrid confirm the fact of the resignation of the ministry, which, however, the Queen refused to accept. The ground of offence taken by General Narvaez and his colleagues was, that they had been on the refusal to a grand ball given by the Queen-Mother on the previous evening! This was considered an intentional slight, which they were determined to resent.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently taken place:—*Bulsprce:* The Right Rev. Henry Field, late Bishop of Sierra Leone, to Nova Scotia. *Deanery:* The Rev. R. Bowles Knottesford Fortescue, to St. Ninian's, Perth. *Deanery Rural:* The Rev. A. W. Chatfield, to Ross, Hereford. *Rectories:* The Rev. Dr. Sweet, to Blagdon, Somerset; the Rev. George Palgrave Simpson, to St. John's, South Hackney, Middlesex; the Rev. T. T. Cotswol, to Horton, Bucks; the Rev. Dr. Colls, to Ingrave, near Brentwood, Essex; the Rev. William Mack, to Horham, Suffolk; the Rev. Bartle Bartle Edmund Johnson, to Dalham, Suffolk. *Vicarages:* The Rev. M. S. Edgehill, to St. Margaret's, Leicester; the Rev. Edwin Pell, to Acton, Suffolk; the Rev. Robert Bewick, to Brightlingsea, Essex; the Rev. — Image, to Ticehurst, Kent; the Rev. John Porter Butck, to Tofthrees, in Norfolk; the Rev. H. J. Fitzgerald, to Worth-Matravers, in the Isle of Purbeck, Dorset; the Rev. J. Tomlin, to Llanasaph.

VACANCIES.—*Rectory:* Newton-Kyme, county and archdiocese of York; value £292, with residence; patron, T. L. Fairfax, Esq. *Vicarages:* Marlow-Grindi, Bucks, diocese of Lincoln; value £172, with residence; patrons, Dean and Chapter of Gloucester. *Perpetual Curacies:* East Ardsley, county and diocese of Gloucester, value £66, patrons, Dean and Chapter of Gloucester and Bristol. Whitby, Yorkshire, Rectorate, Stamford, Lincolnshire, value £59, patron, Mrs. Bambrigge. *Lectureships:* Ashburn, Derbyshire, diocese of [illegible]; stipend £55 Bristol, St. Mary Redcliffe. *Chaplaincy:* Bristol Gaol

TESTIMONIALS.—The following gentlemen have recently received testimonials of esteem and regard.—The Rev. John Tracey, of Dartmouth, from the parishioners; the Rev. Frederick C Thompson, on his leaving the parish of Wilcannia and Balhannah, Norfolk, by the parishioners; the Rev. [illegible] Arnold, of Thrandiston Rectory, on his late marriage, from the Guardians of the Hartismere Union, of which he was vice-chairman; the Rev. Morgan, jun., incumbent of Barnsley, from upwards of 2000 members of the Independent Order of Odd Fellows. Oldham district, M.U., the Rev. Benedict Ashmore, of St Catherine's, Tranmere, Cheshire, from the ladies of his congregation; the Rev. John Cawood, of St. Ann, Bewdley, on completing the fiftieth year of his incumbency.

FIRE AND LOSS OF LIFE.—At a quarter past two o'clock on Wednesday morning a fire broke out on the premises of Ben Caunt, the well known pugilist, known by the name of the Coach and Horses, in St. Martin's-lane The house was much injured at the back, and we are sorry to say that two of Mr Caunt's children, aged six and eight, were burnt to death, as also one of the female servants aged [illegible]

Parliamentary elections will be held within the next ten days, in Lincolnshire and Nottinghamshire. Monday night's *Gazette* contains the Speaker's notice that at the end of a fortnight from the 13th instant a writ will be issued for the election of two members of Parliament in place of Viscount Alford and Robert Breedlay, Esq., both deceased

PAPAL AGGRESSION.

MEETINGS.

THE CARMARTHEN COUNTY MEETING, held in the Shire Hall, at Llandilo, last week, followed the course of other county meetings. Resolutions against the assumption of the Pope, declaring loyalty to the Queen and attachment to the Constitution, were passed, and a corresponding address to her Majesty was adopted The Hon. Col Trevor, M.P., took an active part in the proceedings, and moved the first resolution; the second was moved by Mr. D. A. Davies, also a member of Parliament. The other speakers were Messrs. Pugh Reeves, of Kilymaenllwyd, and J. Jones. A letter was read from Earl Cawdor, in which the noble Lord stated—

that, agreeing with the Lord President of the Council in opinion, "that a controversial and decidedly imperfect discussion, at a public county meeting, of the merits of the Roman Catholic faith can do no production of mischief only;" and having no reason to expect that the meeting will take a different course from that which has been usually pursued on the occasion, I feel that if I were to attend, I should, by so doing, appear to sanction in some degree a course of proceeding which I disapprove of I beg likewise to say, still using Lord Lansdowne's words, that "as far as any resolutions which may be offered to the meeting express a firm determination to uphold by every means the Protestant establishment, and more especially to resist the attempts of any foreign potentate, ecclesiastical or civil, directly or indirectly, to interfere with the ordinances of our Church, or her Majesty's supreme authority as its Head, they will have my entire and cordial concurrence.

THE ADJOURNED MEETING OF THE PROTESTANT DISSENTING DEPUTIES was held on the 10th, and, after some discussion, the report of the committee, which had on the previous occasion been objected to as not going far enough against the Roman Catholics, was received and adopted by a large majority. The party, however, which thought the report insufficient, afterwards carried a resolution moved by Mr. Kilpin and seconded by Mr. Apsley Pellat—to the effect that it is the bounden and especial duty of Protestant Dissenters to resist by every legitimate means the encroachments of the Papacy in this country, and that it will be their duty to petition both Houses of Parliament to protest against any legislative encouragement of that system, and particularly against the continuance of any pecuniary grant towards its support, either in the United Kingdom or its dependencies; the deputies to meet for this purpose at an early period after the assembling of Parliament.

REVIVAL OF THE CONVOCATION. Some members of the Church met in Freemasons' Hall on Tuesday, called together by the Metropolitan Church Union, to take measures for the revival of the Convocation; Henry Hoare, Esq., in the chair. The Revs. G. Anthony Denison, of East Brent; Dr. Biber, Mr. Raven, J. S. Cox, J. J. Cumming, J. B. Sweet, Prebendary Clarke, Mr. Hughes, a barrister; and Mr. Dudley Perceval, were the principal speakers. The meeting was otherwise than numerous or unanimous; but, after many lamentations over the crippled state of the Church, and numerous suggestions as to the means of increasing her efficiency as against the Romish Church, a resolution was adopted declaring that the attack of the Bishop of Rome was the consequence of the long suppression of the synodal functions of the Church, and that the present emergency constituted an additional plea for the revival of her synodical functions; and an address to her Majesty, founded on the resolution, was agreed to. An amendment, moved by the Rev. J. E. Cox, "That the revival of the Convocat on would not now conduce to peace," was lost. Addresses to the Upper and Lower Houses of the Convocation of Canterbury were also adopted.

THE INHABITANTS of the BOROUGH were called together on Tuesday by the High Bailiff, in pursuance of a requisition more numerously signed than any requisition he had ever received. The meeting was numerous and boisterous, Mr. Apsley Pellat moved a resolution denouncing the proceedings of the Pope as an insidious and dangerous invasion of the rights of the throne and of the constitution, repudiating persecution, but calling on Lord John Russell energetically to suppress all Papal power and pretensions in the realm, and to give a proof of his sincerity by abolishing all the endowments of Popery. Mr. Thwaites, who described himself to be a Dissenter, moved an amendment, attending the call on Lord John Russell to bring before Parliament a measure to abolish all endowments of religion out of the public purse. After several speeches, and considerable confusion, the original motion was carried by a considerable majority, as was also a resolution lamenting the encouragement given to the Pope by the Tractarian party; and an address to her Majesty and petitions to both Houses of Parliament, in accordance with the resolutions, were adopted. Mr. Alderman Humphrey, one of the members for the borough, was present, and took part in the proceedings. It was understood, on the show of hands in a division, that Mr Pellat should substitute the amendment for his resolution. The other member for the borough addressed a letter to Dr. Black, from Paris, which was read at the meeting, expressing an opinion that the act of the Pope was foolish and impudent, but disapproving of the contumely and abuse which had in consequence been cast on the Roman Catholics. He declared that he could not depart from the wise policy of religious toleration and equality towards the Catholics that the last twenty-five years; that he thought the State should interfere as little as possible in religious matters; that in times of excitement, principles should be firmly maintained; and that he must wait for the meeting of Parliament, to learn the course proposed to be pursued by her Majesty's ministers, before he could determine whether he should support them or not.

A WESTMORELAND COUNTY MEETING was held at Kendal, on Monday, in pursuance of a requisition, signed by the Earl of Lonsdale, the county members, and between 500 and 600 gentlemen. A large number of persons assembled. An address to the Queen, to vindicate the national independence—moved by Mr. Wilson, of Casterton, and seconded by Mr. Wilson, of Ripmaden Park—was unanimously adopted. The other speakers were Mr. Hasell, of Dalemaine, and Mr. Wilson, of the Stowe.

A MEETING at BRIGHTON, on Thursday week, of the lay members of the Church of England, was remarkable for being intended to attack a clergyman, and for a refusal to hear a gentleman, a member of the Church, who wished to say a few words in their defence. The public does not seem to improve in toleration

DOCUMENTS.

THE BISHOP OF GLOUCESTER AND BRISTOL has addressed a letter of advice to the clergy of his diocese, in which he recommends them to defend the population from the machinations of the Romish priests, by diffusing amongst them scriptural knowledge, and energetically employing all feasible and proper means to expand the influence of the Church. He requests his clergy to preach sermons, and make collections of money for this purpose, and points out four societies connected with the Church, to the funds of which they might contribute.

IRELAND.

ANTI-CENTRALIZATION MOVEMENT.—On Monday, at Dublin, a deputation of a Permanent Anti-Centralization Committee waited on the Lord Mayor, with the requisition for convening an aggregate meeting to petition Parliament against the apprehended abolition of the Viceregal Court, or any other centralising measures affecting the interests of Ireland. The requisition was signed by the High Sheriff of Dublin, the High Sheriff of Kildare, the Lord-Lieutenant of Sligo, the members for the city and county of Dublin, the members for the University, and upwards of twenty other Irish members, Messrs. Latouche and Co., bankers; Ball and Co.; Boyle, Low, Pim, and Co., the directors of the Royal and Hibernian Banks; H. Barton, Esq., of Straffan; the aldermen and town-councillors of Dublin; the borough magistrates, several Baronets, Knights, Deputy-Lieutenants, magistrates, and gentry from various parts of Ireland. Lord Mayor said, that he felt deeply interested in the object of the proposed meeting, and he would have much pleasure in complying with the requisition, which he considered, from its nature, and the influential character of the requisitionists, to be but mandatory on him. The 27th inst. was ultimately arranged as the day for the meeting, which is expected to be a very important demonstration.

THE TENANT LEAGUE.—The Irish Tenant League were burnt out of their council-room by a conflagration which took place on Monday morning, on the premises of Mr Le Febvre, a hatter, at No. 38, Westmoreland-street The fire was discovered soon after midnight, and in a few hours the entire house was completely gutted. The Tenant League conducted the drawing-room, but their papers, books, and documents were saved. A female servant lost her life on the occasion. The League have fixed on the 23rd instant for their aggregate meeting.

NEW CATHOLIC SEE.—The Cork papers announce the formation of a new Roman Catholic Bishopric in the south of Ireland, or rather the restoration of an old one, the late united diocese of Cloyne and Ross having, at the prayer of the Right Rev. Dr. Murphy, the present Bishop, been divided by the Pope into two, Dr. Murphy to remain Bishop of Cloyne, and the Rev. Dr. Ryan, parish priest of Middleton, having been appointed to the diocese of Ross The bull for the consecration of the new Bishop has actually arrived in Ireland, and is in the hands of Dr. Slattery, the Roman Catholic Archbishop of Cashel. It does not appear that in this instance there has been any election by the clergy, but Dr. Ryan has been, at all events a member of their body, and is stated to have been always most acceptable to them.

THE QUEEN'S COLLEGES.—The *Cork Reporter* reiterates a statement which it had previously put forth, and which had been contradicted by the *Freeman's Journal*, viz. that the decree of the Pope and Synod at Thurles which denounce the Queen's Coleges will not be confirmed by the Pope. The *Reporter* says:—"With respect to our announcement of Saturday, we can only say, that, although we positively state that the decrees of the Synod will not be confirmed, we still consider that the intimation we gave will be found correct, and that, except, perhaps, some which have no interest for the general public, the Holy See will not confirm those decrees."

THE LATE LORD MAYOR OF DUBLIN.—On Tuesday, in the Court of Queen's Bench, Dublin, the question of the legality of Mr. John Reynolds's election as Lord Mayor was at length decided. The judgment of the court being against his election The corporation had made a return to the writ of mandamus for the election of a new Lord Mayor to the effect that the office was already filled. To this return a demurrer was made by the opponents of Mr. Reynolds. The demurrer has been before the Court for the last three terms, and the judgment delivered on Tuesday was in favour of it, and against the return

ABOLITION OF THE DUTY ON PAPER.—On Monday, at a meeting in Dublin of the committee of the Association for the Abolition of the Duty on Paper, held at their committee-rooms, 3, Dollard-street, a requisition to the Lord Mayor was agreed upon, to the effect that his Lordship would be pleased to convene a public meeting to petition Parliament for a removal of the [illegible] upon paper. It was also resolved to [illegible] [illegible] [illegible]

THE GREAT EXHIBITION BUILDING IN HYDE PARK.—PORT

E RIDGE AND FURROW GLASS ROOF.—LOOKING WEST.

THE GREAT EXHIBITION BUILDING.—DETAILS OF CONSTRUCTION.

(*Continued from page 26.*)

EXTERIOR OF THE RIDGE AND FURROW GLAZED ROOF.

But few of the visitors to the Great International Museum of Industry, during its construction, even if permitted, would like to ascend the ladders, for the purpose of viewing from the lead flats looking westward, and embraces an extent of 840 feet in length and 120 feet in breadth, to a point 216 feet from the west end of the building, at which point the width is reduced to 72 feet. The beautifully simple arrangement of Mr. Paxton's "ridge and furrow" principle of roofing s here fully illustrated.

The open second-class refreshment court, 144 feet long by 72 feet wide, the west side of which is 240 feet from the western elevation of the building, is plainly discovered by the clump of trees, whose branches surmount considerably the contiguous roofs of glass. On the right side of the picture is the roof of the department to be appropriated to machinery; and on the left, the entire elevation of the exterior of the glass-enclosed gallery is depicted conspicuously; while immediately under, and contiguous to the lead flat from which the view was taken, are the three bays of roofing over the return gallery leading to that at the north end of the transept, and which leads to the galleries extending from the transept to the eastern front of the "Fine Arts Courts." The whole of the upper tier of ventilators, partly concealed by handsome open cast-iron spandrils, and surmounted by a facia extending the whole length of the exterior of the gallery elevation, together with the flag-post standards, intended to receive the flags of all nations, and which are placed at intervals of 24 feet from centre to centre, form the most conspicuous portions of the entire view. The facia is crowned to its full extent, between the respective flag-post standards, with an ornamental cast-iron frieze, precisely similar to that shown in the view of part of the south front, page 482, Vol. XVII. As the few glazing waggons, which, in a few days, will be entirely dispensed with, are just visible towards the west end of the roofs. The picture is made up by a view of parts of Kensington Gardens, Hyde Park, and some of the most conspicuous objects adjoining that can be seen over the roofs.

On our last ascent to the lead-flat, from which the view which we have attempted to describe is taken, we were induced to ascend a little higher than the lead-flat, even to the very top of the roof of the transept, along which is a walk from end to end, formed by a narrow lead flat 2 feet in width; and, although the task was accomplished with some little difficulty, yet we were amply repaid by the magnificent panoramic views of parts of the metropolis and the distant hills of Surrey, and the country on every side. It is to be hoped neither that an ascending room, as that formerly at the Colosseum, or an easy spiral staircase, at any rate, will be constructed at the north end of the transept, for the purpose of adding another feature to the great international show.

HENDERSON'S PATENT DERRICK-CRANE.

In the View of the Hydraulic Testing Machine at page 428, Vol. XVII., by which all the cast-iron girders throughout the building have been proved, is also represented one of Mr. Henderson's Patent Derrick-cranes, which are extensively used in many large establishments, especially of the North of England. There are, altogether, six varieties of these cranes, numbered from 1 to 6, that represented in the View being one of those known by the Number 4, the power of which is from two to four tons, to 45 feet radius of range from the centre. Some of the advantages obtained by this description of machine over the ordinary form of derrick-crane, are the facility with which a load can be moved nearer to, or farther from, the centre of the crane, and deposited at any point of the space included within the range of the derrick, and increased safety while raising or lowering the derrick, whereby extra labour is saved in bringing the load to its original level.

In the derrick fixed at the "Industrial Palace," three-fourths of the circle included within the sweep of the crane is obtained, while the remaining fourth of the circle is likewise available, if logs of timber, or long lengths of iron, &c., are required to be moved. The derrick-crane consists of the the stem, derrick, and the stays—usually made of timber, but which may, if desired, be constructed of wrought iron.

The stem consists of two pieces of timber, which meet at top, and are connected both at top and bottom by means of cast-iron shoes. The lower shoe is constructed so as to turn on a fixed gudgeon; and the upper shoe is also fitted with a gudgeon, by which it is connected with the pair of stays, and which enables it to be turned freely round. The crab-engine, as shown in the View, is worked by three men, and is fixed at the bottom part of the stem, the roller, or chain barrel, being fixed between the two parts of which it is composed. The stays are fixed at their lower ends by being attached to horizontal sleepers, which meet at the centre of the crane, and support the lower gudgeon of the stem.

The derrick, which is constructed of a single piece of timber, has a cast-iron shoe at the top, and another at the bottom, the lower end being jointed by a pin to the bottom shoe of the stem, so as to enable it to be moved vertically. Winch-handles, with wheels for single and double purchase, together with the barrel, form one part of the crab; while the other part, which raises or lowers the derrick, consists of a barrel and two wheels, by which it is connected with the first portion of the crab—the necessary connection being effected by means of a clutch fixed on the spindle of the lift barrel. The derrick is supported by a chain, passing from its barrel and up the stem to a pulley at the top. From this pulley it is carried nearly to the top of the derrick, to which, in the present instance, it is fixed; but, in some of the other forms, passes over a snatch-block attached to the derrick, and, returning to the stem, it is securely fastened to the upper end of the top gudgeon. The left chain passes up the back of the derrick, from its barrel, to a pulley at top, and thence down to the load. In order to prevent the derrick barrel from turning, the two portions of the crab are disconnected—the derrick being supported by a catch, or pall, which acts on one of the coupling-wheels. When the two parts of the crab are disconnected, the crane is in a proper state to be used in raising its load; and when it is necessary to move the load nearer to the centre of the crane, the two barrels are again connected, simply by means of the clutch, the motion of the crab being reversed. When the load has to be moved nearer to the centre of the crane, it is necessary to raise the derrick. The coupling wheels are so proportioned, that the lift chain is unwound as much as the point of the derrick is raised, and thus the load is moved horizontally. When it is required to lower the derrick, the left chain is wound up, and the horizontal motion of the load is still preserved. The chain barrel is tapered, the increased diameter of the barrel moving the derrick through a larger range in its higher position, in proportion to the length of the lift chain unwound, by which the load retains its horizontal position while in motion.

GREAT INDUSTRIAL EXHIBITION OF 1851.

By the main instead attention of the contractors nearly the whole of the flooring of the south side will be completed at the end of the week, the north-western portion of which was delayed, until some of the machinery in motion, which is to be located there, shall have arrived; otherwise, on the north side, the principal portion of the flooring is laid. Upwards of 200 feet of the glazing of the transept is perfected, and the remainder will be completed in a few days. The roofing of the nave is also completed, with the exception of a few feet at the north end, which will be finished as soon as the centres can be struck. The roofing of the transept is also completed, with the exception of a few feet at the north end, which will be finished as soon as the centres can be struck. The roofing of the nave is also completed, with the exception of a few feet at the north end, which will be finished as soon as the centres can be struck.

The contractors have also commenced the erection of the galleries in the transept, and the whole of the columns on the north side of the nave are now erected. The contractors have also commenced the erection of the galleries in the transept, and the whole of the columns on the north side of the nave are now erected. The contractors have also commenced the erection of the galleries in the transept, and the whole of the columns on the north side of the nave are now erected.

at the expense of the contractor. Sealed tenders to be addressed, M. Digby Wyatt, Esq., endorsed "Tender for the supply of refreshments," and delivered at the office of the Executive Committee, Hyde Park, on Wednesday, 22nd day of January, before twelve o'clock."

All the three refreshment courts will be at the north side of the Building. The Central Court will be placed at the north end of the transept, having the contributions of Turkey and Italy on the east side, and those of the East Indies on the western side. The Eastern Refreshment Court will be in the midst of the products of the Zollverein, Denmark, United States, and Russia. The Western Court will be in the centre of the machinery in motion, located at the northwestern extremity.

A Royal party, consisting of the Duchess of Cambridge, her son the Duke, the grand Duke and Duchess of Mecklenburgh Strelitz, and the Princess Mary, were conducted over the building by Mr. Paxton, having on their way visited that section of the building in which are exhibited the articles contributed by Her Majesty. Their Highnesses expressed their admiration of the articles and the ingenuity displayed in their construction.

Portions of the manufactures of Sheffield, Birmingham, and Wolverhampton, specimens of the works, &c. The Duke of Devonshire appears to have repeatedly visited the realisation of the idea of his friend and *protégé*, Mr. Paxton, and with good reason, for from the Committee's Conservatories sprang the "Crystal Palace."

A model of a paddle-box of a steam-frigate, with wheel and paddle-box beautifully executed, and a model of shipping and machinery, by Mr. Penn, of Greenwich; Mr. Mumford, of Deptford, with a gun carriage for working a gun at a bow, broadside, or stern port.

The Isle of St. Kilda is to forward a specimen of woollen plaid and cloth: the wool was spun into thread with the old-fashioned spindle, and woven in a loom made in the Island.

The jewellers, silversmiths, and manufacturers of Paris are in better spirits respecting the Exhibition and its consequences to their trade. As we have previously remarked, the notion of the Exhibition appears to have excited a variety and beauty of [illegible] vases, and chandeliers. A silver candelabrum for the Peace of Paris, [illegible] caskets, and a profusely ornamented [illegible] are among the articles destined for the Exhibition, and which will be accompanied by qualified persons, &c.

The Prussian railway companies have agreed with the Minister of Commerce to convey all persons visiting the Great Exhibition, in second-class carriages, at third-class fares: the Continental second-class carriages, it may be remembered, are nearly as comfortably fitted as our first-class carriages.

A correspondent from Spanish Town, Jamaica, writes, that one planter, who is desirous of shewing the successful growth of the cotton-plant there, which might be made a staple commodity, will forward 500lb. to the Exhibition.

The Massachusetts State has well behaved itself. Machinery for spinning, planing, turning, &c.; textile fabrics—ginghams, shirting, printing cloths of all descriptions; stuffs, woollen wares of all kinds; carpeting, couch-laces, and carriage; a collection of ores and native minerals; farming implements, ventilating apparatus, philosophical apparatus in various departments; pianofortes, stringed instruments (one violin valued at 1,000 dollars); statuary, agricultural implements, models, and other wares of various sorts, are set down in a list furnished by the local journals.

The Executive Committee of the Exhibition have been compelled to notify, that in all cases in which the Executive Committee think it right to draw the attention of local committees or foreign commissioners to any article, with a view to a right of introduction to be sent, which [illegible] Circulars, it appears, for mercantile and other purposes had been issued, with the assertion that they had been approved by the Executive Committee.

The Spanish Correspondent estimates the number of visitors from Spain at about 2000 persons. It is money, not curiosity (he writes), that is wanting. We can assure him that his number is far short of the mark, if the Austrian Government carry out their proposed arrangements.

Specimens of the Harrogate mineral springs are to be forwarded in glass vases in a mahogany case, surmounted with a representation of the pump-room placed over the principal spring.

A rail-axle at Bolsover has been ordered to make a thousand gold, a thousand silver, and a thousand iron tacks for the Great Exhibition, the whole to be hammered out to weigh more than three grains.

There will be no less than 1600 vessels full-rigged in the model of the Liverpool Docks which is to be transmitted. A collection of the importations of Liverpool will also be displayed. It is after the Exhibition, to be presented to Liverpool, as a nucleus of a museum of commercial science.

A manufacturer of Bolbriggan has presented a dozen pair of ladies' stockings, full size, in weight nine ounces, as a perfect and beautiful specimen of Irish manufacture in cotton. The Balbriggan articles in cotton and silk hosiery will be large comparison, according to the local journals, with those of Nottingham [illegible].

Paxton's marble, worked into a model of Kingston Church, Corfe Castle (says the *Poole Herald*), will display the different veins of stone contained in the Purbeck beds.

A specimen of the steam marble, rivalling, it is said, in purity and whiteness the Carrara specimens, is being sculptured into a figure of Ceres, by way of representing a dying Indian chief. The block originally weighed three tons, from a quarry in Rutland, Vermont. The statue, it is said, is being finely executed, and by the time it is young American manual dexterity.

After official correspondence and departmental consultation, sufficient even for the removal of Hyde Park itself, the destiny of the tenth elm—Sibthorp's tree, as the workmen insisted on calling it (whose guardianship was originally received on the 4th instant) is decided: it is no longer to prove an obstruction to the nave, but will be removed, and the portion of the flooring, &c., which it had hitherto impeded, is to be forthwith completed. We find that every public nuisance (even though it should stand in the way of public convenience for a period), could be so satisfactorily disposed of.

The circular from the Executive Committee, in answer to applications from some of the local committees and clubs respecting lodging accommodation for artizans, &c., states, "that the Royal Commissioners do not intend to undertake to find lodgings for persons visiting the Exhibition, or to interfere with individual enterprise." The Committee state their readiness to afford every information in their power to London agents, &c., who may address them.

A Central Agency-office, with a special committee, is suggested in Leeds, which shall superintend the whole of the arrangements for the visiting-clubs, as to railway trains, lodgings, &c. The Midland Company are in every way desirous of increasing the number of clubs, &c., at once, so as to gain some idea of the accommodation the company must provide for; they are specially building 200 carriages to meet their anticipated influx of excursionists. Those who are disposed to support the Central Agency are to write to Mr. M Cawood, the secretary of the Leeds Local Committee, before the 22nd inst.

A committee has been formed in Sheffield to collect and assist a visiting club. Accounts from Sheffield, York, Hereford, Woburn, Norwich, Glasgow, Edinburgh, Preston, Southampton and its neighbourhood, Wrexham, &c., reach us of the successful exertions of those establishing or who have established similar associations, fraternities which will redound to the honour as well as the interests of working men.

The Mechanics' Home, in the Ranelagh-road, Pimlico, arranged by Mr. Harrison, is acquiring favour wherever its arrangements have been introduced. Above 250 beds have been secured by parties connected with the Exhibition. We shall shortly afford the full statistical information respecting this institution, which [illegible] quarters of the metropolis.

A meeting was held at the Crystal Palace, Cock-spur-street, on Tuesday, Mr. Charles Cochrane in the chair, for the purpose of arranging the establishment of a general registry office for interpreters and guides for the foreign visitors expected in this country in the course of the ensuing season. We shall shortly afford the full statistical information respecting this institution, which [illegible] quarters of the metropolis.

The Jubilee Singers, consisting of nine coloured persons, on Tuesday, Mr. Charles Cochrane in the chair, for the purpose of arranging the establishment of a general registry office for interpreters and guides for the foreign visitors expected in this country in the course of the ensuing season. We shall shortly afford the full statistical information respecting this institution, which [illegible] quarters of the metropolis.

A MAGNIFICENT ALBUM.—The artists and artisans of Munich have made a present to King Louis of Bavaria, as a mark of their gratitude and acknowledgment for his munificent encouragement of the fine and industrial arts. The present is the architect Adolph Zwerger's Gothic hall, seventy inches high, seven and a half inches thick; it is bound in dark red velvet, and decorated with clasps, ornaments, and basso-relievos of chased bronze, in the Gothic style of the 15th century. In the middle of the cover is a [illegible] encircled with brilliants, and filled with a basso-relievo, representing the King surrounded by his artists, and saying to them, "I live in your works" (the answer of the King to the deputation of artists after his abdication). On the other side of the medallion, the basso-relievo of which represent the architects with their models, the sculptors and bronze founders with their [illegible] the historical painters examining a fresco work, and the landscape and genre painter painting from nature. Above the middle medallion are placed the arms of the King, of the four divisions of Bavaria, and of the artists, with the device on, executed in enamel, and surrounded by rich leaves. The interior contains a collection of 70 drawings, water colours and sketches, executed by artists in Munich, Dresden, Berlin, Dusseldorf, Stuttgart, &c., so that the Album, indeed, appears as a present of all the German Artists.—*Art Journal.*

WHAT QUAKERS WEAR.—THEIR HATS AT MEETING.—Quakers invariably wear their hats in places of public worship, or in public assemblies, as I for one am aware how this custom originated. Fox, the founder of collarless coats and broad-brims, was in the habit of attending the episcopal church: when the preacher uttered sentiments of which he disapproved, he would solemnly put on his broad-brimmed hat, and take it off again whenever more welcome doctrine occurred. If he sat long with his hat on, and the ill-sounding [illegible] continued, he would rise slowly and walk out. Thus it appears that it was for the purpose of habitual protest that the Quakers first learned to put in places of worship with their hats on.

CHESS WITHOUT THE CHESS-BOARD.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR.—A paragraph has been going the round of the country papers, to the effect that Herr Harrwitz has recently played three games at once, without seeing the board, and that the extraordinary feat has never before been performed, as Philidor, in a similar attempt, saw one board out of the three." Pray, Mr. Editor, spare me a moment to correct the one-sidedness misrepresentation. Surely every one at all conversant with the history of Chess, knows perfectly well that Philidor played at least eight or nine different matches of *three games each, blindfolded*; and that it was only on the last public occasion of his doing so, when at a very advanced age, that he adopted the slight alleviation of having one Chess-board of the three before him. Nor is the case of Philidor a solitary or even a rare one. The late lamented Bilguer occasionally played three games blindfold, and in masterly style; and, in our own day, Kieseritzky, and other have performed the same exploit.

I have no desire to depreciate the performances of Herr Harrwitz, but in justice to others it ought not to be forgotten that, in the cases I have mentioned, the blindfold player has merely had to contend against the most practised and skilful opponents. The best players that London could produce were matched against Philidor—a very different thing, indeed to contending against a few [illegible] amateurs, or others of a class much below the highest

Perhaps, in the case of Herr Harrwitz, the feat is to be lauded by the consideration that, playing in the ordinary manner with the Chess-board before him, he cannot claim the unusual rank. In his match with Mr Staunton, some time ago, that gentleman won every even game with perfect ease, and a majority of those, also, in which he gave the large odds of the Pawn and two moves

I confess, Sir, I am inclined to think that too much encouragement should not be given to blindfold chess, an art which, to a certain extent, may easily be acquired, and which only becomes really extraordinary when the play is really second rate. It may be very well as an occasional exhibition or a holiday display; but I doubt the policy or the utility of a constant attempt to walk backwards unless it can be shown that you can travel as securely, as easily, and as far as by the ordinary method of progression.

I am, sir, yours obediently,

ARGUS

January 18, 1851.

NATIONAL SPORTS.

Since our last a steeple chase meeting has been got up at Wolverhampton, to come off on Thursday next, and, from the spirit in which sporting matters are [illegible] a quarter, with fair promise of success. There is no advertisement of the 28th inst. at Stockton, so that it appears, after all, not to be a Newcastle Cup meeting. The next meetings take place on Monday next, Lincoln on the two following days, Glossop (near Manchester, on Wednesday, and the Newcastle and Northumberland [illegible]

DAY RESULTS.

TUESDAY [illegible] this day. For the next two months, the betting men have no afternoon, was quite stationary, and the quotations in several instances [illegible] declined improvement:

NATIONAL SPORTS.

We understand that her Majesty and his Royal Highness Prince Albert have jointly presented to the Society of Friends of Foreigners in Distress the sum of £200 towards the alms-houses for indigent foreigners about to be erected by that society

It is reported that the Chancellor of the Exchequer, instead of proposing the total repeal of the window tax, contemplates only a reduction of the amount. In the event of his being compelled, by the pressure from without, nominally to repeal the tax, he hopes to retain a portion of it, by levying some new sort of tax on houses

The *New Era* [illegible] says, that the birth of T. Houldsworth, Esq., M.P. for North Notts, is rapidly giving way, and that there is no prospect of his resuming the active duties he has so long and so consistently fulfilled

From William Ray Smee says, in his pamphlet on the income-tax, that, out of the twenty millions of a week our popular [illegible] pauperism 800,000 pay this impost. The same writer remarks that the houses chargeable with the window-tax are only 14 per cent on the total number, and that were the malt tax taken off, the ale now sold at 6d. would be retailed at 3d. a quart. These facts are startling and suggestive to a Chancellor with a surplus revenue.

The *New Era* [illegible] says, that the Duke of Cannon-street is being rapidly proceeded with. The committee, have determined it [illegible] the house shall be at, cleared away, and the streets be paved through by the coming May day

From the usual annual reports on mining in France, it appears that in 1850 twenty new mines has been opened in that country, principally [illegible] which hold out promise of profitableness; some extensive coal seams have been discovered, of excellent quality. Many modern improvements have been introduced, particularly at the coal districts, and in respect to ventilation and, upon the whole, mining enterprise is [illegible] its neighbours.

On Friday morning week, between five and six o'clock, a very disastrous fire occurred in Cheapside-street, Oxford street, Manchester, by which a large cotton mill and its contents, valued at upwards of £292,000, belonging to Messrs Wallace, Watchurst, and Thompson, were utterly consumed. By the fall of the outer walls of the mill, Messrs Nathan Lloyd and Co. sustained damage to the extent of £300, and Messrs. Henry and Co. £100. Of the origin of the fire nothing is known. By the destruction of this mill about 300 hands are thrown out of employment. The damage is partly covered by insurance.

On Saturday last, six of the men who are charged with having committed the daring burglary at Dowland-house, the residence of the Rev. Farncomb, at Uckfield, in Sussex, were brought before the magistrates at Tunbridge. The prisoners gave their names as J. Hamilton, John Smith, Smith, Morgan, W. Harper, and J. Stokes. Elizabeth Oliver was discharged on suspicion of having some of the stolen property in her possession. Thomas Wood, the butler of the Misses Farncombe, recognised some of the prisoners as having been present at the robbery, and the evidence generally went to inculpate all the parties charged. They were remanded for a week.

The Buckinghamshire Railway Company have just contracted with Messrs. Fox, Henderson, and Co., to erect a new station at Rowley, Oxford, which is to be constructed on the same principle as the building for the Great Exhibition, and it is to be completed in three months. It is stated that the line to London is to be opened on the 1st of May next.

Some of the large manufacturing firms on the Wear have it in contemplation to start a large and powerful steamer, to ply regularly between Sunderland and London. The greatly increased quantity of goods transported in Sunderland, and the imperfect accommodation afforded by the railway companies, have rendered this project necessary.

Mr. Charles Dickens has transmitted two guineas towards the funds of the Soup Kitchen, stating that the contribution was "from the proceeds of a charitable subscription collected in India by Lieutenant Boughey Burgess."

In the United States Senate, Mr. Benton has introduced a Public Lands Bill, one section of which authorises the granting donations of land to actual settlers free of cost! This doctrine of mild and beneficent agrarianism is rapidly becoming popular, as being well suited to the peculiar position and resources of the United States.

The steam-ship *Gruffie*, just arrived at Blackwall, from Rotterdam, has brought an entire cargo of live cattle, comprising 978 head of oxen and cows, 67 calves, and 200 sheep, the produce of Holland. This steam enterprise [illegible] importation of horned [stock from Holland, and, possibly, the [illegible] of the kind that has taken place from that country.

Between four o'clock on the morning of Saturday, J. Thompson, Mounsey, and T. Pinnock, three men who, along with another named William Graham, were committed about six weeks ago to take their trial for highway robbery and attempted murder, made their escape from Leeds gaol. Having called the watchmen to the assistance of one of their companions (Graham), who suffered from epilepsy, and who at the time was prostrate on the floor in that condition, they overpowered the officer, and with the keys let themselves out to the yard, whence they escaped over the wall, leaving behind Graham, whom they refused to take from some aversion to him, to assist over the wall. A reward of £20 is offered for their apprehension

Ship-building is occupying much attention at Boston and New York at present. At the former port a ship has been built (the *Starpbound*) for the China trade, 1600 tons register, which is said to be the longest and largest merchant vessel in the world, and will, it is asserted, be the fastest afloat. In her model everything has been adapted to ensure speed. At New York a ship of equal pretensions is fitting out for the Canton trade, and is called the *Screwpent*. Both these vessels are intended to compete with English ships in the trade between China and England.

On Monday morning last, intelligence reached Liverpool, announcing the total wreck of the American ship *Francenia*, on the Aug casa coast, on Saturday night, with the loss of Captain Smith, his chief mate, and nine of his crew. The *Francenia* was bound from Baltimore to that port, with a cargo of tobacco and cotton

Dr. Wareing, the Catholic Bishop of Northampton, was, last week, installed in the vacancy on the Leicester council. Seventeen members took their seats after the Doctor's address contained a protest against the Papal and unparalleled persecution to which "Catholics" had recently been subjected, and he trusted his flock to zeal and consistency in the advocacy of the claims of their church

In Reading is an account of the Customs revenue, and arrivals of shipping at the ports of Gloucester, for the last three years:—Revenue, 1848, £92,767; ditto, 1849, £97,034; ditto, 1850, £94,683. Vessels from foreign parts, with cargoes:—1848, 345; ditto, 1849, 477; ditto, 1850, 491. The decrease in the past year is easily accounted for, the previous year having been £8000 less than in the year 1849. Mean time for the first, the general trade of this port has increased

A few nights ago, the cemetery of St. Veron, at Avignon (France), was scandalously profaned. Many of the tombs were forced open, the railings of others were broken down, the coffin of a woman was dug up, the body stripped, and left lying on the ground naked with a knife, and a number of statues, crowns, and other things were stolen. The authorities are making active exertions to discover the miscreant

From the Australian papers we learn that a new South Wales, from which it appears that there had been many gales, in which sundry vessels had gone ashore and been wrecked. Violent rain had fallen in the interior. The Legislative Council had passed a vote against the transportation of convicts to the colony.

The *Tuscan Monitore* of the 3d publishes a decree prescribing that all carriages of persons conveying at Leghorn, give up to the [illegible] officers all letters and papers addressed to persons within the [illegible] and that after being purified they shall be delivered over to the post-office. And [illegible] captain's shall provide themselves with [illegible] to the place of [illegible] station on leaving Leghorn, except from the post-office, on pain of a fine equal to five times the amount of the post-office charge on the said letters. [illegible] persons carrying or sending letters will be subjected to the same fine.

A few days ago, at the Bath Station, the ticket-clerk forgot to attend to [illegible] and [illegible] were obliged to take their [illegible] to Bath [illegible] Bristol [illegible] towards.

The *Derbyshire Courier* states that Mr. Fearn, of Chesterfield, retaining [illegible] was robbed of [illegible] bank-notes. The next morning he arose very early, and retraced his steps, and at the Ambergate car, where he had taken money from his pocket to pay the toll, he found the notes lying on the road.

The *Leeds Intelligencer* states that a human head was lately found on the Durham side of the river Tees, near Middleshire, by two men who were going down the river in a boat. Mr. Richardson, surgeon, examined it and believed it to be the head of a male, and from appearances the age of the person might be 30. The head appeared to have been a long time in the water

An old man at Gloucester, on New Year's Eve, went to a pawnbroker's in the old year out," when he was observed in a corner apparently asleep. It was agreed not to disturb him, until after the last stroke of the old year had ceased to reverberate upon the clock bell, in order to have some harbour at the expense of his drowsiness; but when the party arrove to awake him, as they had [illegible] he was found to be dead

The managers of the East London Saving-Bank have just presented their report for the year ending November last, from which we learn that 1969 persons have made deposits during the last twelve months, the amount of which exceeded £50,581 between £20 and £50, 193 between £50 and £100, 31 between £100 and 200, and 13 between £200 and £300. The management expenses have been £200. The total receipts from depositors have amounted to £23,487 4s. 11d., and the total payments to [illegible] £20 8s 10s. 11d

The morning papers mention that the secession from the Church of [illegible] of Mr. Francis H. Ward, son of Mr. Alderman Ward [illegible] member of the eminent legal firm of Osbornes, Wards, and Co., of [illegible] when, with his lady, were last week received into the Roman Catholic [illegible] been followed by that of the Rev. J. R. Woodward, incumbent of the popular parish of St. James, in the city, who has intimated his intention of immediately placing his resignation of that living in the hands of the bishop. One of the rev. incumbent's curates preceded him in the march to Rome.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

BURNING OF A SLAVE ESTABLISHMENT BY BRITISH SEAMEN AND MARINES, AT KEONGA, RIVER MOZAMBA, IN THE MOZAMBIQUE CHANNEL.

THE SLAVE-TRADE IN THE MOZAMBIQUE CHANNEL.

THE well-directed energies of British seamen and marines, in checking the enormities of the Slave-Trade, have furnished many interesting scenes for our sketching Correspondents, as well as for our Engraver's art. The accompanying is a contribution to this class of illustration. It shows an attack made on the town of Keonga, River Hambery, or Mozamba, in the Mozambique Channel; with the burning of an extensive slave establishment by a division of seamen and marines from her Majesty's ship *Castor*, and steam-vessel *Dee*, on the 8th of June last, under Commander B. H. Bunce, of the *Castor*. On this occasion a six-pounder gun was carried and spiked, a large slave-dow (native vessel) blown up, and premises for several thousands of slaves set fire to, and completely destroyed; in addition to large storehouses filled with merchandise intended for conducting the vile traffic. The barracoons were defended by the six-pounder, which the British captured, and by about 300 free natives, with muskets, besides several bowmen and spearmen. So rapid were the movements of our seamen and marines, that the people, who are very warlike and courageous, had scarcely time to get under arms before the place was totally demolished. They, however, on the embarkation of the force, opened a sharp fire from the bushes, which was returned with good interest; but no lives were sacrificed on the part of the English.

Towards the close of the month previous to the above attack, the slave barracoons were also burnt at Masuin, near Cape Delgado, by a division of seamen and marines from the *Castor* and *Dee*. This was a notorious slave market. The attack was made by the English at daybreak; and before the natives could offer resistance, the barracoons were destroyed, a magazine of powder exploded, and a stone-built house of the proprietors undermined blown up.

THE GUNPOWDER MAGAZINES NEAR LIVERPOOL.

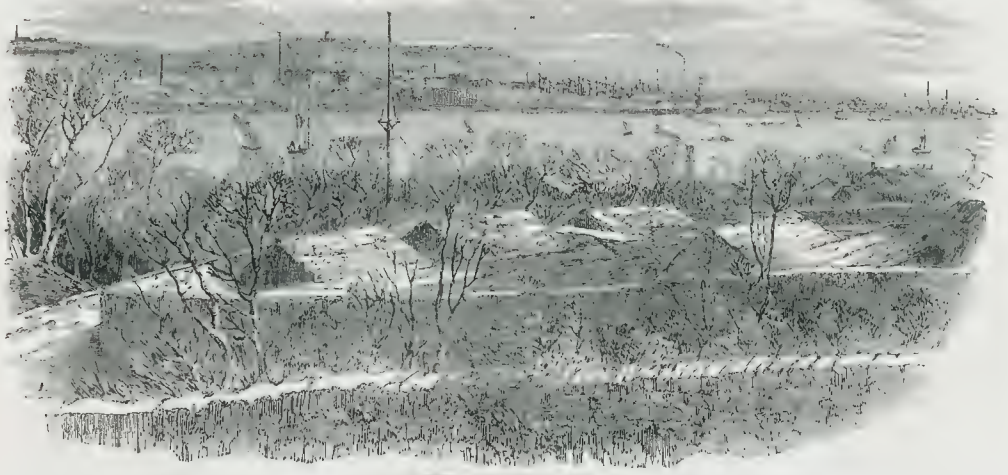
THE inhabitants of Liverpool are just now applying their energies to the removal of a great and imminent danger, of the existence of which they have for a long series of years hardly seemed to be aware.

So little is seen by the ordinary passenger, who seeks a fresh breeze on the opposite shore of the Mersey, of the warehouses in which the vast stores of gunpowder discharged from vessels on entering this port are kept, that, even to our Liverpool friends, the accompanying Sketch will have the freshness and interest of novelty. To those who are but partially acquainted with the noble estuary on whose waters float the hundred argosies whose cargoes form the wealth of Liverpool, we may give a brief description.

Leaving the ferry at Egremont slip, and taking the shore in the direction of New Brighton, and about half way to that fashionable bathing-place, is a collection of houses known as "the Magazines." At the rear of the cottages, on the low cliff, are the Magazines themselves, approached from the shore by a road cut through the cliff, and hardly distinguishable by its circular lodge, curtailed, and gateway in the inner of its two walls. Within the inner inclosure are a number of warehouses, separate, and isolated, if so moderate a precaution may be so termed, by mounds of earth, grass-covered. Round the north side runs the road to Liscard, and from the opposite side of this road, on a slight elevation, the Magazines are seen. To the left is the gaol at Kirkdale, and the East Lancashire Railway, next the church of Everton, the new Clock Tower, and, finally, to the right, the group of buildings in the centre of Liverpool, consisting of the Town-hall, St George's and St Nicholas' Churches, the Telegraph Tower, and the Custom House.

The existence of this danger has been investigated by the Government; and the inquiry, though somewhat tardy, promises to be effective.

The Government Engineer, Lieutenant-Colonel Waters (says the *Liverpoo*



THE LIVERPOOL GUNPOWDER MAGAZINES

Chronicle) must have been as much surprised as others at the apathy which so many thousands of people on both sides of the Mersey have long shown respecting the existence of this horrible nuisance. The carelessness which has existed lightning has not, it appears, been adopted at the Magazines, although, as a contemporary remarks, the fort at the entrance to the river, a short distance from the Magazines, was struck a short time since by the electric spark, which burnt the halyards of the flagstaff. It is really providential, that, in the absence of any necessary precaution, no great calamity has hitherto attended the shipment of gunpowder to and from those Magazines, more especially when we reflect that smacks laden with the powder are passed every hour in the day, and every day in the year, by the numberless steamers that are constantly plying up and down the Mersey, from which sparks and flame are continually emitted. The Magazine itself, with 700 or 800 tons of gunpowder, is left unguarded at night; and it was proved before the Government official that the powder was conveyed into carts, the wheels of which have iron rims, drawn up and down by iron-shod horses. At the time the Magazines were erected the shore on both sides was without houses for miles round; but, with the vast increase of population, with the erection of numerous houses on the Cheshire side, and dockworks on the other, a source of such constant apprehension as a large gunpowder *depôt* ought, years ago, to have been removed. Even now, in all probability, no steps would have been taken, but for the serious explosions in powder that have occurred recently in this country and on the Continent, attended with serious loss of life.

THE BOMBAY RACE CUP.

THIS superb Prize has been purchased by subscription, by the three Services at Bombay, to be contested for next month. It is appropriately

THE BOMBAY RACE-CUP.

formed "The Tria Juncta in Uno Cup." The body is of Etruscan form, and bears two medallions: one is Mars in his chariot, preceded by Fame, crowned by Victory, and attended by the British Lion. On the opposite side is Bellona, in her chariot, attended by the Furies, with flaming torches. On the foot of the Cup is grouped Neptune Riding Triumphant, with Tritons. The surmounting figure personifies Legislation. Figures of Victory, enriched with ornaments, form the handles; the several subjects illustrating the three Services—Civil, Naval, and Military. The Cup is of silver, about 240 ounces weight; and the total height is 33 inches. Value, £300.

MORE NINEVEH SCULPTURES.—A letter has been received from Dr. Layard, dated Bagdad, Nov. 20, 1850, in which, speaking of the sculptures he is sending to the University of Oxford, he says:—"The sculptures, unfortunately, were on the same raft with one of the lions, which was wrecked between this place and Burrah, and above a month elapsing before their recovery, they were too late for the vessel by which I had hoped to forward them to England. They have since, therefore, remained at Burrah with the rest of the antiquities; but I hope to ship them next month, and it is probable they may be with you in the spring." Dr. Layard also regrets that "the sculptures which ought to have been shipped two years ago are still lying on the beach at Burrah, and have suffered irreparable injury." He further says, "I have now deserted Nineveh for the time for Babylon, but have not actually commenced excavations, being without the necessary documents from the Porte, and the country around Bagdad being in an unexampled state of confusion and disorder. In fact, scarcely anyone can leave the gates without a good chance of having his throat cut, or taking a triumphal re-entry in his shirt."

SCENE FROM THE NEW DRAMA OF "BELPHEGOR, THE MOUNTEBANK," AT THE ADELPHI THEATRE.

THE THEATRES &c.

ADELPHI.

The Parisian drama of "Paillasse," by MM. Dennery and Marc Fournier, was produced on Monday, under the title of "Belphegor the Mountebank; or, the Pride of Birth." It has, of course, been much altered and, as announced, "of peculiar construction, full of powerful Adelphi effects." Replete with business and excitement, the drama of "Belphigor" promises to be one of the most successful of the season. The story is exceedingly complicated, and the persons are remarkably eccentric—such, indeed, as the Adelphi performer delights in. Mdme. Celeste, Miss Woolgar, Mr. Webster, Mr. Bedford, and Mr. Wright were admirably fitted. Mr. Webster himself was never seen to more advantage than in *Belphegor*, a wandering mountebank, who, beneath his absurd exterior and bombastic manners, assumed professionally as the means of living, has a good heart and a clear head, and cherishes, in particular, the domestic feelings. His wife, *Madeleine* (Mdme. Celeste), appreciates his many excellent qualities, and his children love him with devoted affection.

The scene opens with a fair in the village of Montrouiade, in honour of the restoration of the Bourbons, in 1814, and here the mountebank arrives with his car, his Merryman and his family. The sports of the fair being over, *Belphegor* and his wife are addressed by the *Chevalier de Rolac* (Mr. O. Smith), who informs them that *Madeleine* is the lost daughter of the *Duke de Montbazon* (Mr. H. Hughes), and coolly proposes that she and her children should forsake her husband, have her marriage dissolved, and so become qualified for admission into her noble family. The proposition is rejected with scorn and indignation. But the *Chevalier* lays plans by which he ultimately prevails. The faithful pair fly to their private lodgings at Angoulême; but here the family emissary penetrates, and, coming at a time when the life of the daughter is despaired of by the mother, he induces *Madeleine* to accept the offer of the *Duke*, for the sake of the child. Great is the despair of *Belphegor*. His son remains faithful to him; but both are in danger of starvation; for the *Duke* sends agents, by whom they are dogged from place to place, and by various persecutions deprived of the means of gaining their livelihood. In the course of his wanderings, however, *Belphegor* arrives at the *Duke's château*, near Bordeaux, just at the moment that his Grace's guests are enjoying a Florentine *fête*, and, being supposed to be one of the masqueraders, addresses them in character, and also performs some of his professional tricks, and finally receives money from the company, in order to carry out the supposed assumption to its natural conclusion. In all this he is prompted and assisted by one *Nina Flora Aphrodite Stiltz* (Miss Woolgar), who, like him, has a chance introduction into high life as the wife of *Ajax*, the "Merryman" (Mr. Wright), supposed to be the son of the *Baron de Montvoulade* (Mr. Paul Bedford). Thus supplied with means, and meeting with the *Chevalier*, from whom he wrings a confession, and some papers, *Belphegor* proceeds to the *Duke's* palace, in search of his wife, disguised as *De Rolac*. His obtains the desired interview; but, it turning out that the *Chevalier* himself is a returned convict, of whom the officers are that instant in pursuit, and the delinquent's papers being found upon *Belphegor*, he (*Belphegor*) is arrested, and tried for a murder committed fifteen years ago. The *Duke*, though sure of his innocence and want of identity, encourages the prosecution, and all would go against him, but that the villain, *De Rolac*, finding a pardon has been obtained from the King (the object being, not to execute *Belphegor*, but to get him out of the way), comes forward to avow his personality. It is then also discovered that *Madeleine* is not the *Duke's* daughter, but that *Belphegor* is really his son, brought up under similar circumstances. The curtain accordingly falls on the happiness of all parties.

The performance is in every respect excellent, and the *mise en scène* perfect, Mr. Webster performed with a force, feeling, and finish which entitle him to the rank of an artist of extraordinary power and skill. We were also greatly delighted with Miss Woolgar. The house was crowded; and the piece must prove immensely attractive. The Illustration shows the opening scene of the drama.

DRURY-LANE.

A sentimental conversational play, in five acts, by Mr. Sullivan, entitled "The Old Love and the New," was produced on Thursday. The house was, we are happy to say, crowded by a fashionable audience assembled to witness a new drama, on which, probably, the fortunes of the theatrical season depended. If the production of a meritorious literary composition, and the approbation of an intelligent auditory, can ensure success, the author and the manager may congratulate themselves on the result of the evening. From the absence of situations and comic scenes, however, it is somewhat difficult to make the interest of the theme intelligible in recital. The plot is of the kind that comes out in the dialogue, not in the action, and its value is dependent more on the style in which it is told than on the manner in which it addresses the eye of the spectator. Its influence lies in the language, which is always good, though seldom brilliant, frequently elegant, and invariably neat. The turns of fortune in the story depend on the agency of an old maid, *Miss Trimmer* (Mrs. Ternan), who has become such in consequence of the neglect in early youth of *Sir Algernon Courtoun, Bart.* (Mr. Cooper), and who, at the opening of the play, deems himself the accepted suitor of one *Camilla Hawthorn* (Mrs. Nisbett). But the young lady has a lover in the baronet's nephew, *Captain*

SCENE FROM THE NEW COMEDY OF "THE OLD LOVE AND THE NEW," AT DRURY-LANE THEATRE.

Sudbury Courtman (Mr. Anderson). In fix our of whom she gives the uncle a refusal! This has the operation of de[stroying] nephew of the uncle's fortune; to restore which, [to] cunning she begins a passion for [the] nephew. Mr. Emery[son] served by a young [lady] according to [the] brilliant of [the] Both turned upon the young [lovers] are compelled to [in the] end of serious, to avoid the consequences [of] mad, who, by making herself known to *Sir Algernon*, turns all his self-torments, and induces him to sanction their [union]. The different developments of it are [given] every bestowed upon it is highly finished [and] one of [the] given in the fourth act. [The] s to the reality of *Camilla*'s attachment for him, [and] produced considerable [interest] of the incidents [in] fond with the [audience] doubt it was indulged in by all from the perception [that] work depended on [the] skill, on its conveyance. Mr. Anderson has little more [than] share of the dialogue, [but] the other hand somewhat [more] some animation into the scenes to which he appears. [The] were called for. The former bowed his acknowledgments [from] box, and the comedy announced for repetition until further [notice].

OLYMPIC.

[A] nature has also produced a new piece of rare merit, by Mr. Wigan, [and] on a former occasion, and entitled "All that Glitters is not Gold." It has a hundred conte[mporary] and pathetic interest [which] is laid in Bristol. [The] is produced by the different characters of the two sons of a contemporary, one being educated as the gentleman of the family, and the other reduced to a fashionable [life] somewhat [resembling] some in the factory works, and has fallen in love with a factory girl [and] ions that the latter (Mrs. [Stirling]) has received an education [above] ry, and was formerly [in] to be [a] governess is recognised [by] mother (Mr. [Anderson]) induced to permit *Martha Gibbs* (that is the poor [factory] girl) to [assume] in order [to] the fitness of their *protegés* for a better station. This period of probation is almost passed when the character of poor *Martha Gibbs* becomes compromised. [A] rescued from the dangerous advances of a libertine [by] ssents to an assignation here [with] the fatal acquaintance of [the] saved by the confession of the guilty part[y]. Miss Louisa Howard performed [the] part of the fashionable and frail lady very [well], and Mrs. Stirling was excee[dingly] pathetic in that of the virtuous and humble girl. Mr. [Wigan] as *Sam Plum*, the mechanical son, with a *patois* and a rough outside, but with a honest and feeling heart, gave a sketch which exhibited him in a new and favourable light. The dialogue of the drama is very effective, and the piece is placed on the stage with all the appropriate appointments of scene, and costume. It was completely successful.

ARCTIC REGIONS.—A Diorama, suggestive of the difficulties of the North-West Passage, is opened in the Lecture Hall of the Western Literary Institution, [Leicester] Square. It consists of numerous dissolving views, illustrative of [the] spots connected with Sir [John] Franklin's expedition. Fiord, near Upper Navik, Port [Leopold], the north east Cape of America, and Prince Regent's Inlet, and other scenes, painted from sketches by Lieutenant Brown, R.N., during the [recent] search in the *Enterprise* and *Investigator*. Portraits of Sir John Franklin and Captain Ross are given in the succession grandeur rendered; the icebergs, [floes], magnificent, appeal both to the senses and the [eyes]. The whole is accompanied by music, and a lecture is delivered by Mr. Malcolm, descriptive of the pictorial objects. The whole is well calculated to please and instruct.

MUSIC.

M. CHARLES GOUNOD'S COMPOSITIONS.

Mention has been frequently made in the columns of the ILLUSTRATED LONDON NEWS of a new composer, named Gounod, whose opera, "Sapho," had been accepted at the Grand Opera in Paris, and is now in preparation. [Of the] M. Gounod, and studied under Reicha, Lesueur, and Halévy. At the age of twenty-one he obtained the second grand prize, in 1837. Two years afterwards, in 1839, Le [Sueur] died, and the first prize, and, in consequence of this distinction went to study at the French academy, established in 1666, in Rome, in the interest of art. After M. Gounod quitted Italy, he travelled in Germany for some years, but he never, it appears, published one print or manuscript of his numerous [works] performances of his works. It was [Mme.] Viardot Garcia, one of the most consummate musicians of the age, as well as the great, yet [ungrateful] recognised by all [those] who have had the opportunity to hear her, who was struck at once with its beauty and originality. [Her] advised [her] to place herself under the tuition and guidance with the genius of M. Gounod, that she did not hesitate to exercise her influence [in] procuring [him] the direction, and to run the hazard of [the] success of [his] first [opera], which was untried and totally unknown [on the] production. An equal degree of [confidence] was displayed by Mr. John Hullah, [when] he placed [upon] the stage of [his] Musical Union [the] sacred compositions, without [any] personal knowledge [of] the composer, produced on Wednesday [last] at [St.] Martin's Hall, the third of his Monthly Concerts of Ancient and Modern Music, [and] proved [that] This act of moral as well as artistical [courage] Hullah entitles him to the [most] [during the series] of concerts, [there] are to be new sacred works by Sterndale Bennett, Macfarren, and Sir F. G. [Oakeley]. [The] interest created in musical circles by Wednesday [night] [of] amateurs, professors, and [others], and the appearance of the composer [himself] excitement [was] [by] two choirs with [an] instrumental accompaniment, [and] [may] be [presumed] [during] four detached pieces [in] [succession], one following the other without any break, the powers of the composer were [manifested] to the greatest [advantage]. It must also be stated that the weakness of the stringed instruments (we mean of course, numerically considered) [in] [comparison] with the [chorus] [was] [to] [a] [great] [extent] and [counterbalanced] [by] [the] [precision] and refinement in many portions, were sensibly felt; but with every [allowance] in the execution, we could not but [feel] [that] the music of M. Gounod [is] [of] a [master] [mind] [and] [possesses] [the] qualities which were found true to classic [principles], [striking], without eccentricity, [pure], with the utmost [art] in [its] [construction], with breadth of [design] and imposing masses of sound [in] [the] [choruses], [varying] [from] massive and rich [in] harmony [to] [the] most [elaborate] [contrapuntal] [combinations], [and] [with] [a] [gradual] [working] [up] of [the] [most] [impressive] and [imposing] [accents] of Divine [power] [on] the [tremendous] [Day] of [Judgment]. [The] [most] [powerful] [contrast] [was] [afforded] [by] the [*a cappella*] [*word-painting*], [in] [the] [setting] [of] [the] [words] ["Et] [in] [terra] [pax]], [in] the genius of the composer [has] preserved the sacred character of the Church [music], [while] [in] the style, the [author's] [individuality] [is] [not] [lost] [sight] [of], [but] [is] [not] [exquisitely] [melodic] [—] [at] [the] [same] [time] [the] [heart] [is] [touched] [with] [sympathy]. There is nothing [sombre] or [gloomy] [in] [the] [effects] [which] [are] [produced] [by] [the] [simplest] [forms] [—] [there] [is] [a] [charming] [naïveté] [in] [the] [treatment], reminding one of the peculiar phrases of melody of [Haydn]. [It] [is] [impossible] [to] [say] [which] [of] [the] [pieces] it might have been sung more smoothly and steadily. The next piece in order of succession, the "Sanctus," with tenor solo, [and] [chorus], created such a sensation [that] [it] was encored: it is [also] [a] very [melodious] [piece], [the] [accompaniments] [are] [quite] [picturesque], and [the] [whole] [is] of marked originality. The [Hosanna], [the] [most] [powerful] [and] [jubilant] [piece] [in] [the] [work], could be in finer contrast than the soprano solo (very [beautifully] sung by Miss Rearns) in the "Benedictus." With the delicate [accompaniment] this *canto fermo* told powerfully. On the whole, the individuality of the composer was thoroughly proved by these four works, the least effective and successful of which was the "Peter the Hermit" cantata, the stringed [parts] [were] quite unable to compete with the martial brass [instruments]. One remarkable point about Gounod is, that his music can [never] be [mistaken] for that of no previous models. It is [entirely] free from [the] [affected] [and] [artificial] [style] [that] [characterises] [the] [works] [of] [many] [composers], and charge him with the desire to avoid plagiarism, a very odd charge, assuredly to a composer in this age of imitation and appropriation. [Indeed] the [originality] of [the] [present] [composer] is [assuredly] [the] [result] of [his] [own] [individuality], and [not] [the] [possession] of [such] [a] [qualification], we shall look forward with [confidence] to his future [career].

In addition to the [pieces] we have referred to, [the] [oboe] [concerto] [by] [Mr.] [Lindley], [and] [two] [pianoforte] [pieces] excellently played by Messrs. Nicholson and Horton); the [first] [scene] from Purcell [—] [the] [letter] [scene] from Mozart's "Nozze di Figaro," Miss [Rainforth] [and] [Mr.] [Sidelsohn's] "Walpurgis Night," were [likewise] [performed] [at] [the] [Musical] [Union] [and] [will] be given in the fourth concert.

FOREIGN MUSICAL NEWS.

(From our own Correspondent.)

PARIS, Wednesday.

One of the most interesting events in the annals took place last Thursday [night] at the Théâtre [Italien]. [The] [new] [lessee] [and] [private] director, presented for the first time [to] [the] [Parisian] [public], Mdlle. Caroline Duprez, the daughter of [the] [celebrated] tenor of [the] [Académie]. The interest of [the] [opportunity], as the [French] [critics] [say], was increased by [the] co-operation of [the] father in the [selection] [of] [the] [piece] [and] [the] [character] selected for the [début]. [It] [was] [expressly] written by [the] [composer] for Duprez when the latter was the [star] of the San Carlo at Naples. [The] [piece] [was] [not] [successful]. [The] French [drama], Opera, as the successor of Nourrit [last] year he took his farewell [of] [the] [Académie] [and] [made] [his] [appearance] [at] [Brussels] [and] [Milan] [as] *Arnoux*, *Tancrède*, *Le Lazzi*, *Otello*, &c. He is still in the prime of life, having been born in Paris in 1805. Take him for all in all he was the greatest tenor ever heard on any stage; Rubini, Donzelli, Nourrit, and [Mario] [were] unquestionably [great] [vocalities], but what one of them [ever] [combined] such lofty and intensely dramatic [powers] as Duprez [possessed]? [In] the Grand Opera, he has devoted [himself] to tuition. On e of the best [pupils] [he] [ever] [had] [was] [Mme.] [Gras], from [whom] [he] [has] [now] [parted]. [She] [made] [her] [first] [appearance] at an early age, [and] great musical aptitude, and, with the lessons of [her] master, it may be conceived that she made rapid progress. In a considerable tour in the French departments, and in some parts of Germany, Mdlle. Duprez sang on the [same] [boards] [as] [Mme.] [Gras], [and] [displayed] [that] [her] [singing] [here] [in] [Paris], [when] [in] public symp[athy] was strong on the [side] [of] [the] [latter], [was] [carried] away by the excitement of such a [contest]. On Thursday, when the disposition was naturally [even] [inclining] on the part of the general public to make the *début* a very [favourable] one, there can be no question, that, even without the name of Duprez [to] [support] [her], [she] [would] [have] [made] a favourable appearance in very [prepossessing], she is not yet nineteen years of age; [her] [figure] [is] [slight], [her] [features] [are] [exquisitely] [neat] and [pleasing]. There was no end to the entreaties of the audience, who insisted on her appearing before the curtain, after *Edgardo*'s death, although her father [pointed] out that [it] [was] [not] [customary] [for] [the] [artiste] [who] [was] brought with a house [to] [a] [close] [to] [appear] [in] [the] [*divertissement*] [of] *Lucca*'s [arrangement]. Duprez was very nervous throughout the performance, but he had a fine moments, when his genius would tower above his physical [debility]. [The] [orchestra] [and] [chorus] [were] [under] the [direction] [of] [Mons.] [Deloffre], [who] [conducted] [with] [his] [usual] [ability]. [The] [scenery] [and] [decorations] [were] [tolerable], [but] [the] [dresses] [were] [old] [and] [worn]. [The] [audience] [recollected] and compared the night with that when Garcia (father of Viardot) appeared [in] [the] [same] [part] and his daughter, the [present] Madame Viardot, made her *début* as *Desdemona*. There will be [no] [more] [performances] [of] Mdlle. Duprez in other parts, but there can be no reason to have any [doubt] as to the brilliancy of her future career. With the exception of Sontag, the management [has] [only] had three [operas] in the *débuts* of the new *artistes* this [season]; the tenor, has disappeared and the new basses and baritones, soprano, and contralto have made no great impression; but, with Sontag and Mlle. Duprez, Calzolari and Labache, there will be attraction enough to bring the campaign to a satisfactory conclusion for the [season].

Auber's "Enfant Prodigue" has attained the fourteenth representation; but the Director has found the necessity of hastening the production of the new ballet, "Paquerette," which will be brought out this week. It has also been resolved by M. Roqueplan that Rosenhain's two-act opera, "Le Démon de la Nuit," shall be forthwith produced, the composer having been kept waiting some [two] years. M. Gounod's new op[era] is [written] for Madame Viardot, will, therefore, be postponed until that [lady]'s return from [Germany]. In the meanwhile, M. Gounod has gone to London, to be present at the performance of some of his sacred compositions, by one of your Choral Societies.

The celebrated Conservatoire Concerts (or Concerts) performances commenced last Sunday; M. Girard conducted. Madame Pleyel, the queen of *pianistes*, is making a tour in the south of France. Her execution is more marvellous than ever.

The Italian opera is flourishing in Madrid. [The] Rossini's "Barbe Bleue" has been unbounded [success]. [The] increased by giving [to] [Mme.] *Rosina*, Mdlle. Albini; Falcon, Mdlle. Rodi; *Isaura*, Herr Formes; the *Count*, Signor Gardoni; and *Figaro*, the mercurial and unrivalled Ronconi. Such were the spurts of the latter, that, whilst the auditory were convulsed with laughter, the stage scenes were sometimes brought to a stand-still. Ronconi's colleagues being unable to resist the infection of the general merriment.

MUSICAL EVENTS

Under the direction of Mr. [Lucas] assisted by Misses Poole and Messent, Mdlle. Lavanzi Messrs. Herbert[son], [Lucas], and Mr. Sou[thwell] concerts), and Mr. [Land] [Mr.] G. Cutler (pianist), the Surrey Chamber Concerts were commenced last Monday at the Walworth Lecture Hall.

Mr. G. Buck and gave his musical entertainment, "The Market Town," at the Marylebone Institution last Monday evening.

Mr. Albert Smith repeated his "Overland Mail" last Monday, at the Music Hall, Store-street.

At the Monday Evening Musical Entertainments, on the 13th, at the Holborn National Hall, the vocalists were Miss [Poole], Miss Vinning, Messrs. Cummings, Gaston, W. G. Rose, and J. H. Roberts; Herr [Hermann] (violinist), and Herr A. Mennen (pianist).

Next Monday [the] second Harmonic Society will repeat Mendelssohn's "Elijah," with Miss Birch, Dolby, Kenneth, Eliza Birch, Messrs. [Lockey] and Phillips, as principal singers.

The Royal Academy of Music re-opens next Monday, after the Christmas vacation.

Mr. Henry Russell is preparing a new Musical Entertainment, to be combined with pictori[al illustrations].

Mdlle. Angri, Mdlle. [Lagrua], Signor [Belletti], Signor F. and Madame F. Lablache, Miss Poole, Tamburini, [Jun.], Stockhausen, and Molique, will perform at Baile's concert, at Exeter Hall, on the 2[7th] inst.

Mr. Benedict has organised a [series] of concerts in the [principal] provinces, for [which] [are] the incomparable Grisi, with our great tenor, Sims Reeves, assisted by Herr Mengis, Signor Ricciardi, Signor Patoni, Signor Galli, M. Sala[mon], Piatti, and [Miss] Dolby, Kenneth, Eliza Birch, Messrs. [Lockey] and Phillips, as principal singers.

Sala[mon], Piatti, and [Miss] Dolby, Kenneth, Eliza Birch, Messrs. [Lockey] and Phillips, as principal singers.

Miss R. Isaacs, Mr Borrani[o], Mr [Howe]rs are singing at Chatteris, an in English operas.

Liszt has been playing at Halle's Classical *Soirées*, in Manchester.

There will be two Musical Festivals (at Norwich, and Worcester) this year.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding the [continuance] of the war, by the settlement of the Holstein question, the English Market has re[mained] heavy, with a mere [nominal] fluctuation in prices [during] was the day appointed for the settlement of the month, [but] [owing] to the opening of the books for transfer at the Bank of England. During the month, the fluctuation in Consols has been about one [per] [cent.], [the] price was at the opening of the Account the quotation [was] 96⅝ ⅜ for [Money] and [Account], and [declined] ; the [lowest] 96⅛ [was] [reached] [on] [the] [3rd] [inst.], [the] [range] has been between 96⅜ ⅝ [and] [96⅛] [⅜]. [The] [Three per Cents] [Reduced] [were] [done] [at] [96⅝] [⅞]. In the Foreign Exchanges as well as the demand for money [has] [been] [moderate]. [The] [Exchequer] Bills have varied in price only a few shillings, and India Bond are about previous quotations. At the close of the week [the] [business] was limited and prices heavy, the following being the last quoted [prices]: [Bank] [Stock], [—]; [3 per Cents] [Reduced], [—]; [3 per Cents] [Consols], 96⅜; New 3½ per Cent [Annuities], [—]; [3½ per Cents] [Reduced], [—]; [New] [3 per Cents], [—]; [India] [Stock], [—]; [Bills], [—]; [Exchequer] Bills, £1000, June, 58 pm; Ditto £500, June, 57 pm; Ditto, Small, [—]; [India] [Bonds], [—]; [Long] [Annuities], [—].

The principal feature in the Foreign Market has been the settlement of the [Russian] [Loan], [the] [payment] [occurring] [a] [number] [of] [days] [earlier] [than] [usual]. [The] [Spanish] [Market] [has] [been] [very] [heavy], [over] [to] [the] [next] [Account] [about] ½ per cent. [Peruvian] [Bonds] [have] [continuation] [advanced] [to] [79]. [The] [Account] [in] [the] [Russian] [Five per Cents] [are] [steady], [the] [business] [of] [the] [week] [has] [been] [limited] [in] [the] [foreign] [funds] [generally], [prices] [scarcely] [fluctuating].

The following are the closing prices of the Foreign Stocks:—Brazilian Five per Cents, [—]; Buenos Ayres Six per Cents, [—]; Chilian Six per Cents, [—]; Columbian Deferred, [—]; Danish Bonds, [—]; Dutch Two-and-a-Half per Cents, 64; Ditto Certificates, [—]; Ecuador Bonds, [—]; Mexican, [—]; New Spanish Deferred, [—]; Ditto Account, 19; Peruvian Four per Cents, 85; Ditto [—]; Portuguese Four per Cents, 1841, 39½; Ditto, Account, 35½; Portuguese Five per Cents, 1840, 17½; Ditto Small, 16½; Russian Five per Cents, 1822, [—]; Ditto Five per Cents, 1828, [—]; Ditto Five per Cents, 1839, [—]; Ditto Five per Cents, 1840, 17½; Ditto Small, 16½; Spanish, Five per Cent., 19½; Ditto Account, 19; Spanish Three per Cents, [—]; Ditto Account, [—]; Spanish Five per Cent., Annuity, [—]; Spanish Passive, 5; Ditto Certificates, 4½; Swedish Five per Cents, [—]; Turkish Six per Cents, [—]; Venezuela Deferred, [—]; Ditto Account, [—].

Yesterday was the settlement for the [Russian] [Loan], [the] [rate] of [continuation] [was] [not] so extravagant as on the last occasion. At the closing of the Account some finances prevailed, and the market has been heavy since meetings, *bond fide* [purchasers] [are] [not] [pressing] [on] [the] [market].

The following are the closing prices of the Railway Shares:—Caledonian, 10½; [—]; Eastern Counties, [—]; Edinburgh and Glasgow, [—]; (£7 17s.), Seven per Cent Pref., [—]; Eastern Counties, [—]; Extension, [—]; Fifty Shares, [—]; Fifty Shares, Six per Cent., 1½; Do., Five per Cent., [—]; Great Northern, [—]; Great Western, [—]; Half Shares, [—]; Hull and Selby, 101; Lancashire [—]; Leeds and Bradford, 95; London and Blackwall, [—]; London and Brighton, [—]; London and North-Western, [—]; Northern and Eastern, [—]; Ditto, Fifths, 1½; Ditto, £10 Shares, [—]; Ditto, £10 Shares, [—]; Newmarket, [—]; North British, 8½; Ditto, Preference, [—]; Scottish Central, [—]; Scottish Midland Junction, [—]; Shrewsbury and Chester (Nor. W. Min.), 8 per Cent., Preference, 13½; Shrewsbury and Hereford, [—]; Waterford and Kilkenny, 3½; York, Newcastle, and Berwick, 18; York and North Midland, [—]; York, Newcastle, and Berwick, [—]; Ditto Preference, 14½; Paris and Rouen, 7½; Paris and Strasbourg, [—]; Sambre and Meuse, [—].

SATURDAY MORNING.—Consols opened flatly yesterday, but improved towards the close of business. [The] last quotation was 96⅝ ⅞ for Money, and 96⅞ ⅞ for the February Account. Exchequer Bills, 55 56 pm. Scarcely any business was done in the Foreign Market, and shares were quiet.

THE MARKETS.

CORN EXCHANGE (Friday).—During the present week the arrivals of English wheat, our market constantly have been very moderate, viz. 1600 quarters, chiefly from Essex, and in very middling condition, arising from the prevailing damp weather. The supply from [abroad] [is] [by] [land] [carriage] [limited] [hence] [to] [about] [fifteen] [sacks] [and] [ditto] [wet]. [The] [prices] [quite] [equal] [to] [those] [obtained] [on] [Monday] [last]. [The] [week's] [imports] [of] [foreign] [grain] [into] [London] [have] [been] [on] [the] [whole], the importers of [wheat] [and] [flour] [very] [large].

PHILOPERISTERON SOCIETY.

This Society—which, as the Introduction to its Rules states, was formed for the "Improvement of the Breed, and the Exhibition of every Variety of Pigeon worthy of the attention of the Fancier"—held its anniversary meeting and Annual Public Exhibition at Anderton's Hotel, Fleet-street, on Tuesday last. The room, from its being constructed with a central skylight, was favourable to the exhibition of the beautiful plumage of those very interesting and favourite birds—Pigeons; but it must be confessed, that it was too small for the accommodation of the large number of visitors on the occasion, particularly as the meeting was graced by a number of ladies. The company appeared much delighted with the exhibition, and many gentleman amateurs present expressed surprise that they had been, up to the present increasing in number and extending the humanising influence of the time, ignorant of the existence of such a respectable society, and evinced a strong desire to join it. The Society may, therefore, calculate upon love of ornithology. Nearly all the species, indigenous and imported, were exhibited. The Tumbler, in all its beautiful varieties, of Almonds, black, yellow, red, and agate Mottles; and Baldheads and Beards (short-faced) in their several varieties; Carriers, in their varieties of black, dun, and blue; Pouters, black, yellow, blue, and red-pieds, and an assemblage under the general name of "Toys," comprising the species and varieties of Jacobins, Trumpeters, Magpies, Barbs, Owls, Turbits, Helmets, Spots, Swallows, Fan-tails or Shakers, Brunswickers, the Porcelain from the West Indies, with the Archangel, Persian, and Australasian birds. All were in excellent feather and fine show; of which we have engraved specimens.

FINE ARTS.

"A CORN-FIELD—EVENING." PAINTED BY C. DAVIDSON.

This Picture, from the Exhibition of Modern Art, in Pall Mall East, exemplifies in a very favourable manner the zeal with which the artist has studied nature. One great claim of this drawing, besides in its colour, in the warmth and embrowned gold of the low-toned light which is suffused over the whole scene. A certain want of balance in the distribution of the materials of this drawing, which is rather prominently apparent (but unavoidably so) in our print, is not felt in looking at the original picture, on account of the interest which is attached to the upper part of the sky, from the delicate rendering of multitudes of luminous bars of amber-coloured cirrus cloud. The stillness of the evening hour and atmosphere is given with fine feeling; and the elaborate yet unaffected execution of the whole deserves high commendation.

EXHIBITION OF MODERN BRITISH ART.—A CORN-FIELD—EVENING.—PAINTED BY C. DAVIDSON.

THE ILLUSTRATED LONDON NEWS.

No. 466.—VOL. XVIII.] FOR THE WEEK ENDING SATURDAY, JANUARY 25, 1851. [SIXPENCE.

THE WINDOW-TAX AND THE EXCISE.

If we are to believe the oracular announcements of the journals that either are, or pretend to be, in the confidence of the Ministry, the Chancellor of the Exchequer has resolved to abolish the Window-Tax. It is stated, also, that the financial surplus not being sufficiently large to justify the Government in relinquishing the whole sum which it yields to the Treasury, about a third of the amount is to be re-imposed in the shape of a House-Tax. Whether these announcements may be considered official or not, the opponents of the tax seem to have determined not to rely too implicitly upon their authenticity. They still believe that a necessity exists for agitating against it. The walls of the metropolis are therefore covered with placards, announcing the meetings of boroughs and parishes to protest against the longer continuance of the impost, with the object, no doubt, of strengthening the Chancellor of the Exchequer in a good resolution, if he have already formed it, or of inducing him to do so if he have not. To be disembarrassed of a tax of any kind is always a blessing; but to get rid of one so injurious to the amenity of our streets and houses, and to the health and cheerfulness of the community, as that upon windows, is doubly agreeable. We shall greatly rejoice, therefore, if the Chancellor of the Exchequer be in the position and in the mood to grant the middle and upper classes this great boon—even should the sweetness of the cup be slightly embittered by the infusion of such a drop of gall as the imposition of a House-Tax.

But if it should turn out, upon due investigation of the national resources for the year 1851, that the Chancellor of the Exchequer cannot afford to relinquish more than one tax—and if the Government be not prepared to commence that great work which awaits the practical reformer of our age—we mean the total revision and re-adjustment of our fiscal system—we think, obnoxious as the Window Duties are, that they might remain for another twelvemonth, and allow a more urgent benefit to be accorded to us. Bad as they are, there are other taxes quite as unpopular, and which interfere in a far greater degree with the social comfort, as well as the moral health, of the most numerous classes of the people. The Window Duties fall exclusively upon the upper and middle classes. But even the middle classes are, to a certain extent, relieved; for shops, warehouses, and other places of business, and farm buildings, no inconsiderable portion of the tenements requiring windows, are altogether exempt. The people, generally so called, are but slightly affected by the tax, inasmuch as no house containing less than eight windows is chargeable. The tax in reality lies upon the middle and upper classes; and it is for this reason—bad as the tax is, and in every way to be condemned—that we think the Government should follow in the steps of the great reformer and statesman, now unhappily no longer amongst us, and free industry in the first place. The abolition of the excise duties upon paper, and after paper, upon soap, seems to us to have a stronger and a prior claim upon the attention of a wise and far-seeing Government. If, by a bold project of financial reform, the Russell Administration should be enabled to dispense with the Window Taxes and the Excise Duties upon Paper and Soap, all at one time, and by one beneficent stroke of the pen, the country would no doubt consent to some more equitable tax to meet any temporary deficiency that might be created, even if it went to the extent of a House-Tax calculated to bring in as large a sum as the abolished Window Duties. But, if the Government cannot or will not undertake such a task, and will only do one thing at a time, we think that, in strict justice, as well as in sound policy, the Paper and Soap Duties should have the preference. Not only would the middle and upper classes be sensibly benefitted by the repeal of those taxes and by the cheapness of two highly necessary, and, indeed, indispensable articles; but the great bulk of the people would derive from their repeal a benefit which would in nowise accrue to them from the repeal of the Window-Tax. In these times of change and perplexity, when revolution stalks abroad, and social anarchy menaces the uninstructed populations of Europe; in these times, when Popery and Protestantism have entered the lists, to do battle for the mastery of Christendom, it is unwise for such a Government as that of Great Britain to perpetuate the ignorance of the masses by keeping up impediments to their instruction. Order and justice, and civil and religious liberty have no greater supporters and friends than the printing-press; and if paper be taxed to such an extent as to place healthy literature out of the reach of the young and rising manhood of our day, the printing-press cannot accomplish the work that might be expected of it. The class whom it would most benefit, and who most urgently need its teachings, are, by reason of this fiscal oppression, either shut out altogether from the blessings of literature, or are fed with moral garbage, to their own degradation, and to the imminent hazard, in a future time, of all the institutions of the State. On this ground alone, and quite independently of the fact that the repeal of the duty would give employment to at least a quarter of a million of persons, in addition to those now engaged in the manufacture—this question should recommend itself to the earnest attention of our statesmen of all parties. If the middle and upper classes desire to have cheap and good literature for themselves; if they desire to lessen the burden of poor-rates and prison-rates, and to see a well-employed and moral population growing up around them; if the friends of Protestantism desire to combat Romanism by the most effectual of all weapons—knowledge, and the dissemination of free opinion—they will unite to urge upon the Government the necessity and duty of untaxing that commodity, without a large and cheap supply of which the education and enlightenment of the people is impossible. The question cannot be too strongly urged, or too constantly kept before the public; and it is because we see too much of a tendency to be contented with the first boon offered, and to be thankful for the repeal of the Window-Tax, unaccompanied by any other remission of a more onerous and mischievous

[COLOURED EDITION.] PROCESSION AT SAN FRANCISCO, IN CELEBRATION OF THE ADMISSION OF CALIFORNIA INTO THE AMERICAN UNION.—(SEE NEXT PAGE.)

burden, that, without at all denying the policy of abolishing an impost that so injuriously affects the middle and upper classes, we would appeal to the upper and middle classes on behalf of the people. Whatever deprives the working classes of a legitimate field for the exercise of their honest industry—whatever tends to keep them in ignorance—combines to throw a burden on the classes above them.

We by no means desire to discourage the agitation for a repeal of the Window Duties, but we do most earnestly desire that the more serious question of the abolition of the Excise Duties upon Paper should not be lost sight of, and that the apathy of any portion of the public upon this subject should not encourage the Government to do less than it might do. All Excise Duties are necessarily more injurious and vexatious in the operation than any other form of taxation, direct or indirect. The Excise restrictions upon glass, now happily removed, by the wise intervention of Sir Robert Peel, were a striking proof of this fact; and every one knows the good effects which have followed their removal. We therefore hope that the Government and the Legislature will find the means to free us, during the Session, of those Excise restrictions which affect such an important article as paper, and of the Soap and Window Duties along with them. If, however, this is too much to expect, we must of course take the good that is provided for us, whatever it may be. We shall, however, retain our opinion —if the abolition of the Window-Tax be the only boon intended —that it would have been a wiser step on the part of the Government, and a greater benefit to all classes, to have freed industry and knowledge from taxation. Free-Trade, and the Exhibition of Industry in a Palace built of untaxed glass, would be appropriately recorded on untaxed paper. Perhaps, after all, we have, in these observations, been fighting with a shadow, and the Chancellor of the Exchequer's Budget will be of the great wonder of 1851. At all events we shall continue to hope—till we hear an authoritative statement to the contrary—that we shall have to date from this year the period of untaxed knowledge as well as of untaxed light.

THE WINDOW TAX.

THE expectation that a considerable surplus of revenue will be in the hands of the Chancellor of the Exchequer at the close of the financial year in April, excites the active exertions of all who regard themselves as especially aggrieved by any one particular impost. Accordingly, we find the claimants for the repeal of the obnoxious Window Duty on the alert in a quarter where the agitation of a grievance is always nursed with peculiar goodwill—the borough of Marylebone.

In addition to the meetings already held in that and other districts of the metropolis, there were two convened this week—one on Monday, and the other on Wednesday—with the view of effecting the unconditional and total repeal of this fiscal burden, without any compromise of a modified base-tax, which is understood to be the intention of the Chancellor of the Exchequer to propose to the next budget.

The first meeting was held in the yard attached to Marylebone workhouse, and was attended by deputations from Islington, St. Anne's, and others of the metropolitan parishes; that from Islington came in procession, many of the members wearing blue sashes, on which were inscribed in large white letters, "Unconditional Repeal," "No surrender;" and the carriages which conveyed the deputies were decorated with bills bearing similar mottoes.

There were on the platform several members of Parliament, including Sir John Duke, Bart., Sir De Lacy Evans, Mr. Mowatt, Mr. W. Williams, Mr. Lushington, Lord Dudley Stuart, &c.

Mr. Nottidge, the chairman, shortly explained the object of the meeting, and read letters of apology for non-attendance from Lord John Russell (laughter), Mr. Duncombe, Mr. Mr. Wakley, M.P.; Sir Benjamin Hall, M.P.; the Lord Mayor of York (Mr. Meek); Mr. Ewart, M.P.; Mr. Hume, M.P.; and other gentlemen.

Mr. Heath, who moved the first resolution, observed that this was a popular meeting, and although they might expect to be addressed by noblemen and men of rank, yet it had been determined that the question should be carried by the people, not by the Earl of Hales or Sir Benjamin Barsacres. (Laughter.) The resolution was as follows:—

"That the Window-tax is wrong in principle, unnatural in character, partial, oppressive, and unfair in operation; most repugnant to the feelings of the community, and a direct incentive of the morals of the people, inasmuch as it is the only means by which a large class of the community, individually, total, and collectively, can avoid the payment of their moral proportion of this odious tax, and not to compromise, commutation or mock base-tax proposed, in any manner whatsoever."

Mr. Mitchell, of Oxford-street, in seconding the resolution, pointed out the three-fold considerations to be kept constantly in view by the promoters of the repeal—viz. the injury resulting to the public health from the operation of the tax; the danger of their being lulled into a false security of success and a relaxation of their efforts by the promised compromise of the Chancellor of the Exchequer; and the risk of their object being defeated if they suffered themselves to be diverted by the din and confusion of the expected Papal Aggression debates.

On these several points he observed that they were opposed to the continuance of this impost because it was detrimental, to the health, cleanliness, and morals of the people, and because it was unequal in its pressure. (Cheers.) But then it was said they were beating the air—that the tax had already been semi-officially announced as to be abolished. For his part, he (Mr. Mitchell) was not to trust too much to Ministerial promises; and he was afraid that it was intended to distract public attention by long-winded debates on the Papal Aggression ("Hear, hear," and laughter.) He was prepared in the ensuing session to hear

> More grave their doctrines orthodox,
> By apostolic blows and knocks

(Laughter.) He was prepared to witness an attempt to set different denominations by the ears, and to set gracious zealots to fight for different forms of faith (hear hear), and it became them, therefore, to take care that their demands were not drowned in the din of this controversy (Cheers.) But he hoped they would take care that that should not be the case, and he had no doubt they would be successful. (Cheers.)

Lord Dudley Stuart, M.P., Sir De Lacy Evans, M.P., and Mr. W. Williams, M.P., having spoken in support of the resolution, it was unanimously agreed to, as also was a petition to Parliament founded upon it.

It was also resolved, amidst enthusiastic cheers,

That, as it is a principle of the British constitution that no supplies are to be voted by Parliament until grievances are redressed, this meeting, considering the Window-Tax to be an intolerable grievance, respectfully requests that, in case the Window Tax be not repealed, the members of this borough do use their influence to withhold the supplies.

That, should it happen that Parliament may not comply with the expressed wishes of the people, by giving an immediate, total, and unconditional repeal of the window tax (cheers), but propose some commutation or modification thereof, this meeting is resolved, by requests that the constituties now formed in this parish will continue their strings and their [illegible] that what ulterior proceedings may be necessary to obtain a total and immediate repeal of the window-tax, this meeting hereby pledging itself to support the committee in all things necessary to obtain their object.

The petition is to be presented to the House of Commons by Lord Dudley Stuart.

The second meeting was held in the Music-Hall, Store-street, and consisted chiefly of inhabitants of the united parishes of St. Giles and St. George, Bloomsbury. Mr. R. B. Cabbell, M.P., presided. The principal speakers were Mr. Wakley, M.P., Mr. Jacob Bell, M.P., Mr. Churchwarden George, &c. (Reports), but we were not quite so strong a rampant as at the first meeting; they were merely declaratory of the oppressive and injurious nature of the tax, especially on the poor, and demanding its repeal in a petition to Parliament agreed to on the occasion.

THE TAXES ON KNOWLEDGE.

On Monday last, the annual meeting of the association which was formed about a year back at Manchester, for the purpose of effecting the repeal of the Paper, Stamp, and Advertisement Duties, was held at the Public-office in that town; Mr. Scholefield, M.P., in the chair.

The efforts of the association have been directed (as stated in the report) to the dissemination of information by means of tracts illustrative of the injurious operation of those duties, and reports upon the diffusion of general education and instruction amongst the people.

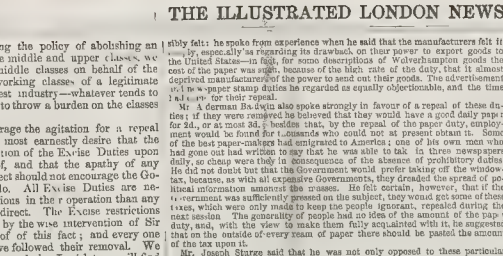
The chairman addressed the meeting at considerable length. He observed, admitting that taxes were never welcome, the next consideration was how they should be imposed, so as to make them a burthen on the general body of consumers. It was not to be wondered at that, in times of war, taxes should have been laid on rather inconsiderately; but the time has now arrived (in fact it had arrived long since) when it was the duty of the Government to see that the taxes were laid on the right shoulder. It was all very well for the weight of the taxes to be compensated, as that the burthen did not fall where it ought to fall, namely, on the property instead of the industry of the country. The tax on property was something like 3d. per cent.; whereas upon tea, sugar, soap, paper, and other articles of large consumption, it was as high as 30, 50, and even 75 per cent. Take the paper tax itself, which was found to be most injurious in its operation, and for whilst [illegible] added to it all discouragement to the publication of the most expensive class of books, it pressed most injuriously and heavily on works issued in a cheap form, and was consequently [illegible] against the issue of publications that would by their general circulation greatly tend to the diffusion of sound and useful information among the people. It was not only here that the grievous character of the paper duty was most forcibly felt: he spoke from experience when he said that the manufacturers felt it deeply, especially as regarding its drawback on their power to export goods to the United States—in fact, for some descriptions of Wolverhampton goods the cost of the paper was such, because of the high rate of the duty, that it almost deprived manufacturers of the power to send out their goods. The advertisement and newspaper stamp duties he regarded as equally objectionable, and the time had arrived for their repeal.

Mr. Bazley Bazley also spoke strongly in favour of a repeal of these duties; if they were removed he believed that they would have a good daily paper for 2d., or at most 3d.; besides that, by the repeal of the paper duty, employment would be found for thousands who could not at present obtain it. Some of the best paper-makers had emigrated to America; one of his own men who had gone out had written to say that he was able to talk in three newspapers daily, so cheap were they in consequence of the absence of prohibitory duties. He did not doubt but that the Government would prefer taking off the window-tax, because, as with all expensive Governments, they dreaded the spread of political information amongst the masses. He felt certain, however, that if the Government was sufficiently pressed on the subject, they would get some of these taxes, which were only made to keep the people ignorant, repealed during the next session. The generality people had no idea of the amount of the paper duty, and, with the view to make them fully acquainted with it, he suggested that on the outside of every ream of paper there should be pasted the amount of the tax upon it.

Mr. Joseph Sturge said that he was not only opposed to these particular taxes, but to every indirect tax. If he could have his way, he would have a property-tax to-morrow; at the same time, he looked upon the newspaper and paper duties as the worst amongst all the taxes, therefore he was most strongly opposed to them. He suggested that twenty members of Parliament should immediately wait upon the Chancellor of the Exchequer, and urge the repeal of all the taxes upon knowledge.

Mr. Alderman Hawkes, Mr. Councillor Alday, and other gentlemen having spoken warmly in favour of the abolition of these duties, the report was adopted; Mr. Scholefield, M.P., was re-appointed President, and a committee elected to carry out the objects of the association during the ensuing year.

CELEBRATION OF THE BIRTHDAY OF THE STATE OF CALIFORNIA



THE street spectacle represented in the accompanying Engraving illustrates more vividly than the columns of written description, the rapid march of California from an unexplored desert to the rank of a State of the American Union, in celebration of whose birth this inspiring scene was enacted. Three years ago, "the shores of the Pacific, about San Francisco (says a writer in the *Times*) were scantily tenanted by a few scores of Russians and Spaniards, who lived without rivalry or suspicion, and who scarcely waited for the sanction of their respective governments to effect such changes as convenience might suggest. Nobody knew or cared whether the enormous tract beyond contained inhabitants or not, and a journey across its plains was considered as remarkable as a journey through Central Africa. If we were to speak at this moment of the province of Sonora, it is probable that nine-tenths of our readers would be without any distinct conception of the locality referred to, yet Sonora is the next county to California, and in 1847 one region was about as well known as the other. This remote district is now the seat of a powerful independent State—a State which has been founded and constituted, from beginning to end, in about thirty months' time, and which, though junior in political birth even to the French Republic, has obtained a formal recognition of its existence, and is exercising all the functions of an organised commonwealth. The treasures of California have hitherto wrought their chief wonders in the land of their production, and, though they have not yet materially affected the currency of Europe, they have called into being at the extremities of the Pacific a community unparalleled in the manifold fusions of races or combinations of men."

On the 9th of October was the day selected by the Californians as the birthday of their State—as a festival to be celebrated in honour of their admission to the American Union. As the day broke upon San Francisco, the American banner, augmented by an additional star, was hoisted in the centre of the town, under the "general salute" of artillery. The echoes were taken up by the ships in the harbour, and the flags of every country under the sun found their appropriate place. Then commenced the procession, which may have been too theatrical for some tastes, but was sanctioned more by the enthusiasm of the people than by the taste of the Municipal Authorities and Guild; and then his staff, in sky blue and silver. Next fell away the "United Californians" who would, we are told, "have been stopped had they not been [illegible]." They were succeeded by the "Californian Pioneers," who carried a banner of white satin fringed with gold, and charged with a device exhibiting a pioneer just landed, who strikes off a piece of rock with his hammer, and discovers the State Seal of the community underneath. From mouth issues the declamatory motto of the Great (or, small) Seal; while by his side stands a native in a genuine attitude of dismay. After these followed "the Guards," commanded by Captain Howard, an aristocratic battalion, which appeared in uniform on the occasion, and excited particular applause. The officers of the State and of the revenue filled up the interval between the military and the civil portion of the procession, which was headed by a Company of Englishmen, under the red cross of St. George, and followed by Germans, Italians, and other nations. Next came the settlers from the Celestial Empire, arrayed in the richest brocades of the East, who carried a banner of crimson satin, on which was an inscription of great length and elaborate caligraphy, but to which, when interpreted, corresponded with the simple motto, "China boys." In numbers they were about fifty, commanded by their own chief, and decorously obedient to his word.

At this stage of the procession was introduced the triumphal car, a capacious vehicle, drawn by six white horses, and containing thirty little boys, dressed in "white shirts, black pants, and liberty caps," each representing a State of the Union; while the honour of personating California was represented by a beautiful little girl, who stood in the middle, arrayed in white satin, with a wreath of roses. The car bore a motto of political significance—"The Union: *it must be preserved!*" From the representatives of the Federation, the pomp descended to the delegates of the provinces. The Mayor and Aldermen appeared in dark-blue scarfs, with gold trimmings and white armlets, and were followed by the police, who, in this land of freedom, formed an integral part of the procession, instead of escorting it. They mustered "in strong force," under colours of azure satin, and with a band of their own. Next to the perils of theft in California come those of combustion; and the "fire department" accordingly outshone all other guilds in the brilliancy of its displays. The Knickerbocker Hook and Ladder Company appeared with their engines beautifully decorated, and bore for their device a burning building, with the motto, "We destroy to save." The "Monumentals," who succeeded them, turned out "six carriages, one engine, two sections, and a hook and ladder carriage," their colours, like those of Bohemia, being white and scarlet. But the "Sansoune Hook and Ladder Brigade" outdid them all; for while their carriages were covered with decorations, "even to the hubs of the wheels," their firemen had ingeniously raised their ladders in the form of a pyramid, on the summit of which was perched a real live eagle, "captured that morning at the Mission by Alderman Green." Lastly, by a true Parisian conceit, there came, drawn on a car, a portable printing press in full play, from which were thrown off copies of a laureate ode, composed by a lady for the occasion. An oration, as long as a President's message, a concerted execution of the ode by the entire population, a general dance, and a universal banquet, concluded the proceedings of the day.

The writer already quoted thus points attention to the extraordinary character of the facts symbolized by this pageant: "Here was a community of some hundreds of thousands of souls collected from all quarters of the known world—Mexicans, Peruvians, Englishmen and Scotchmen, Germans and New Englanders, Spaniards and Chinese all organised under old Saxon institutions, and actually marching under the command of a Mayor and Aldermen. Nor was this all, for the extemporized State had demanded and obtained its admission into the most powerful federation in the world, and was recognised as a constituent part of the American Union. A third of the time which has been consumed in enacting our Charters of Incorporation, has here sufficed to create a State with a territory as large as Great Britain, a population difficult to number, and destinies which none can foresee."

The Illustration, from a sketch by J. Prendergast, and lithographed of large size, shows the Procession crossing the Plaza of San Francisco, here shown to be inclosed not by an assemblage of rude wooden buildings, as seen in the earlier views, but containing *stores* of architectural pretension, in one of which, by the way, is an assimilation to the Gothic of the Old World.

It has already been mentioned that the new golden state has its *California Illustrated News*. No. 6 is embellished with five engravings:—"Two Views of Vallejo, one of the Capitol Hill itself, the other taken from the summit of Capitol Hill; a group, consisting of a Mexican and his Horse; the South Side of Portsmouth-square; and an excellent likeness of the late Hon. Hardin Bigelow, executed at the eleventh hour, and possessing peculiar interest at the present moment."

Our Correspondent from San Francisco edits: "It may be interesting to know that your journal has a large sale here, and is as regularly looked for at a town near the sierra Nevada as at Islington

FOREIGN AND COLONIAL NEWS

FRANCE

The new Cabinet has not lasted long. The result of the [illegible] debate has proved fatal to it, and France is now, [illegible] days, without the guidance of any [illegible]

The anxiety of the mis-called "party of order" to read Louis Napoleon a lesson, and [illegible] of his Government, induced them [illegible] in connexion with the [illegible] for those parts of creditable move presented [illegible] and sustained by the "men of order," [illegible] torial policy which [illegible] against Ministers [illegible] the presence of the chamber [illegible] Ministerial acts as the latter enlarged constituted the [illegible] taken up by the majority. [illegible] however, [illegible] cles to their comb [illegible] unable to form a Cabinet to succeed them; and it is thought [illegible] ranks of the minority who supported the [illegible] call to choose a Cabinet that will have a [illegible] in the Assembly.

Various Ministerial lists have been in circulation during the week, [illegible] which M. Odilon Barrot's name figured; but this was owing to his having had an interview with Louis Napoleon on Tuesday, when it was [illegible] that he had been chosen to form an administration; but M. [illegible] declared the honour, and declared that his interview was confined to a general conversation on the present state of affairs

The Coalition Majority have, however, been [illegible] of these late operations. For the few days [illegible] cidedly against them, and that their proceedings on that occasion [illegible] the Assembly much in the estimation of [illegible]

The [illegible] adopted, by a majority of

CHURCH, UNIVERSITIES, &c.

Ordinations have been appointed to be holden in Lent, 1851, by the bishops of Carlisle, Chester, Ely Exeter Gloucester and Bristol, Lincoln, Manc[illegible] Peterborough, Rochester, Salisbury, and Worcester

THE NOMINATION OF A SCOTCH BISHOP.—In consequence of the resignation of the bishopric of Moray and Ross by the Right Rev. Dr. Lowe, the primus (Bishop Skinner) has issued his mandate to the presbyters to meet on Fr[illegible] the 31st inst., for the purpose of proceeding to the election of a new B[illegible] It is expected that the presbytery will be divided in opinion, and that there will be a severe contest between the Puseyite and Low Church parties.

COLONIAL BISHOPRICS.—There have been some difficulties in the way of the bishopric of Nova Scotia, rendered vacant by the death of Bishop Inglis. It is now definitively settled that Dr. Field, the present Bishop of Newfoundland will succeed to the Bishopric of Nova Scotia; and that the new Bishop of Newfoundland will be the Rev. Ernest Hawkins, B.D. Fellow of Exeter College, Ox. rd, and Incumbent Minister of Curzon-street Chapel, May-fair.

LORD CHANCELLOR'S LIVINGS.—The Lord Chancellor has presented the Rev. Charles Cuthbert Southey, M.A., son of the poet, to the vicarage of Ardsley, [illegible] vacant by the death of the Rev. Henry Bishop; and the Rev F Robbins, M.A., to the Rectory of Courtesnhall, Northamptonshire, rendered vacant by the cession of the Rev. W. Wake

OXFORD.—The Regius Professor of Divinity (Dr. Jacobson) proposes to resume his private lectures on the Book of Common Prayer, on Thursday, February 25. The Regius Professor of Divinity will also begin a course of lectures on Thursday, the 13th of March, at one o'clock, at Christchurch. These lectures are intended for students of divinity who have passed their examination for the degree of B.A.

OWEN'S COLLEGE.—Mr. W. C. Williamson, surgeon, of Manchester, has been appointed by the trustees of Owen's College to fill the chair of natural history, which includes the teaching of botany, zoology, geology, and physiology Mr Tobias Theodores, who has long resided in Manchester as a teacher of several modern languages, has been appointed professor of German.

THE CATHEDRAL in the Cathedral of Bristol, held by the late Rev. Lord W[illegible] and which was in the gift of the Lord Chancellor, will not be filled up

THE QUEEN'S COLLEGE, BIRMINGHAM.—ENDOWMENT OF A CHAIR OF PASTORAL THEOLOGY.—The Rt. Rev. Dr. Warneford has intimated to the trustees of his former benefactions the Rev. Chancellor Law, the Rev. Vaughan Thomas, and William S. Cox, Esq., his intention to pay in their hands the sum of £1400, in addition to the munificent sum of £2000 already paid over by him, as an endowment for a chair of pastoral theology. The appointment to be in the gift of the Church of England, in priest's orders, and a graduate of Oxford or Cambridge. Dr. Warneford endows this Professorship of Pastoral Theology "in order to [illegible] the students for holy orders in the duties they may be called upon to perform as the ministerial duties in their various branches, as also the composition and delivery of sermons, the reading of the Church services, the history of the liturgies, the reason and use of the rubrics, and all other matter connected with, and subservient to, a faithful and efficient performance of what the Church requires of her pastors and ministers for the edification of their flocks." The College now owes to this enlightened philanthropist the following munificent endowments: For the classical tuitor of the College, £1000; for the chair since of the Queen's Hospital, £1000; for the scholarships in the medical department £ 000; for the Warneford medical prizes, £1000; for the endowment of a resident medical tutor, £1000; for the endowment of the warden, £1000; for divinity lectures to medical students, £1000; and for the endowment of the professor of pastoral theology, £3400.

BEQUEST TO UNIVERSITY COLLEGE HOSPITAL.—The committee have received notice of a legacy to the hospital, by the late Thomas Assalo Hewson, Esq., of £1000, free of duty

PREFERMENTS AND APPOINTMENTS.—*Honorary Canonries*: The Rev J. C. Campbell, rector of Mo[illegible]ry, and the Rev. E. Jenkins, incumbent of Dawlais, in the Cathedral of Llandaff. *Canonry*: The Rev. Nicholas Smart, Acton Bordis, in the Cathedral Church of Salisbury. *Rectories*: The Rev. William Mortimer Heath to [illegible] Norfolk. The Rev. Alfred Jenner, to Kittisford, Somerset. The Rev. G. Mann, to St. Mawgan-in-Meneage, with St. Martin [illegible] Manacle, Cornwall The Rev. E. O. Roach, to St. Paul's, Deptford. The Rev. D. Jeffreys, to Newborough, Anglesey. The Rev. George Hall Sywell, to Brington, Notts The Rev Barry Samuel Vaughan Blacker, to East-Rudham, with West-Rudham, Norfolk. *Vicarages*: The Rev G Bruce, to Cheriton. The Rev. William Henry Jones, to Bradford, Wilts. The Rev. Arthur [illegible] Nowell, to Thornton, The Rev. George William Holt, to St [illegible]ry with St Peter, Barton-on-Humber. The Rev. John Southern Austin [illegible] Leigh, Lancashire. The Rev. R. Martin, to St. Breock, Cornwall. Rev J Image, to Ticehurst, Sussex; value, £330 with residence, patrons, Dean and Chapter of Canterbury. Rev. G S. Escott, to Regent-square, St. Pancras. Lordship of Argoed, Rev. Edward Morgan, Vicar of Bedwellty, Rev. H Jones, to the vicarage of Llandinam, with the curacies of Llandinam Vale, Llandowland, and Llewarry-Cwmwrdy, Anglesea; patron, Lord Boston

VACANCIES.—*Rectory*: Hackthorpe-with-Yelvet, 6th mile-stone from Manchester; value £[illegible], with residence, patron, Lord Chancellor: Rev. J. Tatham, deceased Chirk-Abbey to the Duke of Hamilton and Brandon, Rev. J. Tatham, deceased. *Rectory*: Michaelstowe-le-Vetlow, 6th mile-stone from Bridgenorth, Shropshire, diocese Llandaff; value £400, with residence; patron, C. K. Kynaston, Esq., Rev. J. Cox, deceased. *Vicarages*: Barnwood, county and diocese Gloucester; value, £[illegible]; patrons, Dean and Chapter of Gloucester. Rev. S Escott, promoted. Bedlam, Sussex, diocese Chichester; value, £280, with residence; patron, L. T. Cubitt, Esq.; Rev J Image, promoted. *Perpetual Curacies*: Egton, county and archdeaconry York; patron, Archbishop of York; Rev. W. Keen, deceased. Wilmcote, Warwickshire, diocese Worcester; Rev. E B Knottsford Fortescue, Canon Chancellor.

TESTIMONIALS.—The following gentlemen have recently received testimonials of esteem and affection :—The Rev. W. C. Usher, late curate of St George's, Sheffield, from some of the congregation; the Rev. J. S. Ward, head master of Hackthorne School, Lowther, from his late pupils; the Rev. W. Fisher, incumbent of Wilshaw, from the congregation; the Rev. E B. Howell, curate of St James's parish, Birmingham, from the choir, the congregation, and Sunday school teachers, on leaving; the Rev A. M. Wilson, on his leaving the curacy of [illegible]stall; the Rev. T. A. Bolton, incumbent of New Basford, from his own congregation, the Rev Hezekiah Gibbes, incumbent of All Saints, Sidmouth, from the teachers of the Sunday-school, and also from the congregation; the Rev. W. Lee Howarth, curate of Pudsey, on the teachers of the Sunday-schools and others of the congregation; the Rev. Thomas Henry Watkins late of Shalthwaite, Yorkshire, from the congregation; the Rev. William Augustus, from the congregation of St Michael's church and the Blind Asylum, Bristol, the Rev. John Penhaue, of Black Torrington, Devon, from his parishioners.

IRELAND.

BANQUET OF THE LORD MAYOR OF DUBLIN

The usual banquet of the Right Hon. the Lord Mayor of Dublin took place on Tuesday night, in the Mansion House. The Lord-Lieutenant, attended by his [illegible] staff, arrived about half-past seven o'clock, and was escorted to the [illegible] where the company had assembled by the Lord Mayor, the Archbishop of Dublin, and others. The dinner was served in three rooms

Among the company, besides the Lord-Lieutenant, were his Grace the Archbishop of Dublin; his Grace the Duke of Leinster; the Marquis of Conyngham; Lord Midleton; Lord C Russell, Lord W Fitzgerald, Lord Hewitt, Bishop of Meath; Lord Gort, Lord Gormanston, Lord Castlemaine, Lord Talbot de Malahide, Sir William Somerville, Hon. Captain Lindsay, Hon G Ponsonby, Hon W Brabazon; the Lord Chief Justice of the Queen's Bench, the Chief Justice of the Common Pleas, all the other Judges and the Barons of the Exchequer; the Crown, the ex-Lord Mayor, the Lord Chancellor, the Marquis of Drogheda, the Marquis of Kildare, the Lord Viscount Suirdale, Lord Dunsany, Lord Bellew, Sir Thomas Redington, &c. &c. &c. All were unanimous, and [illegible] from his parishioners.

[illegible]

BANQUET OF THE LORD MAYOR OF DUBLIN

The usual loyal toasts, the Lord Mayor proposed "The Lord-Lieutenant, and prosperity to Ireland."

His Excellency, Lord Clarendon, responded to the toast in a speech complimentary of the conduct of the new Corporation, whose search for pure the [illegible] characterised as the celebration of the triumph of the principle of [illegible]ection, and proposed in return, "The health of the Lord Mayor, [illegible] to the success of Dublin"

His Lordship having acknowledged the compliment, the health of his Grace the Archbishop of Dublin, one of the vice-Lord Justices, and the Lord Chancellor, and some other toasts of loca. importance, duly given and responded to, and the company separated shortly [illegible]

THE NEW CORPORATION OF DUBLIN — Has body has begun to show itself worthy of its increased powers by the practical and business-like manner in which the newly elected members have entered upon their important duties. They have struck committees, and decided on their plans and measures, setting up from grand juries and boards of commissioners the various duties and responsibilities [illegible]erated to themselves. In the recent act of Parliament; investments [illegible] that on all corporations hereafter to be created in this country from former corporations, it is resolved to meet all their difficulties like men. The [illegible] has been [illegible]ken on with satisfaction, and were evidently round of their [illegible] of representatives

ABOLITION OF THE VICE ROYALTY.—On Monday, a motion was brought forward in the Dublin Corporation, for a committee to propose an address to the Queen upon the subject of the abolition of the Irish Vice Royalty, and also for the purpose of preparing petitions to both Houses of Parliament against the introduction of such a disastrous measure." The mover of the proposition was Alderman Sir T. O'Brien, M.P.; it was seconded by Mr Leland Crosthwaite, one of the oldest and most respectable merchants of Dublin; and among the gentlemen who spoke in support of it were Conservatives, whigs of the old S[illegible] All were unanimous, and [illegible] motion was declared to be carried by acclamation

The head mine recently discovered near the town of Galway has now a number of men employed on it as full work, and the results promise to be of a most successful and profitable nature

PAPAL AGGRESSION.

A MEETING IN IRELAND.—The proceedings on account of the Papal Aggression drawing to a close. We have only one more to mention.

In the Catholics of the diocese of Elphin, at which two adverse parties proceed to congratulate Dr. Wiseman; to express indignation with a alarm at the unnatural silence and calm rest which a hateful press, uncharitable ministers, and weak-minded Premier have on unduly prolonged; a manly and fearless demand of our liberal members to use every effort to resist in the united Parliament any ministry that should attempt to diminish the civil or religious rights of any party of her Majesty's subjects; and to announce their persuasion that the enlightened portion of the Protestants of Ireland, with few exceptions, have not identified themselves with the uncharitable contest made upon the Roman Catholic religion.

THE CLERGY OF WATERFORD AND LISMORE have addressed the Bishop of Cashel, and, after referring to the foundation of the Irish branch of the Established Church, request the Bishop to convey their sympathies to their British brethren, with whom they have common interests, common joys, and common dangers. In his reply, the Bishop adverts to the encroachments of Popacy has received from the conduct of the Government to counteract its[illegible] and supported by the Catholics. He infers from this circumstance, that, whatever steps may be taken to prevent the Church in England, they may expect the same steps will be taken to give security to the Church in Ireland. He advises the clergy to make an appeal to the Queen; but recommends them to place their confidence in the protection and blessing of God.

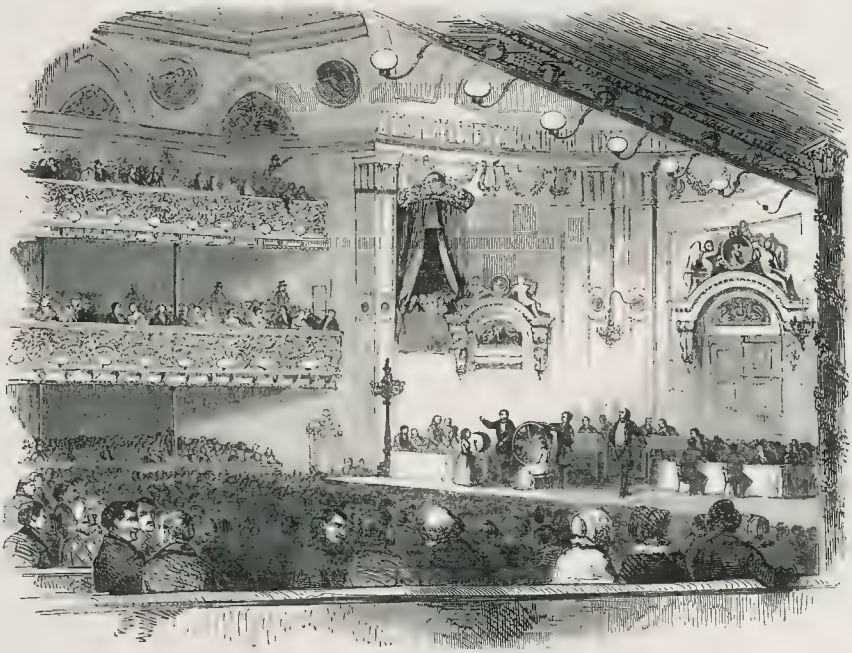
THE CLERGY OF THE DIOCESE OF DROMORE have addressed the Right Rev Dr. Mensell, their newly-appointed Bishop, and have declared that the "Irish Church has not enjoyed the proudest days of its origin, its character, its undeviating loyalty, and the engagements voluntarily undertaken by England in its favour, demanded. Its resources, they say, have been curtailed, its machinery in part destroyed, its clergy degraded, as well by unjust legislation, as by a partial and unfair rule of Government patronage. The endowment of Maynooth has been increased and placed on a firmer basis, the priests of Rome have been assisted by the National Board in the very design of withholding the Scriptures from their people, the titles of their foreign prelates have been acknowledged, and precedence granted them above the nobles of the land. In [illegible]ery, the Bishop expresses his regret that they have introduced into the diocese such extraneous tomes, and attributed to others unbecoming motives.

AN ANTI-PAPAL DEMONSTRATION is to take place in the county of Down. Lord Castlereagh has allixed his name, with other Irish members, to a document protesting against any re-enactment of penal measures to curb the authority of the Holy See in England, and to Presbyterian constituents in Down recent this so much, that an opposition to his Lordship's re-election for the county is spoken of.

ANOTHER PAPAL BULL, dismembering the ancient Roman Catholic diocese of Ireland, known as Cloyne, and appointing the Rev. Dr. Keane to preside over a portion of it, with the title of Bishop of Ross, has been issued, and has excited much gratulation amongst the Catholic laity and clergy, who, indeed, [illegible] its aims. The *Times* has thought the "audacity" worthy of a leading article

THE CONGREGATION OF THE INDEX has placed a work, recently published in Dublin, entitled "Lectures on the Scripture Proofs of the Doctrines of the Protestant Religion, addressed to the Catholics of York and Lancaster," on the Index; in other words, proscribes it and forbids it to be read, and commands those who have copies to deliver them up to their Bishop. The Pope has confirmed this prohibition. As the Professor has appealed to Rome authority, this act of the Pope has added to the public indignation Though the book does not seem to merit much attention, the prohibition will probably bring it into notice, and may serve to make many Catholics aware of [illegible] authority which prescribes even what they shall know and what they shall think of history

DR WISEMAN has had a document sent to him (the *Globe* says), at the instance of a gentleman legally connected with the City, containing some admissions which the Cardinal is requested to make, in order to raise the question of the legality or otherwise of his archiepiscopal assumption. He is appointed by Royal



DISTRIBUTION OF THE AMERICAN ART-UNION PRIZES, IN TRIPLER HALL, NEW YORK.

THE AMERICAN ART-UNION DISTRIBUTION.

NEVER (says our New York Correspondent), not even on the nights of the "Nightingale," has the capacity of Tripler Hall been more fully tested than on the 20th of December, the evening appointed for the distribution of the American Art-Union prizes. The immense floor (25 feet wider than Exeter Hall), the aisles, and the galleries, before the stage, and beside the doors, were crowded to excess. There was not a foot to spare. Surely the Fine Arts are not entirely neglected in the third city on the globe (late census gives New York 750,000); when the largest bodies ever congregated under a roof have been allured there by the charms of music and painting

On the present occasion, the Art-Union distributed 1000 prizes, 400 of which were paintings, the residue being bronze statuettes, medals, &c; besides which, each of its 16,000 subscribers will receive a large engraving and five smaller ones, in size similar to Darley's Outlines, distributed last year.

The meeting was opened by an address from its very popular president, A. M. Cozzens, Esq.; a report from the Executive Committee was then presented; after which, the treasurer, G. W. Austin, Esq., read his report, which was succeeded by the most important business of the evening—that is, the drawing of the numbers; and it was curious to one disinterested to watch the eagerness of the spectators to hear in what part of the continent some favourite picture of Cole, Kensett, or Casilear had fallen, as they were thus being sown broadcast over the land, and notice how they would give vent to their applause if it happened to be some public institution or lady fair that carried away the prize.

The large revenue of the Art-Union, greater than that of any similar institution, must give it great power, whether for good or evil; and, although in the United States there are some individuals that cannot decide as to which side the balance lies, yet in the business part of its management all parties seem to agree that it is conducted with all that energy and enterprise that has become proverbial of the American people.

FINE ARTS.

MACLISE'S PORTRAIT OF MR. MACREADY IN "WERNER."

THIS picture, which is about to be engraved by Mr. W. C. Sharpe, is now on view at Mr. Hogarth's, in the Haymarket. It represents the scene between *Werner* and *Josephine*, in which he insists with her on the reality of their condition:—

Have what we seem! save what we are—sick beggars
Even to our very hopes—
If no would ye? in th' e'en
The high soul of the son of a long line?
If so, in this garb, the heir of princely lands?
If so, in this sunken, sickly eye, the pride
Of rank and ancestry? In this worn cheek,
And famine-hollow'd brow, the lord of halls
Which daily feast a thousand vassals?

The bitterness of the anguish expressed in these lines is truthfully and intensely exhibited by the gifted artist. The sardonic laughter, the unrevealable sorrow, the shame, the indignation, the remorse, are all embodied or indicated. The picture owes little to colouring, the principal portion being the reflection of light through a window glancing on old armour and arms. The figure of *Josephine* also has some good artistic points. Kneeling in an attitude of despair, the grief is indicated in the face without the features being visible. This, a matter of some difficulty to execute, is quite successful. The grouping of objects and the accessories are, as in all this artist's works, exceedingly clever. The labour throughout, indeed, appears to have been a labour of love, and the result accordingly is highly gratifying. The picture, we are told, is the property of Mr. John Forster; and we cannot but congratulate him on the possession of so excellent a work of art, on a subject so dearly associated with himself by the ties of friendship and admiration.

DESTRUCTION OF THE PORTUGUESE FRIGATE, "DONNA MARIA II."

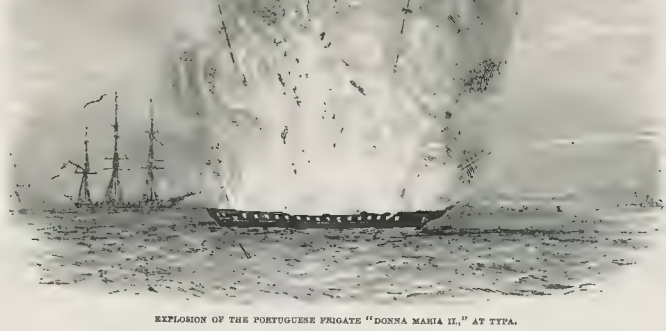
WE regret to learn by the Overland China mail, just received, that, on the morning of the 30th of October last, the Portuguese 32-gun frigate *Donna Maria II.*, was blown up at the Typa, about TWO P.M.; and that, of those on board, scarcely a man survived.

It appears that a salute was fired at noon on occasion of the birthday of the King Consort of Portugal: about half-past two the vessel blew up with a tremendous explosion, and, of a crew of upwards of 200 officers and men, only nine were picked up by the boats of the United States sloop-of-war *Marion*, which were instantly despatched to render assistance; and, of these nine, five have since died. The son of Captain d'Assis, a lieutenant, and a purser chanced to be on shore at the time of the catastrophe.

A rumour was current that Captain Glendy and some of his officers, besides civilians, were on board at the time, but this, we are happy to say, was not the case; and though the *Marion* was anchored close to, she escaped injury, her safety lying in her very proximity, the most dangerous projectiles being thrown over or beyond her. The only accident that befel her was, that one of her men tending boat alongside was severely injured on the knee by the falling of an iron bolt.

The body of Captain d'Assis e Silva has been found.

The Illustration shows the exploding vessel, with the American sloop, *Marion*, lying close to; Macao is seen in the distance.



EXPLOSION OF THE PORTUGUESE FRIGATE "DONNA MARIA II." AT TYPA.

ADMISSION TO THE EXHIBISION OF 1851.

TO THE RIGHT HONOURABLE LORD JOHN RUSSELL.

MY LORD,—Within a few days, the structure designed to receive the contributions of the world's industry will be completed. The question now arises, as to the mode of admission of the world's people. And it is upon this important subject that I now claim the liberty of addressing you.

Shall admission be taxed by payment? or shall it be free?

Each mode has its difficulties; but, after an anxious consideration of the matter, it is my conviction that free entry will be at once more simply practicable, and more in harmony with the enlarged and enlightened purpose of the Exhibition.

There are no less than seven thousand exhibitors. Surely no tax should be levied upon them or their families for the right of visiting an Exhibition to the staple of which they have themselves contributed. And I am further confirmed in my belief of the practicability and wisdom of free entrance—to be modified as I shall hereafter propose—by the unanimous and hearty opinion of very many of the most influential members of the city of London.

The Royal Commissioners have incurred a large debt—a debt that must be liquidated. And it is to be feared that a too anxious sense of this obligation may induce the levying of a rate of entry that shall, to the million, amount to prohibition.

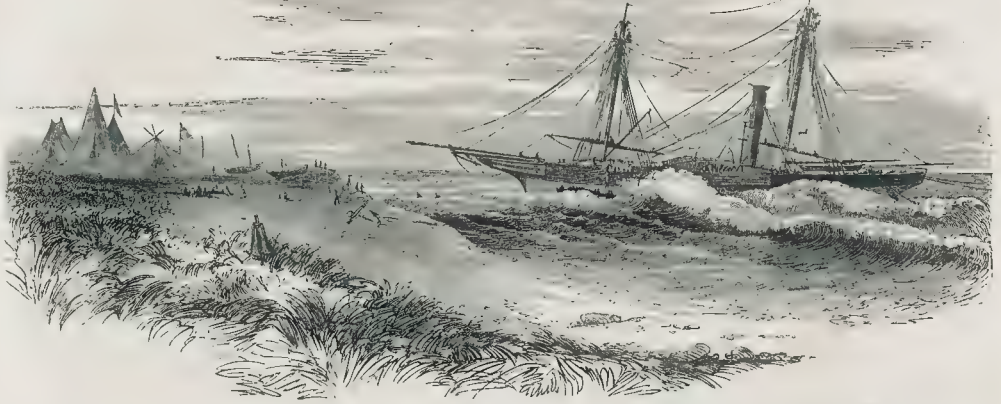
I have therefore to propose, that, for the first fortnight of the Exhibition, admission shall be, in every case, by payment. And further, that one day in the week (and for many reasons I should select Wednesday) shall, for the whole term of Exhibition, be reserved for the higher classes of all nations who may prefer to pay for the exclusive privilege of admission, rather than encounter the inconvenience of a crowd. With these exceptions that the entrance shall be entirely free.

The sum taken during the first fortnight and on the one day of each week would, no doubt, be very considerable; nevertheless a large deficit would remain onerous upon the Royal Commissioners. This deficit I am emboldened to solicit your Lordship to meet by a Parliamentary grant. And this solicitation I make the more readily, from the belief that from the very fact of the Exhibition a large addition will accrue to the revenue of the country; an addition—it is calculated upon trustworthy authority—of upwards of two millions. Now of these two millions how small the item required to throw open the doors of the world's Exhibition to the world's citizens.

When the subject of the Exhibition was brought before Parliament last year, it was very properly dealt with; for as everything was then in a state of uncertainty as to the future, had Government interfered, the whole matter must have passed into their own hands. The case at present is entirely altered: the Building is nearly finished, and will shortly be ready for the reception of the world's wares: and the great difficulty at this moment is to find space for the vast quantity of articles likely to be sent.

We have invited all the nations of the earth to a friendly competition of skill, to this invitation many have heartily responded. We have also invited the whole family of man to come and participate in the first banquet the world has ever dedicated to peaceful industry and to intellectual triumphs. An event so pregnant with high and humanising good to all mankind should be informed with the most liberal—with a purely cosmopolitan spirit. If it be otherwise—if, at the very threshold of the building dedicated to this industrial banquet, a tax be laid upon those who would partake of its beneficial influence; a banquet, moreover, to which thousands of the payers have contributed—the whole purpose of the Exhibition will forego a grace which otherwise would endow it with a crowning lustre.

Several foreign Governments have voted considerable sums to aid their people in the object of the Exhibition; and I know that already in France and Germany the idea of payment (for foreigners are especially accustomed to gratuitous entry into all national buildings) has been



H. M. STEAM-VESSEL "FLAMER," ON A REEF SOUTH-EAST OF MONROVIA.

canvassed in a spirit which, as an Englishman, I feel to be a reproach to my country. It is this reproach, my Lord, that I beg of you, by the consent of Parliament, to put away from us

But not alone for the stranger do I ask for free admission. I ask it for the large body of our own working classes; for those men whose skill, whose industry, will, I doubt not, be triumphantly represented at the forthcoming Congress of Labour. Thousands of these men—the sinews of the land—are at this hour depriving themselves of many little household comforts to enable them to visit London; and the inevitable cost of such a visit should not be increased by a further tax. Therefore, I ask for the working-men of England a free entry into the structure dedicated to the world's industry free as the light that pervades it.

Again, such will be the magnitude of the Exhibition, that no one, two, or three visits will suffice to the knowledge of its manifold objects This will be made sufficiently obvious when it is known that to make merely the circuit of the tables will be to make a journey of no less than 20 miles. Hence, with paid admission, the visitor will be tempted to spend a day, when otherwise he would at various visits occupy but a few hours. There would, in the gratuitous admission, be a flowing stream of people, if I may use the figure; whereas, with exacted payment, visitors will become fixtures from morning till night

I might, my Lord, dilate upon this subject; but I hope that I have said sufficient to obtain of your Lordship a patriotic consideration of the question—Shall the Exhibition of the World's industry be free to those whom England invites to meet in generous rivalry; or, shall we send forth invitations, and then tax our guests?

I have the honour to remain, your Lordship's obedient humble servant,

JOSEPH PAXTON.

Exhibition-buildings, Hyde-park, Jan. 22, 1851.

LOSS OF HER MAJESTY'S STEAM-SLOOP "FLAMER."

By the arrival of the *Cyclops* steam-frigate, Capt. the Hon. G. F. Hastings, from the coast of Africa, we have intelligence of the total loss of her Majesty's steam-ship *Flamer*, 120-horse power, on a reef about fourteen miles south-east of Monrovia, lat. 6.10 N., about 250 miles from Sierra Leone, on the 22nd of November, in the night, when she became a complete wreck, the engines having knocked a hole through her bottom after striking, as we are informed. The commander and master were on the paddle-box at the time she struck, and the last man in the ship was on the chains heaving the lead, and had announced a cast of 15 fathoms and no bottom the moment before she struck. The cause of the catastrophe was this:—They were steering in the direction of the known beacon, the "Saltpan Light," which light, however, as they neared it, went out; they were then going to put the ship's head off shore for the night, when she took the ground (going six or seven knots), and became a total wreck. On the Captain of the *Cyclops* hearing of the disaster, he proceeded immediately to render assistance. Every means was resorted to which the circumstances could admit of to float the wreck, but it proved of no avail. The ship's company, we are happy to state, are all saved. The Admiral of the French squadron on the coast, in his steam-frigate, *El Dorado*, also proceeded to the assistance of the *Flamer*, and endeavoured, by steam-power, to drag her off the reef, but unsuccessfully. Commander Faiten, in the *Hound*, 10, also proceeded to the spot on hearing of the wreck, and rendered every assistance in his power. He held a survey, subsequently, upon the *Flamer*, assisted by the officers of the latter, and condemned her. By extraordinary exertions, persevered in through the most untoward circumstances, the stores of the *Flamer* have been for the greater part saved, but the exertion brought on the coast fever, which prostrated 60 out of 65 men employed. Mr. Cook, master's-assistant, died; and Mr. Webb, master's-assistant, and about 30 seamen, marines, and boys, have been sent home invalids in the *Cyclops* and transferred to the Naval Hospital at Haslar. The *Hound* had embarked Commander St. Leger, his officers, and the remainder of the *Flamer's* ship's company. They will be sent to England to be tried by court-martial.

The *Cyclops* has brought home a mail from the coast, and left the *Centaur* steam-frigate, bearing the Commodore, off Ambris on the 21st of November. The *Cyclops* fell in with a rich prize the day before she spoke the Commodore—a brigantine, under Brazilian colours, with 630 slaves on board, which capture, and the conveyance of the prize to St. Helena, were the cause of her detention there, and not a court of inquiry, as reported on the arrival of the *Barkenhead*. She left St. Helena on the 8th ult., and Ascension on the 13th; she left Monrovia on the 26th ult., and Madeira on the 9th inst. She has brought home three specimens of the produce of the island of St. Helena for the Great Exhibition—viz. one of rock salt, one of raw cotton, and one of barilla.

NAVAL AND MILITARY INTELLIGENCE.

COMMISSIONS OF MILITARY OFFICERS.—The evidence given by the military secretary before the committee on army and ordnance expenditure, shows that the number of candidates for commissions during the last seven years amounted to between 1000 and 1200, and above 200 had been upwards of three years on the list. It is further stated by Lord F. Somerset that it is not the practice to give these commissions by rotation, but a selection is made by the Commander-in-Chief. Such being the case, it was quite clear that interest with the Commander-in-Chief for the time being is the only guarantee of a candidate's success

THE VACANT INFANTRY COLONELCY.—It is understood that Major-General Dalmer, the Colonel of the 47th Regiment, who formerly commanded the 23rd Fusiliers, is likely to succeed to the latter regiment. Major-General Lightfoot, whose distinguished services have caused his name to be reported for a regiment on several occasions when a colonelcy of infantry has been vacant, will probably succeed Major-General Dalmer as Colonel of the 47th Regiment.

THE OFFICE OF QUARTERMASTER-GENERAL.—A difference of opinion, it is said, exists between the military authorities and the Government with respect to filling up this office. A saving of £1800 a year by the abolition of the appointment is, it is said, desired by the Government, but, on the other hand, the Commander-in-Chief insists on the necessity of keeping up the appointment, and his Grace has, it is well known, been applied to by a considerable number of general officers for this hitherto lucrative appointment. It is at all events certain, should a general officer be selected to fill the office, that the £500 allowance to the late Quartermaster-General will be at once discontinued

MILITARY SETTLERS.—Between 200 and 300 men have been allowed by Major-General Pitt, commanding the troops in New Zealand, to purchase their discharge. This has been done partly with the view of a reduction of the army, as well as to induce respectable men to become settlers.

WORK OF ART.—A correspondent from Rome, says:—"Mr. Engel, a Hungarian sculptor, who resided some years in England, has just completed a group in marble for Prince Albert, representing an episode from the conflict of the Argonauts and Amazons. One of the latter is supposed to have been wounded in the fray, but rescued by one of her companions from the sword of her aggressor, who, in his turn, is wounded and overthrown. The moment chosen by Mr. Engel for the subject of his group is that in which the triumphant heroine, supporting her wounded comrade with her left arm, grasps a battle-axe with her right, and is on the point of dealing a *coup de grace* to the prostrate Argonaut, when her hand is stayed by her more compassionate friend, whom an instantaneous awakening of the softer passion appears to have interested in his behalf. Mr. Engel has got through the great labour of his undertaking with the most meritorious perseverance having received no aid whatever in the execution of it from beginning to end. The group is to take its place amongst the artistical contents of the 'Crystal Palace.'"

DEATH OF LORD BURGHERSH.—We regret to announce the decease, on Wednesday last, of George Augustus Frederick John Lord Burghersh The deceased nobleman was eldest son of the Earl of Westmoreland, G.C.B., G.C.H. and was born June 18, 1819; consequently, he was in the 32nd year of his age. By the death of Lord Burghersh many noble families will be placed in mourning, including those of the Earl of Jersey, Earl of Beaborough, &c

The New Zealand papers of September last which have reached us are chiefly occupied in detailing the many removals by the hand of death amongst the native chiefs. Within one month, four of no inconsiderable note had died:—Pomare, of the Bay of Islands; Wuharoa, son of the great chief of that name; John William Heke Pokai, the once active enemy of the Europeans; and Taki Waru, the brother of Te Whero Whero, the powerful chief of Waikato.

QUICKEST VOYAGE TO AUSTRALIA EVER KNOWN.—The ship *Constance*, of London, John Bulwer Godfrey, commander, of Dartmouth, sailed from Plymouth with emigrants, on the evening of 17th July last, and arrived at Port Adelaide on the 1st October (per *Shipping Gazette* of the 17th inst.), thus performing the voyage in the unparalleled period of seventy-six days This vessel and commander performed the last voyage (as noticed in our Journal of 9th March last) to the same place in seventy-seven days.

On Saturday afternoon, between one and two o'clock, as the *Sun-flower* steam-boat was about to put in at Hungerford Pier, for the purpose of landing passengers, a young man attempted to jump on to the "dummy" before the vessel had got quite alongside; he missed his footing and fell into the river. The tide was running very strong at the time, and he immediately disappeared. The drags were soon in requisition, but the body was not found.

EMIGRATION SCHEME FOR PAUPER CHILDREN.—At the weekly meeting of the board of guardians of St. Pancras, on Friday (last week), Capt. T. W. B. Burrows, of the brig *James*, sent in a written application for boys and girls from the workhouse, to be conveyed by him to Bermuda as emigrants. Sir James Hamilton, Bart.: What must be the ages of the children?—Captain Burrows: Between twelve and fourteen.—Sir James Hamilton: What do you do with them when you get them at Bermuda?—Captain Burrows: I apprentice them as domestic servants until they are eighteen.—Sir James Hamilton: On what conditions do you take them?—Captain Burrows: I charge £6 passage money, for which I find them in bed, bedding, and board. The parish provide their outfits.—Mr. Merriott: After they serve their apprenticeship what becomes of them?—Captain Burrows: Why, they get other situations.—Mr. Merriott: Are there any funds to assist them in getting situations or returning home if they desire it after their apprenticeship?—Captain Burrows: No, sir; I have already taken out sixty children from St. Pancras workhouse. (Surprise.)—Mr. Arland: Are they steerage passengers?—Captain Burrows: No; I put them in the cabin.—Mr. Arland: Have you a female to attend to them on board?—Captain Burrows: The last time I went out there was in the cabin a female passenger aged nineteen. Mr. Arland. That was accidental?—Captain Burrows: Yes, sir. In further conversation, Captain Burrows said he sailed on the 29th, and would take any number of children. The board considered the matter as too grave to be hastily decided upon; at all events, no children would be sent out on the 29th.—On Tuesday, the subject was brought under discussion at St. Pancras Board of Guardians, who had received a communication from Mr. Lumley, assistant-secretary to the Poor-law Board, making enquiry as to the truth of the above statement relative to the sending of the parish children to Bermuda. The vestry clerk was instructed to reply in the affirmative, stating at the same time that such a measure was highly advantageous to the emigrants, and had been conducted with care and attention to their interests

The number of vessels belonging to the United States wrecked during the year ending June, 1848, as shown by official documents, was 585, valued at 2,021,495 dollars. The value of their cargoes was 2,501,771 dollars. Total, 4,523,266. The total number of lives lost in connexion with the above was 477. The amount of losses paid by underwriters on vessels and cargoes was 2,802,319

Berlin is believed to be its ultimate destination. The General was reported to have desired that a new Cabinet should not be formed until he had entered France

The Liberal press of Madrid attributes the fall of Narvaez "to his peculiar system, inasmuch as, for the good of the human race, he was unable to maintain those in power whose [illegible]m, opposition to every [illegible] and a return to doctrines and practices condemned by [illegible] that [illegible] [illegible] that [illegible] [illegible] [illegible]

THE GREAT EXHIBITION BUILDING.

INTERIOR OF THE TRANSEPT, COMPLETED

VIEW LOOKING NORTH.—(SEE NEXT PAGE.)

THE GREAT EXHIBITION BUILDING.—DETAILS OF CONSTRUCTION

(*Continued from page 42.*)

INTERIOR OF THE TRANSEPT COMPLETED, LOOKING NORTH.

We have already presented to our readers various details and Illustrations of the most beautiful portion of the Great Industrial Palace of [illegible] opportunity of seeing the Interior of the Transept as completed. The [illegible] cast-iron columns, twenty-four in number, the [illegible] girders, the bridges over the central aisle, the massive semi-[illegible] framework of the roof, together with the [illegible] covering, are [illegible] distinctly shown in our present [illegible] view, the general effect [illegible] is greatly destroyed by the trees at the north end of the Transept, which occupy so much of the [illegible] which might be otherwise so much more usefully appropriated. [illegible] his remark on the supposition that the Building is to remain [illegible] ornament ornament to Hyde-Park; but, of course, if the Building is [illegible] a temporary asylum for the industrial products of the world, during the spring and summer of the present year, then such a sacrifice would not on any account be permitted It is proposed to name [illegible] style of building adopted in the Crystal Palace after her [illegible] Majesty Queen Victoria.

Our View of the [illegible] taken from the south end of it, looking [illegible] it; it represents what it will appear when completed as [illegible] without any object in it. The immense height of the roof, the [illegible] &c., are all faithfully given, and, as will be seen by our representation, the light and striking Picture, its singular appearance is now being greatly heightened by the trees enclosed within its crystal walls.

THE OFFICES.

The offices of the Royal Commissioners, the Contractors, the Executive Committee, and the Police, are conveniently placed on either side of the grand entrance to the Building, nearly opposite the Prince of Wales' Gate, a frontage on the south elevation of 36 feet on each [illegible] As in all other parts of the plan of the leviathan structure, so, with [illegible] the laying out of the offices, all the horizontal dimensions, from centre to centre, of the principal partitions, [illegible] but feet or multiples of eight feet. The entrance to the offices, on either side, are at a distance of sixteen feet from the south front; from each entrance, a passage, eight feet wide from centre to centre of [illegible] feet, to a room 24 feet square, which forms the end of [illegible] In the east wing this is appropriated to models; and in the west wing the similar room is for contractors On the south side of each of the long passages are six small offices, each 8 feet wide, for the Executive Committee, or else with [illegible] The [illegible] To the police, an office is appropriated 16 feet [illegible] situated on the east side of the grand entrance. And the corresponding room on the west side of the grand entrance is to be used as a general waiting-room a second passage, running at right angle to the long passage, extends northward 24 feet, on the east side of which are three additional small [illegible] and at the end another room 24 feet square, at present unappropriated This latter part of the description of the offices applies to the east wing, exactly similar are the corresponding offices in the west wing. the 24-feet rooms at the end of the short passage being designed for the use of the Royal Commissioners, and the three small offices contiguous for clerks in the special service of the Commissioners.

An increase in each wing leads to the clerks' offices on the upper story. The [illegible] ground-floor space occupied by the offices is equal to [illegible]

The partitions of the offices are framed to receive matched and beaded linings; the floors are 1¼-inch battens, grooved and iron-tongued; [illegible] of the upper rooms form the ceilings of the rooms on the ground-floor, and being left smooth by planing, supersede the necessity of the ordinary lath and plaster; the whole being painted, to correspond [illegible] painting of the rest of the woodwork

[illegible] occupied in other parts of the Building by the lower tier of [illegible] are filled in with close boarding The offices through [illegible] occupying the spaces between each pair of the external iron and wooden columns, and reaching from the top plate of [illegible] tier of ventilators to the middle of the sill of the upper [illegible] tators, so that the offices will be well lighted

[illegible] are formed of solid grooved and splayed deal, 3 inches by [illegible] shes towards the Kensington-road [illegible] and [illegible] and [illegible] over sashes similar to the [illegible] ver, being used instead of ground glass The whole of [illegible] used during the inclem nt season are warmed by means of gas-stoves, which [illegible] re easily fixed, are free from dust, and, [illegible] portion of ours of w [illegible] above the upper [illegible] atmosphere, are better for places of business than [illegible] fire, which sometimes leads to idleness on the part of [illegible] ng mental interest in their occupation.

GREAT INDUSTRIAL EXHIBITION OF 1851.

[illegible] appointed for the safety of the roof of the Palace of [illegible] their anxiety not at rest by the tests of wind and weather [illegible] ne during the last ten days We have had hail-[illegible] and [illegible] thickness of the glass; and well they have [illegible]

[illegible] the transept roof is all but complete, and the grandeur of [illegible] Paxton's design now that it is fully developed, is [illegible] to the *regardis* [illegible] great area over which the arches [illegible] tion of the transept [illegible] ines on the north [illegible]

[illegible] a striking and novel character, have been obtained for [illegible] ases had to [illegible] Parts of the north west [illegible] extremity [illegible] and unfinished [illegible] division, it may be [illegible] red, is to be de-[illegible] tonishment, about 4 ft [illegible] which, has been thrown up on the outside of the [illegible] ish, it will eventually be covered [illegible] the old wooden [illegible] partly so) removed [illegible] the present temporary [illegible] from levelling the road and the paths the foregro nd of [illegible] [illegible] light ornamental cast-iron [illegible] Paxton, Jones), will surround [illegible] [illegible] of eight feet, within which the police will [illegible] [illegible] with [illegible] [illegible] [illegible], and is much [illegible] [illegible] the low iron rails and posts originally [illegible]

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

It is stated to be her Majesty's intention to open the ensuing session of Parliament in person.

The members of the Royal Commission issued to inquire into the practice and pleading in Chancery, viz. the Attorney-General (chairman), Mr George J. Turner, Mr Bethell, Mr. W. Pitt Wood, Mr Compton, and Mr W M James.

It is stated that the Address in reply to the Speech from the Throne will be moved in the House of Commons by the Marquis of Kildare, and seconded by Mr. Pusey, M.P. for Berkshire.

Lord Wharncliffe has withdrawn from a contest with Lord Redesdale for the chairmanship of committees in the House of Lords. Lord Redesdale's election therefore may now be regarded as certain.

Sheffield is active in commemorating the year of its industry for the Crystal Palace. Messrs Spears and Jackson are having a circular saw made with segments of five feet diameter, to be the centre of well finished smaller machines of sharp-edged teeth. This will, it is supposed, be the largest circular saw ever manufactured.

Robert Bladduth Phillips, Esq., of Longworth House, was received into the Roman Catholic communion by the Rev. Francis Kenney, Church, Hereford, on the feast of the Epiphany, Monday, the 6th inst., by the Rev. J. B. Morris, of Prior Park, formerly Fellow of Exeter College, Oxford.

The Queen has conferred a pension of £100 a year, on the Civil List, upon Mrs. Liston, widow of the eminent surgeon, whose affairs at his decease were not found in the prosperous condition that might have been expected from his extensive practice and professional reputation.

Mr. George Loch has addressed the electors of the Falkirk district of Burghs, vacant by the elevation of Lord Lincoln to the Upper House, as a practical and economical reformer. On the subject of the Income-Tax Mr. Loch says, that "if such there are still some exclamations from particular interests will utter their difficulties produced from recent legislation, his belief is that they, too, will gain by what has been done, not less than others, while those will be the peculiar advantage of exchanging an artificial position for one resting on its own independent foundations."

Mr. Hyde Clarke, Consul at Oran, is appointed Consul at Algiers, on a salary of £800, by which a saving to the public will accrue of £800 a year, consequent on the abolition of the office of Agent and Consul-General, lately held by Mr. St. John, but which is not to be filled up. The Consulate-Agency at Bona, the reduction of the Consulate-General in Syria (£1000 a year), makes a total saving effected by Lord Palmerston on two consular appointments alone of £1800 a year.

The society formed at Frankfort-on-the-Maine, for the encouragement of faithful services in servants, has just held its sitting; M Bethmann, the banker, in the chair. Twenty gold medals were given to servants living with the same master for more than twenty years, fifteen silver ones for more than ten years. This speaks well for the morality of the place, as the population is only 55,000, and the number of servants is great.

Lord Palmerston has carried out a saving of £1200 a year in the late arrangements and reductions in the consular establishments in China.

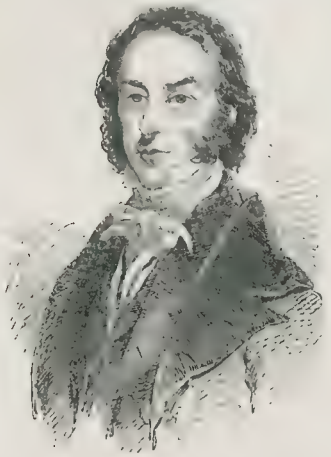
West Wemyss has long been famed as the principal coal-field of the east coast of Fife. The parrot coal of this district can be converted into article of household furniture, such as coking-grates, writing-desks, chairs, and tables. Accordingly, Mr Thomas Williamson is at present making a sofa wholly composed of coal, for the Great Exhibition. It is nine feet long, with three compartments or divisions, and is sufficient to contain seven people sitting on it. The front standard is beautifully carved, displaying three curious sporting animals. Mr. G. H. Ramsay, of Derwent Walk, also proposes to exhibit various articles made from the celebrated cannel coal in the North of England.

On Saturday, inquests were held at the Torbay public-house, Rotherhithe, on the bodies of two men found dead in the river. The first was that of a young man supposed to be an apprentice to one of the seamen, and which had been in the water about three weeks. The other was the body of a woman found off

"THE HIGHLAND MOTHER."—PAINTED BY F. W. TOPHAM.

and two daughters, the elder of the latter being now widow of Viscount Alford; and the eldest of the former, Charles, being the present, and third, Marquis of Northampton

The late Marquis died on Friday week, at Castle Ashby, the ancient family seat, in Northamptonshire. The recent death of Lord Alford, his son-in-law, had proved a severe shock to a naturally sensitive temperament, and he was advised to leave Ashridge for his own residence, before the funeral. He did so, but very shortly after his return expired.



THE LATE MARQUIS OF NORTHAMPTON.

The family of Compton is of great antiquity, and its ancestors were Lords of Compton, county of Warwick, antecedently to the Conquest. In the reign of Henry VIII., Sir William Compton took a distinguished part in the Battle of Spurs; and in the troublous times of Charles I., the then Earl of Northampton, and several of his sons, fought with the utmost gallantry under the Royal banner, the Earl himself being slain at Hopton Heath.

We select the following tribute to this lamented nobleman, from a communication to the *Times* of Wednes

Although the late Marquis did not fill any considerable space in public life, there have been few persons in our [illegible] more varied accomplishments of more extended knowledge, or who, by preserving a just balance between his various functions, fulfilled more thoroughly the duties of his station. His calm and unobtrusive manners, and his peculiar simplicity and singleness of mind made others almost as unconscious of many of his rare and peculiar excellences as he was himself.

At Trinity College, Cambridge, Dr. Peacock, the present excellent Dean of [illegible]y, Professor Sedgwick, the Archbishop of York, Sir John [illegible], and Professor [illegible] were his contemporaries, associates, and friends; and, though separated [illegible] seniors, Whewell, Master of Trinity; Airy, Astronomer Royal; Bishop Thirlwall, and Professor Willis, all cordially entered into the same friendly association. On quitting the University, he was returned to Parliament for the town of Northampton. His immediate connexions were all of the highest Tory politics. The Prime Minister, Spencer Perceval, was his near relation; he soon was remarked for a determined independence. He repeatedly expressed a strong preference for a system of direct rather than of indirect taxation, and even incurred the unpopularity of opposing the repeal of the Property-tax in 1816 on this ground. The leader of Opposition, George Ponsonby, admitted that Lord Compton had done so in a manly and dignified manner, "though at a time when the Ministers have nothing to say for themselves." Lord Compton expressed on a subsequent day his surprise at the conduct of the Government in repealing the war malt tax, after having declared their conviction of the absolute necessity of retaining the Property tax; and he attributed this conduct, which produced in his mind the deepest disappointment, to a false seeking after popularity. Lord Compton associated himself soon after with Wilberforce and the noble and excellent band of men who devoted themselves to the cause of Africa. The same association connected him with Sir James Mackintosh as a criminal law reformer; and by his conduct on the case of Parga, on the Alien Act, and on the constitutional amendments which he proposed in the Seditious Meetings Act in 1819, he manifested how far he had advanced beyond the foreign policy of Lord Castlereagh, or the home policy of Lord Sidmouth. It was on one of those occasions that Lord Castlereagh charged him with "turning his back on himself."

Lord Northampton is more known to the public in other ways than as a politician. On the retirement of his late Royal Highness the Duke of Sussex from the presidency of the Royal Society, the varied and recognised accomplishments of Lord Northampton pointed him out as the individual most worthy to succeed to our highest scientific honour. For this he was well fitted from his abilities and his associations. He had not the pretension of possessing very deep erudition in matters of science, but he possessed very general knowledge, and the most active sympathy both for science and its professors. He was a sound and practical geologist. His associations with all our most eminent philosophers, his knowledge of their fellow-labourers on the Continent, his familiarity with foreign languages, and his cheerful and splendid hospitality, rendered the period of his government greatly beneficial to the Royal Society. His retirement was regretted by all; though the admirable selection made of his successor (the Earl of Rosse) has done honour to the scientific world.

Some of Lord Northampton's poems have appeared in various publications, and are specimens of good taste and good feeling. Several of them are published in a very interesting volume called the "Tribute," to which many of our most distinguished writers, Wordsworth, Rogers, Moore, Scott, Alfred Tennyson, and others, were contributors. This publication was edited by Lord Northampton for the purpose of benefiting the family of the late Rev. E. Smedley, and it contributed in no inconsiderable degree towards the kind object for which it was undertaken. This is only one example among many of the active beneficence of Lord Northampton. His charity was unostentatious, but it was noble and discriminating; and many a deserving sufferer has reason to be thankful for the sympathy and relief received from Castle Ashby.

Let it not be said that we have given too much prominence to the life and character of a private individual. We should rejoice if we could flatter ourselves that excellences carried so far, possessed so modestly, so well balanced, combining the faith of a Christian, the affection of a husband and a parent, the acquirements of a man of science and of literature, the public spirit of a member of the Legislature, the justice and kindness of a magistrate and of a landlord, are, indeed, so common as to be unworthy of notice. Such is not the case. We feel the more anxious to preserve this imperfect record of the late respected Marquis of Northampton, because his character was essentially English. This happy combination of practical duties, without sacrificing any one to another, without giving, in any case, an improper or exclusive preeminence, is not only the greatest blessing to the happy individual himself, but is the greatest blessing to his friends and his country. It is, therefore, the brightest example to his contemporaries, and to those who will succeed him.

The accompanying Portrait is from a drawing in the possession of Mr. Weld, Assistant-Secretary to the Royal Society. This drawing was taken in 1848, and is an admirable likeness.

FINE ARTS.

"THE HIGHLAND MOTHER."—PAINTED BY F. W. TOPHAM.

THIS very interesting scene of domestic life in the Highlands, is one of Mr. Topham's happiest contributions to the Exhibition of Modern British Art, at the Gallery of the Old Society of Painters in Water Colours, now open in Pall Mall East.

The composition of the Picture is extremely skilful; the details are few and simple, but cleverly arranged into a harmonious group. The expression of tenderness and affection in the mother, caressing her infant, though surrounded by the rudest approaches to comfort, as in the roughly-constructed cradle, and the fire upon the broken floor, forms an episode of touching nature. The colouring, as of all the artist's productions, is deep-toned, rich, and mellow. It is, altogether, a very admirable picture.

ASHRIDGE, THE SEAT OF THE LATE VISCOUNT ALFORD.—(SEE PRECEDING PAGE.)

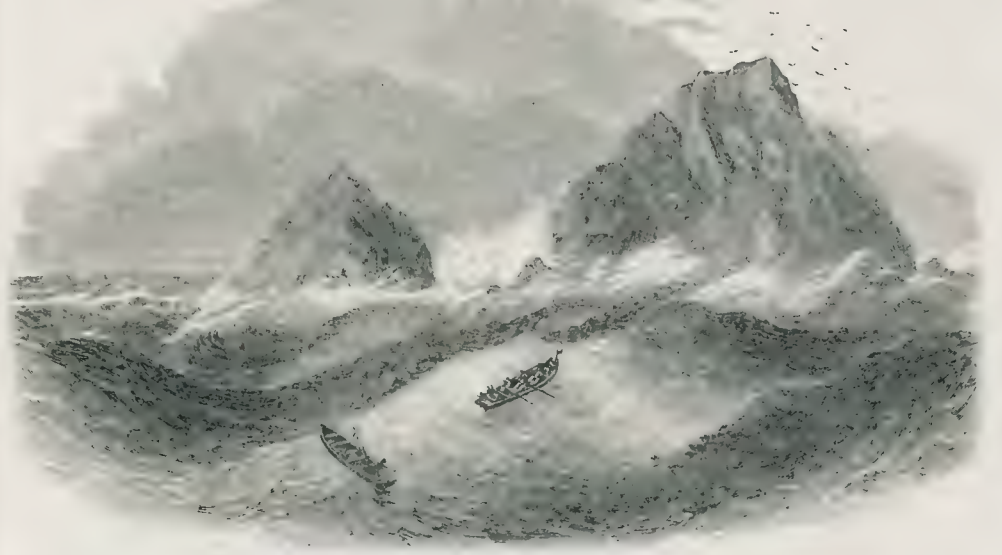
DIORAMA OF "OUR NATIVE LAND."—THE "SIR ROGER DE COVERLEY" DANCE.

"OUR NATIVE LAND."

Under the title of "Our Native Land; or, England and the Seasons," a diorama is now being exhibited at the Gallery of Illustration, in Regent-street; consisting of a series of rural landscapes, with human and animal accessories. The former are by Messrs. Grieve and Telbin; the latter by Mr. Absolon and Mr. Herring. The landscapes are exceedingly fine, but are, perhaps, somewhat ideal for a general public. There seemed to be an expectation among the company that they should see actual places with recognised names; but neither in the lecture delivered by Mr. Frederick Vining, who is engaged for the occasion, nor in Mr. Miller's descriptive catalogue, was or is there any attempt to identify the pictures with actual scenes. This absence of topographical reference will, we fear, detract from the interest with which this diorama will be witnessed. In a higher point of view, however, this peculiarity may be considered an excellence. The projectors have evidently preferred the abstract and the general to the real, and thus endeavoured to elevate the notions of the picturesque in the minds of spectators. In furtherance of this ideal the subject has been divided in allusion to poetical exemplars, and that of Thomson's "Seasons" has been adopted; to which we may add Bloomfield's "Farmer's Boy," and occasional hints from Shakspeare and other poets. Spring, Summer, Autumn, and Winter accordingly display in succession their various phenomena; and Mr. Vining recites the poetical passages referrible to the situation while it moves onward. Musical illustrations also accompany the exhibition, such as Beethoven's "Pastoral Symphony," and other popular compositions. These, we think, should be occasionally interrupted, especially when the recitation is proceeding. It is impossible to listen to Mr. Vining and the pianoforte at the same time. The lightness of the aim proposed in this diorama, together with the appeal made to our national feelings by it, disposes us, however, to welcome it with more than ordinary satisfaction. Some of the scenes are exceedingly fine and true, but others approach us in rather a fanciful guise, and the more particularly as the costumes are obsolete. We are afraid that the peasants are Mr. Absolon's peasants, rather than the rude natives of the English soil. The pictures are, in a word, too pretty; though not uniformly painted with the same care. One was set in the manner of a theatrical scene, representing a princely mansion by moonlight, with "real-water" fountains, and elm avenues, and aristocratic groups. This is followed by Sunday in the country—a touching topic, with the old church, and the grave-stones, and the congregation. As a contrast to these, we may mention a winter picture, of Thomson's peasant perished in the snow, with that of his cottage, and his dame looking out upon the dreary scene, expecting her husband in vain. But we are not permitted to retire with such gloomy impressions: the concluding picture presents us with a merry party in an old-fashioned manor-house, dancing "Roger de Coverley"—a copy of which accompanies our remarks. It is to be hoped that the artistic merits of this Diorama may prove attractive, and that the laudable attempts made to elevate the taste of the public may not meet with discouragement because of their ambition.

SHIPWRECK NEAR THE LAND'S END.

EARLY on Saturday morning, the 11th inst., the brig *New Commercial*, of Whitby,



WRECK OF THE "NEW COMMERCIAL" BRIG, ON THE BRISSON ROCKS, ON THE COAST OF CORNWALL.—THE RESCUE.

211 tons burden, Sanderson master, bound from Liverpool to the Spanish Main, in a thick fog and strong gale from the S.S.W., struck upon a ledge of rocks lying on the Great and Little Brisson—two high rocks rising between sixty and seventy feet above high water-mark, about one mile off the bluff headland of Cape Cornwall, and four miles northwards from the Land's End. The sea running very high, the vessel immediately went to pieces, and the crew, nine men, with one woman, the wife of the master, got on the ledge. They were discovered from the shore as soon as day broke, but no assistance could then be possibly rendered to them.

In the part, as conjecture, the poor creatures remained until about nine o'clock, when they were all washed off together by one tremendous wave, and in a dark, into the boiling deep—seven out of the ten sank at once into a watery grave.

Of the remaining three—one, a mulatto, contrived to get on a portion of the floating wreck, and after being beaten about for some hours in imminent peril of being every instant swallowed up by the breakers, managed, with remarkable coolness and presence of mind, by means of a plank which he used as a paddle, and a piece of canvas, which served him for a sail, with the assistance of the strong tides, to keep clear of the broken waters.

While this poor fellow was thus struggling for life, amid the anxious expectations of the people who witnessed his attempt from the shore whose lofty cliffs were now crowded by upwards of 2000 spectators, five fishermen, belonging to Sennen, a small fishing cove close to the Land's End, determined, with that bold and resolute spirit for which these men are distinguished, to launch their boat (the *Grace*) through the breakers, in which they happily succeeded, and eventually, after encountering great risk, they rescued the poor mulatto from his perilous situation.

The other two, the master and his wife, when they were cast adrift the ledge, were washed upon the Little Brisson Rock, which rises in a peaked head, and is the resort of numerous sea-fowl. The master first succeeded in clambering on the rock, and upon looking around him saw his wife struggling in the waves, but sufficiently near to enable him to stretch out his hand and pull her in. While the Sennen fishermen were occupied in rescuing the mulatto, her Majesty's revenue cutter *Spitfire*, commanded by Mr. Forward, was seen gallantly working up and the Land's End, having been ordered to the spot by Captain Davies, R.N., the active and still acting inspecting commander of the coast guard of this district. Mr. Commander Davies himself and several of the officers took up their stations upon the lofty promontory of Cape Cornwall, overlooking the Brisson. On reaching the point, Mr. Forward launched his boat, and attempted, with a crew of five hardy men, to near the rock, but the attempt was fruitless, and it was only with great difficulty that he regained the cutter, to the great relief of Captain Davies and the many on spectators upon the cliffs, who rejoiced to perceive that, though success did not attend his daring exploit, still he himself and his gallant crew at least were safe. It was now growing late, and nothing more could be attempted in the way of rescue for the day, so Mr Forward hoisted his colours and hove-to his cruiser, to encourage the poor sufferers, who were now to be left to spend the wretched night without food or shelter, exposed to the wind and rain upon this desolate rock amid the wide waste of waters, and to assure them that they had still a friend who would stand by and not forsake them.

On Sunday morning the wind happily drew a little to the south-east, which caused the sea to abate: all hands were immediately on the alert. At one o'clock four boats were seen approaching from the Sennen Cove—three manned by fishermen, and one by the coast guard, under the command of Mr. Forward, having embarked in a preventive boat at a small cove named Pendeen, about three miles north-east of the spot, with four preventive men and one miner, taking rockets with him. The cutter's boat, also, was manned by Mr. Forward's men, so that six boats were quickly on the spot. By this time the scene had become one of the most exciting description, and the crowds of people upon the cliffs could not have numbered less than 5000 or 6000; and as soon as they arrived at the spot, the cheers of this vast multitude, awaking all the echoes of this adventurous coast, added not a little to the excitement.

The sea ran so high that no boat could venture within 100 yards of the rock. The rockets which Captain Davies had taken with him in the preventive boat had never been tried here before, even from the shore, and we believe never elsewhere from a boat.

After making his arrangements, he with his own hand discharged the rocket. He was enveloped for an instant in a sheet of flame from the rocket, but happily, however, he sustained no injury, but unfortunately the line which reached the rock fell upon a sharp ledge, which cut the rope so that the end of it slipped off into the sea.

It is impossible to describe the disappointment experienced by the people on the cliffs and in the boats at this unfavourable result of such a daring experiment.

After a short delay, however, another rocket was prepared, which Captain Davies again himself discharged, and this time the cord fell on the rock close by the man, to the great joy and delight of the assembled multitude.

This critical moment the sun shone forth with brilliancy. The man on the rock was seen to fasten the line around the waist of his wife, and to encourage her to take the fearful leap, which she lingered and hesitated long before the ensuing waters. After some little time, however, its persuasions prevailed. They took an affecting leave of each other, and, after breathing a fervent expectation of all, she made the awful plunge for life or death from a height of about 100 feet. At this moment three immense waves broke in rapid succession, perilling the safety of all. For a time, indeed, the issue was enveloped in the deepest anxiety to the spectators, and the loud cry broke forth from thousands of voices, "She is gone!" But soon again the boats were seen above the sea-line of the lofty cliffs once more rising with majestic steadiness. The coast guard was drawn with great judgment, and after about three minutes the poor woman was taken into one of the boats; but two blows from the waves were more than human nature could endure, and she became insensible. Every attention could be paid to her, and she soon recovered her consciousness. She was spared. The men took off their own clothes to cover her, and used every effort to restore her. She breathed, but by the time the boat reached the cove life was fled. After the master had provided his wife to leave him, he fastened the line to his own waist, and was drawn, greatly exhausted, into one of the boats.

It is impossible to speak too highly of the conduct of those who were employed on this occasion. All who witnessed it agree in declaring that a more gallant, humane, and praiseworthy act has seldom been recorded.

The accompanying Illustration, from a Sketch by an obliging Correspondent at Penzance, shows the perilous situation of the two boats, in which Captain Davies, Commander Forward, and the coast guard, and their men, endeavoured to rescue the unfortunate sufferers and the wreck.

COUNTRY NEWS.

REPRESENTATION OF GLAMORGANSHIRE.—A rumour is abroad to the effect that Mr. Henry Thomas, who for many years has been vice-chairman of the quarter sessions of the county of Glamorgan, will be put forward in the Liberal interest as a candidate for Glamorganshire, on the vacancy occasioned by Earl Dunraven accepting the Chiltern Hundreds.

BEDFORD COUNTY ELECTION.—Colonel Gilpin, of Harklilde Grange, has issued an address to the electors, in which he declares himself "an uncompromising defender of due and just protection to native industry in all its branches."

REPRESENTATION OF SOUTH LANCASHIRE.—It is said that Mr. Alex. Henry M P. has given his friends to understand that he does not intend to solicit the suffrages of the freeholders of South Lancashire again.

MANCHESTER COMMERCIAL ASSOCIATION.—On Monday, this association held its first annual meeting in their room, King-street, in that city. The meeting was attended by a goodly array of many gentlemen, members of the association. Mr. A. Turner, president, filled the chair. He reverted to the operations which prevails on caprice is at present carrying out in India, among the cases from Panama to Hindostan, Sydney, and Australia, received from Mr. David Lees, a member of that body, who was at present engaged in the important undertaking of the growth of cotton in the New Orleans or Mexican seed, that it can be produced at 4d. per lb., and 4½d. the all charges in its removal to Liverpool from Frichinclor, will only cost 4d. per lb. Samples of the cotton were recently exhibited in Manchester, and declared to be worth 8d. per lb. After making other remarks, he called upon Mr. Fleming, the secretary, to read the report, from which it appeared that the directors during the past year had been engaged in the following subjects:—Trade of Siam, tea culture, Birkenhead Docks, Pa. Hours Bill, Mr. Bowring on the New Indies, Lord John Russell on his visit to Manchester, Danish ports on the west coast of Africa, Manchester Custom-house, bankruptcy law in reference to the remuneration of official assignees, Australian trade, Port Natal, Gibraltar trade, cotton cultivation in India, &c. The meeting having been addressed by Messrs. Clegg, W. Gibb, Lees, and M. Ross, in favour of the election of the several officers for the ensuing year, with the usual vote of thanks, the proceedings terminated.

GREAT MATCH AT CRICKET.—The match at draughts, between Wyke, "the herd laddie," and Mr Mintoch, has excited considerable interest since its commencement in the Lennox Hotel, Glasgow, on Tuesday. We regulated two games; on Wednesday, it ere were six drawn games only made, and on Thursday again, the result of the day's contest ended with a repetition of five drawn games.

On Saturday afternoon, the ceremony of installing the Rev. Dr. Schiller Szinessy, as minister of the old Hebrew congregation in Manchester, took place. After the recitation of a decalogue, the wardens appointed the last steps of the ark, and conducted the rev. doctor to his official seat; and the service closed with the usual afternoon prayer. Dr. Schiller Szinessy took an active part in the Hungarian war, and received some severe wounds while fighting on the popular side in that struggle.

HIGHWAY ROBBERY.—Mr. James C. Wheeler, of Northgate-street, Gloucester, when in a very hurry to be charged, at about six o'clock on Saturday evening last, in a road much frequented, was attacked by a couple of fellows, at a short distance from the New Inn, and within a few hundred yards of several houses, and had his gold watch and chain forcibly taken from him. Fortunately, he was able to describe one of the robbers so accurately as to lead to the detection of the ruffians, who are committed for trial.

MILDNESS OF THE SEASON.—Mr. Dennis, of Billericay, Essex, has this day brought in his garden with young fruit now upon it. In another garden, to the same neighbourhood, another boy has in full bloom.

The country papers report numerous fires of farming stock, supposed to be the acts of incendiaries. This abominable crime seems to be extending very much.

NATIONAL FREEHOLD LAND SOCIETY.—This society has recently made two important purchases in the county of Essex. One of the estates is situate at Walthamstow; it will be divided into 70 lots, each having a frontage of 26 to 30 feet, and varying in depth from 95 to 160 feet. The estate is situate in close proximity to Grosvenor House, and, being laid out in streets, is well adapted for building purposes. Its distance from town is about six miles. The other is a very large purchase consisting of an estate of 70 acres, close to the town of Romford, consisting of land partly adapted for building, and partly for agricultural purposes. It has been purchased by the society at a cost of £ per acre, and will be allotted in small farms of two or more acres. The intended for this purpose is admirable, lying to the right and left of the Eastern Counties Railway, and a portion of the land forms the station. A meeting was held at Romford, on Tuesday evening, for the purpose of celebrating the completion of the purchase. Mr. Fletcher, of Romford, presided, and the spacious Corn Exchange was crowded. A number of branches, with which the society's operations are extending, it was stated, that up to that time fifteen estates have been purchased, at a cost of more than £50,000, and that 9,000 shares have been issued. The estates are situate respectively at New Malden (Surrey), Kingston (North and South), and Annerley, in East Surrey; at Tunbridge Wells, Enfield, and Stoke Newington, in Middlesex; at Godstone, Farnborough, and Cobham, in Kent; at Goda ming, in West Surrey; at Walthamstow and Romford, in South Essex; and at Manningford, in North Wilts.

The active officers, Morten and Dadson, of Tunbridge Wells, have succeeded in apprehending upwards of 100 persons who have broken and burglaries in Sussex. He was taken into custody in a barn belonging to the Rev. James Norton, of Woodbarns, near Chertsey. He gives the name of William Brooks, and is said to be one of the most daring of the gang.

NATIONAL SPORTS.

QUARTERLY SPORTS.

By an unaccountable want of consideration, the ensuing week will be almost blank, inasmuch as promises to come off being one on Tuesday and two following days at Broughton (Yorkshire), and one on the same day at Bolton, and another on Tuesday at Southam. Had the secretaries of the various coursing clubs been aware, they would assuredly have been awake to the Spelthorne and Ashdown Park meetings would not have clashed on the same days.

TATTERSALLS.

MONDAY. A fair amount of business was got through at the prices quoted underneath, the Italian, Cossack, and Harlot having the most powerful parties.

	LIVERPOOL STEEPLECHASE.	
10 to 1 against Vain Hope	18 to 1 aget Abd-el-Kader	30 to 1 aget Victim

John Wroe, the founder of a sect called the "Beardies," from their partiality to hairy barbarism, recently arrived in Melbourne, Australia. He is described as a man sixty years of age, but hale and strong; and announces that he has a divine mission to preach in the colonies. His doctrine is to observance of the law of Moses, together with the Christian dispensation. He commenced operations by preaching in the "Sanctuary" on Sunday, the 15th of September, whither all the sect repaired on the new sect resorted.

From a return of the number of convicts in the colony of New South Wale, there would appear to be the large amount of 21,400, classed as follows: male convicts employed by government, 3864; female, 1671: ticket holders earning their own livelihood, male, 11,000; females, 1153; in all, 17,101 males, and 4306 females.

TORNADO AND EARTHQUAKE AT MALTA.—Accounts from Malta to the night of the 9th of January, mention, that about half-past two P.M. on the 6th ultimo, fr in a perfect calm there was instaneously rose a most terrific tornado, such as is sometimes experienced on the coast of Africa but, fortunately, it passed over in the direction of Gozzo, or many houses in Valetta would have been dead a calm as before, without, happily, causing any injur. either to the squadron or merchant shipping. At a few minutes after seven o'clock, however, on the same morning, two very violent shocks of an earthquake were felt in the island, and were soon perceptible on shipboard in the harbours, were intensely stationed at cable-doors in the ships of war ran in to ensure bells which they found had been set ringing by an invisible power. Similar shocks occurred in the most occupied hotels and lodging-houses. In some of which bedroom doors were thrown open, were shaken open, which shutters remained in al. directions to answer bells, when in some cases the bells were found sprawling on the floors, having been jerked out of their beds by the first shock, and many fainting from alarm and bewilderment. The first was a jolt or upward movement; the second, immediately succeeding, a violent shake (not an undulatory motion) from N.W. to S.E. It was quite calm at the time, and shortly previous to the first shock. The sky was clear, and the moon shone beyond the crackling a few walls in a me old houses. The *Spitfire* steam-frigate was on the previous evening in sight of Mount Etna, which, though smoking, presented no unusual appearance.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The collision between the Assembly and the Pres dent of France affecting the prices of French Rentes at the opening of the week, a corresponding depression was produced in the English Market. Consols opened on Monday at 96¼ being a point lower than the previous price of the previous week. After receding to 96, the opening price was again attained; but, notwithstanding the Government broker purchased on Tuesday, a sale on account of a scotch banker at company countenance the effect, and the lowest price of the week, 95⅞, was recorded, however, to 96⅛ to ⅜. There was more buoyancy on Wednesday, Consols closing at ¼ per cent higher, and, on Thursday, a no apprehensions were entertained of the directors of the Bank of England raising the rate, Consols closed to 96⅝ ⅞ for Money, and 96⅞ ⅞ for time. Exchequer Bills receded a few shillings early in the week, and are now about 36s. pm India Bonds are a shade lower At the close of the week's transactions prices stood for Bank Stock, 214; Reduced, 97⅛; Consols, 96⅞; New Three-and-a-Quarter per Cent. Annuities, 98⅛; Long Annuities to expire in 1860, 7 13-16; India Stock, 266; India Bonds, £1 pm.; Ditto under £1000, 72 pm.; Bank Stock for the Account, 96⅜; Consols for Account 96⅝; Exchequer Bills, £1000, June, 39 pm.; £500, June, 39 pm.; Small, June, 38 pm

In the foreign Market transactions have been limited, both in number and amount; fluctuations have, consequently, been barely numerous Mexican has ranged from 23½ to 23¾, and Russian Five per Cents have improved to 112¾. Reported disturbances in Portugal have not affected the price of Stock at present. The Market has offered no other topics of interest, pending the close being, for Brazil Bonds, 90¾; Chilian Bonds, 6 per Cent., 101½; Danish Bonds, 1825, 5 per Cents., 102; Equador Bonds, 3¾; Ditto, 6 per Cent., 1846, Ex Jan. Coupons, Account, 23¾ x. d.; Peruvian Bonds, 4½ per Cent., Account, 78; Ditto, Account, 33¾; Russian Bonds, 4½ per Cent., 99¾; Spanish, 5 per Cent., 1840, Account, 17¾; Belgian, 4½ per Cent., 92; Ditto 2½ per Cent. (12 Guilds.), 58; Ditto, 4 per Cent. Certificates, 91

Shares closed with a greater degree of buoyancy. London and South Western will pay a dividend at the rate of 4 per cent. per annum London, Brighton, and South Coast continue to improve in price the report afford great satisfaction. Aberdeen, 19½; Belfast, 9 per cents., No. 1, 20 pm.; Ditto, New Preference, 8 per cent., 0½; Eastern Union, 6 per cent., 1 dis.; Lancashire, 12½; East Lincolnshire, 6 per cent., 8½; Great Northern, 1½; Do. buttes, A. deferred, 1½; Ditto, balance, 5 per cent., 11½; Do. 4 per cent. preference, 12½; Great Southern and Western (Ireland), 39; Great Western, 75¾; Hull and Selby, 102; Lancaster and Carlisle, Thirds, 9; Lancaster and Yorkshire, 21; Ditto, guaranteed 5 per Cent. Stock, 104; Leeds and Bradford, 96¾; London and Blackwall, 7¾; London, Brighton, and South Coast, 98¾; South Eastern and Dreadwich, Preference, 24¾; London and North-Western, 124½; Ditto, ditto, New Stock, 124; Ditto, Six per Cents, B, (c), 34; London and South-Western, 81; Lowestoft, Guaranteed Six per Cents., 14½; Manchester, Sheffield, and Mat ck, 14½; Manchester, Sheffield, and Lincolnshire 24½; Midland, 48½; Ditto, £50 S. rres, 52½; Ditto, Consolidated Bristol and Birmingham, Ditto, Extension, Newcastle and Berwick, 19½; Oxford, Worcester, and Wolverhampton, 19½; Reading, Guildford, and Reigate, 21½; South Central (Paris), 12½; Shrewsbury and Birmingham, Class A, 6¼; Ditto, Class B, 5⅝ dis.; Ditto, New Guaranteed, 10; Shropshire Union, 5⅜; South Devon, 2½; Vale of North, 8; York, Newcastle, and Berwick, 19½; Ditto, and Newcastle Extension, 14½; Ditto, G N L. Purchase of Pref., 6½; York and North Midland, 22½; Boulogne and Amiens, 5½; Dutch Rhenish, 2½; Great Luxembourg, 10½; Luxembourg, 2½; Namur and Liege, 8½; Orleans and Bordeaux, 3½; Paris and Strasbourg, 5½; Rouen and Havre, 10½; Samure and Meuse, 2½.

THE MARKETS.

CORN EXCHANGE.—Since our last report, the arrivals of English wheat up to this market, coastwise as well as by land carriage and sample, have been small and of very middling quality, owing to the damp state of the weather. The few fine samples on offer have sold somewhat readily at full prices. In other kinds very few transactions have taken place. There has been rather more inquiry for foreign wheat, the late advices. The supply of Irish barley has increased, that of foreign fallen off all descriptions have sold heavily, and are figures have been with difficulty augmented. Malt dull but not lower. We have had a rather demand for flour; but other articles have ruled dull:—

English. Wheat, Essex and Kent, new, 38s to 43s; ditto, white, 38s to 40s; North of England, new, 38s to 42s; ditto, white, 39s to 43s; rye, 24s to 26s; grinding barley 20s to 23s; distilling ditto, 23s to 25s; malting ditto, 25s to 31s; Lincoln and Norfolk malt, 46s to 48s; brown ditto, 44s to 46s; Kingston and Ware, 50s to 52s; Chevalier, 54s to 56s; Yorkshire and Lincolnshire, 52s to 54s; grinding ditto, 46s to 48s; beans, new, 34s to 37s; ditto, old, 38s to 40s; grey peas, 34s to 38s; maple, 34s to 36s; white, 37s to 39s; boilers, 38s to 40s; Town-made flour, 35s to 40s; Suffolk and Norfolk, 32s to 34s; Stockton and Yorkshire, 30s to 32s; *Foreign*, 1 sack red wheat, 40s to 42s; white, 42s to 44s; barley —; beans, —; peas, —; oats, —; quarter American flour, 30s to 34s; Canada, —; to —a per barrel. Baltic, 24s to —per barrel. French, 30s to —per sack.

BRITISH WOOL MARKET.—Since our last report, the demand for all kinds of wool has been extremely limited. English, leaving the qua ity unchanged, is offered on former terms. Spanish, also, is quite as dull as before. Of Portuguese and Germans, the supply is very small, and the demand inactive, at late rates. Cape, Adelaide, and Port Phillip, are in moderate request, at full prices. Of other kinds, very little is doing, and buyers are not inclined to operate.

Leicester.—Good ordinary native Leicester has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Lincoln.—Good ordinary native Lincoln has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Kent.—Good ordinary native Kent has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Sussex.—Good ordinary native Sussex has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Essex.—Good ordinary native Essex has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Hampshire.—Good ordinary native Hampshire has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Dorset.—Good ordinary native Dorset has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Somerset.—Good ordinary native Somerset has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Devon.—Good ordinary native Devon has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Cornwall.—Good ordinary native Cornwall has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Wales.—Good ordinary native Wales has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Scotland.—Good ordinary native Scotland has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Ireland.—Good ordinary native Ireland has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Foreign.—Good ordinary foreign has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Colonial.—Good ordinary colonial has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Miscellaneous.—Good ordinary miscellaneous has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Waste.—Good ordinary waste has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Noils.—Good ordinary noils has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Tops.—Good ordinary tops has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Yarns.—Good ordinary yarns has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Fabrics.—Good ordinary fabrics has sold heavily, at late rates. Fleeces of fine quality have been in request, at full prices.

Manufactures.—Good ordinary manufactures

CLUMBER, THE SEAT OF THE LATE DUKE OF NEWCASTLE.

FUNERAL OF THE LATE DUKE OF NEWCASTLE.

(Continued from page 62.)

bearers, on horseback; the late Duke's chariot, containing the coronet, borne by the house steward; the stud-groom, undertakers, and the clerk of the works, on horseback; the hearse (with escutcheon), drawn by six horses, and containing the coffin; a mourning coach, containing the Earl of Lincoln (now Duke of Newcastle), and the Lords Charles, Thomas, and Robert Pelham Clinton, sons of the late Duke. Among the other mourners in attendance were Viscount Combermere; the Lord Clinton, now Earl of Lincoln; and the Lords Edward and Arthur Pelham Clinton, grandsons of the late Duke; H. Fyne Clinton, Esq.; E. W. Mundy, Esq.; and Col. Dawkins. The procession was closed by the head keepers and foresters on horseback, and tenants in carriages.

At Markham-Clinton, the *cortège* was met at the church gate by the Rev. E. H. Dawkins, who read the funeral service in a most impressive manner.

All the Ladies Clinton were present at the interment in the church, whither they had proceeded privately

As soon as the coffin had been placed upon the platform appointed to receive it, the pall was removed by the undertaker, when the coronet was set upon it, and the mourners then withdrew.

The pall-bearers were selected from the principal class of the late Duke's tenants, some of whom and their families had held farms for upwards of 300 years. The under-bearers were selected from the class of cottage farming tenants, some of whom and their families had held upwards of 250 years

The body was first placed in a shell of Spanish mahogany, lined with rich white satin; next within a lead coffin; and enclosed in the outer coffin of Spanish mahogany, covered with crimson Genoa velvet, having eight massive handles, with a coronet over each; the lid studded with gilt stars, and having upon it the breast-plate, with the noble Duke's arms heading, the inscription.

THE ILLUSTRATED LONDON NEWS

No. 467.—VOL. XVIII.] SATURDAY, FEBRUARY 1, 1851. [SIXPENCE. {WITH SUPPLEMENT GRATIS.

THE EDUCATION OF THE PEOPLE.

THIS great question—beyond comparison the greatest and most urgent of our time and nation—makes a sure, if not a rapid progress. Even that unhappy controversy forced upon the people of this country by the aggression of the Papacy, promises to open eyes that have long been shut, and hearts that have long been hardened by sectarian animosities against the secular education of the whole people, to the danger which Great Britain incurs in allowing her teeming multitudes to remain ignorant of the great arts of reading and writing. Protestantism is the mother and the nurse of enlightenment; but Protestant sects in this country, as far as the great masses of the people are concerned, have hitherto neglected their duty, and, to some extent, belied the principles upon which Protestantism is founded, by refusing to co-operate with one another in the instruction of the people. Sectarianism—in itself a great evil—has thus been the parent of another evil far greater. Every sect has been so jealous of every other sect, that union for an educational purpose, combined with or independant of religion, has become equally impossible. The result is, that Great Britain contains a larger proportion of utterly uninstructed and degraded men and women and young children, than any other Christian country in the Old World or in the New, which is fit to be ranked in the same scale of civilisation and intelligence. That this is not a necessary consequence even of that great evil—a multiplicity of warring sects—is shown by the experience of the United States of America, where secular education has been provided for all classes of the people to an extent unsurpassed, if not unequalled, in the world. The Protestant sects of Great Britain, warned by the encroachments of Popery, and awakened to a full sense of the evils of this darkness of the popular mind, long talked of but never remedied, will, we trust, study by what means our American brethren have been enabled to surmount the many and great difficulties which surround the question; and, by thinking less of the outward form and more of the inner spirit of Christianity, do it the justice to believe that it will find its best friends and supporters among those whose secular knowledge has been most cultivated. Should the aggressions of Popery lead to the conviction that the most effectual means to meet them is to enlighten the people, the nation will draw from that nettle of danger the flower of safety. The true way to combat a religious system which wars with the intelligence of mankind, is by armies of schoolmasters, and by the artillery of the spelling-book, the multiplication table, and the great facts of physical science. These are far better than penal laws and counter-aggressions—at variance alike with Christianity and with the principles of civil and religious liberty; and real good will flow from apparent evil, if the people of this country resolve to employ them.

The rapid progress made by the National Public School Association of Manchester, and the fact that it has called into existence another powerful body, in connexion with the Church of England, having objects as wide as its own, are of good augury. Mr. Cobden's speech at the meeting of the first-mentioned society—which recals, in many parts, the fervour and the zeal, no less than the sound logic and complete mastery of the subject, which signalised his efforts in the cause of Free-Trade—marks him as a man who knows that he has still work to do, and who, at the same time, knows how to do it. Hitherto, Mr. Cobden has not given the question all the aid which might have been expected; but, for the future—if he be true to the promise of his last speech—he will rank among its foremost and most strenuous supporters.

But in this, as in every other stage of the question, it is well that the whole truth should be known, and that the difficulties which impede the establishment of a system as large and comprehensive as the evil which it is intended to meet, should be fairly measured. There should be no working in the dark in a question like this; no reliance upon a popular support among the religious bodies of the country, which they have manifested as yet no disposition to accord; no self-delusion on the part of the athletæ in this great struggle, that the worst is over, and that for the future the cause will roll with its own momentum, and increase like the snowball as it goes. Great as may be the progress which the cause has made, it has much more to make before it can be considered firmly established in the good sense and good feeling of the public. If much has been done, more remains to do. We wish we could share Mr. Cobden's conviction, when he says that "we have arrived at that period when all the world is agreed that secular education is a good thing for society." We wish we could believe that "there are no dissentients from that now; that, if there are, they dare not show themselves; and that all are agreed, that it is a good thing that English boys and girls should be taught to read and write, and as much geography and grammar as they can possibly imbibe." We wish sincerely that this were the case; but Mr. Cobden himself, though so earnest on the subject in one part of his speech, betrayed in another that he was not quite so sure that the unanimity was so complete as he had represented it to be. "I have found everywhere," said he, "among our dissenting friends, the objection, that by our system secular education is separated from religious instruction. I have found everywhere a pertinacious resolution on their part to maintain that the teaching people reading, writing, arithmetic, and a little geography and grammar, is a system inimical to religion." This, in fact, is the great difficulty which the friends of education have to surmount. This objection exists, and must be combated wherever and whenever it may be raised, if any real progress is to be made in the settlement of this mighty question. No good can be done by shutting our eyes against it, or treating it with contempt. It must be confronted boldly, and refuted satisfactorily. Those who hold it must be taught the cruelty of acting upon it as regards the outcast children of our swarming streets and alleys, when they do not and cannot act upon it in the case of those children who are happy enough to possess parents to pay for their instruction. As Mr. Cobden showed, by the instances which he cited of the schools of Birming-

FIRE IN THE CLOCK TOWER OF THE NEW HOUSES OF PARLIAMENT.—(SEE NEXT PAGE.)

ham and Huddersfield, many well-meaning men who object to secular education for the poor, allow their own children to receive secular education at public schools, and never make any complaint upon the subject. We believe, indeed, that in nineteen out of every twenty of the private and public day-schools and academies throughout the country, there is no such thing as a mixture of religious with all other teaching; that the education given is purely secular; that the children of all sects and denominations of Christians attend them promiscuously; and that religion, whatever may be the theory of the school or the belief of the parents, *is de facto* left to the parents themselves, and to the ordinary ministers of religion who officiate beyond the precincts of the school, and whose teachings are not simultaneous with, but supplementary to, those of the schoolmaster. What is urgently required in the present stage of the question is, to prove to the objectors against secular education for the poor that this is the fact, and that their objection is so groundless, that the children of the middle and upper classes —to whom, if good for anything, it ought to be equally applicable—are not affected by it; and that, if they can be taught reading, writing, arithmetic, and geography, without having religion enforced upon them as portions of their tasks, and without, at the same time, growing up to be irreligious, there is no reason why the less fortunate children of the deserving poor, and all the helpless infants of vice and crime, should not have a similar advantage.

Those who maintain the argument that education without morality and religion is worse than useless, that morality cannot be taught without religion, and that religion cannot be taught in public schools, supported by the public money, because sects are so hostile to each other; and that, consequently, nothing can be done, beyond what is done at the present time by the voluntary efforts of the people themselves, have indeed much to answer for, when we reflect upon the educational deficiencies of the country. Such an argument, if pressed home to the objector, is generally found to proceed from a sectarian, who values nothing so much as his sect, and who would rather the child should remain ignorant than that it should be instructed by a rival. Such sectarianism is a national misfortune; but it must be reasoned out of the minds of many influential people, before National Education can make much progress. The future safety of these realms depends upon it.

"It is not enough," as the American Minister said, "that we can show a great accumulation of wealth, or that we are exporting more largely than other nations;" if at the same time we have within our bosom a larger amount of utterly uneducated men, women, and children than nations not so rich and prosperous. In the course of a short time, that very America—whose meanest child has a legal right to its education, and where the religious difficulties of the question have been met and overcome—will be as rich and as powerful as we are. And then, "what will be our place in the world, if, in the meantime, we continue to neglect the education of the multitude? We shall have stood still, or gone back, while the world has gone forward, and shall have laid up for ourselves a heap of difficulties, disorders, and perplexities, from which it will take not one, but many generations to rescue us, if ever we be rescued at all. We agree with the distinguished Ambassador, and with Mr. Cobden, who reiterated his warning, "that there is no time, not a day, not an hour, to be lost;" and that the character of Great Britain, no less than its future safety, require that on this great question we should yield up our points of difference, and be more religious and less sectarian—more charitable in our hearts, and less righteous in our own self-conceit. The Manchester School of the cause have done much for it; let them continue to agitate it, and they will deserve well of the present and all future generations of Englishmen.

FIRE AT THE NEW HOUSES OF PARLIAMENT.

A FIRE, which for a brief period threatened the existence of this palatial edifice, broke out on Monday afternoon, at half past two o'clock, in a story of the clock tower, on the side facing Westminster Hall, and to the presence of a quantity of timber materials in this tower, the flames for a few moments rose with a vigour rarely observed in the conflagrations of buildings where stone bears so large a proportion to wood as in the New Houses. From a quarter to, until half past three, the tall tower was more or less concealed in a cloud of dense smoke. By ten minutes past three o'clock, however, the engine of the establishment, with others of the London Brigade, were brought to act on the burning materials, and in about half an hour the flames were extinguished.

During the interval between the outburst and suppression of the fire, Westminster-bridge was crowded with spectators, and every point commanding a view of the structure was occupied. In Westminster Hall the excitement attending the transient prospect of a burning out gave a temporary fillip to the lagging oratory of one or two learned gentlemen, but, beyond this, left the progress of business unaffected.

Various rumours got afloat as to the cause of the misfortune, and suspicions suggesting an incendiary origin were hinted; but they appeared to have had no foundation in fact. The investigations of the firemen and others connected with the building leave no doubt of its purely accidental character. It is understood that the plumbers made use of a stove for melting their lead, the pipe of which passed through the clock tower; and it is probable that the ignited soot of this flue was the immediate cause of ignition in the combustible materials of the apartment. The fire does not appear to have in any way injured, although it has somewhat disfigured the exterior of the lower portion of the clock tower. The only damage visible is a slight blackening of a few of the stones, which the men are rubbing away, and the destruction of property was confined to some scaffolding poles and boards

FIRE AT THE NEW CROSS RAILWAY STATION.—On Tuesday night a fire broke out at the carriage *dépôt* connected with the New Cross Station of the London, Croydon, and Brighton Railway. This building, which was formed almost exclusively of timber was with a short distance of the booking-offices, and was some hundred feet long, and of sufficient width to allow of three lines of rails. The latter were covered with carriages, consisting of second and third class, and a few of the first class. The fire commenced in a few minutes after ten o'clock, and when discovered was running up the timber walls. An instant alarm was given, and assistance having arrived, the most strenuous exertions were made to cut off the spread of the flames and remove the various carriages. Unfortunately, the flames travelled with the rapidity of lightning, and very speedily nearly 150 feet in length of the shedding presented one immense sheet of flame. A great many carriages of all classes were pulled out of the blazing premises, some in a general state of ignition, but a vast number—probably as many as twenty or thirty—took fire almost simultaneously, and the only chance there appeared of saving the remainder of this valuable property was by pulling down the building at the points not yet reached by the fire. To this means, and the exertions of the firemen, the flames were mastered about two o'clock in the morning. The damage done was very considerable; but, notwithstanding the great loss of property, the business of the line has not been in the least retarded. The origin of the disaster does not appear

On Saturday the licensing magistrates of Finsbury district appointed the next licensing day for the renewal of licenses as follows: Clerkenwell parish, at half-past ten, on the 8th of March, at the Sessions-house, Clerkenwell-green; Islington, eleven; St. Luke, half-past three; and St. Sepulchre, Gassmouse-yard, Hornsey, Finchley, Stoke Newington, and Priern Parnet, at twelve o'clock on that day. The adjourned day for the granting of fresh licenses, is fixed for the 22nd of the same month, at the like place, at the hour of ten.

The committee at Lloyd's intend, at the next general meeting of the members, to propose that the silver medal of that distinguished body be presented to Captain George Davies, R.N., of the Coast Guard station at Pentrance, as a mark of their appreciation of his brave and humane exertions in proceeding, with the boat's crew under his direction, to the Briscow Rocks, in a tremendous sea, at the imminent peril of his life, and thereby being the means of rescuing therefrom the surviving crew of the schooner *New Commercial*, wrecked there on the 11th instant

Within the last few weeks, four American liners, namely, the *Ecuador*, the *States Rights*, the *Jessica*, and, last, the *Dr Witt Clinton*, have been driven back to the Irish coast, and have found in Cove harbour a refuge. The schooner *Harriett*, bound for New York to St. John's, Newfoundland, with a cargo of flour on board, was driven into Queenstown on Wednesday evening, with the loss of sails, cables, and rigging, after having been in sight of the harbour of St. John's for three days

THE ILLUSTRATED LONDON NEWS.

FOREIGN AND COLONIAL NEWS.

FRANCE.

A new and almost unprecedented phase in the Ministerial changes of the French Republic has taken place this week. A Cabinet of transition, avowed and officially announced to be such, has been instituted in office: that is, a Cabinet which derives its origin not from its presumed or acknowledged ability to administer the affairs of the State, but from the necessity imposed on the head of the Executive, of preparing the first combination of politicians that offers, without reference to their fitness, in order not to expose the country to the danger of being without any Government at all for an unlimited period. And this anomalous state of things occurs, not in a half-settled colony or remote Transatlantic settlement, where men, accustomed to any of the duties of a Government are few, or none at all, and where, consequently, such a make-shift would be the only device practicable, but in one of the oldest, most early civilised, and most refined of the great nations of Europe, which boasts a numerous body of orators and statesmen, accustomed by long experience of official life to all the practical duties which devolve upon Ministers of State so discharge for the public weal

This lamentable and humiliating spectacle is the result of the wretched jealousies and pitiable wranglings which disunite the men who ought to have been the bulwark of France in her hour of need, and though the avowal of such a necessity was a pre-ordained, foregone conclusion, yet the politicians of France in general, and even of the Assembly, were well prepared for the announcement. The avowal of the weakness of the real resources of St. Mary's, as well as any addition which may be owned in future from an improved value of the public lands, or otherwise is to be appropriated as a provision for new districts, of which three are proposed to be formed on St. Mary's and one in South Stroghans, and in augmentation of existing churches in the two parishes. When the new rector goes into residence, which will be as soon as his house is fit to be occupied, he will be able to enter more into details than is possible at present: and if any of the gentlemen whom I saw on the occasion, should wish to have a personal interview with me, I expect to be here during the whole of next week, though I do not know that there is anything more to be stated than the information I have this given.

I am, sir, your very faithful servant,

C. Deacon, Esq. C. WINTON

Her Majesty has been pleased to grant the office and place of Reader of Physic in the University of Cambridge unto Henry John Hayles Bond, M.D., and to the survivor of him, during the term of his natural life.

The Rev. Robert Eden, Rector of Leigh, Essex, has been elected Bishop of the diocese of Ross and Moray, in the Episcopal Church of Scotland, by a majority of five to two, in succession to the Right Rev. Bishop Low.

The Convocation of the Bishops and Clergy of the province of Canterbury stands prorogued to Wednesday next, the day after the meeting of Parliament, on which day the Archbishop of Canterbury with his registrar will alone attend to further prorogue the Convocation during the session of Parliament. On this occasion the attendance of the clergy is not required as some of them have imagined.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently taken place:

Bishoprics: The Rev. Ernest Hawkins, D.D. secretary to the Society for Propagating the Gospel, to the see of Sodor and Man. The Rev. Philip Nowell Morgan, to Defynog, St. David's. *Rectories:* The Rev. J. S. M. Anderson, to Todmarton, Gloucestershire; the Rev. Thomas Collyer, to Gislingham, Suffolk; the Rev. Charles C. Beverley, to Rushton, Wilts. The Rev. Edward A. Cobbold, to Yaxley, Suffolk, the Rev. Thomas Sabin to St. Peter's-Sheffield; the Rev. H. T. Shelton, to Redborneheney, Wilts; the Rev. David Williams, to Llanwenog, with the chapel of Silan annexed, Cardiganshire.

TESTIMONIALS.—The following clergyman have recently received testimonials of esteem and affection: The Rev. James Henry Cowie, late curate of St. Andrew, Penzance, with Penyin and Newlyn, from the inhabitants; the Rev. W. F. Taylor, of Christ Church, Claughton, Cheshire, from the congregation. The Rev. R. Bingley, M.A., Curate of St. George's, Hanover-square, upon his Bible classes.

VACANCIES.—*Perpetual Curacy*: Tildesley-cum-Shackerley, Lancashire, diocese of Manchester, value, £120; patron, Lord Lilford; Rev. J. Dobson, deceased. *Proctorships*: Leeds, St. Peter; Rev. W. C. Barwis, promoted.

PAPAL AGGRESSION.

It is an indication of the expiring interest, that a meeting, which took place at Norwich, on Tuesday week, was only noticed in the Anti-Papal *Herald*, and in no other journal, on last Tuesday. It was numerously attended. J. Bignold, Esq., was in the chair. Addresses to the Queen and the Archbishop of Canterbury, and a petition to Parliament, were adopted.

A regular controversy, supported on the one side by the Rev. the Principa of St. Aidan's College, Birkenhead, Mr. Joseph Balise, and the Rev. Bishop Brown on the other, has been commenced in the *Morning Herald*, on the faith and merits of the Protestant and Papal Churches. Mr. Balise's first letter on behalf of Protestantism appeared on Tuesday.

THE PROVOST AND SENIOR FELLOW OF THE UNIVERSITY OF DUBLIN have presented an address to the Primate, Lord John Beresford, Vice-Chancellor of the University, expressing a strong sense of the danger to which the Protestant Church at all present exposed, by the Papal usurpation has placed, at great length, and dwells on the long connexion between the Churches of England and Ireland, confirmed by the 39th article of the Union of the two countries, which united them into one Protestant Episcopal Church, and which now by this act is only one reformed episcopal church within the realm, and that the national faith is thus established in that one church, as it is pledged to maintain one King, one House of Commons, and one House of Lords; the love of faith and charity of the Irish clergy, and encourages the university to continue its labors of training the future heads of the Church of England, and expressing a hope that measures will be taken to assert and defend sound Protestant principles. After some speeches in favour of the addition, in which regret was expressed at the tardiness of Sackville Gardiner in responding, and Pusyism energetically denounced, the address was made to Archbishop Beresford, which was carried with great approbation. A resolution, moved by Ear. Talbot, disavowing any intention to interfere with the religious privileges of our Roman Catholic fellow-countrymen, was agreed to; and an address to her Majesty, by the Lord Lieutenant, was adopted. The meeting finally separated, giving three cheers for the Queen.

The PROPRIETORS AND RESIDENTS OF THE COUNTY OF DOWN (Ireland) have held a protest against the usurpation of any power foreign to the realm to the usurpation of any title in these realms by any foreign Prince or Potentate, in violation of the laws and constitution of the State. They are determined, they say, to resist any attempt to infringe upon the laws of the Queen's Majesty, especially on the part of the Pope. Viscount Castlereagh, the member for the county, has declined to affix his signature to the protest, chiefly because he believes that it will be followed by measures of aggression, but that some penal measures are necessary in reference to the proceedings of the Pope. He believes that these cannot be described as an infringement of civil and religious liberty, and is not prepared to vote for them. Nor by subjecting Catholics to any restrictions to which they are not at present liable.

SOME OF THE CLERGY OF THE DIOCESE OF OXFORD, to the number of thirty-nine, have declined to sign the protest proposed by their Bishop on Nov. 22, and have stated publicly their reasons for not affixing their signatures. They say the protest does not sufficiently take its stand on the question of those scriptural limits of the Church of England between the Church of Rome and the Protestant Church; that it gives too much prominence to a secondary importance; and that they desire mainly to protest against the Church of Rome as a corrupt and idolatrous Church, and not whether the "Universal Church" a phrase of the protest if it includes the Church of Rome, and consequently the act of the Pope, &c. The Bishop replies to his clergy, that the object of the protest was not to convey Scriptural instruction, that the act of the Pope was schismatic, and that the protest was directed against that schismatic act, and not against any errors of doctrine. After going through all the objections, he concludes that they had no sufficient grounds for not joining their Bishop and their brethren against the common enemy; and he trusts their consciences will not allow them to divide those who ought to be united.

AN AGGREGATE MEETING OF THE PROTESTANTS OF IRELAND was held at Dublin, in the Rotunda, on Tuesday. The attendance, though not numerous, was highly respectable, including Lord Farnham, the Earls of Leitrim, Earls of Roden, Bandon, Mayo, Clancarty, and Enniskillen; Lords Dunsany, Nass, M.P., Bernard, Suirdale, Castlemaine, and Clonbrock; the Dean of Ardagh, Archdeacon Singer, Sir Richard Musgrave, Bart., M.P., &c. The principal speakers were Mr. T. Wallace, the Ear, of Clancarty, the Rev. Mr. Tresham Greg, Mr. Napier, Dr. O'Sullivan, Lords Surdale and Castlemaine, Colonel Lewis, &c. There were also present a number of clergymen with Protestant flags or Orange meetings. The resolutions, which met no opposition, denounced the attempt of the Pope to divide England into districts; called for the unsparing correction of the Government to the Clergy, and engaged the support of Ireland demanded for every part of the United Kingdom equal protection against all Papal usurpation. A strongly worded address to her Majesty, conveying the sense of the resolutions, was unanimously adopted

MR. BENNET, late of St. Barnabas, has published a farewell address to his parishioners, in which he laments the distracted state and condition of the Church, the want of charity and love amongst men. He speaks of the Church as starving the congregation by doling out spiritual love, for which men hunger and thirst, unsparingly and sparingly; and he deprecates resorting to any extreme step at once, but calls on his parishioners to "strive all they can by entreaties and prayers," and urge our rulers "to allay this perilous storm, that of their own heedless state they may be aroused around us. If they will not help, if the vessel must needs be lost, why then," he concludes, "we must seize the first plank that comes to hand—watch through the long night, and if of misery with prayer and faith, and wait for the day."

Last week the neighbourhood of Carlisle was visited by a flood little less in extent than that of the year 1840.

CHURCH, UNIVERSITIES, &c.

CLERICAL CHANGES AT SOUTHAMPTON.—The town-clerk of Southampton, Mr. Charles Deacon, having been instructed to apply to the Bishop of Winchester to know what progress was making in the new ecclesiastical arrangements for St. Mary's parish, at that town, consequent on the resignation of the late rector of St. Mary's, the Rev. Earl of Guildford, the following reply was received from the Bishop:—

Farnham Castle, Jan. 24th, 1851

SIR,—In reply to your letter of the 21st inst., I have the satisfaction of informing you that I have collated Archdeacon Hoare to the rectory of St. Mary's, assigning him such a portion of the income as will produce £1000 a year. I calculate this will afford a fair amount of about £600, after payment of curates and other expenses incidental to non-residence. The whole of the remainder of the present resources of St. Mary's, as well as any addition which may be owned in future from an improved value of the glebe lands, or otherwise is to be appropriated as a provision for new districts, of which three are proposed to be formed on St. Mary's and one in South Stroghans, and in augmentation of existing churches in the two parishes. When the new rector goes into residence, which will be as soon as his house is fit to be occupied, he will be able to enter more into details than is possible at present: and if any, or any of the gentlemen whom I saw on the occasion, should wish to have a personal interview with me, I expect to be here during the whole of next week, though I do not know that there is anything more to be stated than the information I have this given.

I am, sir, your very faithful servant,

Last week the neighbourhood of Carlisle was visited by a flood little less in extent than that of the year 1840.

METROPOLITAN NEWS.

MOVEMENTS FOR THE REDUCTION OF TAXATION.

The impression that the Chancellor of the Exchequer will have two or three millions surplus revenue this year, has set all the fiscally-burdened interests in agitation (as we noticed last week), to obtain relief from their respective imposts, and during the week just ended the movement has been urged forward with increased assiduity in the metropolis, meetings having been held in favour of the repeal of the Paper Duty and the taxes on knowledge generally, the Window Duty, and the Carriage Tax.

On the two former subjects every available argument and suggestion have been already brought prominently before the public; it is therefore unnecessary to advert further to them, than to observe that the chief meeting on the Paper Duties was a conference of delegates, which was held on Wednesday, at the King's Arms, Palace-yard, for the purpose of making arrangements for an interview on the next day with the Chancellor of the Exchequer, with a view of [illegible] representations of a deputation on the matter. Among those present were Mr. Crompton, Mr. C. Knight, Mr. Chambers, of Edinburgh; Mr. J. Cassell, Mr. S. C. Hall, Mr. Towle, of Oxford, and other paper manufacturers and publishers in the metropolis and the country.—On the motion of Mr. Chambers (of Edinburgh), seconded by Mr. Charles Knight, it was resolved—

That, in the opinion of this meeting, the excise duty on paper acts as a grievous impediment to the progress of sound popular instruction, inasmuch as it bears with a burdensome pressure upon those cheap and useful publications which form the best medium for the [illegible] of elementary and general knowledge.

Other resolutions of a similar tendency were also adopted.

The question of the repeal of the Carriage Duty was discussed also on Wednesday, at a meeting of the coachmakers of London, held at the Freemasons' Tavern, for the purpose of contributing the aid of that body "to the movement now going on throughout the country to call on the Government to reduce the present unfair system of taxation to which pleasure and trade carriages are liable, so as to relieve the coachm king trade without diminishing the revenue of the country." There were present about fifty of the principal coachmakers of the metropolis. Mr. Lewis Lewis, Master of the Coachmakers' Company, was called to the chair. He explained that the gross number of carriages in the country was about 150,000, of which 100,000 paid no duty, about 50,000 pony phaetons, &c., being exempted from duty, and about 50,000 not being returned at all. This was according to the return of 1848. It was calculated, that, if all two-wheeled carriages and all four-wheeled carriages, except those in trade, were subject, the former to 30s., and the latter to 4 duty, it would produce a gross or revenue than at present by £10,695. Several gentlemen addressed the meeting; and a committee having been appointed, a subscription was entered into to advance the objects of the meeting.

On Thursday evening, a meeting was held in the vestry-room of St James's, Piccadilly, to make arrangements for a Westminster borough meeting; W. Gossin, Esq., in the chair; at which Viscount Duncan attended, and pledged himself to bring forward his motion for the unconditional repeal of the Window tax at the earliest possible moment. He also expressed his opinion that the repeal of the tax could no longer be withheld by the Government.

INTERVIEW WITH THE CHANCELLOR OF THE EXCHEQUER ON THE PAPER DUTIES.

On Thursday morning, the deputation referred to above, of the paper manufacturers, &c., of the United Kingdom, proceeded to the offici residence of the Chancellor of the Exchequer.

Amongst its members were Messrs. Charles Dickens, Charles Knight, Robert Chambers, &c.

Mr. Crompton (the paper manufacturer) introduced the deputation to the Chancellor, and, having explained their views, and read the resolutions of the preceding day's meetings,

The Chancellor of the Exchequer observed that he had a pleasant week before him, if he was to receive all the deputations which were to wait upon him.

Mr. Charles Dickens said he wished to make one remark for the repeal of the Paper Duty, as that repeal would affect literary men. The reduction of the duty on paper would enable the proprietors and publishers of useful works to give higher remuneration, and secure a better class of writers than at present. He was satisfied that if the duty were repealed, a higher class of literature and instruction would find their way to the homes of the humble. He was more in favour, however, of the repeal of the Window Tax than the Paper Duty, as he thought the Window Duty was more objectionable.

Mr. Crompton said he had ninety-five memorials to present to the Chancellor of the Exchequer, signed by 11,949 persons, all of whom were intelligent persons.

The Chancellor of the Exchequer said the deputation would not, of course, expect him to give them any information as to what was to be done by the Government. He had before him the prospect of a deputation from every class of persons who paid taxes, all desiring to have the taxes removed.

CHANCERY REFORM ASSOCIATION.—A public meeting of this association took place on Tuesday, at the Hall of Commerce, Threadneedle-street, City; the Right Hon Lord Erskine in the chair. The chairman having addressed the meeting at some length on the objects of the association, several resolutions were unanimously adopted, for the purpose of carrying into effect the necessary reforms; and, after a vote of thanks to the chairman, the meeting separated.

On Tuesday evening a public meeting was held in the theatre of the Mechanics' Institution, Southampt—buildings; Mr. Wakley, M.P., in the chair, when the principles and objects of the Financial Reform Association were fully explained by Mr. James Taylor, of Birmingham, the founder of [illegible] societies. A resolution expressive of confidence in the principles on which the society was founded, and pledging the meeting to support it, was agreed to.

ENTOMOLOGICAL SOCIETY.—At the anniversary meeting of this society, held on Monday evening, the president, G. R. Waterhouse, Esq., delivered an address on the state and prospects of the society, and enumerated the entomological publications that had appeared during the past year. A ballot then took place for the election of officers, when Messrs. Shepperd, Smith, Stevens, and Wilkinson were elected into the council, in the room of Messrs. Spence, Stephens, Parry, and Dawgines; and Mr. Westwood was elected president. Mr. Yarrell was re elected treasurer, and Messrs. Douglas and Stainton were re-elected secretaries

INSTITUTION OF CIVIL ENGINEERS.—At the meeting of this Society on Tuesday (Wi liam Cubitt, Esq., president, in the chair), the discussion on Mr. Digby Wyatt's paper, "On the Construction of the Building for the Exhibition of the Works of Industry of all Nations, in 1851," was renewed, and was continued throughout the meeting. The meeting was adjourned until Tuesday, February 4th, when the monthly ballot for members was announced to take place, and the following paper to be read:—"An Inquiry into the nature of Patent Law Property, with a view to the better appreciation and security of the Inventor's Rights," by Mr. E. V. Newton

ROYAL GENERAL ANNUITY SOCIETY.—The annual meeting of the subscribers to this Society was held at the London Tavern on Saturday, (seventy-two members (five men and three women) were elected out of a list of 137 candidates. According to the report, the last anniversary festival had proved very productive, and during the past year £600 had been added, making the funded property of the society £3592 1s. 9d., being an increase of £3180 19s. 8d. since 1848. The annual subscriptions had amounted to £1446, being the largest amount received from that source for 21 years. The next anniversary was to take place on the 9th of next month, when Mr. Booker, M.P., would preside. The directors regretted that the fancy sales of the last two years had not proved so productive as had been anticipated, though they had been of great benefit in extending a knowledge of the advantages of the institution. The directors were also sorry that the expenses had been so large; but the subscribers must recollect that a sum portion of them had been incurred in re-constituting the institution, which had, a few years since become almost extinct. In 1845 the annual subscriptions were only £186 10s. 6d., while last year they amounted to £446 6d. In 1845 the funded property only amounted to £411 2s. 1d., while it was now £3592 1s. 9d. In 1845 the pensions they gave to the men were £1 6s per month, and to the women £1, while they had now been reduced to 15s. to £2 5s. and £1 10s. per month. In the first-named period they had twenty-one pensioners, seven men and fourteen women, to whom they allowed, in the aggregate, £237 18s. for the year; while last year they had twenty-four pensioners, nineteen men and thirty women, the aggregate of their pensions amounting to £561 10s. The directors felt certain, that now that the society was firmly established, the expenses would from year to year be considerably reduced. The report concluded with an eloquent appeal to the su[illegible] continued support. The balance-sheet showed the [illegible] months to have been £3180 19s. 8d., and the expenditure (including £964 [illegible] for pensioners, £800 for the purchase of stock; £240 expenses of getting up the [illegible] ner, the full receipts from which were carried to the credit of income; and [illegible] ses on fancy sales), to £3080 10s. 10d., leaving a balance in hand (irrespective of the funded stock) of £50 6s. 8d.

LONDON ORPHAN ASYLUM.—The annual meeting of the subscribers to this institution took place on Monday, at the London Tavern, Alderman Thompson in the chair. The report stated that since the last general meeting in 1850, 61 children had completed their time, and had left the institution, 4 had died, and 2 had been their friends, so that, at the present time, with the 30 to be elected that day, the entire number amounted to 416, making the total number since the establishment of the institution 502. The legacies bequeathed during the past year had amounted to £1050. The general health of the children had been very good, and the committee were ever ready to carry out those sanatory improvements as from time to time might be deemed advisable for the preservation of the comfort and health of the children. As only 30 out of the 34 candidates could be elected, it must necessarily give great dissatisfaction; but the board, to remedy this to some extent, had determined to secure the ultimate success of the most deserving cases; and for that purpose they intended to carry on the votes for three successive years. The receipts for the past year had amounted to £8980 16s. 4d., and the expenditure to £8723 16s., leaving a balance of £257. The amount of stock now possessed by this institution was £56,304 18s. The report was unanimously adopted, and his Grace the Duke of Wellington elected vice-patron. After a vote of thanks to the chairman, the meeting proceeded to the election of the 30 children.

REDUCTION OF COUNTY RATES EXPENDITURE.—On Tuesday evening an aggregate meeting of representatives of the several metropolitan parishes in the county of Surrey took place at the vestry-room of St. George's, Southwark, "to consider the best means of promoting the movement in favour of county financial boards." The attendance comprised members of the boards of guardians, churchwardens, overseers, and vestry-clerks, from the following parishes:—St. George's, Southwark; St. Saviour's, Newington; St. Mary, Battersea, and Marylebone. Mr. [illegible] chairman of the board of guardians of St. George's, presided. He said it was also necessary that some steps should be taken, on account of the great increase in the county rate expenditure. Last session a bill had passed a second reading in the Commons, but had been shelved by Ministers, because it appeared one or two would be surported by the county treasurer. [illegible] Surrey, however, had stood to a deputation, that, if the opinion of the metropolitan parishes, and those in other parts of the country, were strongly expressed, it would no doubt have weight with the Government. For this purpose the present meeting had been convened, and by united action the object might be attained. That it was highly desirable, no one could doubt who noticed the large proportion of parish expenditure which was occasioned by the county rate. In the parish of St. George it was a penny in the pound in each quarter-y rate; and the Surrey county rate had been increased in 10 or ten years from £14,700 to £40,000. (Hear, hear.) This movement had been undertaken out of no disrespect to the magistracy of the county, but on the simple ground that the ratepayers ought to have a control over the expenditure of their money. At present, owing to the anomalous way in which prisons were built and conducted, the cost of a prisoner was three times that of a pauper. (Hear, hear.) Mr. J Day, vestry clerk of St. George's, the honorary secretary, stated that he had received communications from the parish officers of Lambeth, Christ Church, Epsom, and other parishes, expressing their full concurrence in, and their desire to assist, the object of the meeting. In 1837, the parish of St. George paid only £3238 6s. 8d. as county rate; in the last year it was £1910 8s., being an increase of £1047 1s. 4d., or upwards of 100 per cent. in eleven years. The total of the county rate last year was upwards of £40,000. The expenditure was extremely [illegible] defined in the accounts rendered by the magistrates, of which only one copy was supplied to each parish. Some of the items were of a very lumping description; for instance, Sundry disbursements for the year 1850 were £5100 5s. 7d., of which £1839 13s. was for the county gaol alone; repairs and additions for the same, £1,129 6s.; repairs to Brixton Gaol [illegible] to the Lunatic Asylum, £2140 9s. 5d. salaries of the [illegible] exclusive of tankeys and watchmen, £3,652 9s. 10d. These were the only details which were vouchsafed to the ratepayers. When the parish officers were called on for the purpose of auditing the accounts, they must do it immediately; otherwise they were subject to a penalty of 10 per cent, when [illegible] paid by the overseers. [illegible], for, as it was assumed that they could not do it otherwise, it was necessary, the auditor would not allow it out of the poor-rates [illegible] Fenton, who appeared in the capacity of a deputation from the county of Lancaster union, stated that the county had received a notice of [illegible] had been done all since 1835. The magistrates, as a body, were sore on the subject, though individually so; for they admitted the principle, which, indeed, was the basis of the constitution, that taxation and representation ought to go together. Mr. Roberts, of Bordsdale, the secretary of the Lancashire committee, had come to town to assist in drawing up a bill which should [illegible] free from the defects of that of last year; and he trusted its provisions would secure the support of all the metropolitan parishes. Resolutions were agreed to approving of the steps that had been taken on this question, and pledging the parish officers present to use their best endeavours to carry out the same in their respective parishes, by requiring the necessity of vestry meetings, and of petitioning Parliament; also requesting each parish to send one delegate to the Surrey Union, to co-op rate with the Middlesex parochial officers

SUDDEN DEATH OF MR. SERJEANT SEDGWICK.—On Tuesday, Mr. Wakley, M.P., held an inquest at the Gray's-Inn Workhouse on the body of the late Serjeant Sedgwick, many years Chairman of the Board of Stamps. On Sunday deceased dined with Lord Chief Baron Pollock, and at nine o'clock left for his residence in Church street, Kensington. He had dined very moderately and drank no wine, was cheerful, and apparently in his ordinary health. At a quarter-past nine he was found by a m[illegible] named Peoney lying on his bed in the kerb-stone, in Queen's-square. Deceased breathed twice after it discovery, but never moved. Dr. Robert Richmond, who was called to attend deceased, found him quite dead. In his opinion disease of the heart, and not apoplexy, poison, or violence, was the cause of death. The coroner having summed up the case with care, the jury returned a verdict of "Natural death."

BOOKS FOR THE COLONIES.—The Lords of the Treasury have sanctioned the transmission of printed books by post to the colonies in the West Indies, Newfoundland, Gibraltar, Malta, and Hong Kong, at very low rates: and as soon as the concurrence of the several colonial governments can be obtained, it is intended to extend the benefits of the arrangement to all other colonies. The regulations under which the transmission may be effected are as follows:—On and after the 1st March next, books may be sent by post from the United Kingdom to the above-named colonies, and elsewhere, at the following rates, viz. Not exceeding half a pound in weight, 6d.; not exceeding 1 lb., 1s.; not exceeding 2 lb., 2s.; and so on in proportion for any greater weight. Only a single volume only; it must be sent open at the ends like a newspaper, and must contain any writing either within or without the wrapper will [illegible] the address. They must be prepaid, or sent from the United Kingdom having a sufficient number of stamps; and from a colony, the p[illegible]ment to be made in money.

DEPARTURE OF DISTRESSED NEEDLEWOMEN FOR NEW ZEALAND.

On Tuesday, the managers of the Female Emigration Fund (4 St. Martin's place, Trafalgar-square) were enabled to despatch another (the eighth) detachment of distressed needlewomen to the colonies, under the auspices of the society, going to New Zealand by a splendid first-class barque sailing for that colony, the *Stanley*, Captain Gander. They were accompanied to Gravesend, where the ship was lying, by the Hon. Stanley Fernehalf, Esq., the Hon. Mrs. Percy, Mrs. Quickett, the Hon. Mrs. Stuart Wortley, the Hon. Mrs. Percy, and a number of their relatives and friends. On reaching the barque, they were introduced to the cabin and had their berths allotted to them. The arrangements for their comfort during so long a voyage were as perfect as possible, and reflected great credit upon the care and zeal of the parties concerned. The Hon Arthur Kinnaird and Mr. Quickett then briefly addressed the assembled emigrants in appropriate and impressing upon them the fact, that their good conduct and wellbeing were the only recompense which they could give to their benefactors, who had cheered themselves with the expenses of their passage. The latter gentleman stated, that a full description of their characters, dispositions, and capabilities had already been forwarded to the Bishop of New Zealand, and that his Lordship would be prepared to send them to suitable situations immediately on their arrival. The visitors and relatives then took an affectionate farewell, and the emigrants were at once initiated into the mysteries of the "mess" on shipboard. After dinner, they were again addressed by Mr. T. Seaward, visiting secretary of the Prayer-book and Homily Society. 18, Salisbury-square, who concluded by distributing to each selected from the inmates and [illegible] the Church suitable to their circumstances. Mr. Seaward also made a distribution to the other emigrants going out in the *Stately* [illegible] needlewomen sailing in this vessel is thirty

BIRTHS AND DEATHS.—During the week ending Saturday last, the births in the metropolitan districts amounted to—Males, 764; females, 739; total, 1523. The average of six corresponding weeks in 1845-50 was 1392. The deaths, which in the two preceding weeks were 1037, 1037, 1037, and 1045, having corresponding weeks of the ten years (1841-50) the lowest rate was 1046, when the deaths registered were only 908, in a week of unusual [illegible] temperature. The mean of which rose 4 degrees above the average, and the highest recorded in 1848, namely 1457 deaths when influenza had disappeared, when other epidemics abounded. The mortality from small-pox was singularly low, having fallen nearly as much below the average as in 1845 it had been above it. The average number of deaths in the ten corresponding weeks was 1104, exceeding that which (between 1841-50) the increase of population) the account for last week presents a favourable result. But an inspection of the tables of ages and fatal diseases shows that though there is a considerable [illegible] from bronchitis, which had previously thinned the ranks of the aged, who are the greatest sufferers by it; and though the number who die from what is rather vaguely described as "old age" has declined from 97 to 84 [illegible] the deaths in the last, and in some complaints common to the young there is also a decrease; yet pneumonia, which is principally fatal to children, has actually increased, and in the epidemic class small-pox and hooping-cough [illegible] notic or epidemic diseases in the aggregate have risen from 195 in the previous week to 2.1 in the last, small-pox from 21 to 32. Of these 32 deaths, 9 occurred above the age of 15 years; while in only two cases, out of the whole number from [illegible]-pox, does it appear probable that vaccination had been properly performed [illegible] deaths from small-pox occurred between the 18th and 25th January in the hospital for this disease, which was recently removed to Ho low, and, with the exception of a child aged 16 months, which had been brought [illegible] persons of the following ages, viz.:—Males, 1 to 2, 2 to 5, 5 to 24 years. The seamen brought from the *Dreadnought* hospital ship, three female servants from Mor.lake and Marylebone; a married woman from Clerkenwell; and [illegible] from Lambeth. In cases of small-pox in which vaccination is asserted," except that of a sailor, who is stated to have died from "[illegible] unmodified (unmodified, extensive) (moderate) vaccination is [illegible] tally visited by [illegible] ase, and where vaccination is [illegible] prejudice entertained against it. A house in St. Giles's is mentioned which 26 children, six persons of mature age, and a cat, had the same complaint; and the medical attendant adds, that the only child that has escaped is one of two months, which had been vaccinated in the workhouse. In Boswell-court (St. George the Martyr), where a child had died without vaccination, the mother and four children are now labouring under small-pox. In the return of the week, a child of two years is stated, in the medical certificate, to have died of excision from hydrocephalus. Two died from intemperance.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, [illegible] the mean daily reading of the barometer was above 30 inches on Thursday and Friday, the mean of the week was 29.850 inches. The mean daily temperature was 4°8 degrees on Tuesday, when it was highest: and 31°2 degrees on Friday, when it was lowest. The mean of the week was 40.1 degrees, which is 2°3 degrees above the average of the same week in ten years. The daily mean was from 4 to 8 degrees above the averages of the several days on Sunday, Monday, and Tuesday; it then declined till it fell considerably below the average on Friday, when fog prevailed, and continued below it on Saturday. The wind was, for the most part, in the south-west.

EPITOME OF NEWS—[illegible] AND DOMESTIC.

The address in the Lords, in reply to her Majesty's Speech, will, it is understood, be moved by Lord Effingham, and seconded by Lord Overstone.

Lord Langdale, it is understood, will retire from the Rolls almost immediately and will be succeeded by Sir John Romilly.

The prospects of Mr. Loch, the Liberal candidate for the Falkirk Burghs, continue to improve. Sir Charles Napier, whose name was mentioned, is convinced of the better chances and chances of Mr. Loch, and will not offer

The Marchioness of Hastings was expected at her seat, Ifford, near Lymington, this week. The profound respect and sorrow for the Marchioness and the affliction she has sustained in the loss of her son, the young Marquis of Hastings, were manifested in Lymington the whole of last week, by all the inhabitants partially closing their shops.

Considerable unsatisfaction exists amongst the public as to the [illegible] Post-office arrangements between this country and the Cape of Good Hope, [illegible] it is not generally known that Post Natal is included in those arrangements, and that the postage on letters to that port is 1s. each, and that newspapers, periodicals, and parliamentary proceedings go free

On Saturday, at half-past ten P.M., the zinc factory of Langston Scott, Esq., at Islington, was nearly destroyed by fire. The white oxide of zinc mingling with the flames, produced a pale blue light of great intensity. The fire was extinguished by the courage of one of the workmen, not, however, till considerable damage had been done to plant and stock, which will occasion at least three weeks stoppage of works

The late Field-Marshal Grosvenor used to take pleasure in relating that he commenced his career at the Bank during the Bradshaw scenes which took place at the no-popery riots in London in 1780:—now 71 years ago

A correspondent of a morning contemporary states, that [illegible] have been made for placing the Episcopal Church of Scotland on a better footing. We are informed, that, during the forthcoming session of Parliament, a bill will be introduced by a distinguished statesman, the effect of which will be to annul the two disunctions, and to free the Scottish Episcopalian clergy from the disabilities under which they have hitherto been placed, and the present law they are prevented from holding any benefice in England, and may only officiate to congregations of their own English diocese

The agitation for the total and unconditional repeal of the window-tax is sustained with unabating vigour in the various parishes of the metropolis, and that the postage on letters is to be reduced within two miles of the town of Brighton, instead of going up to Kingston wharf, and then having the expense of the Kingston wharf and railway charges, and enabling coal-merchants at Lome successfully to undersell those of London, with whom they [illegible]

A £5 note, purporting to be issued by the Nottingham and Nottinghamshire Banking Company, which was the other day paid to a gentleman in Leeds, has been discovered to be a forgery. Other forgeries on the same banking company have been recently detected, and it therefore behoves the public to [illegible] such notes may in future be offered should take means to satisfy [illegible] they are genuine.

[illegible] Lord Willoughby d'Eresby has, with [illegible] city, offered us his own expense, a house in London for the accommodation, upon the [illegible] on this extensive estates as may wish to visit the great Exhibition

The Lords of the Treasury have granted Mr. Catlin, the owner of the North American Indian collection, the privilege of retaining his collection in this country, without being subjected to the duties due on the several articles, for a further period of two, in order to give him an opportunity of exhibiting it in the metropolis during the ensuing summer, at the expiration of which the collection will be taken from it this country

On Saturday, at the Marylebone Police-office, Iacchimo Guiecrol, [illegible] stated himself to be a natural son of the late Lord Byron, was placed before the magistrate very nearly naked, and in a shivering state, and he therefore desired that [illegible] such notes may in future be offered should take means to satisfy [illegible] they are genuine.

[illegible] t Lord Willoughby d'Eresby has, with [illegible] city, offered us his own expense, a house in London for the accommodation, upon the [illegible] on this extensive estates as may wish to visit the great Exhibition

The Lords of the Treasury have granted Mr. Catlin, the owner of the North American Indian collection, the privilege of retaining his collection in this country, without being subjected to the duties due on the several articles, for a further period of two, in order to give him an opportunity of exhibiting it in the metropolis during the ensuing summer, at the expiration of which the collection will be taken from it this country

On Saturday, at the Marylebone Police-office, Iacchimo Guiecrol, [illegible] stated himself to be a natural son of the late Lord Byron, was placed before the magistrate very nearly naked, and in a shivering state, and he therefore desired that [illegible] with being drunk. He told the magistrate he had but just returned from the Archipelago, and had fallen in with some large sharks, who had stripped him of all his worldly wealth and garments. The magistrate cast a pitying glance at the unfortunate man, and

The Judges have at length come to the [illegible] nt determination, in [illegible] matters, without being [illegible] made to the [illegible] ntended for trial on criminal charges [illegible] ten by the committing magistrate to be produced before them [illegible] the magistrate's clerk, so that they may be read as part of the proceedings. This is a most important move in the right direction, as it will be the means of preventing some of the most desperate thieves escaping from justice with the impunity the former practice occasioned.

The Gray's Inn lecturer has given notice (with the sanction of the members), that the annual voluntary examination in law of students for the bar, will take place in the hall of the Society in next Trinity Term, viz. on the 5th and 6th days of June. The competition for honours, and for the lecturer's prize [illegible] reports of Vesey, jun.), is restricted to the students who, from [illegible] present term to the time of examination, may be attend ng Mr. Lewis's lectures.

The *Norfolk Chronicle* announces the following reductions of [illegible]ension, 15 per cent.; Mr. John Day, of Wymondham, 10 per cent; the Duke of Norfolk, 10 per cent.; the Venerable Archdeacon Bonwell, 10 per cent.; Colonel Mason, of Neston Hall, 10 per cent.

COLLEGE OF THE PROPAGANDA AT ROME, SKETCHED FROM THE PIAZZA DI SPAGNA.

COLLEGE OF THE PROPAGANDA AT ROME.

This celebrated educational establishment is situated at the southern extremity of the Piazza di Spagna, in the centre of the most fashionable quarter of Rome. It is a heavy structure, with nothing attractive in its architectural details, and is disfigured by a range of shops which run along, or rather form a part of, its basement.

There are two principal entrances—one in the Via di Propaganda, the other (represented in the Engraving) in the Piazza di Spagna; and over the latter the title of the College—"Collegio de Propaganda Fide"—is inscribed. The building is the joint production of the architects Bernini and Borromini, and was begun about the year 1622, in the Pontificate of Gregory XV., and was completed in the succeeding reign of Urban VIII.

The College of the Propagation of the Faith is the Grand Missionary head-quarters of the Roman Catholic Church, and its system of education is one of the most comprehensive that was ever devised in any age or country, for any purpose whatever. It was aptly compared by a witty Frenchman, the Abbé Raynal, to a sword, the handle of which is formed in Rome, while the point reached everywhere. Its object is to educate students of every country, complexion, and language on the habitable globe, for the service of the altar, in their own countries respectively, and for the propagation of the Roman Catholic faith, by preaching and teaching its dogmas and doctrines as missionaries amongst their own countrymen. In its classes are to be found, accordingly, Chinese, Hindoos, Negroes, Abyssinians, natives of Pegu, of Siam, and other remote parts of Asia and Africa, inhabitants of the different countries of South America, of the United States, and of Europe; and while these youths cultivate a perfect knowledge of their own native tongues and their idioms, together with the Latin and the Italian, the language and the class-room, their education comprises also the various branches of learning which constitute the literary training of the Roman Catholic priesthood, viz. the learned languages, logic, physical and moral science, history, metaphysics, theology, and the Scriptures.

The occasion when the polyglot character of the College can be best observed and understood, is furnished by the annual Epiphany examination of the students, when one from each of the countries represented in the College is called upon to [illegible] in the presence of a numerous assemblage of the Professors, dignitaries, and distinguished foreign or native, who may choose to grace the with their presence. The extraordinary spectacle of forty or fifty different languages being spoken successively by youths of as many different [illegible] dressed for the occasion in their native costume, and exhibiting every variety of the human countenance, from the [illegible] Negro of Africa, the Mongolian, or the Chinese with his [illegible] featured member of the Caucasian race. Each student, in his turn, gets upon a platform, and there delivers a short speech, recites a poem or part of a play, or sings a native song, and perhaps accompanies himself with a tom-tom, a primitive pipe, or any other musical instrument of his country. The scene is one of the most extraordinary and amusing imaginable.

Amongst the languages to be perpetually heard within the walls of the Propaganda are the Hebrew, the Chaldean (ancient and modern), the Armenian (ancient and modern), the Samaritan, the Syriac, the Arabic, the Persian, the Turkish, the Kourdish, ancient and modern Greek, Latin, Italian, Maltese, Coptic, Ethiopian, Chinese (several dialects); various languages of India, Asia, and Africa, such as the Hindustani, the Pegu, the Siamese, the Sanscrit, the Georgian, &c.; the tongues of Europe, viz. English, French, Spanish, Portuguese, Polish, Bulgarian, Russ, the Irish, and other branches of the ancient Celtic, &c.

The College dress of the students is a long black gown, like the *soutane* of the Roman Catholic priesthood, distinguished, however, from the *soutane* by two stripes of scarlet down the front—a remnant of ancient costume, recalling the *latus clavus* of the patricians and the noble youth of Pagan Rome.

DUST STORM IN THE PUNJAUB.

In the Punjaub, terrific storms of wind and dust frequently rage during the hot season. The instance here sketched by an obliging [Correspondent] took place in the month of June at [illegible]. [illegible] the station the sky was perfectly clear, and the air quite calm and [illegible] and a speck like a thin cloud [illegible] to the [illegible] extended from N. to S. [illegible] this appearance [illegible] had before witnessed [illegible] part of the world, prophesied an extremely bad one before nightfall and their prophecy was verified to the full. In the course of half an hour the long light cloud had magnified itself into a huge column of [illegible] high into the heavens, and evidently rolling on at a terrific pace towards the cantonments; the eastern end of these it speedily enveloped in impenetrable darkness, though, at the western end, the atmosphere remained as calm and [illegible]. In an instant, however, without any warning, the wind rose, and blew a perfect hurricane; the sun was obscured, and it became as dark as the blackest night, the dust penetrating every crevice in the doors, and filling the house with clouds of dust. The storm continued for about three hours, but the last hour and a half with decreased force.

DUST-STORM IN THE PUNJAUB.

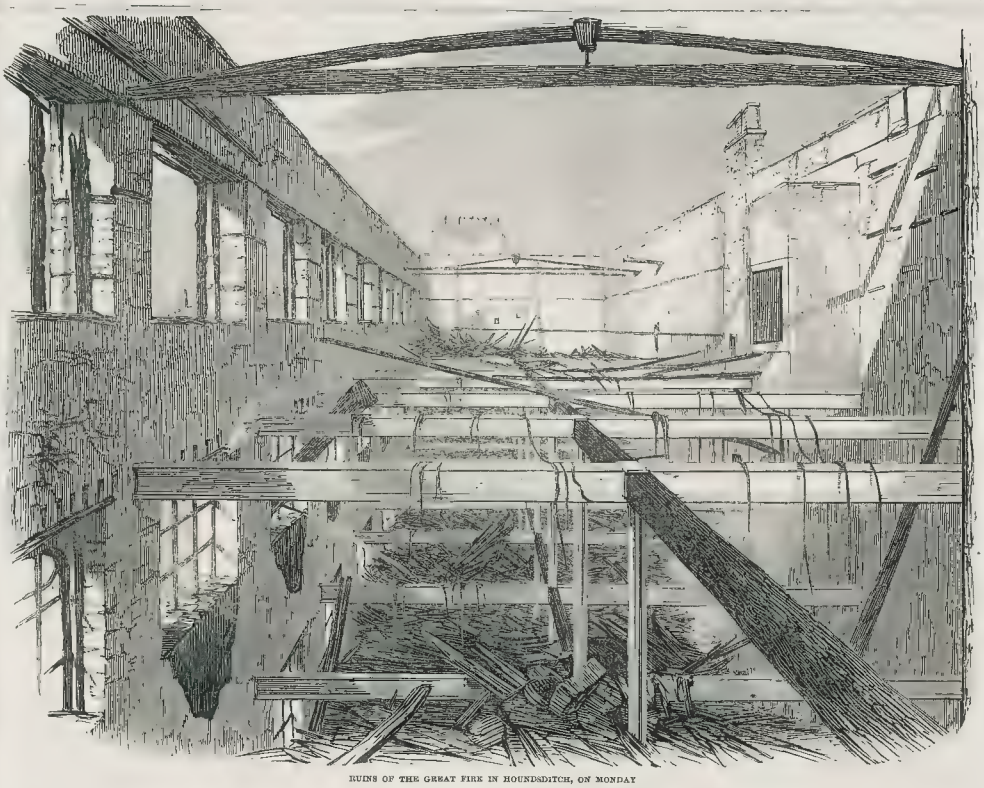
Roman Antiquities.—The Government of Rome has authorised excavations in the Via Appia, and in those [illegible] usually which have not hitherto been explored. The result of the [illegible] is has been the discovery of many Roman remains of great interest, amongst which may be mentioned slabs of stone bearing the following inscriptions:

HOC CENOTAPHIVM AVRELII IMACHI [illegible] TABEL. L.A RIORVM [illegible] PATRIMON ET AVRELIAE [illegible] AVRELIAN HONORE II [illegible] LIBITABUS QUAE [illegible]

[illegible] AVIE CONIGI [illegible] QVAE VIXIT ANNIS XXVIII. M. VI DIEB XVIII. HORAS VI [illegible] BENEMERENTI MACARIANAE FECERE

The most remarkable point in the second inscription is the fact, that not only the odd days but the odd hours of life are marked, a circumstance not yet met with in other inscriptions.

The Society of Friends have, it is said, agreed for the future to pay all tithes due to lay impropriators; to such imposts, when demanded by clergymen, they will offer the same strenuous opposition they have hitherto done.



RUINS OF THE GREAT FIRE IN HOUNDSDITCH, ON MONDAY

EXTENSIVE DESTRUCTION OF PROPERTY BY FIRE.

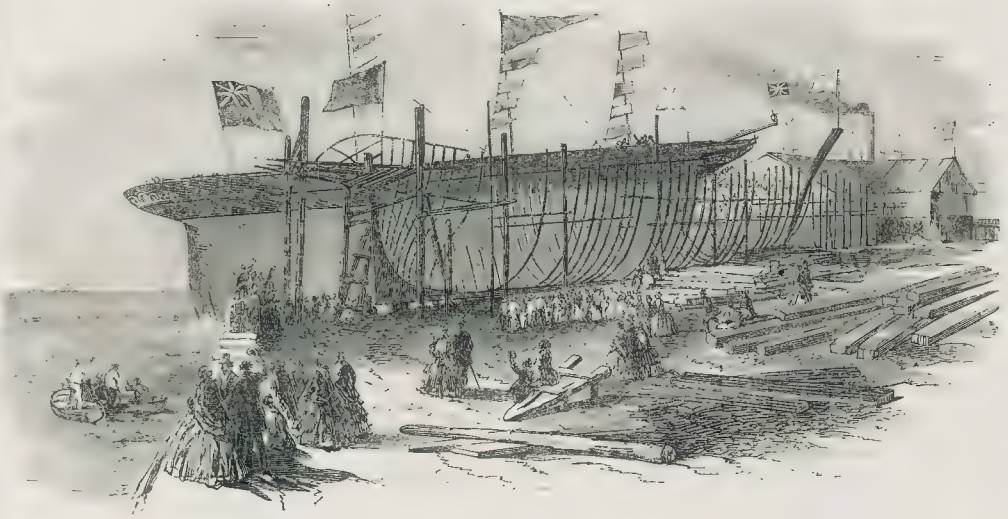
DREADFUL ACCIDENT.

On Monday morning the City was visited by a fire of very considerable magnitude. The scene of the disaster was a large range of premises belonging to Mr. J. R. Bousfield and Co., wholesale clothiers and exporters, situate at Nos. 126 and 127, Houndsditch, City. The business was one of the largest at the east end of London, upwards of 1,000 hands being employed by the firm. The buildings in which the fire commenced had been erected not more than seven or eight years, of the most substantial construction, and nearly 200 feet long; the lower floor being used as the manufactured goods *depôt*, whilst that immediately above contained the made-up goods, which were ready for the home trade or for exportation. The floor above was the depository for the piece goods, and the one over that was occupied by the cutting-rooms. Some slight conception of the extent of each floor may be formed, when it is stated that every room stretched the whole length of the building, and were only separated by immense iron doors. Although the latter proved of some benefit in preventing the flames from travelling, they were almost as destructive, by shutting out the firemen for a time from the exact scene of conflagration.

The principal damage may be described as follows:—The large building behind, front premises nearly burned out, consisting of cutting-rooms, piece-rooms, made-up goods rooms, and general stock rooms. In one compartment of the latter were several thousand pieces of cloth, worth a large sum, and in another were a great assortment of articles for the spring season, the whole of which have either been destroyed or seriously injured by fire. Fortunately, the front house has escaped, and some thousand pounds' worth of goods have received but trifling injury at the extremity of the premises. The total loss, however, will amount to many thousand pounds. The firm was insured, for the building, in the Sun Fire-office; and the stock in trade and fixtures were insured in the Phœnix, Imperial, and Union Fire-offices.

With respect to the origin of the fire, not the slightest idea can be formed by the firm. In the construction of the buildings every precaution was adopted to secure them from the ravages of fire, by substituting iron girders for the ordinary timber beams, yet the destruction is apparently as great as if they had been built in the usual manner. On Saturday evening, about seven o'clock, the premises were closed in the regular course of business, and Mr. Bousfield, as was his practice, went over the establishment with one of his clerks and saw that all was safe. The doors were locked, and the warehouses remained closed the whole of Sunday. The first intimation of the property being on fire was given shortly after five o'clock on Monday morning, by some parties who resided in one of the houses in a gateway, on the south side of the warehouses, leading to the Jews' Infant School.

During the progress of the conflagration, Hoffmeyer, one of the London Brigade, belonging to Waterloo-road station, received such serious injuries as will in all probability cost the poor fellow his life. He was



LAUNCH OF THE "MARION MACINTYRE," AND PART OF THE SHIP "IRON FRAME," AT MESSRS JORDAN AND GETLEY'S BUILDING-YARD, LIVERPOOL.

standing on the sill of one of the windows, directing the water from the branch of an engine into the first floor, when the rooms above fell in, and the timber flooring projecting through the opening, knocked the unfortunate man from his standing-place, and he fell in a dangerous position upon the top of some iron spikes round an area window. The height he fell was so great that the iron railings were forced into his side, and he remained impaled until another fireman rushed forward, and lifted him off. Blood was then gushing so fearfully from the wounds inflicted, that it was deemed advisable to remove him without delay to the London Hospital. Upon his arrival at that establishment, it was found that two of the spikes had perforated the left blade-bone, one of his ribs was fractured, and it was found that the bone had entered his lungs. No hopes are entertained of his recovery.

Our Artist's Sketch of the ruins is taken from the upper story of the building, looking towards Houndsditch. The window on that extreme left is that from which the unfortunate fireman was precipitated by a falling door.

IMPROVED SHIP-BUILDING.

The accompanying Sketch represents the launching of the *Marion Mactaggart*, a new barque built for Messrs. Henry Wood and Co., of the port of Liverpool, by Messrs. Jordan and Getty, of that town, upon the principle lately patented by Mr. John Jordan, the son of one of the firm

The mode of construction is entirely new, and, except in the case of the schooner *Excelsior*, launched by the same builder, in July, 1850, has never been adopted before

The beauty of the principle consists in the fact that the most durable, and the least objectionable, parts of both descriptions of vessels heretofore in use (wood and iron) have been selected by the patentee, and so combined as to form vessels at once cheaper, and at the same time free from those defects and imperfections which invariably attach to vessels constructed *wholly* of one material or the other.

The merit of the invention consists more particularly in the construction of a perfect and rigid iron frame, which is completely independent of the material with which it is covered, be it wood or any other; and in the disposition and arrangement of the principal timbers and planking, whereby secure and perfect joinings of wood with wood, and iron with iron, are formed throughout the whole structure.

The advantages possessed by vessels constructed on this principle over both wood and iron vessels are stated to be—

1. [illegible] *sels*). Dry rot is completely got rid of, by doing away with the wooden frame

2. Much greater strength is attained in the iron frame, it being, when complete, all united, and entirely independent of the material with which it is covered, and not dependent for its strength upon the skin, as in other ships, nor liable to be broken by a strain, as is the case in wooden vessels, where there is so much cross-grain

3. Far greater carrying capacity is obtained in these vessels, the thickness of the sides being greatly reduced, while greater strength is [illegible]

4. Being considerably lighter than wooden vessels [illegible] can much less water, and, of course, take more cargo in proportion to put them down

5. The facilities for repairs, if required, are much greater

6. The security for life and property is much greater in these ships than in wooden ones; it being well known among practical men that a wooden ship's planks frequently "pull off" from the keel, and clear away the strength of the vessel, and rendering her unable to work and become leaky in bad weather; whereas, in vessels constructed on the plan, the planks are so fastened that it is impossible they can move without first breaking.

7. The superiority of these vessels over wooden ones, when viewed as property of shipowners, is very great. A wooden vessel is lost their class together after a certain number of years, while it has been decided by Lloyd's Committee that vessels constructed on this principle will maintain their superiority so long as the materials continue good, thereby causing a great saving in insurance to the shipowner

The superiority of these vessels for passenger traffic, also, consists in their being so easily kept clean; and the patentee anticipates that they can be produced at a much less price per ton than either wooden or iron vessels.

Over iron vessels they possess the great advantage of not fouling; their construction being such that they can be coppered with perfect safety, and this, for vessels trading abroad, and lying for any length of time in a warm climate, is absolutely necessary. The solid beings, also (a bad conductor of heat), they will be much cooler than iron vessels, which is a great advantage over the latter for passenger steamers, &c., in warm climates; and the expansion and contraction being imperceptible, the decks will not become leaky, as in iron ships. The form of strength is also much greater than in iron vessels, it being well known that the [illegible] iron vessels work in and out in a heavy sea, thereby materially interfering with their speed.

The mode of construction is as follows; viz.:—A keel of wood being laid, and a wooden stem and sternpost erected and fitted thereon with deadwood forward and aft, as in wooden vessels, but much smaller, a plate of iron called a keel-plate is then laid upon the keel, being also of its whole length, and carried over the timbers of the stem and sternposts to the top all in one, the upper parts on the stem and sternposts being made broader, and turned inwards at the edges, so as to form aprons with flanges, for the purpose of receiving the ends of the beams as well as to the wooden stem and sternposts. This being done, the floors and flooring plates are placed across the keel plate, and riveted to it at the outer edges, while long bolts pass through each floor, the keel plate and keel bolting all firmly together; the ends of the ribs are then put in, and bent riveted to the floors, form a series of inverted arches all in one, from the gunwale on one side down to the keel, and up to the gunwale on the other side of the vessel; the cant feet being riveted to the aprons forward and aft. This done, a series of vertical stringers are passed round the vessel outside, and riveted to each rib, the number depending upon the size of the vessel, one being placed at least in the range of the deck beams, above and below. These bounds being then put in, horizontal stringers are laid fore and aft across the ends of them, to which they are riveted, as well as each rib, by means of an angle iron, so placed as to take hold of both. These stringers, as well as the vertical ones outside, are carried right fore and aft, and riveted to the aprons before mentioned, thus forming the whole into an iron frame of immense strength. The kelson and sister kelsons, as well as bilge kelsons, were used, and carried right fore and aft also, and continued up the stem and sternposts, being also riveted to the aprons by means of two angle irons placed back to back, which receive the main kelson between them, and they are also riveted to each rib along their whole length, from end to end. The flooring plates spoken of before are plates of iron of a proper form, placed athwart-ships on their edges, and riveted to each floor in the whole length of the ship.

The planking is put on and fastened to the ribs and stringers by means of screw-bolts, with countersunk heads, the holes over which are filled up with a composition prepared for the purpose. The vessel is then sheathed with wood, upon gutta percha, instead of felt, as high as load-water line, and then coppered. Gutta percha being impervious to wet, as well as a non-conductor of electricity, has the double effect of preventing any galvanic action between the iron and copper, and making the vessel quite tight. Since the *Marion Mactaggart* was launched, she has not made a spoonful of water

---

THE ENSUING SESSION OF PARLIAMENT.—At the commencement of the ensuing session, on Tuesday next, the statute passed in June last, entitled "An Act for shortening the language used in Acts of Parliament," will take effect. It is enacted that henceforth all enactments will be made in future acts both in the phraseology and in the omission of clauses which have hitherto appeared in such matters. Acts are to be divided into sections without any introductory words. Where any act is referred to, it shall be sufficient to cite the year of the reign, chapter, and section. In future acts, certain words which now appear in interpretation clauses, importing the masculine gender, are to include females; and the plural, the singular, &c. Repealed acts are not to be revived, in virtue of the repeal of the repealing statute. Repealed provisions of any act to remain in force until the substituted provisions come into force. All acts are to be deemed public acts, unless the contrary is especially declared.

ROYAL FREE HOSPITAL, GRAY'S INN-ROAD.—The annual court of governors of this hospital was held on Tuesday evening. Mr. Prescott Hewett, Bart. of Southwark, in the chair. The report stated that there had been £8018 14s. 9d. received, and the expenditure had been (including about £1000 paid for old debts) £4813 2s. 11d., being by this last sum £800 more, not to mention a by a diminution in the amount of legacies—as compared with the receipts of previous year. The number of patients relieved had been 28,135, being a slight decrease of about 50 under the number relieved during the year 1849. Thus, while the total number received had been nearly equal to that of 1849, the receipts had been less by between £800 and £900. The number of beds ready for occupation is 134; but one ward containing 48 beds is unfortunately closed from want of means.

PUBLIC FOOTPATHS.—A vestry meeting was held in the [illegible] Church last week, to adopt measures for preserving the public foot [illegible] parish. It seems that the Northern Railway Company have in prosecuting their works, [illegible] two highly important footways across the fields, so as to [illegible] the [illegible] inhabitants, so that it is [illegible] to obtain substitution for the land of which were about taking measures for that purpose when they were met by the [illegible] and [illegible] Chandos Pole, and other powers to stop the footw[illegible] to the parishioners, [illegible] a large majority, decided on the most [illegible] opposition to the obnoxious clauses before the Parliamentary committee

TO EXHIBITORS in the GREAT EXHIBITION.

Carefully executed DRAWINGS of every Important Article in the EXHIBITION will appear in the ILLUSTRATED LONDON NEWS, WITHOUT ANY CHARGE TO THE EXHIBITORS. In order to ensure greater accuracy, and [illegible] Exhibitors are requested to forward, IMMEDIATELY [illegible] for the Exhibition. The Engravings will [illegible] Exhibition, [illegible] opening of the Exhibition, in May next

ROYAL PRINCESS' THEATRE, Oxford-street.—MONDAY, Feb 3rd, HENRY V. (First Time) and the Pantomime. On Tuesday, Feb 4th The PRISONER of WAR, LOAN of a LOVER (as acted at Windsor Castle by Royal Command), the Pantomime. On Wednesday, Feb. 5th, AS YOU LIKE IT, (as acted at Windsor Castle by Royal Command) and the Pantomime. On Thursday, Feb 6th TWELFTH NIGHT, and the Pantomime. On Friday, Feb 7th, HENRY IV. (First Time) and the Pantomime. On Saturday, Feb 8th, THE TEMPLAR, and the Pantomime.

ROYAL PRINCESS' THEATRE.—The Public is respectfully informed that Mr. BARTLEY will perform only FIVE NIGHTS MORE, on that account, the usual representations of Shakespeare's Play of HENRY THE FOURTH will not be given. To-night (Saturday), Monday, Wednesday, Friday, 14th Feb and the Last Time, on Monday, 17th.

ASTLEY'S ROYAL AMPHITHEATRE.—Sole Proprietor and Manager, Mr W. BATTY. MONDAY, February 3rd, and during the week, will be produced the Grand Romantic Drama of BARLOWRIE; or, the Golden Days of Queen Elizabeth. To be followed by the Ballet of Action of the Age, Mons. PLANCHE, who will appear nightly in his wonderful ASCENT ON THE BANNERS. Together with Batty's novel SCENES OF THE ARENA. To conclude with the GRAND COMIC PANTOMIME of HARLEQUIN from the Sea-Shore; or, Mr. T. THOMPSON.

MADAME ANNA THILLON and MR. HUDSON for TWO NIGHTS ONLY.—Mdme. THILLON and Mr. HUDSON will give their highly [illegible] new Mus[illegible] [illegible] ENTERTAINMENT, on MONDAY Evening, To-morrow, Tuesday, at Eight o'clock, with [illegible] unreserved seats, 2s 6d; back seats, 1s. To be obtained of Jullien and Co., Chappell and Co., Ransford, Keith, Prowse, and Co., Cramer, Beale, and Co., and at the Hanover-square Rooms.

DISTINS' CONCERTS.—Mr. DISTIN and his SONS will Perform on their SIX HORNS at the following places:—3rd, Peckham; 4th Petersfield; 5th, Fareham; 6th, Portsea; 7th, Southampton.—Distin's improved Bassoon Cornet, with many new and valuable improvements on all Instruments sent, on the receipt of two postage stamps, to HENRY DISTIN, Sax Horn Manufacturer, 31, Cranbourne-street, Leicester-square, London

MR. WILLY'S CLASSICAL CONCERTS.—Mr. WILLY has the honour to announce that his Classical and Pianoforte Soirées, CLASSICAL CONCERTS, will, in consequence of his engagements in Scotland, they are POSTPONED until his return to London. [illegible] [illegible] [illegible]

MR. JOHN PARRY'S ENTERTAINMENT.—Mr. JOHN PARRY'S NEW and ORIGINAL VOCAL and DRAMATIC ENTERTAINMENT, entitled MORNING AND EVENING NEWSPAPERS, at MANCHESTER, Tuesday, Rochdale, Thursday, Sheffield, Friday, Doncaster; and on Monday, Feb 10, at Huddersfield.

MR. GEORGE BUCKLAND will deliver LECTURES on MECHANICS at the [illegible] INSTITUTIONS in the following Towns:—Devonport, on the 4th and 11th; Plymouth, 10th and 18th; Penzance, 14th and 21st; Falmouth, 17th; Truro, 18th and 25th; Cranborne, 19th, and Redruth, 24th February

MR. ALFRED PHILLIPS'S Highly Popular LITERARY, VOCAL, and SCENIC ENTERTAINMENT, on MONDAY and During the Week, at the APOLLONICON, Hanover-square, entitled THE SEVEN AGES, or, the Days of Human Life, illustrated by appropriate representations. The Entertainment includes a Superb DIORAMA of the most remarkable SCENERY of the Rhine, and will be Delivered by Mr. Hogarth Nest, at MANCHESTER, Tuesday, Rochdale; Thursday, Sheffield, Friday, Doncaster; and on Monday, Feb 10, at Huddersfield.

MR. ADAMS'S ANNUAL BALL.—Mr. THOS. ADAMS has the honour to announce to his numerous Patrons, that his 15th ANNUAL BALL will take place at WILLIS'S ROOMS, King-street, St. James's, on TUESDAY, FEB 11th, when the celebrated Quadrille Band (patronised by the Royal Family) will be in attendance.—Gentlemen's Tickets, 7s 6d; Ladies' ditto, 5s, including Refreshments. Tickets to be had of Mr. THOS. ADAMS'S Royal Quadrille Offices, 77, Johu-street, Fitzroy-square; and at the Rooms. An early application for tickets is particularly requested

IMMENSE SUCCESS.—WONDERS and MIRACLES. SALLE ROBIN, 228, PICCADILLY, opposite the HAYMARKET.—SOIRÉES PARISIENNES et FANTASTIQUES.—THIS EVENING and every following Evening, at Seven o'clock, an Original SOIRÉE with Songs and every Wednesday and Friday, Morning at Two o'Clock, a MATINÉE MAGIQUE.—Tickets as usual, at Messrs Mitchell's Library, Old Bond-street, Messrs. Ewer's, 390, Strand, and at the Salle Robin.

THE EXHIBITION of MODERN BRITISH ART, at the Gallery, 5, Pall-mall, East, is NOW OPEN daily, from 10 in the morning till dusk.—Admission, 1s; Catalogues 6d SAMUEL STEPNEY, Secretary.

APOLLONICON. TUESDAY, THURSDAY, SATURDAY MORNINGS, TWO EVENINGS. LIGHT Overture, "Zampa," by [illegible] Selection, "Semiramide" Fantasia. March, "Oberon." Overture "Fra Diavolo." Bell Bishop. Glee, "Spring a delight." Selection, "Huguenots." Fantasia. March, "Oberon." Carriages return, Four and Ten.—Admission, 1s and 1s 6d.—ROYAL MUSIC HALL, adjoining Lowther Arcade.

ROYAL POLYTECHNIC INSTITUTION.—EVENING CLASSES.—A course of TWELVE LECTURES on USEFUL PRACTICAL CHEMISTRY, by J. H. Pepper, Esq., will commence in the Laboratory of the Institution, early in February Fee, including the use of Apparatus, Three Guineas

ROYAL POLYTECHNIC INSTITUTION. LECTURES on the MUSIC of WALES, by Ellis Roberts, Esq. The celebrated JUVENILE [illegible] LECTURE by Mr. HOLDING, ELECTRIC SPECTRE, and other Novelties will be exhibited ALMAN'S PATENT ELECTRIC LIGHT. LECTURE by J. H. Pepper, Esq., on FIRE and its MAGNIFICENT PHENOMENA. Exhibition of the EXTRAORDINARY MECHANICAL GIN. New Series of DISSOLVING VIEWS.—Admission, 1s. Schools, Half-price. Open daily, from Eleven till Five o'Clock; and every Evening (EXCEPT SATURDAY) from Seven till Half past Ten.

TOURIST'S GALLERY, Her Majesty's Concert Room, Haymarket, will OPEN shortly, with the First Representation of Mr CHARLES MARSHALL'S GRAND MOVING DIORAMA. The subject of this exhibition will illustrate the grand routes of a FOUR thousand MILES'OPE.—The Diorama will be accompanied by a Descriptive Lecture, with a Popular Music, expressly arranged for the subject.

INDIA OVERLAND MAIL GALLERY of ILLUSTRATION, 14, Regent-street.—The NOVEL DIORAMA of the OVERLAND MAIL to India, from Southampton to Madras and Calcutta, is NOW OPEN Daily: Mornings at 12, Afternoon at 3, Evenings at 8. Open half an hour before each exhibition. Admission, 1s; Stalls, 2s 6d; Reserved Seats, 3s

NEW DIORAMA.—GALLERY of ILLUSTRATION, 14, Regent-street.—The NEW DIORAMA, illustrating "OUR NATIVE LAND, ENGLAND, and its SCENERY," is now Open Daily, in the Lower Gallery, forming a separate Exhibition from the Overland Mail. Mornings at Two; Evenings at Seven. Doors open half an hour before each representation. Admission, 1s; Stalls, 2s 6d; Reserved Seats, 3s

OVERLAND ROUTE to CALIFORNIA, across the Rocky Mountains.—New Exhibition at the PANORAMA HALL, a GRAND MOVING DIORAMA illustrative the Overland Route to Oregon, Texas, and California, as surveyed by Colonel Fremont for the United States' Government.—Mornings, 12; Afternoon, 3; Evenings, quarter to 8. Open half an hour before each exhibition. Admission, 1s; Reserved Seats, 2s

THE HIPPOPOTAMUS, presented to the Zoological Society by H. H. the Viceroy of Egypt, is exhibited daily at the GARDENS in the REGENT'S PARK. [illegible] [illegible] [illegible]

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

Her Majesty the Queen and his Royal Highness Prince Albert will arrive at Buckingham Palace from Windsor Castle on Monday next. The Court will leave Windsor immediately after luncheon, in order to enable her Majesty to preside at the Privy Council, to be held the same afternoon at Buckingham Palace. At the Council, her Majesty's most gracious Speech at the opening of Parliament will be read and finally determined upon. Her Majesty and the Prince Consort will return to Windsor Castle on Tuesday afternoon, immediately after the conclusion of the ceremony of opening the session of Parliament.

It is understood that the Court will come to town for the season on Tuesday, Feb 11.

Her Majesty and the Prince Consort have dispensed the Royal hospitality during the past week to a distinguished circle of visitors; among whom may be mentioned his Excellency the Russian Minister and the Baroness Brunow, his Excellency the Belgian Minister, the Duchess of Sutherland and Lady Caroline Leveson Gower, the Marquis of Lansdowne, the Marquis and Marchioness of Worcester, the Earl and Countess of Hardwicke, the Earl and Countess of Minto and Lady Charlotte Elliot, Lord John Russell, Lord Seymour, Lord and Lady Ashburton, and the Right Hon. Fox Maule, M.P.

Her Royal Highness the Duchess of Kent dined with the Queen and the Prince on Wednesday.

Her Majesty has taken her accustomed walking and riding exercise daily, generally accompanied by the Princes and Princesses of the Royal Family.

The Prince Consort has enjoyed the diversion of hunting and shooting on several days during the week, attended by the noblemen and gentlemen of the Royal household.

The Viscountess Jocelyn has relieved the Viscountess Canning in her duty as Lady-in-Waiting on the Queen.

Their Royal Highnesses the Hereditary Grand Duke and Grand Duchess of Mecklenburg-Strelitz, with Prince Adolphus of Mecklenburg-Strelitz, accompanied by their Royal Highnesses the Duchess of Cambridge, the Princess Mary, and the Duke of Cambridge, left Kew, on Saturday morning, for Brussels, Hanover, and Berlin.

We are happy to be enabled to announce that her Royal Highness the Duchess of Gloucester has recovered from her recent severe indisposition.

The Duke and Duchess of Norfolk and Lady Adeliza Fitzalan Howard, and the Duke and Duchess of Bedford have joined the circle visiting the Duke of Rutland, at Belvoir Castle, where a brilliant series of hospitalities have been dispensed during the past month.

Lord and Lady John Russell had a dinner party on Wednesday evening, at their residence, in Chesham-place. The company consisted of Baron de Brunnow, the Russian Minister, and the Baroness de Brunnow; Count Colloredo-Mansfeldt, the Austrian Minister, and Madame Colloredo-Mansfeldt; Senor Isturitz, the Spanish Minister, the Marquis d'Azeglio, the Sardinian Minister; the Attorney-General and Lady Romilly, Mr. Arthur Russell, and Mr. George Russell.

Lord and Lady Stanley and the Hon. Miss Stanley have arrived in St James's-square from Knowsley Hall. His Lordship will entertain about thirty noblemen and gentlemen, members of the Opposition, on Monday next, preparatory to the opening of the session.

The remains of the late Lord Robert Taylour have been deposited, with military honours, in the vault of Castleyhis Church, previatory to removal to the family vault in England.

FESTIVITIES AT WYNYARD PARK.—The local newspapers furnish us with extended reports of the princely hospitalities dispensed during the past fortnight by the Marquis and Marchioness of Londonderry, at Wynyard Park. The principal *fête* took place on Friday, the 17th ult, in celebration of the natal day of the Marchioness, when a grand banquet to forty guests was succeeded by a ball, at which all the leading families in the county were present.

PRIVATE THEATRICALS AT FROGNAL.—Viscount and Viscountess Sydney have been entertaining a numerous party of fashionable company since Christmas at Frognal. On Friday week, an amateur dramatic perform-ance took place, at which a very distinguished numerous circle of guests was present.

NAVAL AND MILITARY INTELLIGENCE.

SIR JOHN FRANKLIN.—Despatches have been received at the Admiralty, from Captain Kellett, C.B., of her Majesty's ship *Herald*, dated at sea, the 14th of October, 1850, on his return from Behring's Straits. The *Herald* had communicated with her Majesty's ship *Plover*, on the 16th of July, at Chamisso Island, where the *Plover* had passed the preceding winter. The two ships proceeded to the northward until they sighted the pack ice, when the *Herald* returned to Cape Lisburne, in quest of Captain Collinson's expedition, and on the 31st fell in with her Majesty's ship *Investigator*, which had made a surprisingly short passage of seventy days from the Sandwich Islands. The *Herald* remained cruising off Cape Lisburne, and again fell in with the *Plover* on the 13th of August, on her return from Point Barrow, Commander Moore and his boat's crew had suffered severely from exposure to cold. Captain Kellett, having communicated the several insts as far as that point from Icy Cape, without gaining any intelligence of the missing expedition. Commander Moore and his boat's crew had suffered severely from exposure to cold. Captain Kellett, having communicated the *Plover*, ordered her to winter in Grantley Harbour (her former anchorage at Chamisso Island not being considered safe), and then returned to the southward on his way to England. Despatches were also found on board from Captain Collinson, C.B., of her Majesty's ship *Enterprise*, and Commander M'Clure, of her Majesty's ship *Investigator*, but they contain nothing calling for especial attention.

NAVAL SURVEYS.—The *Speedwell*, surveying vessel, Master Edward K. Calver, left Woolwich, on Tuesday, to resume her surveying duties on the coast of Ireland. On her surveying duties on the coast of Ireland, she will only have two men kept upon her, it being left to her commander to employ the number he may require to assist in the requisite duties ashore in the locality, and paid at the rate of 2ls. per week. This plan is ordered to be adopted, when possible, on all the home surveying stations. The new arrangement is expected to be more economical than the plan previously adopted, as there were many weeks, and sometimes months, when the crews of surveying vessels had to remain in an inactive state, owing to unfavourable weather. The men hired for surveying duties under the new system will only be paid for the days they are actually employed.

THE MERCHANT SEAMEN'S FUND.—The trustees of Dartmouth have issued a circular to all the receivers of the dues now to grant any relief to shipwrecked seamen unless sick, maimed, or hurt, as the present state of the funds is only equal to relieve the decrepid, worn-out, and sick seamen, and the widows and children of those who have a legal claim, agreeably to the 3rd and 4th and 9th Will., 4, c. 52. The ports of Whitby and Sunderland also refuse to relieve shipwrecked seamen for similar reasons

RETIRING OF NAVAL CAPTAINS.—It is reported that the Admiralty have determined to reduce the number of entries of cadets in the naval service for the year 1851 from 190 to 80. This is stated to be absolutely necessary, or the list will, in a few years, be again crowded as it used to be made.

MILITARY SCHOOLMASTERS FOR DEPOTS.—The following circular, dated Horse Guards, 14th of January, has lately been issued by the Adjutant-General to commanding officers:—"When a regiment to which a trained schoolmaster has been appointed is ordered to embark for foreign service, care must be taken to select the best qualified pupil who has been attending the regimental school for the purpose of acting as schoolmaster to the depot, and *vice versâ*, to which it is understood the usual grant will be made, on application to the Secretary at War for the provision of the prescribed books and materials required for the use of the school."

DISCONTINUANCE OF IRISH MILITIA AGENTS.—A circular from the Secretary at War, dated War-office, 20th of January, has just been forwarded to colonels of Irish militia regiments to the effect that from the 31st of March next agents for the disembodied militia regiments are to be discontinued

THE HONG-KONG COMMAND.—Major-General Staveley was, according to letters dated Hong-Kong, 29th of November, to leave for Bombay by the next mail, in which presidency he has been appointed the second major-general in command of the troops. Major-General Jervois, R.H., the newly-appointed general officer on the staff at Hong-Kong, does not, however, leave England for his command until the 20th of February; it is, therefore, doubtful whether the former will leave Hong-Kong until the arrival of his successor.

THE VACANT COLONELCIES.—Nothing has yet been decided with reference to the vacant colonelcies of the 32rd and 65th Regiments, although the former has now been vacant since the 4th inst. Amongst the names mentioned last week, that of Lieut.-General Sir John Hanbury, K.C.H., has been named for one of the vacancies.

THE OFFICE OF QUARTERMASTER-GENERAL.—Various reports are in circulation as to this appointment, but we are enabled to state that it is not yet decided whether a successor to the late Sir J. W. Gordon will be appointed or not

NAVAL MEDALS.—The following notice has been issued from the Admiralty:—"Three years and seven months have now elapsed since notice was first issued, by command of her Majesty, in the *Gazette* of 1st June, 1847, requiring all persons to make application who should consider themselves qualified to receive a medal for their services during the late wars, as therein specified. Although above 17,000 officers, seamen, and marines, and soldiers serving as marines, have, after investigation, been declared qualified, it is supposed that some claims may be still outstanding. My Lords the Commissioners of the Admiralty therefore direct, that all remaining claims, under the *Gazette* notices of 1st June, 1847, 1st June, 1848, and 11th February, 1850, be brought forward without loss of time; and notice is hereby given, that no claim will be taken into consideration unless it is submitted before the 1st May next ensuing By command of their Lordships, J. PARKER."

The *Glasgow Daily Mail* contains an account of a gentleman, the pastor of the Levern church, at Barrhead, having been convicted in the penalty of £20 for poaching on Sunday, the 5th ult. The reverend gentleman had set a snare, and taken some game upon the estate of the Earl of Glasgow. The public prosecutor requested that the penalty might be mitigated to £10; but the Provost of Paisley, where the case was heard, refused to entertain the application.

TOWN TALK AND TABLE TALK.

SOME six months have elapsed since the last column of "Talk" was presented to our readers. The season of 1850 was then upon the wing. The last musical echoes of the year were dying away in opera and concert-room—fashionable shops were falling into a graceful *négligé*—the dull reign of brown holland was asserting itself in drawing-room and boudoir—the usual social languor which marks the close of a season was inspiring the wonted temporary distaste for crowded *soirées*, and disgust for the hot white paving-stones of Fall Mall; by consequence, the light of any autumnal morning shone upon heavy trains bound Scotlandward, and the crowded decks of France and Belgium paddling steamers —in a word, to use a delightful piece of hyperbole which I once heard employed, "London was emptying, and the world was filling." The dreary time of wintry dullness, of moral and social as well as of physical fog, succeeded; the annually recurring epoch when the buzz of the social world of London sinks the lowest; when the thousand rumours and legions of *on dits*, and the multitudinous chit-chat, those myriads of mental and quizzical dragon-flies, which go darting, and glancing, and sparkling through the summer atmosphere of our minds, lie torpid and nipped by the unkindly influence of the dull times when physical London indeed continues to move and breathe, to eat and drink and sleep, but when mental London takes its rest for the ensuing campaign—like fallow, in fact, to bear the better and the richer crop of schemes and whims—projects literary, artistic, social, and political—which will glance and rustle in the coming summer breezes. And now then we are beginning to leap into life again. The dragon-flies are roaming from their cells and posting their wings, the buds and shoots of the forthcoming months' harvest are peeping above the soil, and all the world is agreed upon it, that the crop will be the most luxuriant which has ever sprung in England. The season of 1851 will indeed be an epoch in our social and industrial annals. It will be signalised by a gathering of people greater, probably, than has ever taken place since the four rivers ran round Eden; and by a display of the produce of human skill and human labour, in which will be summed up the accumulated triumphs of modern art, science, and civilisation. As Mr. Macaulay pauses in his "History," at the period when Feudal power gave way with its last crash in favour of Constitutional Government, to sketch the social and domestic condition of England, so future historians will linger upon the opening of the second half of the nineteenth century, to describe, *apropos* of its great Labour Jubilee, the progress of Britain and the world in the useful arts—to settle the exact stage at which the great onward moving army had arrived in the universal march towards scientific, artistic, and industrial perfection. With such a season dawning upon us, we may well look ahead with a mingled feeling of suspense, almost amounting to awe—of curious perplexity of eager and joyful expectation, dashed, perhaps, with the fluttering and scarcely acknowledged trepidation of the experimentalist, who, implements in hand, stands breathless upon the brink of a great discovery. And in this frame of mind is London gradually filling again. Everybody anticipates—everybody discusses—everybody, after his own fashion, prophesies the thick-coming events of the next eight months. We are upon the threshold of an eventful season. Business and pleasure will ferment and bubble, and work up strongly in London during the ensuing summer heats. At present we have the hush of anticipation. Is it unnatural, that, previous to the plunge, we should pause to summon our energies; that there should steal over the *morale* of society something of that expectant calm which brooded over the Baltic, when "the boldest held his breath—for a time"

Of course, previously to the bursting of the vague flowers of rhetoric of the Queen's speech, and previously to the blowing of the earliest spring blossoms in Covent Garden—previously, that is to say, to the recognised and authentic opening of the season—the monster topic of the day has made awful havoc among the smaller and defenceless topics, which he has come down upon and gobbled up without pity or remorse

How many people will the season of 1851 kill in London, is the favourite topic with the speculative arithmeticians of the day. How much money will the season of 1851 see spent in London, is the favourite topic with the speculative financiers of the day. I have taken some pains to examine and collect the different estimates; but, as they can in general be founded upon no more substantial data than the individual opinions of their upholders, the calculations in question are, to say the least of them, something gossamery. The more moderate school of calculators content themselves with doubling the ordinary population of London More sanguine spirits estimate that the Continental influx alone will be sufficient for that end, and that we shall have a bearded foreigner for every smooth-chinned Cockney. Provincial Britain, again, is anticipated as likely to send up nearly three times the amount of the foreign quota; so that the school of calculators in question deluge us with an inundation of something like seven millions of hungry men, women, and children, all intent upon the sights and sounds, the eatables and drinkables of London! The next question is, how much this goodly crowd intends to fling into the expectant hats owned by the dwellers in the great capital. Doctors, as before and as usual, disagree. A £5 note is estimated, in some quarters, as likely to be the average figure disbursed by each sight-seer. People with grander notions, and possibly with better-filled purses, scout the humble fiver, and magnanimously insist that each visitor must at least spend double. Here, of course, you will find an estimator upon the more liberal scale of expenditure applying his notions to the more populous scale of expectant visitors; there, you have the reverse process taking place; anon, a medium bread of estimators is produced, by crossing the great estimate of influx with the small estimate of expenditure; but the general result seems to be, that what weight of authority we possess is in favour of estimating the amount likely to be raised upon gaping London next season as something ranging from fifteen to twenty millions of sterling pounds. How much was made, or imagined to be made, in the railway year, I know not. But, in the vast majority of instances, the mint of Capel-court produced but fairy money —deceitful gold, which turned to clipped oak-leaves in the owners' breeches-pockets. So will it not be with the Exhibition coin. Genuine metal, that—ringing to the ear, glittering to the eye, temptingly palpable to the finger-ends. Yankee eagles, Spanish dollars, Prussian thalers, Italian florins, Dutch guelders, Russian roubles, Hamburg marks, Austrian dreats, and our next-door neighbours' neat little Napoleons, or fat, burly five-franc pieces—all transmuted into English gold and silver—all sporting as sovereigns, half-sovereigns, crowns, half-crowns, shillings, sixpences, and fourpenny-bits, through existing John Bull's pockets. A goodly sight, my masters; may we all live to see it!

An ancient Parliamentary notability has just departed. Mr. William Holmes, the good-conscientious "whip" who ever mustered the stragglers of St. Stephen's to a close and critical division, is no more. His *vraisemblance* will be found in another column. The ancient Tory disciplinarian has left a strange but honourable memory behind him. A finished man of the world—a scholar and a wit, overflowing with *bonhomie*—staunch to his party as buttress to its wall—conversant with every phase of London West-end life—a consummate cajoler of honourable gentlemen who did not know their own minds—an immitable dictator when the result of the intrigue was to be a vote gained to his Tory friends—the late Conservative whipper-in was the perfection of his anomalous, but practically important vocation. For I suspect that Peel Ministers will admit, that a capital working under-secretaries may be found by the score for a single first-rate "whip." This office requires the delicate mingling of so many and so nice qualifications. A division is coming off; it is important for Ministers, and turns more or less upon a puzzling and disputing question. Then blare forth the taents of your perfect whipper-in. He knows every doubtful man he knows his haunts and his habits his ambitions and his desires. He is especially up to his hobbies. He understands how to hint promotion in a squeeze of the hand—how to convey a private intimation of ministerial approbation in an almost imperceptible movement of the eye-lid. Daily and hourly, by hints, nods, jogs, and winks, the accomplished whipper-in does his spiriting, and the division is all but secure. His night comes on—it waxes—it wanes. "What! all our men not here! Put up So-and-so to speak against time." So-and-so accordingly bursts into a flaming flood of indignant oratory, and a lot of respectable country gentlemen in the stranger's gallery nod to each other, and say, "Ah! I come now; there's a patriot!" Meantime where is the whipper-in? Galloping, as hard as the sinewy bay in his brougham can go, from street to square, from pillar to post, tracking the absentees with the nose of a Cuban bloodhound; pouncing upon them with the spring of a Bengal tiger; coaxing them with the tongue of the serpent, the wisest and the subtlest of the beasts; and, finally, bearing the last down in triumph just as the division-bell is ringing and rattling through all the lobbies and avenues of the House of Commons. ARGUS B. REACH.

GREAT INDUSTRIAL EXHIBITION OF 1851.

THE task of constructing the vast edifice in Hyde Park is nearly perfected: it has been publicly announced that the interior will, by next week, be ready for the reception of goods, and, consequently, the principal work now to be performed has in the arrangement of the tables, counters, stands, shelves, &c., with the interesting and marvellous objects which will be stored upon them; in the execution of the light and gay decoration adopted by Mr. Owen Jones, both inside and outside; in the adjustment of the mach nery, and in the adaptation of the miles of calico blinds, which are to ward off the heat of the sun. The glazing of the transept being completed, advance has been made with the painting of the iron and purlins inside. The general effect is certainly novel and pleasing, the specimen of the gallery, at the entrance of the transept (painted as it is to remain), is also agreeable. The tone of the blue should, it appears to us, be brighter where it is seen, as in the girders, relieved only by white. The aspect is very cheerful, but the yellow on the columns is rather gaudy and starring. That portion of the transept window (south) painted outside (contrary to the original intention of keeping it a pale stone-colour) blue and white, appears to be generally approved of, though, as the *Times* judiciously observes, what with the flags, and the calico sails, and the decorations, these "usual attributes of a fair must be skilfully handled, or the Crystal Palace may degenerate into a huge vulgarity."

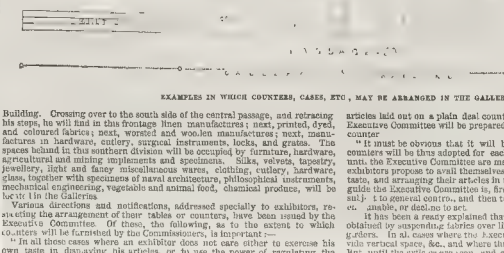
From the communicated arrangements of the Executive Committee, an intending visitor is now enabled to gather a pretty clear notion of the adjustment of the interior of the Palace of Glass to the magnificent purposes of the Exhibition. Let him suppose himself to be entering by the central entrance at the eastern extremity, viz. that immediately adjoining the Knightsbridge Barracks, on his right hand lies the north, on his left hand is the south. He will first find himself in the midst of specimens the produce and handicraft of the United States; approximating these are contributions from Russia, also placed on both sides, north and south, of the central avenue. On the south side, next to those of Russia, will be seen the examples of the wealth and industry of Norway and Sweden: whilst the productions from Northern Germany join those of Russia on the north, and those of Norway and Sweden on the south of the central passage. Next arranged the industrial specimens of the Zollverein on both sides, north and south; then those of the Austrian empire, joined on the north by the products of Holland. The commerce and industry of Belgium are next accommodated on both sides; adjacent, also on both sides, will be located the contributions of France Portugal, Spain, and Italy are next in the northern division: whilst Switzerland and her produce are to be found on the south side: here, close at hand, will be arranged the manufactures and produce of Mexico and Brazil, those of Egypt and Turkey occupy the remaining compartments on the north side close to the transept, and those from Greece, Persia, and Arabia, whilst those of China, &c are to be distributed on the south side

The visitor now crosses the transept, and, after viewing the contributions from the East Indies and our colonial possessions, will advance upon the arts and manufactures of the United Kingdom, the machinery being in possession of the north-western portion of the Building. The galleries will be divided into similar geographical distinction.

The central avenue or passage will extend uninterruptedly from east to west, forty-eight feet in width.

Independently of the transept, eight other passages run across the Building from north to south, interrupted only at the eastern and western extremities by the entrances there.

The more minute space arrangements for the products of the United Kingdom and her colonies retain the classification into the thirty sections. Of the four grand divisions—raw products, machinery, manufactures, and the fine arts —the articles included within the first (raw produce) will be located on the south side; those of the second (machinery) will be found on the north side: the frontage on both sides (north and south) being occupied by manufactures and the fine arts. To be even more explicit: let the visitor suppose, as before, that he has crossed the transept. On each side of him, a frontage of seven bays, each 24 feet wide, will be filled with the productions from the East Indies and the colonies, then, on the north-side frontage, will appear the articles from the United Kingdom, thus placed: Specimens of paper printing and bookbinding; next, furniture and upholstery, paper-hangings, &c.; next, manufactures used for architectural or building decorations in marbles, porphyries, artificial stones, &c.; next, manufactures in leather, skins, furs, &c.; next, manufactures in cotton. The visitor will here have arrived at the western extremity of the



EXAMPLES IN WHICH COUNTERS, CASES, ETC., MAY BE ARRANGED IN THE GALLERIES.

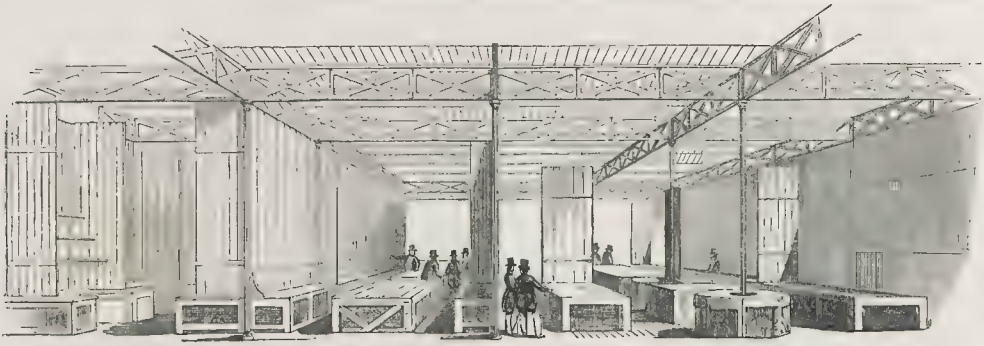
Building. Crossing over to the south side of the central passage, and retracing his steps, he will find in this frontage linen manufactures; next, printed, dyed, and coloured fabrics; next, worsted and woollen manufactures; next, manufactures in hardware, cutlery, surgical instruments, locks, and guns. The spaces behind in this southern division will be occupied by furniture, hardware, agricultural and mining implements and specimens. Silks, velvets, tapestry, jewellery, light and fancy miscellaneous wares, clothing, cutlery, hardware, glass, together with specimens of naval architecture, philosophical instruments, mechanical engineering, vegetable and animal food, chemical produce, will be located in the Galleries

Various directions and notifications, addressed specially to exhibitors, relative to the arrangement of their tables or counters, have been issued by the Executive Committee. Of these, the following, as to the extent to which counters will be furnished by the Commissioners, is important:—

"In all these cases where an exhibitor does not care either to exercise his own taste in displaying his articles, or to use the power of regulating the amount of vacant space immediately surrounding them, as he might do by building up steps or shelves, affixing brackets, &c., but is content to have his articles laid out on a plain deal counter of some uniform width and height, the Executive Committee will be prepared to furnish such an uniform plain deal counter

"It must be obvious that it will be impossible to determine what sort of counters will be thus adopted for each class, or the actual position of them, until the Executive Committee are made acquainted with the extent to which exhibitors propose to avail themselves of the privilege of gratifying their own taste, and arranging their articles in their own way. The principle which will guide the Executive Committee is, first, to leave every one to please himself, subject to general control, and then to act on behalf of those who are indifferent, unable, or desirous to act.

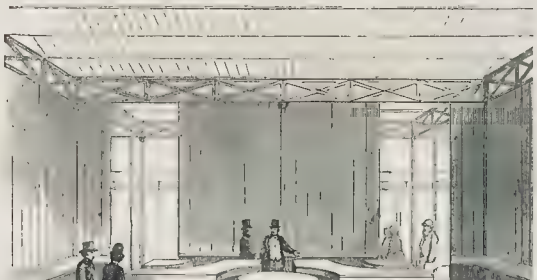
It has been a ready explained that vertical, wall, or partition space may be obtained by suspending fabrics over lines, &c., by hanging draperies from the girders. In all cases where the Executive Committee are called upon to provide vertical space, &c., and where these means will suffice, they will be adopted. But, until the articles are seen, and actually classified within the Building, the Executive Committee will not be able to define to what extent they will provide more substantial modes of obtaining vertical space



SUGGESTIONS FOR COUNTERS.

"Some misapprehension has existed, that an exhibitor, having an allotment of vertical space, is thereby necessarily entitled to some indefinite amount of horizontal space. As a general rule, vertical space must be interpreted literally; for, if it were not so, and every exhibitor on vertical space was entitled to project his articles over those of another exhibitor immediately below, serious inconveniences would result in many cases; still there may be some instances where a moderate projection (say not exceeding two feet) can be allowed without detriment to a neighbouring exhibitor; and the Executive Committee will use every exertion to find the best accommodation for every one having vertical space, consistently with justice to those exhibitors who have allotments of floor or counter space: but the extent to which this may be possible cannot be defined, until it is seen how far exhibitors having vertical space, and exhibitors having horizontal space in the same class, are disposed mutually to accommodate one another.

When all exhibitors who desire to have their own way and work in concert shall have done so, the Executive Committee will be prepared to do their best in carrying out the arrangements necessary for displaying the remaining articles; but if exhibitors decline co-operating together, then the decision will be made by the Executive Committee."



SUGGESTIONS FOR COUNTERS.

They have also announced, respecting the fittings-up of the space, that the boundaries of each class of goods have been fixed, and counters, &c. of one class must not extend into the limits of the adjacent classes. Counters projecting into the great central passage must not be built up higher than four feet at summit: they may be raised in steps from the ground. Every passage leading out of the great central passage to the north or south must be eight feet wide, and in the centre of the twenty-four feet space between the columns. No communication from east to west between passages without special leave in writing. Passages taken out of exhibiting space by exhibitors must be, on the ground, not less than five feet wide; and in the gallery, not less than three feet Counters below a gallery may be built up to nineteen feet, if required. Vertical wall or partition space must not project into the great central passage.

Specimens of the arrangements proposed for counters, shelves, and vertical space, on the ground-floor, are presented in our present week's illustrations.

Examples in which counters, cases, &c. may be arranged in the galleries are to be found in the plan engraved on the preceding page. Exhibitors are reminded that there must be always a clear passage of 3 feet next the railings in the galleries, and no intermediate passages less than 3 feet. Cases, counters, &c. may be placed in any direction north to south, or east to west, provided they do not extend beyond the boundaries of the space allotted to their class, or into the general passages; but it is requested that counters and cases should be multiples of 4 feet, as far as possible. No vertical or counter space in the galleries must rise above 7 feet from the floor

A circular from the Executive Committee, respecting the allotment of space for Agricultural Implements, affixes the following conditions:—"1. That, although the shafts must be sent with waggons, horse gear, steam-engines rollers, drills, horse hoes, horse rakes, and similar implements, for the purpose of moving and trying them, the shafts will not be allowed to remain attached to these implements when within the Building, as they would occupy unnecessary space. 2. That exhibitors will be allowed to hang up all small implements, such as harrows, &c. on frames, which they will be expected to provide. 3 That exhibitors will be allowed to place ploughs, and similar implements, one above the other, on light frames, which they will be expected to provide, so as to make the most of the room. 4. That duplicates of the same implements, or such as are dissimilar only in minor detail, power, or size, must be omitted. 5. That, in order to prevent the same implement being shown by several different parties, exhibitors must give the priority to implements of their own invention and manufacture. As the Exposition includes all branches of industry, and, as a full proportion has been appropriated to agricultural machinery, no extension of space can be granted. The wishes of exhibitors respecting the shape of their stands cannot be guaranteed to be fully complied with; but their convenience will be studied as far as the form of the Building, the alleys for the public, and other circumstances, will admit."

When the aggregate space to each section is marked off in the Building, the allotment of it among exhibitors materially devolves on the sectional committees or their chairmen. The arrangement of articles will be left to the individual forwarding them, so that he may exercise his own taste or discretion entirely in their exhibition. The contractors, Messrs. Fox and Co., we again remind our readers, will undertake, after due communication, to receive and unpack articles, keep them in order, and supply cases, stands, and decorations for stalls, &c

The Executive Committee notify, that, upon receiving a request and copy of the instructions sent to Messrs. Fox and Co., they will send a certificate that the fittings have been completed to those exhibitors who may not be able to superintend the arrangements themselves.

So far the gigantic task of allotting the space for the thousands of exhibitors who have claimed it, is somewhat accomplished. None but those engaged in such a service can have an adequate idea of the onerous and harassing duties which have been imposed on the Executive Committee, whose willingness to attend to and accommodate all classes of contributors has been as remarkable, as the impartiality and good sense which have hitherto characterised their discharge of their important functions.

We hear with regret of the enormous demand insisted upon for the services of the police (the division A, with members of the detective force), who are to be entrusted with the care of protecting the Building and its contents. Will our readers credit us, when we say that report fixes the amount of the demand at £6000 to £10,000? Mr. Mayne, the Police Commissioner, will be lavished with the full responsibility for the safety of the Great Exhibition, but our metropolitan Argus seems in this case to be determined to be amply paid for the use of his hundred eyes. Surely this expense might have been borne by the Government: not a sixpence has yet been, or will be (despite Mr. Paxton's letter) extracted from the public purse for the advancement or interests of the Exhibition; but the protection of the collected results of the trade and industry of the empire from mischief and injury, might have been fairly conceded by the Home Department. After all, it would have been but the watching over the properties of the good and industrious citizens against the attacks of the bad and idle members of society.

The Sappers and Miners at present engaged on the Building have been marking out the spaces for the passages by lines of red paint. The actual division, by hoarding, &c., of the compartments allotted to foreign and home contributors, is commenced; and, as next week preparations are to be entered upon for the reception of foreign goods, the public have received official notice that they will be altogether excluded from visiting the Building after the 3rd February. So strictly, are we assured, will this order be observed, that every Royal Commissioner, member of the Executive Committee, &c., will be provided with a special ticket of admission, which he will have to show, in order to enter beyond the offices of the Executive Department, &c.

The report of M. B. d'Axy on the credit of 500,000f. to defray the expense for the transport of articles to the Exhibition, from France, has been approved of by the Committee. A vote has been taken on the subject, and carried by a large majority of the Assembly. A further credit of 100,000f. is recommended for the purchases of patterns, &c.; and a sum of 50,000f., to assist the operatives desirous of visiting London on the occasion. The total sum voted is 638,000f. (£25,520.)

The Portuguese Commissioners publicly announce the various articles to be sent from Portugal:—wool, flax, African cotton, Cape Verd coffee, oil, dried fruits, honey, cheese, medicinal plants, timber, marbles, minerals, salt, arms and implements, naval models, sail-cloth, printed cottons, coarse woollens, carpets, woods, and furniture

Manufactures in gold, silk, lace, jewellery, embroidery, woods, oils, petrifactions, and fruits are named from Syria; mother of pearl work is proffered from the Pasha of Jerusalem; marbles and flowers from Mr. Consul Finn; and some gold antique curiosities from Cosone, Rose, the Syrian Consul-General.

A monster block of anthracite coal is to be brought from the Swansea Collieries. It is 17 feet long, 4½ feet wide, 3 feet thick, and weighs nearly four tons. The colliers in the employ of the owners (Messrs. James and Aubrey) gave three days' work to the raising it, &c., without other reward than a barrel of beer presented to them to celebrate the safe landing of this specimen

Tin and lead ores, Cornish minerals, porphyries, clays, glass, crystals, ventilator for coal-mines, ore-dressing machines, breakwater, cooking apparatus, steam-engines (various), tables, chairs, mineralogical and geological maps of Corawall, pebble porphyry, granite and serpentine columns, pedestals and tables, vases, &c., appear in the promised returns from the Truro district.

The exhibitors (some 393) from Ireland appear to be in great spirits with the amount of space (9254 feet counter space, and 14,226 feet wall space) and other arrangements to accommodate their enterprise. Though late in the field, they are organising visiting clubs among their workpeople. Exertions, especially in Dublin, are being made to induce the mechanic and artizan class to visit the Exhibition. The space allotted for the Dublin district is 10,840 superficial feet. Marbles, minerals, chemicals, animal and vegetable substances, carriages, tabinet looms; agricultural, philosophical, and musical instruments; woollens, linen, saddlery, paper, carpets, floor-cloth, lace, embroidery, clothing, cutlery, hardware, jewellery, glass, furniture, paper-hangings, bog-oak ornaments, marble tables, stone carving, turning in ivory and wood, die-sinking, &c., figure among the articles enumerated in the Dublin list. At a meeting in Dublin on the 25th, a report of the efforts of the Local Committee was read, and a new subscription list, for the general purposes of forwarding the articles to the Exhibition, and assistance to the working men's clubs, &c., was determined upon.

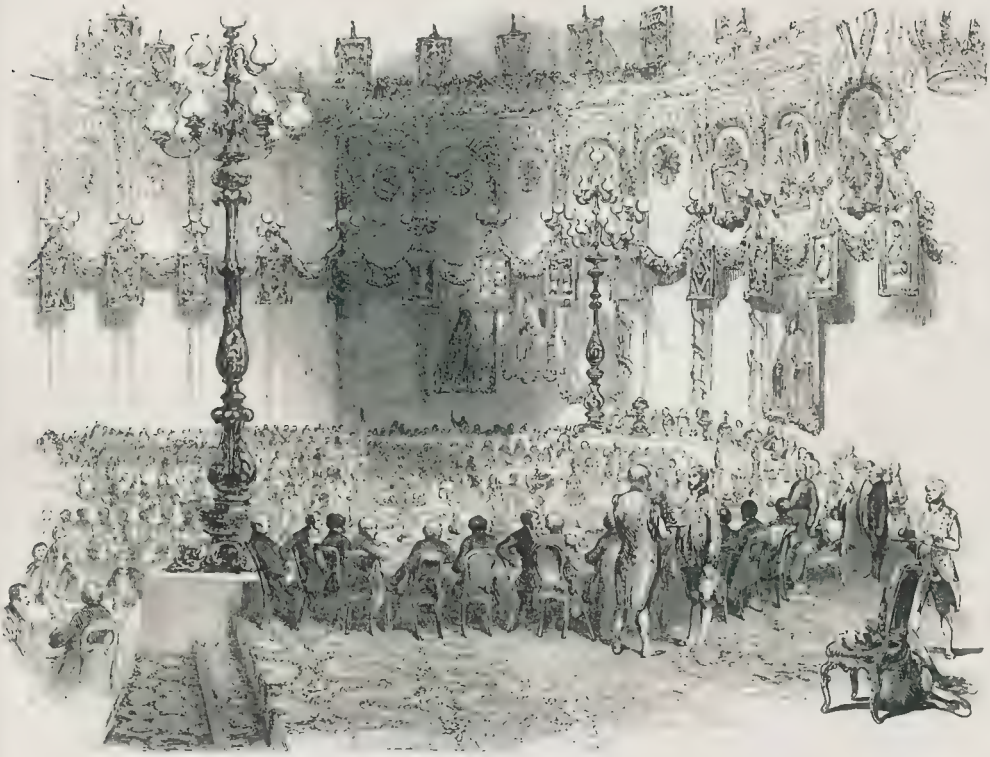
The Central Association at Leeds of all the clubs in the district, which provides an agency for general arrangements, so as to prevent confusion, is well worthy of imitation. Conveyance and lodging could be more certainly and cheaply provided, and we hope so sensible a concentration will be generally adopted

The answer from the Executive Committee to exhibitors proposing to have attendance at the place assigned in the Building, declares that the rules and conditions upon which attendance can be permitted are not yet matured. "It must, however, be borne in mind that it will only be possible to grant the privilege to those exhibitors who have received allotment of space of sufficient amount to enable them to accommodate the attendant within the allotment."

An immense block of coal is now being raised for the Exhibition, from the Speedwell pit, one of the mines of Richard Barrow, Esq., Stavely, Derbyshire, on the estate of his Grace the Duke of Devonshire. The dimensions of the block after being perfectly squared, are—17 feet 6 inches long, 6 feet wide, and 4 feet deep. Its estimated weight is upwards of 16 tons.

GREAT EXHIBITION BUILDING.—SECTIONAL VIEW OF GALLERIES.

THE OAK DINING-ROOM.—THE EARL OF CLARENDON AND THE LORD MAYOR OF DUBLIN.



THE BANQUET IN THE KING'S ROOM, MANSION-HOUSE DUBLIN.

INAUGURATION BANQUET OF THE LORD MAYOR OF DUBLIN

THE grand festival given by the Lord Mayor of the city of Dublin, in honour of his inauguration, took place on Tuesday week. The old Mansion-house has been under repair since the accession of the present chief magistrate; and although the exterior could not be completed, the re-decoration of the saloons and assemblyrooms was accomplished. The splendid oak panelling of the two great reception-rooms has been newly polished and varnished; the fine old portraits have had their frames newly and richly gilt; the window draperies have been renewed in Irish damask, and the general furnishing of the suite of rooms has been restored in magnificent style, and in the truest taste. The vestibule was decorated for the occasion with laurel interspersed with wreaths of artificial flowers, surrounding swords, muskets, and bayonets, grouped variously on the oak panelled walls. At each side of the entrance leading to the Banquet-room was fixed a figure in complete armour.

The large Room, in which the Banquet was held, presented a scene of tasteful splendour. The walls were painted in new and tasteful designs, and the panels were covered with hatchments, displaying the armorial bearings of the Irish nobility. Fronting the principal entrance, and immediately over the chairman's seat, was a large crown, with the initials "V. R." in gas jets. The entire front of the gallery was embowered with evergreens, interspersed with bouquets, and the panelling in front was festooned with wreaths of ivy and laurel, amidst which were coloured lamps. Under the illuminated crown was displayed the arms of Lord Clarendon; and around the walls, as regular heralds, were presented beautifully painted heraldic devices. Over the principal entrance, the coat of arms of the Lord Mayor, surmounted by his Lord ship's family crest, and quartered with the city arms, was exhibited in gas jets; whilst around the walls several national illuminated devices were exhibited—the Irish harp and crown, with stars, crescents, &c. The section of the hall directly facing the principal entrance was occupied by a raised dais, traversed by the head table, having in its centre the Lord Mayor's chair of state, and at either side, to the right and to the left, the seats for the Lord-Lieutenant, the nobility, the Judges, the city members, the members of the Town-Council, and other distinguished guests. From this central table those other tables (eight in number) extended in parallel lines across the entire extent of the spacious hall. The display of plate was very superb

The scene was altogether very splendid, particularly at the moment when the Lord Mayor took his seat, and when his Excellency the Lord-Lieutenant and the glittering throng of military officers, Deputy-Lieutenants, and members of the Government staff, appeared seated in full uniform. The Lord Mayor was attended in full robes of office, wearing the silver chain and collar of SS. His Excellency entered the Banquet-Room at a few minutes before eight o'clock. He was received at the entrance by the Lord Mayor, and a large body of the Town-Council in their robes, and conducted to his seat to the right of the chair. His Excellency wore the Windsor uniform of blue and gold, with the Viceregal star and collar of St Patrick. He was accompanied by the several members of his suite, in their state uniform. His Excellency was received on his entrance into the Banquet-Room with the usual honours, the guests all standing, and the splendid military band stationed in the gallery playing the National Anthem.

The dinner, served by Mr Ingram, was of the first character.

The company sat down to dinner at eight o'clock. The Right Hon. the Lord Mayor presided. At his right were

The Lord-Lieutenant, his Grace the Archbishop of Dublin, his Grace the Duke of Leinster, the Marquis Conyngham, Lord Milltown, Lord C. Russell, Lord W. Fitzgerald, Lord Howth, Baron de Robeck, Lord Gort, Lord Nass, the Bishop of Meath, Lord Talbot de Malahide, Sir W. Somerville, Hon. Captain Lindsay, Hon. G. Ponsonby, Hon. W. H. Hutchinson, the Lord Chief Justice of the Queen's Bench, the Chief Justice of the Common Pleas, Baron Pennefather, Sir Philip Crampton, Baron Lefroy, and Mr. Justice Moore.

At the left of the chair were—

The ex-Lord Mayor, the Lord Chancellor, the Marquis of Drogheda, the Marquis of Kildare, the Lord Viscount Ennisdale, Lord Dunsany, Lord Bellew, Sir Thomas Redington, Hon. and Rev. Dean Pakenham, Hon. E. Lawless, the Master of the Rolls, the Chief Baron, Baron Richards, and Mr. Justice Jackson

The Rev. Mr. Jameson, chaplain to the Lord Mayor, having said grace, The Lord Mayor then rose, and proposed the usual loyal toasts, which having been duly honoured,

The Lord Mayor rose, and said:—

Gentlemen, we will now drink the health of our distinguished guest, his Excellency the Lord-Lieutenant; and connect with it the toast of "Prosperity to Ireland"—a sentiment which his Excellency has very near at heart. (Hear, hear!) He has been for upwards of four years in this country, and has gone through times of the greatest difficulty and trial; and I feel sure that his Excellency has done as much as he could possibly have done to alleviate the wants and distresses of our country, and promote its prosperity. (Hear.) I therefore give you, gentlemen, "The Health of his Excellency the Lord-Lieutenant, and, coupled with it, Prosperity to Ireland." (Loud cheers)

His Excellency the Lord-Lieutenant rose amidst cheers, and said:

Gentlemen,—I will now drink the health of your distinguished guest, his Excellency the Lord-Lieutenant, and connect with it the toast of "Prosperity to Ireland"—a sentiment which his Excellency has very near at heart. (Hear, hear!) He has been for upwards of four years in this country, and has gone through times of the greatest difficulty and trial; and I feel sure that his Excellency has done as much as he could possibly have done to alleviate the wants and distresses of our country, and promote its prosperity. (Hear.) I therefore give you, gentlemen, "The Health of his Excellency the Lord-Lieutenant, and, coupled with it, Prosperity to Ireland." (Loud cheers)

His Excellency the Lord-Lieutenant rose amidst cheers, and said:

Delighted though I am sure we are with our reception here this night, yet this meeting appears to me to afford matter for reflection still more gratifying, and, I would say, of far higher importance than anything that is connected with our personal enjoyment. We meet here alone to inaugurate the Municipal institutions established upon theory than deduced from experience. I consider, gentlemen, but this night we celebrate the principle of purity of election; and never was it better illustrated, nor upon a larger scale, than at the recent municipal election—and, connected as I am if I may without presumption say so—connected as I feel myself to be with this city, anxious as I am for all that concerns the honour and the welfare of its citizens—I do rejoice that it should have been the good fortune of Dublin to set an example which other cities and other constituencies agree in admiring, and will, I trust, not neglect to imitate. Upon the passing of the Municipal Bill, the determination or object and scope upon it for the public good was strikingly and universally manifested. Men who, by their position and their talents, are eminently qualified to take part in the administration of public affairs, come forward in honourable rivalry with each other to solicit the suffrages of their fellow-citizens, and, at a time when matter for excitement assuredly was not wanting, all political and religious differences were forgotten, in order faithfully to discharge the duties committed to them for the public good. And, gentlemen, we know the result, and I think I may say that a corporation which so completely represents the wealth, the intelligence, and the respectability of the commerce and the interests of the second city of the empire, can challenge comparison with any municipal body that ever was, and is ever likely to be called into existence. (Loud cheers.) Then the very first act of the body upon which a short time ago was laid before the council, I gather that the new corporation will have no sinecure, for, in addition to its own ordinary functions, it must take upon itself the arduous duties hitherto performed by independent bodies, together with that which, whether in public or in private, is always considered the most arduous task—that of making both ends meet—(laughter)—for it is long since the city treasury has labored under that embarrassment which a surplus is now-a-days supposed to occasion to a Chancellor of the Exchequer. (Laughter.) But, whether in dealing with this or other difficulties, the drafts of the corporation upon the confidence of their fellow-citizens will, I am sure, never be dishonoured; for, without intending or presuming to make the slightest comparison between this or any previous corporation, I do think it is of incalculable benefit to a great community like that of Dublin, that their affairs should be entrusted to men who have laid aside all personal and political differences, and who will devote themselves zealously to the business for which they were elected. (Hear, hear.) For do I think that this advantage will be circumscribed within the limits of the metropolis; I think the example which Dublin has set will have its effect upon other corporations and other constituencies, and I think both will reflect more than they have hitherto done upon the character of the duties which they have to perform—that on the one hand they will bear in mind that confidence should not lightly be placed, and, on the other, that solemn obligations should not be light y undertaken by men upon whom devolves the guardianship of the health, the peace, the security, and the fiscal interests of their fellow-townsmen, and that it is alike the interest of all to impart to one of the most ancient and valuable of our institutions all the capacity and purity which circumstances will admit. (Cheers.) Speaking in the presence of men so much better informed than myself on the subject, I should regret to indulge in any anticipation which they might think too sanguine; but still I hope it is not an exaggeration to say, with reference to the times when the new corporation shall have taken its seat, that all municipal prospects of Dublin are improving—that many of our artisans are better employed—that the necessaries of life are more within the reach of the poorer classes, and that business, although perhaps not as extensive as formerly, is now conducted upon a system far more cautious and secure. Generally too, throughout the country, I trust that the tide has turned, and that the depression of the famine for five years, which has pressed so heavily upon Ireland, has been halted with increased energy and exertion by all classes of the community; and, if such be the case, and if the present scale of taxation may be sustained, which I see no reason to doubt, and if diminished crime continue to give the most satisfactory assurance of diminished destitution, as it has done in the year 1850, I trust that this state of things will henceforth retard not upon the metropolis alone, but that you, London's year of office will, therefore, be one of progressive amelioration, and thus repay you for the personal sacrifice you have made, and for the toils and responsibilities you have undertaken to assume, let me once more thank you for the honour you have done me. I can assure you, that it was always most gratifying to me that my name should be coupled with the prosperity of Ireland, for that is the object of my unceasing solicitude, and, I believe me, because I have the presumption to think that through any exertion of mine it can be materially advanced. Nobody can be more conscious than I am of how little can be effected towards that object by a government producing those feelings of security and confidence which the proper exercise of its functions will create. When it steps out of those legitimate functions, I believe it does but impair individual exertion, and is injurious to that spirit of association which is indispensable to social progress and national greatness. (Hear.) When, however, that spirit is manifested, as it is manifested in Ireland, and yet is found insufficient for the completion of great national objects, such as the extensive improvement of land communication, and, above all, of railway communication, then I think the assistance of Government is justly asked for; and I rejoice to think that it has been freely given. (Cheers.) For myself, individually, permit me only to add, that, knowing, as I do, how boundless are the resources of this country; feeling confident, as I do, in its future destiny, I can with truth say, that, whether in or out of office, my humble endeavour will be to serve Ireland, and the object nearest my heart will be her welfare and prosperity. (Loud cheering, amid which his Excellency resumed his seat.)

The Lord Mayor then rose, and proposed the health of the late Lord Mayor, Mr. Reynolds, M.P., who returned thanks

The Lord Mayor then gave the "Army and Navy."

The toast having been duly honoured, the Adjutant-General (Colonel Corkran) and Captain Daniel, R.N., briefly returned thanks

The Lord-Lieutenant again rose, and proposed "The Health of the Lord Mayor, and Prosperity to the Citizens of Dublin;" his Excellency observing, with reference to the expected influx of foreigners at the Great Exhibition :—

On arriving here, they will learn, by the position occupied by the Lord Mayor, how high character and honour are estimated in this country; and by visiting, as I had the pleasure of doing, a few days ago, the splendid establishment of the Lord Mayor, they will see up to its source the universal fame which the name of Guinness has so justly obtained. (Loud cheers.) Therefore, in such a year, when we anticipate so many distinguished visitors—and when, on every account, we should desire that Dublin should appear to the best advantage—I think it most fortunate that its dignity and its hospitality should be represented as they now are. (Cheers.)

The toast was drunk amid enthusiastic applause The Lord Mayor responded; and then proposed "The Health of his Grace the Archbishop of Dublin," a prelate who (he observed) had been for years residing amongst them, and who was remarkable for his munificent and bountiful charity.

This toast having been most warmly received, Archbishop Whately rose, amidst loud cheers, and responded to the toast

The Lord Mayor then rose, and proposed "The Health of his Grace Archbishop Murray." The Very Rev. Dean Meyler, V.G., returned thanks, in the Archbishop's absence.

The other toasts were "The Attorney-General and the Irish Bar," "The Duke of Leinster," Sir William Somerville," &c.

At a quarter-past twelve, his Excellency the Lord-Lieutenant withdrew, and the company separated immediately afterwards.

IRELAND.

ABOLITION OF THE VICEROYALTY.

On Monday, at Dublin, a highly influential public meeting, convened and presided over by the Lord Mayor of that city, was held in the Rotunda, for the purpose "of petitioning against the contemplated abolition of the Irish Viceroyalty, and placing on record their present against the system of centralization adopted towards the country (Ireland), and which has already been so destructive to its best interests."

The large circular room in which the meeting was held was crowded in every part, and gave a true representation of the rank, station, professions, trades, creeds, and classes of the city, besides a number of gentlemen to the object of the meeting, from various parts of the country. Amongst those on the platform, and who took part in the proceedings, were the Marquis of Westmeath, the Earl of Howth, the Earl of Mayo, Lord Talbot de Malahide, Sir Thomas Hamilton, M.P., Colonel Dunne, M.P., Henry Grattan, M.P., John Reynolds, M.P., Sir L. O'Brien, M.P., Hyacinth Talbot, M.P., Sir Edward Borough, Bart., Joseph Napier, M.P., the High Sheriff of the county Dublin, the High Sheriff of the county of Wicklow, James Whiteside, Q.C., and a long list besides of the Aldermen and other members of the Corporation, together with a number of the leading men of the professional and commercial classes of Dublin.

The Marquis of Westmeath, in moving the Lord Mayor to the chair, expressed his gratification at beholding such a respectable meeting, and such an indication of union amongst Irishmen upon any subject. As to the object for which the meeting was called, he confessed he had been in favour of the abolition of the office of Lord-Lieutenant chiefly on account of the conduct, a few years ago, of a nobleman who filled that office, and who kept in the pay of the country, to overrun the community with gangs of the most notorious offenders of all descriptions. When he saw, however, the vast array of signatures of the highest and specially attached to the requisition for this meeting, he felt that it was his duty to surrender his own opinion and former impression, and come there to give them his assistance to repel what they considered an injury and injustice, and he should do so with all the energy in his power.

Letters were read, excusing the absence, but entirely approving of the object of the meeting, from the Marquis of Londonderry, Lord Inverness and Ferrard, the Marquis of Clanricarde, Lord Clonbrock, the Mayors of the corporations of Kilkenny, Sligo, Clonmel, Waterford, Wexford, Limerick, Admiral Robinson, and several others.

The High-Sheriff of the county of Dublin moved the first resolution, to the effect, that the office of Viceroy of Ireland might be made highly conducive to the welfare and interests of the country.

Earl Mayo, in seconding this resolution, said that he attributed to absenteeism a great deal of the misery of Ireland. He believed, however, that better times were approaching, and he was happy to say that during the great part of the passage if her Majesty were to come occasionally to visit her Irish people after she had passed some time at her Highland residence, and recruited her strength from the fatigue of the Parliament sitting.

The second resolution, to the effect that the abolition of the Viceroyalty, in the opinion of the meeting, was injurious and unjust, was moved by the Earl of Howth, who expressed the hope, that, with the aid of such a meeting as this, they would be able to ward off the intended mischief

G. A. Hamilton, Esq., M.P., seconded this resolution in a very able address, and said that the abolition of the office of Lord-Lieutenant was a concession made by the Government to a certain school of politicians in Parliament.

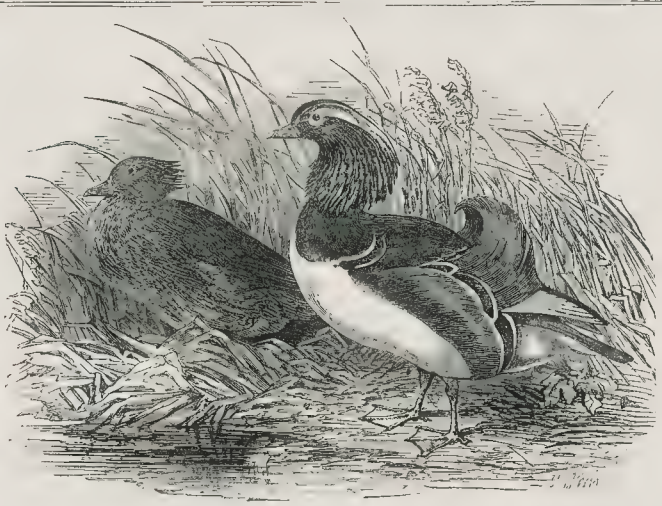
Mr. Napier, M.P., moved the third resolution, declaring the centralization principle injurious to social order and constitutional freedom, and declared his opinion that the abolition of the courts of law and all other public institutions in Ireland would follow that of the Viceroyalty.

This resolution was supported by Lord Talbot de Malahide and Mr. Whiteside, Q.C., who addressed the meeting at great length, denouncing, with powerful effect, the principle of centralization. The latter gentleman stated that no legislation could upon Ireland if suffered to be further carried out than it had been already, and expressed his conviction that the abolition of the office of Lord-Lieutenant would be followed by the removal to London of every other public and useful establishment in the country.

Mr. Sharman Crawford, Sir Lucius O'Brien, Mr. Henry Grattan, Col. Dunne, Mr. Gregory, and several others, also addressed the meeting in support of the resolutions, and the proceedings were not over till a late hour of the evening.

DEPORTATION OF PAUPER CHILDREN TO BERMUDA.—OFFICIAL INVESTIGATION.—On Wednesday an official investigation was opened before Richard Hall, Esq., the Metropolitan Poor-law Inspector, into the circumstances connected with the deportation of pauper children from the parish of St. Pancras to Bermuda. The inquiry took place in the new vestry rooms adjoining the workhouse, and nearly every member of the board of guardians was present. Mr. Donald, the parish solicitor, attended, having been called to the chair. Mr. Dyke, director of the poor, handed in a protest against the right of the Poor-law Board to interfere with the management of the poor of St. Pancras [illegible] we received a notice [illegible] Mr. Hall, I think, was in the chair [illegible] Mr. Hall [illegible] Mr. Donald [illegible] Mr. Dyke

Europe during the last three years -and never was there a period in history where there was so much consultation-congressing—I had almost said-constitution-in-ferring, for it has been so badly done; yet in all this constitution-making has any body ever proposed to send persons to represent them for seven years. (Hear, hear.) Why, the thing is an absurdity! To hand over your convictions and opinions to a man now, and to allow him to enjoy the privilege of doing what he likes in your name for seven years to come, is an absurdity. Why, your opinions may differ widely two years hence; for circumstances may occur which will render a change of opinion both necessary and justifiable. We are moving now in two years fast as we did in 28 years formerly; for you go to America and back now in 40 days; and travel to and from the furthest part of the kingdom in 48 hours, a distance which used to take you 20 days. Then we have the discovery of California, which may in a short time completely alter your standard of value; and you have many other changes that may take place which may overthrow the choice of wise men, and men who are able to meet an emergency. How absurd, then, to send men to Parliament for seven years! (Applause.) It is so absurd, that if you had a House of Parliament representing the people, it would instantly be done away with. (Hear, hear.) The utmost term you should give would be three years; and of the House of Commons I would have one-third vacated every year, as is the case in your municipal corporations. (Loud cheering.) It would enable people to express their feelings and opinions once every year; and it would, at the same time, enable the Government to ascertain what the public opinion really was. (Hear, hear.) Moreover, it would prevent the great danger of Government not being in harmony with the wants and wishes of the people. (Applause.) This is the great danger—the monster evil (Hear, hear)—for that which produced the great convulsions of the continent of Europe was the want of harmony and absence of sympathy between the continental Governments and the people they were called upon to rule. (Applause.) Now, gentlemen, there are at the present moment in this country—in all parts of the country I may say, for I have received letters from Bristol, societies of this kind from Brighton to Newcastle-on-Tyne—from every one of the 39,000 and 40,000 members of these freehold land societies. (Hear, hear.) Why, we used to be told that this was the number of landholders in England, and this addition is, in my opinion, but the beginning of these societies. I think we shall have branches extending to every town and village in the kingdom—(Hear, hear)—and I shall not rest satisfied until I see 30,000 or 40,000 multiply into 300,000 or 400,000. I may, indeed, be long in the grave before that period arrives, and disturbance in the country. Your report says that you have seen a work done without noise and acrotation. I do not mean to say that a little agitation is not sometimes necessary, if it be only to guide other parties in the right direction; but this is a movement which will progress noiseless y and without agitation, and therefore it will get no notice from the politicians. (Hear, hear.) It is a movement which will get no notice from the politicians. (Hear, hear.) It is a movement which will get no notice from the politicians. (Hear, hear.) It is a movement which



MANDARIN DUCKS.

A meeting of the passengers was held on board the steamer, at which resolutions were passed in testimony of the unwearied care of Captain West and the other officers, in bringing the ship safely into port.

The Cork papers attach importance to this accident, from its likelihood of proving advantageous to the port, by showing the amount of skill and enterprise now existing in Cork. About eleven o'clock on Wednesday night a despatch was sent up to the establishment of Messrs. Lecky and Beale, informing them that the *Atlantic* had come into Queenstown with her machinery disabled; and, at an early hour next morning, Mr. Lecky went on board to ascertain the amount of injury done. The principal repair requisite was the construction of a main shaft. Captain West then arranged for time to consult his correspondents in Liverpool and Glasgow. It was suggested that Haulbowline would be an excellent position for the repairs; and our Artist's sketch shows the steamer being towed to her moorings there.

The injury which the *Atlantic* has sustained, in addition to the breaking of the shaft, is confined to the loss of her bowsprit and jibboom, together with much damage to the paddle-wheels and boxes, those at the starboard side especially being almost completely destroyed. We regret to state, also, that one of the firemen had his leg fractured by a portion of the broken machinery

MANDARIN DUCK AND DRAKE.

This beautiful pair of ornamental water-fowl has been brought from Wlampoa, in China, and may be seen at Messrs. Baker's Pheasantry King's-road, Chelsea.

The Drake is the most gorgeous in plumage of all water-fowl. The top of the head is black, which extends down the nape of the neck; below is a clear white line, passing over the eye down the base of the bill, which is of a deep bright rose-colour; the cheeks and the long pointed feathers of the neck are of a bright orange brown; the upper part of the breast and back of a glossy black, the lower white; the two raised feathers of the wing are orange brown; the flight feathers are white and black; the tail is black, except underneath, which is white; the sides of the breast are greenish orange, margined by a clear white fine line: the legs are deep pink. From the middle of June to the middle of September, the Drake assumes the colour of the Duck, which is a dull olive brown; he is very pugnacious, and quite a tyrant over all the other aquatic birds.

These Ducks are the only pair in England, and so scarce that his Royal Highness Prince Albert has honoured Mr. Baker's exhibition of poultry, at Chelsea, by a visit on purpose to see them. Mr. Baker, we understand, has refused 120 guineas for these Mandarin Ducks, which he intends keeping for exhibition.

The Mandarin Duck, in many respects, resembles the Summer Duck, and is even more beautiful and velvety in its plumage. We learn from Richardson's very useful "Rural Handbook" (Domestic Fowl and Ornamental Poultry), just published, that the Mandarin has been bred in the Zoological Society's Gardens. "Mr. Yarrell," says Mr. Richardson, "recommends that this species and its congeners should have grain which has been steeped in water until macerated given to them in confinement; others recommend barley-meal mixed with water, and sopped bread, and similar mixtures. I would recommend a variety of soft food for these birds, as most conducive to health: an occasional supply of insects and larvæ will also be useful, where they cannot pick up such food for themselves."

NOOKS AND CORNERS OF OLD ENGLAND.

MICKLEHAM CHURCH.

The picturesque environs of Dorking, in Surrey, present comparatively few antiquarian attractions; and, certainly, neither of them surpasses in interest the ancient Church of Mickleham, a road-side village about a mile north of Box-hill, in the romantic Vale of Norbury

This Church is of Norman origin, and affords an excellent specimen of that style. The following extract from the "Domesday Book" shows that a Church existed here at the date of the general survey, 1081—1086:—"Nigel holds of the Bishop (of Bâieux) Micleham. Ainsfric held it of King Edward. There is a Church and two acres of meadow." From the reference thus made to King Edward, it is at least highly probable that a Church existed here in his time, 1041—1066. The size and proportion of the edifice, and also the ornaments to the windows and arch of the chancel, very nearly correspond to those of several churches which are known to be very ancient; while the absence of ornament in the arch of the western doorway would seem to bespeak it of earlier date than some more enriched specimens: for example, that of the Chapter House of the Oxford Cathedral (formerly St. Frydeswide), which it otherwise much resembles, and which is supposed by Dallaway to have been built by King Ethelred, in 1004.

Being much dilapidated, the Church at Mickleham was restored and beautified in 1823, at a cost of upwards of £2000, under the able superintendence of P. F. Robinson, Esq.

In this repair and restoration, the nave was rebuilt, and the arches separating the nave from the south aisle were enriched to correspond with the channel arch before mentioned; and square piers were substituted for the circular shafts of the original building, in compliance with the wishes of the inhabitants. A gallery, to accommodate some of the principal inhabitants, was also erected in the south aisle, and the building ornamented throughout. In pulling down the nave, the original plastering was discovered, and the date (1013) found marked in red

THE UNITED STATES MAIL STEAM-SHIP THE "ATLANTIC" BEING TOWED TO HER MOORINGS OPPOSITE HAULBOWLINE, QUEENSTOWN.

colour. This, although not of itself satisfactory, may at least be regarded as corroborative of the great antiquity of the edifice

About eleven years since, a north aisle was added, which also contains a gallery, and is ornamented to correspond with that on the opposite side. At the east end of the north aisle is situated the Norbury pew, which existed in the former building. It consists of a small sepulchral chapel, and contains a fine altar-tomb to Wyllyam Wyddowsoun.

MICKLEHAM CHURCH, SURREY.

DEATH OF THE "ROYAL CENTENARIAN," AT WEST COWES.

(From our own Correspondent.)

On Saturday last, died Mrs. Mary Read, at the advanced age of 102 to 104 years, better known of late as the "Royal centenarian," from her having been honoured, on her supposed one hundredth anniversary, with an interview with the Sovereign and Royal Family during their sojourn at Osborne House, in December, 1849.

Mary Read had been twice married, and had given birth to eleven children. Her maiden name was Griffin; she was born on the 21st December, 1746 or 1748, her parents residing then at Durley, in the neighbourhood of Gosport. At the early age of 17 she was married at Fawley, on the borders of the New Forest, to Mr. John Randall, the master of a coasting vessel, by whom she had three children: he died at the age of 28. In the following year she was married, at Holyrood Church, Southampton, to her late husband, Mr. William Read, foreman shipwright at Hythe building-yard. By this marriage she had eight children. We learn that she was left by her first husband in comfortable circumstances, and that at the time of her second union she kept a grocer's shop, and possessed a stock of £200. About 60 years ago she settled in the Isle of Wight, and subsequently lived at West Cowes.

There appears to have been some little doubt as to the old lady's precise age: she was always under the impression of being two years older than above stated, from the circumstance that her eldest son by the first union died in 1814, at the age of fifty years, and that she was just eighteen at his birth; this would give her 104 years. She retained full possession of all her faculties to the last moment; her eyesight was remarkably good, and she never needed spectacles.

On her visit to Osborne, in December, 1849, she walked to the Ferry, from her abode in Mary-terrace, a distance of 300 yards. It was thought that the interview with the Sovereign would prove too exciting for her aged frame: but such was not the case; for, having had a week's intimation of it, she got up several mornings early, and dressed herself each day, anxiously awaiting the Royal pleasure to attend. At the interview, the Centenarian was presented with gratuities to the extent of seven pounds. Her great age, and the humble circumstances of her daughter-in-law, were well known to the neighbours and inhabitants, on whose bounty she has subsisted for many years; and, in justice to her memory, she was not wanting in gratitude for the kindness shown to her.

On the morning of her decease she arose as usual, and proceeded to her work that of making a patchwork quilt, which she had nearly completed. In the afternoon, after drinking a cup of tea, at half-past three, she retired to take her accustomed nap, but it proved the sleep of death. She expired at half-past five o'clock, without any suffering, during the momentary absence of her daughter-in-law, who, on returning from the adjoining room to her bed-side, not hearing her breathe hard, as she generally did, found life extinct

The deceased is to be buried at West Cowes churchyard, where a stone is to be erected to mark the grave of "the Royal Centenarian"

"THE ROYAL CENTENARIAN," MRS. READ, OF WEST COWES.

FINE ARTS.

"DON SCIPIO RELATING HIS ADVENTURES TO GIL BLAS AND HIS WIFE."

THIS charming composition is one of Mr. Uwins's contributions to the Collection of Drawings by the Sketching Society, now on view at Mr. Hogarth's, in the Haymarket. The scene is graceful and highly poetic throughout: it has a delightful air of quiet and listening, characteristic of story-telling; and, altogether, the romancist's incident is here very successfully treated. It is thus related in the "Adventures:" the chapter, "What followed the Marriage of Gil Blas and the fair Antonia. The beginning of Scipio's History."

On the very next day after my marriage, the Lords of Lerya returned to Valencia, after having given me a thousand new marks of friendship; so that my secretary and I remained in the house with our wives and servants only.

The care which both of us took to please the ladies was not ineffectual: in a little time I inspired my wife with as much love for me as I had for her; and Scipio made his spouse forget the sorrows which he had made her suffer. Beatrice, who had a pleasant obliging temper, easily insinuated herself into the favour, and gained the confidence of her mistress. In short, we all four agreed to admiration, and began to enjoy a situation worthy of envy. All our days glided away in the most agreeable amusements. Antonia was naturally grave, but Beatrice and I were very gay; and had we been otherwise, Scipio's presence was enough to keep off melancholy. He was an incomparable fellow for society; one of those comical creatures, whose appearance alone can make a company merry.

One day we took a whim, after dinner, to go and take a siesta in the most agreeable place of the wood, when my secretary was in such a good humour that he banished all desire of sleeping by his merry discourse. "Hold thy tongue, friend," said I, "or, if thou art resolved to keep us from taking our nap, entertain us with some story worthy of our ears."

"With all my heart, sir," answered he; shall I recount the history of King Pelagius?" "I would rather hear thy own," I replied; "but that is a pleasure thou hast not thought proper to give me since we have lived together, nor ever will, I suppose." "And what is the reason?" said he. "If I have not recounted my own history, it was because you never expressed the least desire to hear it; it is not, therefore, my fault that you are ignorant of my adventures; and if you are in the least curious to know them, I am ready to satisfy your curiosity." Antonia, Beatrice, and I took him at his word, and disposed ourselves in order to hear his narration, which could not miss of having a good effect, either in diverting or lulling us asleep.

DON SCIPIO RELATING HIS ADVENTURES TO GIL BLAS AND HIS WIFE.—FROM A SKETCH BY T. UWINS, R.A.

PLATE PRESENTED TO SIR EDWARD GAMBIER.

TESTIMONIALS PRESENTED TO SIR EDWARD AND LADY GAMBIER.

We have much pleasure in recording the excellent feeling expressed by the native community of Madras on the recent retirement of Sir Edward J. Gambier from the Chief Justiceship of that important settlement, on which occasion a very complimentary address was presented to him, signed by upwards of ten thousand of the natives, accompanied with the splendid Testimonial shown in the Illustration. It consists of a large centre-piece, formed as follows:—A triangular plinth, richly ornamented, supports three Oriental palm trees, from which issue six branches for lights, surmounted by a basket for flowers. Around the stem are three figures—two, of natives in the act of presenting the address to Sir Edward. On the front of the plinth is engraved:—

To the Honourable Sir EDWARD JOHN GAMBIER, Knt., Chief Justice of Madras. Presented by the Hindu Community of Madras, in testimony of their high sense of the integrity, zeal, and patience with which, during a period of thirteen years, he discharged the important functions of a British Judge in the Supreme Court of Judicature at this Settlement. 1850.

This handsome piece of plate is thirty inches high, weighs about 550 ounces, and is highly creditable to the taste and skill of Messrs. Hamilton, of Calcutta, by whom it has been manufactured.

An equally flattering mark of esteem has been presented to Lady Gambier, from the European ladies of Madras. This consists of a tripod centre-piece, with shaped triangular pedestal, richly ornamented with the Brahminy lotus, supporting a palm tree, encircled with the vine, supporting a palm trellis basket for flowers. On the pedestal are three figures, Music, Painting, and Dancing. It is twenty-seven inches high, and weighs above 180 ounces. On two sides of the pedestal are engraved—

1850 Presented to Lady GAMBIER, on the occasion of her departure from Madras, after a lengthened residence of thirteen years, as a token of their affectionate regard and esteem, by M. D. Stonhouse, J. Montgomery, C. Morehead, C. A. Boyd, M. H. Montgomerie, A. H. Key, E. J. Arbuthnot, on behalf of themselves and the following ladies (above sixty).

On the third side are her Ladyship's arms, &c. This piece of plate has been executed in a chaste style by Mr. Beavan, of Marylebone-street, Piccadilly.

PLATE PRESENTED TO LADY GAMBIER.

MUSIC.

SACRED HARMONIC SOCIETY.

At the eighteenth annual general meeting, it appeared from the accounts, that the receipts were £4985 14s. 3d., and the payments £4725 4s. 9d., leaving a balance in the hands of the treasurer of £260 9s. 6d. Amongst the principal items were £1043 subscriptions, and £3800 for proceeds of concerts; in the expenditure was the sum of £2340 for music for the concerts and for the library. The society has £1,000 in the Three per Cent. Consols, and the estimated value of their other property is £1200. Seventeen performances were given from Christmas, 1849, to Christmas, 1850; ten of which were subscription concerts, and the others repetition ones. The concert for the King's College Hospital funds, given by the society, produced £900. The report of Mr. Brewer, the hon. secretary, referred to the recent improvements in the hall, achieved chiefly through the indefatigable zeal of Mr. Bowley, the librarian, to whom a special vote of thanks was given; as also to Mr. Costa, the conductor, not only for his exertions in the orchestra, but for his general zeal to promote the prosperity of the society. The continued success of this institution must be a matter, of rejoicing to every amateur; but it is to be hoped the committee will not slumber on their well-deserved popularity; there are many great works of the ancient school yet to be produced, and it is also well worthy of the deliberation of the executive whether new compositions by living masters might not be essayed.

On Thursday evening last, Handel's "Israel in Egypt" was performed for the first time this season. The solos were sung by Miss Birch, Miss Eliza Birch, Miss Dolby, Mr Manvers, Mr. Machin, and Mr. Whitehouse. Since the revival of this sublime oratorio, under Costa's direction, the integrity of the original score has been respected. Mr. Brownsmith, the organist, played the organ part, written by Mendelssohn for the edition published by the Handel Society. The choral power is developed in the "Israel in Egypt" with stupendous results; the solos are few and far between; the chain of events is continuous in choral vastness, in which the mighty conception of the composer is only rivalled by the coherency of the treatment and by the symmetry of the design. With the general public the "Israel" does not rank with the "Messiah;" but few musicians are disposed to dispute the opinion of Mendelssohn, who regarded it as one of the "greatest and most lasting musical works." As now performed by the Sacred Harmonic Society, under Costa's inspiring direction, the "Israel in Egypt" is a marvellous musical portraiture, so truthful, poetical, and intense is the execution.

MR. BALFE'S CONCERT

The benefit concert, ritually announced to be given at Her Majesty's Theatre, took place, on Monday night, at Exeter-hall, which was crowded in every part. Mr. Balfe was cordially greeted when he appeared to conduct his "Falstaff" overture. The other instrumental pieces were Lindpaintner's "Battle Overture" and Mendelssohn's "Wedding March." Ernst was the lion instrumentalist, and created the usual sensation in his "Otello" fantasia, Hungarian airs, and "Carnival de Venise." M. Alexandre Ballet played Mendelssohn's Rondo Brilliant in E flat with sure mechanism, but frigidly; and Mr. Gerhard Taylor, whilst he astonished the auditory by his harp execution, caused a feeling of regret that he had not selected better music. The first appearance of Mr. and Mrs. Sims Reeves, since their marriage, was made a special demonstration, and everything they sang was warmly applauded. Mdme F. Lablache in Scotch ballads, Mdlle. Angri, Signori S. Tamburini and F. Lablache, in Italian music, M. Jules Stockhausen in a French air, and Miss Poole in English songs, were likewise especial favourites, but Mdlle. Lucciola, the "celebrated female tenor," as she was wrongly styled, who made her *début* on the occasion, encountered a most vivid display of antagonistic opinions. This was scarcely fair, for she has a sympathetic contralto organ; and, if she will correct the exaggeration of her

method, will be a welcome addition to the list of our British vocalists, but she ought to assume her native name. Mr. Balfe conducted the band, of which Tolbecque was the leader. Mr. F. Mori was the pianoforte accompanyist. The encores were numerous, and the entertainment, although of too mixed a nature for classical amateurs, evidently afforded unbounded gratification.

CLASSICAL CHAMBER CONCERTS.

For the performances of classical chamber music, instrumental and vocal, several professors of note have entered the field. Mr. Dando took the initiative at Crosby Hall, with his long-established Quartet Concerts, assisted by Mr. A. Mellon (second violin), Mr. Hill (viola), and Mr. Lucas (violoncello). The chief items in the scheme were Mendelssohn's posthumous Quintet in B flat, Op 87, in which Mr. W. Thomas was the second tenor, with the four above-named: the quintet won universal admiration. The new Trio in C minor, by M. Silas, beautifully played by Lindsay Sloper (piano), Dando (violin), and Lucas (violoncello), was thoroughly relished, as a most promising effort of a young composer. Misses Cole and Mr. Benson were the vocalists.

M. Sainton's evening pianoforte performances, at St. Martin's Hall, will commence February 11.

Mr Lucas, Conductor of the Royal Academy Concerts, and first violoncello of the Royal Italian Opera, has announced his four musical evenings, at his residence in Berners-street, on Thursdays, Feb. 6th and 20th, and March 6th and 3rd, with the co-operation of Santon, Blagrove, and Hill

M. Rousselot, the composer and violoncellist, will give a series of three performances of classical music, at the Queen Anne-street Rooms, on Wednesdays, Feb. 26th, March 12th and 26th.

Last Tuesday, Mr. Lindsay Sloper, at the Queen Anne-street Rooms, commenced his pianoforte *soirees*. He performed in sonatas and trios, by Finto, Mendelssohn, Beethoven, Heller, and Handel, assisted by Mr. Dando (violin), and Mr. Lucas (violoncello). besides four of his own compositions—a serenade, a tarantella, and two studies. Miss Dolby and Mr. Benson were the vocalists: the former sang a beautiful song, "Ida," on Alfred Tennyson's words, the music by Miss Laura Barker, a lady composer, whose works are attracting much attention. The second concert will be on the 11th inst.

MUSICAL EVENTS.

Madame Thillon and Mr. Hudson gave their entertainment last night, at Willis's Rooms, and will repeat it at the same place on Monday night.

Signor Nappi, on Thursday, and M. Salaberi, on Friday, gave *soirées musicales* at the Mortimer-street Rooms.

An evening concert took place on Tuesday, at the City Sussex Hall, at which Mdlle. Magner, Miss R. Isaacs, Miss Lizzy Blunet, Miss Woolf, Messrs. Simmons, F. Smith, and Whitworth, were the principal singers.

A concert was given at the Mile-end Beaumont Institution, on Wednesday night. The principal vocalists were Mr. and Mrs. Sims Reeves, Miss Poole, Miss Roper, Mr. N. J. Sporle, and Mr. Drayton; with Mr. R. A. Brown, conductor, and Mr. Mathers, organist.

The London Sacred Harmonic Society performed Haydn's "Creation" and Dr. Elvey's new anthem, "In that day," conducted by Mr. Surman, at Exeter Hall, last night, our notice of which will appear next week.

Ernst, Mdlle. Angri, Signor F. Lablache, and Miss Stockhausen, with Mr. F. Mori as accompanyist, commenced their provincial tour on Wednesday.

Mr Wally (violin) and Mr. Hausman (violoncello) have been playing at the Hanover-square Rooms, on Monday nights, with great success

A grandson of Abraham, son of the patriarch Isaac, is very popular in Scotland.

Miss R. Isaacs, Miss E. Honner, Messrs. Travers and Horrani, have been singing in English operas at Cheltenham and Gloucester

Mr. Ella Roberts, harpist to the Prince of Wales, delivered a lecture on Welsh music, at the Polytechnic Institution, last Saturday.

Mrs Parish Alvars, the widow of the celebrated harpist and composer of that name, is about to take up her residence in London; she was a pupil of her husband, and her playing is reported to be that of a most accomplished *artiste*.

The Purcell Club celebrated its anniversary festival on the 30th ult., at the Freemasons' Tavern.

The Amateur Musical Society will commence its fifth season by a concert at the Hanover-square Rooms, on Monday next. The remaining concerts are fixed for Mondays, Feb 17; March 3, 17, 31; April 14, May 5 and 19: the rehearsals take place on the Fridays preceding the concerts. The annual subscription of a guinea gives the continued property of this aristocratic body of amateurs, under the direction of an intelligent working committee, with the zeal and activity of Mr. Henry Leslie, as honorary secretary.

FOREIGN MUSICAL NEWS.

(*From our own Correspondent.*)

PARIS, Wednesday

Herr Rosenhain's two-act opera, "Le Démon de la Nuit," will be the earliest novelty at the Grand Opera; M. Gounod's "Sappho" will follow, and it is now in preparation. Mdlle. Fitzjaz, a pupil of the Conservatoire, has made her *début* in Halévy's "Juive;" *Eleanor* being sustained by Maralti. Auber's "Enfant Prodigue" is given twice a week, alternately with Vizardot's *Pâtis* and *Valentine*, in Meyerbeer's "Prophète" and "Huguenots."

Scribe and Halévy's "Dame de Pique" is very popular at the Opéra Comique

At the Italian Opera House, Mdlle. Caroline Duprez has obtained another triumph, as *Adina* in Donizetti's "Elisir d'Amore;" in which she was supported by Lablache's *Dulcamara*, Calzolari's *Nemorino*, and Ferranti's *Belcore*. Mozart's "Don Giovanni" is in rehearsal, for Grisi's reappearance, as *Donna Anna*; Mme. Gulliani, *Elvira*, and Mdme. Parentini, *Donna Anna*; with Lablache as *Leporello*. Halévy's "Tempesta" is in rehearsal, for Sontag and Lablache; the tenor part is filled by Gardoni, who will have completed his two months' engagement at Madrid

Sims Reeves is to make his *début* in Verdi's "Ernani," in March.

The concerts of the Conservatoire, the Union Musicale, directed by Félicien David; the Philharmonic Society, conducted by Seghers; La Société Sainte Cécile, under M. Seghers, are in progress; besides the chamber concerts of Alard and Franchomme

Lortzing, the composer of the "Czar and the Carpenter," died recently in Berlin

Mdme. Castellan has made another hit at the Italian Opera House in the Prussian capital, as *Anai*, in Rossini's "Moïse" (Zora); she was engaged for the famed Leipzig Gervandhaus concerts, and for the Hanover Royal Theatre.

M. Dorvy, the father (in age) of the French dramatic authors, died lately here, aged 87.

THEATRICAL SEASON.

The extraordinary success of all the theatres since Christmas has come now to be esteemed a fact of some moment. It speaks, at any rate, of the prosperity of the people at the present time, and, perhaps, indicates the re-production of a dramatic taste among all classes. No doubt, the example of her Majesty and the Windsor theatricals have had much to do in the revival of a love for stage performances. Their obvious tendency was, indeed, to set the fashion, and remove the prejudices of the fashionable and respectable. Another reason is, that the present year is already looked upon as a kind of holiday year, and the May Exhibition has even in its bud of promise exercised a strong influence on the imagination of the masses. Theatres will continue to benefit by that excitement, and they will hereafter be crowded with foreigners. Would it not be as well to anticipate this fact by setting at once about some expedient theatrical reforms? Managers would do much to meet the present mood, and to prepare for the future success to the playgoer. Enter the saloon of the boxes, and you are immediately beset one woman stars the bonnet off your wife's head, for the sake of a sconce; and another insists on your handing her cloak or umbrella, for the sake of another, while, at the door of the box, a sulky official pokes into your face a play-bill, in sign that unless you give him a shilling he will not accommodate you with a seat, for which you have already liberally paid. Even when you have yielded to his demand, the fellow probably will offer you the worst, that he may extort another fee from an after-comer. All this impudent system of extortion should immediately be put a stop to. Such things never take place in Continental theatres, and we should be careful to stand well in this respect in the eyes of the friendly visitors who will come to this country expressly to admire, and to whom we should present nothing that they could reasonably condemn.

DRURY LANE

A one-act operetta, called the "Cadi's Daughter," was produced on Monday night, with success. The story is based on the placarding of the superiority of the lords of the creation over womankind, by a merchant and a barber at Bagdad, and the ingenious devices of the Cadi's daughter and her attendant to convince the daring pretenders to supremacy, of their conceit and inability to cope with female wit. Mr. Nelson is the conductor of the orchestra; and Miss Nelson and Mr. Rafter were the principal exponents of the agreeable trifle, which filled up a night' bill between the new comedy and the pantomime

PRINCESS'

On Saturday, Mr. Douglas Jerrold's comedy of the "Prisoner of War," having been previously performed at Windsor Castle, was reproduced. The cast was very effective. *Band Forebrace* and *Clerana Channel*, Mr and Mrs Keau; *Peter* and *Polly Pull-Mail*, Mr and Mrs. Keeley; and *Captain Channel*, Mr Ryder With the spirited acting implied in this selection of the principal characters, the drama went off with the utmost *éclat*. It was followed by Mr. Planché's farce of the "Loan of a Lover." *Peter Spyk* and *Gertrude* being admirably supported by Mr and Mrs Keeley

CITY OF LONDON CENTRAL MARKET ASSOCIATION

On Wednesday evening, a conversazione was held at the London Coffee House, when an explanatory lecture by Mr. Acland was delivered upon the corporate model of the proposed New Central Cattle Market, which has lately been exhibited on the table of the Common Council Among the company were Sir James Duke, M.P., Messrs. Hick, Mr. Sarle, and Mr. Challis, and the room was numerously attended. Besides the elaborate model of the proposed Market, there were exhibited models of Billingsgate as it was and is to be, and of the New Prison at Holloway. The association, Mr. Acland told the company, was formed in September last. It consisted of salesmen and drovers, occupiers of property likely to be affected, and others. The object was to maintain the central position of the present live-cattle market, which certain interested persons, with the assistance of the press, sought to win from the City. The corporation of the City of London, while opposing the removal of the Market, propose to remove the nuisances justly complained of by making new and extended arrangements. In this they were not seeking to retain a monopoly, but the most convenient spot; for it was found that the Islington Market, though legally sanctioned, could not command business, butchers not coming there to purchase, and therefore graziers not sending cattle. Smithfield supplied meat for two millions of mouths; were there a dozen suburban markets, they would all fail.

The new Market, Mr. Acland continued, would be enclosed. This could be effected without interfering with any of the existing thoroughfares. It would be shut up from nine o'clock in the morning to seven in the evening; so that, during the hours of business, there would be no cattle-driving in the streets. This, in fact, appeared to be Mr. Acland's main argument; for a notice to the same effect was placarded on the wall above the lecturer's head. Also, no fewer than fifty-seven of the worst nuisances would be removed by the pulling down the old neighbourhoods south and west of the Ram Inn; comprising Cow-cross and Sharp-alley, and including hackers' yards and slaughter-houses, and erecting there instead the New Market property worth a quarter of a million of money, which, nevertheless, the corporation were willing to buy up. By this enlargement of the Market, much cruelty to animals, now unavoidable, would be prevented, as the new area would easily provide accommodation for more than 5,000 cattle, the utmost number ever brought to the Market in one day.

By the arrangement proposed, it appeared that four-fifths of the New Market would be left an open area. A range of model lodging-houses, for a thousand families, would be erected; and opposite St. Bartholomew's Hospital, baths and washhouses would also be erected. A new street, in an inclined plane, Fleet Ditch lying forty feet below the level of Smithfield; and the flushing of the sewer, when necessary, would be rendered easy

After the lecture, some conversation took place on various points between Mr Acland, Mr. Earle, and Mr. Challis, which was put an end to by the announcement of a cold collation being in readings up-stairs. A handsome supper, in fact, was provided, the discussion of which put an end to all other, and ended the evening in a highly satisfactory manner

It was stated, that the model would continue to be exhibited at a house in Cheapside, which would be opened to the public, and where Mr. Acland would be in daily attendance, to give explanations

NATIONAL SPORTS.

The weather continues favourable for field sports, and the coursing and steeple-chase calendars are at length beginning to assume a business-like aspect. Thus, in the former department, we have no less than eight meetings in the list for next week; viz. Ashdown Park and Workington, on Monday; the Spelthorne (Overton), North Berwick, and Ealing, on Tuesday; the Altcar, on Thursday; the Swinton, on Friday; and Easton, on Saturday. The Ashdown meeting will last four days, and most of the others a couple. The steeple-chase fixtures are the Carmarthenshire on Monday, Cupping Norton on Tuesday, and Lincoln on Thursday.

TATTERSALL'S.

MONDAY.—The Chester Cup movements were limited to an improvement in Rhesus, Cossack, Lady Evelyn, and Wallflower, the outlay in the aggregate being anything but heavy. There was no new feature in the Derby, but business, on the whole, looked healthy.

APPREHENSION AND COMMITTAL OF MRS. SLOANE.

This wretched woman, who is charged with revolting acts of cruelty upon her servant, and who has hitherto contrived to elude the grasp of justice, has been apprehended. Since the finding of the true bill by the grand jury against Mrs. Sloane, Superintendent Pearce, of the D division, and Sergeant Kay of the detective force, to whom the person of Mrs. Sloane was known, have been indefatigable in their exertions to trace her whereabouts, and have visited Twickenham, Richmond, and the country in search of her; but, in consequence of their ultimately forming a strong conviction that she was concealed at Boulogne, they proceeded to that place last week, and carefully investigated, they learned from the landlord of a house that there were three parties answering the description furnished him, residing in his house. They watched them for several days without any careful inquiry, and they went by the name of Smith. They led a very secluded life, and the lady only left the house at an advanced period of the night for a walk. As one of the officers came in the house, it was necessary for him to adopt some disguise, and he accordingly adorned himself with rather a prominent pair of moustachios, and on Friday night week, about eleven o'clock, they placed themselves on what was supposed to be the lady's nightly walk, and the timing the usual nocturnal walk. As her face was closely concealed with a veil, the officers had some difficulty in seeing her features; but, on passing by one of the street gas-lamps, they found that, by some means, or by some mode of accident, to raise her veil, and she was at once recognised to be Mrs Sloane. She was allowed to return to her dwelling, and, as the French law requires a second warrant to establish her identity, an express was forwarded to London for one to come over. The party arrived on Sunday, and on Monday morning the officers proceeded to the lodgings of Mrs. Sloane. On going into the second floor, they found Mr. and Mrs. Sloane and Miss Devaux. The French authorities then demanded their passports, and it being discovered that they had assumed a name not their own, they were informed that they had rendered themselves liable to the operation of the French laws, and that they must quit Boulogne. Not being permitted to travel through France with a false passport, they had to undertake but to take their passage by the first steamer for Folkestone: and at five o'clock in the evening they were escorted by the police of Boulogne to the quay side, where the steamer was moored. Some hundreds of the principal inhabitants collected on the quay to witness their departure, but no manifestation of feeling was exhibited. The officers came over in the same boat, and when the steamer reached Folkestone Harbour, Mr. Hodgson announced to Mrs. Sloane that she was his prisoner, producing the judge's warrant for her apprehension on the charge of cruelty to her servant. Mrs. Sloane was wretchedly dejected throughout the passage, and became much affected. She did not speak, on leaving the steamer. The whole party came to town by the two o'clock (A.M.) mail train, and Mrs. Sloane was conveyed at once to the residence of Mr. Superintendent Hodgson, at the chief City police office, the Mansion House, and, at twelve o'clock the same day (Tuesday), she was taken to Westminster Hall, and introduced into the Judge's room, where Mr. Justice Cresswell signed the warrant for her committal; and Mrs. Sloane had been given in charge to the officers. Mrs. Sloane was not prepared with her required bail, and was, therefore, committed to Newgate. She was dressed entirely in black, and altogether presented a most wretched appearance, being in such an excessively nervous and weak state of body as to be unable to stand.

SEIZURE OF THREE ILLICIT DISTILLERIES.—On Saturday the revenue officers effected the seizure of three illicit stills. The first was at No. 34, Poole-street, Hoxton, a private house, whose well-whitened step and clean white blinds had preserved it from all suspicion. A still was setted in the back-kitchen capable of making an amount of spirit, the duty on which won't be £7 per diem. The next seizure was at 5, George-street, Bethnal-green, which, however, being in such an excessively nervous and weak state of body as to be unable to stand.

SEIZURE OF THREE ILLICIT DISTILLERIES.—On Saturday the revenue officers effected the seizure of three illicit stills. The first was at No. 34, Poole-street, Hoxton, a private house, whose well-whitened step and clean white blinds had preserved it from all suspicion. A still was setted in the back-kitchen capable of making an amount of spirit, the duty on which won't be £7 per diem. The next seizure was at 5, George-street, Bethnal-green, which, however, being in such an excessively nervous and weak state of body as to be unable to stand.

MONETARY TRANSACTIONS FOR THE WEEK.

(*From our City Correspondent.*)

HERE has been no change in the value of money. Consols closed to-day at the reigning quotation having been 96⅜ for Money, and 96⅝ for Account. An eighth per cent in advance of these prices has occasionally been quoted; but the market in the meantime having been generally tranquil, with an inclination to firmness. Money is plentiful in the "House," a tendency to higher prices being, in consequence, apprehended; but, until after the opening of Parliament, speculation appears likely to be limited. Exchequer Bills are a few shillings in advance of last week's prices, indicating a greater ease in the Money Market —Bank Stock, 214; Reduced, 97⅜; Consols, 96⅝; Three per Cent. Annuities, 1726, 96⅜; Three per Cents Annuities, 1751, 96⅜; New Three-and-a-Quarter per Cent. Annuities, 98⅝; Long Annuities, 30 years, Jan. 5, 1860, 7⅛; India Stock, Jan. 5, 1860, 211 pm; Annuities, 1860, 7⅛; South Sea Stock, Old Annuities, 96⅛; Consols for Account, 95⅝; Exchequer Bills, £1000, June, 61 p; £500, June, 61 p; Small, June, 61 p

In the Foreign House a better tone has prevailed than during the previous week, although business has been limited. Spanish Stock improved on Monday to 18⅛ to ⅜ for the Active Bonds, and has maintained the advance. The Three per Cents quote 28⅝. Russian Five per Cents have further improved to 113, and the Four-and-a-Half per Cents to 97⅜. Mexican Bonds have been steady at 35⅜ to ⅛, ranging as high as 35⅜ ex div. Peruvian Bonds are a fraction in advance of last week's prices The closing values were—Brazilian Bonds, 89⅜; Mexican, Five per Cent., 1846, 35⅜ ex div; Ditto, Account, 35 ex div; Peruvian Bonds, Four-and-a-Half per Cent., 79⅜; Ditto, Deferred, 34; Portuguese, Four per Cent., 35; Russian Bonds, Four-and-a-Half per Cent., 97⅜; Spanish, Five per Cent., 18⅜; Ditto, Three per Cent., 28⅛; Dutch, Two-and-a-Half per Cent., 12 Guild., 58⅛; Ditto, Four per Cent., Certificates, 91⅛

The Railway Market has been very buoyant; and, as the settlement of the Account approached, prices widely fluctuated But, when the tendency was found still to be for the rise," the prices of "continuations," although high in some instances, were readily paid. This again improved quotations, and the new account opens with a quoting advance in Scotti-Westerns, Great Westerns, Midlands, Sout.-Eastern, Brighton, and Lancashire and Yorkshire, as the following list will demonstrate:—Aberdeen, 10½; Ditto, Preference, 4 dis.; Ambergate, Nottingham, Boston, and E. Lincolnshire, 2½; Caledonian, 10⅜; Ditto, Cl's, 1st, 4½; Eastern Counties, 6¼; Eastern Union, Class A, late E U Shares, 3⅜; Ditto, B and C shares, 5⅛; Ditto, Scrip, par, 6 per cent., 19; E. Lancashire, 3⅜; Great Northern, 17¼; Ditto, Halves, A, Deferred, 6¼; Ditto, Halves, B, Six per Cent., 11⅛; Ditto, Five per Cent., Preference, 10⅜; Great Western, 80¾; Lancashire and Yorkshire, 57⅛; Ditto, Fifths, 4⅜; Ditto, West Riding Union, 5¾; Leeds and Bradford, 73; Leeds and Thirsk, 13; London and Blackwall, 7; London, Brighton, and South Coast, 97; London and Greenwich, 11⅜; London and North-Western, 125⅜; Ditto, New, Quarters, 3⅝; Ditto, £10 Shares, M. and B. (c), 3⅜; London and South Western, 87; Manchester, Buxton, and Matlock, 1⅛; Manchester, Sheffield, and Lincolnshire, 27; Ditto, New, £10, Preference, 1⅛; Ditto, Manchester and Lincoln Union, 3⅛; Midland, 93⅛; Ditto, £50 Shares, 17½; Ditto, Consolidated Bristol and Birmingham, Six per Cent., 197; Newmarket, 8½; North Britain, 8½; North Staffordshire, 9½; Norwich and Brandon, 2½; Reading, Guildford, and Reigate, 14½; Shrewsbury and Birmingham, Class A, 5½; Ditto, Class B, 4½; Shrewsbury and Chester (Oswestry), 10½; Ditto, 8 per Cent., Preference, 13½; Shropshire Union, 9½; South Devon, 10½; Ditto, Preference, 10½; South-Eastern, 34½; West Cornwall, 6 per Cent., guaranteed, 99½, Whits, Somerset, and Weymouth, 42½, York, Newcastle, and Berwick, 30½; Ditto and Newcastle Extension, 15; Ditto, G.N.E., Purchase or Preference, 64; York and North Midland, 23½; Ditto, Preference, 8½; Foreign and Colonial, 9½; Central of France (Orleans and Vierzon), 16; East Indian, 12; Luxembourg, 9½; Namur and Liege, 8½; Northern of France, 14½, Orleans and Bordeaux, 4.

THE MARKETS.

CORN EXCHANGE.—During the present week, the arrivals of English wheat up to our market, coastwise and by land carriage and sample, have been on a very limited scale Fine dry samples of new wheat have sold at full rates of currency, and a good clearance of other kinds has been effected. Owing to the large imports of foreign wheat upwards of 30,000 quarters, into London alone, and the heavy stocks of flour, the trade in the latter is dull in value The barley trade has continued in a very depressed state, whilst a large portion of the malting samples has been sold for distillation. Fine oats have sold at late figures, but many samples have given way 6d per quarter Beans, peas, and Indian corn without change. No alteration in the value of flour.

English.—Wheat, Essex and Kent, red, 38s to 40s; ditto, white, 38s to 43s; Norfolk and Suffolk, red, 35s to 40s; ditto, white, 38s to 43s; Lincoln and Yorkshire, red, 35s to 38s; ditto, white, 40s to 43s; rivet, 40s to 42s; Northumberland and Scotch, red, 34s to 36s; ditto, white, 36s to 38s; grinding barley, 28s to 30s; distilling do, 32s to 35s; malting do, 32s to 34s; Lincoln and Norfolk malt, 46s to 49s; brown do, 44s to 46s, Kingston and Ware, 50s to 52s; Chevalier, 52s to 56s Yorkshire and Lincolnshire, 46s to 48s; beans, 32s to 34s; tick, 30s to 32s; white, 34s to 36s; grey peas, 32s to 34s; white, 35s to 38s; tick beans, new, 28s to 32s; ditto, old, 28s to 30s, grey peas, 27s to 29s; maple, 30s to 32s; white, 32s to 34s; Egyptian, 28s to 30s; Indian corn-flake flour, 25s to 26s; Suffolk, 28s to 30s; Stockton and Yorkshire, 28s to 32s per 280 lbs. *Foreign.* Danish and white, 34s to 36s; red, 32s to 34s; barley, 28s to 30s; oats, 16s to 18s; rye, 28s to 30s; peas, 32s to 34s per quarter. American flour, 20s to 24s per barrel. Canada, —to — per barrel; Prince, 26s to 28s per sack.

The Seed Market.—The trade continues dull, continues steady, and full prices In all other seeds exceedingly little is doing. Linseed, English sowing, 54s to 56s; ditto, crushing 42s to 42s; Mediterranean and Odessa, 52s to 54s; Baltic, 50s to 52s; Calcutta, 52s to 54s; Bombay, 48s to 50s per quarter. Brown mustard-seed 5s to 10s; white ditto, 5s to 7s; and tares, 4s to 6d per bushel; English rape-seed, nom. £25 to £27 per last; Essex and Kent cakes, £12 to £13 10s; foreign ditto, £9 to £9 5s per 1000; rape-cakes, £3 16s to £4 5s per ton, canary, 40s to 50s per quarter. English clover seed, red, 30s to 36s; white, 40s to 50s; trefoil, 20s to 24s; Portugal, 18s to 20s; red, —s to —s, white, —s to —s per cwt.

Bread.—The prices of wheaten bread are from 7d to 7½d; of household ditto, 6d to 6½d per 4 lb loaf.

Imperial Weekly Averages.—Wheat, 38s 0d; barley, 28s 7d; oats, 16s 7d; rye, 29s 8d; beans, 32s 4d; peas, 32s 4d.

The Provision Market.—Only a limited amount of Irish butter having been received from the south since our last report, the finest kinds of that description have realised full prices, and there has been no change to report in the value of Dorset, but the Dorset being scarce, fully 2s per cwt. more has been obtained for it. Fine Carlow, Waterford, and Cork, have sold at 90s to 92s per cwt., and the middling and ordinary qualities from 82s to 88s per cwt. Fine Limerick has realised 90s to 92s per cwt. Waterford bladdered, 86s to 88s; Belfast firkins and kegs

Tallow.—Notwithstanding that the stock on hand is nearly 50,000 casks, prices have advanced 6d per cwt. since Friday last. Y. C. on the spot is 37s 6d per cwt. Delivery, 37s per cwt was made.

Oils.—Linseed oil is rather more inquired for, common fish oils than of late; and prices are well supported. Linseed, 32s to 34s per cwt. No change in other articles

Coals.—Market steady. Stewart's, 16s 6d; Hetton, 16s 6d; Lambton, 16s 6d; Hartley, 16s 6d; Wylam, 16s 6d; Eden Main, 16s 6d per ton

Hay and Straw.—Meadow hay, £3 to £4 5s; clover, £3 to £4 15s; and straw, £1 5s to £1 7s per load

Cattle.—Full average business is doing in East India rum, at 1s 6d to 1s 7d per gallon Leewards steady, rum quite as dear as last week. We have no change to notice in Jamaica rum, which is held for 1s 8d to 1s 9d per gallon Cape is about 1s 4d to 1s 5d per gallon British made spirits 9d to 9½d, with a dull market.

Sugar and Coffee.—In sugar, our market is dull, and late rates are nominal, although the supplies offered are moderate. In coffee, our market is steady, and fully as dear as last week. We have no change to notice in Mocha, the supplies being small, and the demand continues somewhat active, at very full prices.

Pimento.—The supplies being large, the pimento demand is heavy, at barely stationary prices. Yesterday Regents sold at Liverpool 5½ to 6½ d per lb.

Rice.—Prices are rather more supported, and a steady sale, at full rates of currency. In other kinds of rice very little doing.

Spices.—Pepper, 6½ to 6¾ d. Nutmegs, 2s 6d to 4s 6d; mace, 2s 6d to 4s 0d; cassia, 2s 10d to 4s per 8 lb, to sale, the extra.

Provisions at Leadenhall.—Our markets continue to be well supplied with each kind of meat, at which only a moderate business is doing, at late rates.

Prime Scots, 3s 6d to 3s 8d; mutton, 3s 6d to 3s 10d, veal, 3s 0d to 4s 0d; and pork, 2s 6d to 4s 0d per 8 lb. by the carcase.

Ready for publication on the 31st of March
NATIONAL ILLUSTRATED LIBRARY, IN MONTHLY VOLUMES,
Each to contain Three Hundred and Twenty Pages, and Sixty Engravings,
PRICE HALF-A-CROWN, BEAUTIFULLY BOUND
TO THE READING PUBLIC
[illegible] will be given in essentially of a PRACTICAL character [illegible] entertainment peculiarly interesting to all classes [illegible] a marked desire for CHEAPNESS. Cheapness however, is too often found without excellence, and the only exposition to supply a deficiency at present [illegible] popular literature of this de-
[illegible] the projectors of the present undertaking have [illegible] in watching the progress of an extensive [illegible] simultaneously in the London, Edinburgh, and Dub[illegible] Book Trades, [illegible] seen that there was a most commonly indifferent literature, and [illegible] a most inferior manner, will, they feel assured that [illegible] and judicious selection, and a careful avoidance of [illegible] ILLUSTRATION, being produced with the utmost attention to [illegible] and accuracy, and published at the moderate price fixed upon, [illegible] to secure extensive patronage from the Reading Public. The publishers rely upon [illegible] may materially to supply good and [illegible] at a low rate to that, but [illegible] themselves the ACTUAL BOOKSELLERS, they [illegible] to save the public the expense of all INTERMEDIATE PROFITS.
As a practical explanation of the above views it is, therefore, proposed to publish, on the 31st of March next, THREE SAMPLE VOLUMES of the NATIONAL ILLUSTRATED LIBRARY. These Volumes will be wholly different in character, in order that the publication may form more than one standard and variety of the series pursued; afterwards, one Volume will be issued Monthly. Each Volume will contain at least Three Hundred and Twenty pages, printed, according to the requirements of the subject matter, by from 12 to 100 Illustrations and will be strongly bound in ornamental cloth boards [illegible] charge. Should a longer time in the course of a more extended period, a library of [illegible] and interest may be formed, which shall furnish materials for [illegible] and amusement during the coming long winter.
The chief advantages which this Series of Works will present over all others are—Originality in many [illegible] double column editions, and the new-fashioned, though equally objectionable, Shilling Books, with their numerous and [illegible] Volumes, and flimsy binding—are the following:—
1. A carefully Revised Text.
2. Judicious Explanatory Foot-Notes
3. Engravings [illegible] illustrating the Text.
4. A new and legible Type
5. The most substantial Binding
6. Strong and neat Binds
A portion of the Work will be published under the title of the "NATIONAL ILLUSTRATED LIBRARY" will consist of carefully [illegible] Works, and will thus present a true variety in their pages, including many of those great masterpieces of the human mind which, having survived, beyond the generation for which they were written, are now universally recognised as worthy to flourish so long as the English language is spoken, and an acquaintance with which [illegible] appreciated by every one who would be a man for English readers.
The series will also comprise original works, especially written by eminent authors, upon such subjects of general interest, extending to the [illegible] of political economy, the progress of science and mechanism, which so frequently engross the national attention. These latter works will be prepared with the view that the purchasers of the Library may be placed at once on a level with those who devote themselves to [illegible] with practical information. In fiction, the series will be [illegible] arrangement, but volumes on general literature, history, [illegible] travels, popular science, and fiction will follow each other in the whole comprising such a variety of illustrated Works as shall form a compact and comprehensive Library for the Reading Public.
Many among those to whom this prospectus is addressed must have had the great pleasure of the course of the present period in the conveyance of instruction by appealing to the eye. It will be readily understood that whole pages of narrative and long abstract descriptions may be condensed into an Illustration to be comprehended at a glance. Pictures in books are [illegible] as visual representations that at once engage the memory and a liveliness of attention is thus evoked, and [illegible] extended to the minds, faculties which is so agreeable to adults [illegible] to children. The publishers feel that the most ardent friends [illegible] to assure to perform as prominent a part in our popular literature as has yet [illegible] the diffusion of knowledge has already been greatly [illegible] by its success.
If at the outset the foregoing professions are too diffuse and too [illegible] of accomplishment, it may be said, that the present idea is simply the [illegible] of the publication of a portion of the standard [illegible] literature since it will be found that every publication has had its [illegible] and peculiar [illegible] The present undertaking, however is wider in its scope, more profound in its aim, and more profuse of its [illegible] illustrations, and relying for its success on former publications it is strictly in accordance with the existing pro-
[illegible] to our countrymen at Literature and Art, and the
[illegible] during the last portion of the half-century
[illegible] and the diffusion of knowledge, has already been greatly [illegible] by its success.
[illegible] to our countrymen at Literature and Art, and the
[illegible] during the last portion of the half-century
[illegible] and the diffusion of knowledge,

GENERAL RANDON.

General Randon, the newly-appointed French Minister of War, was born at Grenoble, on the 25th of March, 1795. He entered the army as

GENERAL RANDON, THE NEW FRENCH MINISTER OF WAR.

ensign, in the 93rd Regiment of Foot, in 1812; in the following year he became lieutenant, was appointed aide-de-camp to General Marchand, and was promoted to a captaincy towards the close of the year. He afterwards entered the cavalry service, where he attained the rank of major in 1830. He was next appointed Colonel of the 2nd Regiment of Chasseurs d'Afrique; in 1841, adjutant-general; and lieutenant-general in 1847. He was next called to the office of Director-General of the Algerian Department of the Office of the Minister of War; and then appointed Commander of the Third Military Division at Metz, where he was stationed when the President called him to his Ministry, to fill the important post of Minister of War.

General Randon has rendered eminent service to his country. He made the campaign of Russia in 1812; served in the Grand Army in 1813; in the Army of Lyons in 1814 and 1815; and in Africa from 1838 to 1847. He was wounded with two shots at the battle of Lutzen, in 1813; one in the left arm, the other in the right leg.

PARIS FASHIONS FOR FEBRUARY.

Although the discussions in the Chamber of Representatives have excited much interest of late, balls and *soirées* have not been neglected. The principal theatres alone have felt the effects of the Ministerial crisis. The balls of the Presidency, on Thursdays, have never been more animated than of late. Ball dresses have never been so richly ornamented; however, the *toilettes* are still graceful, in spite of their tendency to showiness.

Head-dresses for balls are of great variety, in shape, shade, and composition. Bunches have superseded the long and falling branches; and, above all, is the interspersing of flowers with ribbons. The ribbon sometimes forms the chief part of the head-dress, and the flowers fall in clusters on the shoulders; at other times, the ribbons fall as low as the bodice, while the flowers encircle the face. Here follow some of the most recent head-dresses.

Wreaths of red transparent gelatine flowers, green leaves, and slight green stems, are much in request. We recommend the gelatine wreaths, as being of the only substance combining transparency with solidity: the globes of glass are liable to break, whilst the gelatine is not damaged by dancing. Wreaths of small white fruit, with the foliage of lilac green; the same, with golden fruit, and same foliage; wreath of green roses, with brown leaves; and a host of wreaths, with a mixed foliage of green and brown, with drops of gold, garnet, or coral, fitted up with great taste, and falling very low, are popular.

Ball Dresses are still open in front, cut square, not very low behind, body ending in a point, trimmed with a *berthe*, terminating in the point. Thus far, Fashion is sober enough; but the skirts are frequently covered with ornaments. Two skirts or flounces are no longer sufficient: a net dress is trimmed with two net flounces cut out into deep indentations; each flounce is trimmed with two puffs, and a third flounce is worn. The second net skirt is cut out at the bottom with deep indentations, like those on the flounces, trimmed with three flounces of ribbon and two puffs. All this is somewhat heavy; nevertheless, the effect is very handsome.

For Walking Dresses, we were not wrong in predicting the skirts to the bodice as likely to become favourites. The most in vogue now are the square skirts, four on each side, disposed as follows: two from the point of the bodice to the seam under the arm, and two from the seam under the arm to the seam down the middle of the back. These skirts are generally square cut, trimmed with lace, flat or gathered, and matching the other ornaments of the bodice. Another kind are the rounded skirts, with large indentations, cut out in smaller but similar indentations, which ornament the flounces fixed to the skirt of the dress.

Among the fashionable novelties, we cannot omit mentioning a little stool for the feet, square or round, harmonising with the richness of the rest of the furniture; this footstool is a little house for the favourite "King Charles" or "Blenheim," belonging to the mistress of the house: the curtains, fringes, &c., are of silk, and add to the elegance of the little habitation.

We add the following from *Le Follet*:—

Among the many pretty *toilettes* that have appeared at the fashionable *soirées*, our attention has been particularly attracted by a coiffure equally novel and *distingué*. It was composed of three brown velvet bands crossing over the head. These were sprinkled with small diamond stars, and united on each side under a *chou*, formed of narrow brown velvet, fastened in the middle with a daisy of diamonds. From this *chou* three ends of velvet descend, each terminated with a light fringe, sprinkled with diamonds. This elegant coiffure was accompanied by a robe of pink flowered brocade, with a double skirt, the top one raised on one side by a bouquet of brown and white wild roses. A magnificent *berthe* of Venetian point-lace was fastened on the front of the body by a bouquet, to match that on the skirt, and at the waist with a knot, and ends of diamonds.

A very original coiffure is composed of a gold and Venetian lace, placed square over the head in the style of the Neapolitan coiffures. The two sides of this are raised by a tuft of wild poppies and blue bells, mixed with long gold corn, falling over the neck a little behind the head.

Another coiffure, of the same description, is composed of a *résille* formed with pink chenille, and beads each side of the *résille* raised on each side with tufts of long leaves of pink chenille, mixed with light bunches of currants formed of white beads. This pretty coiffure was worn with a robe of pink taffetas d'Italie, the over-skirt raised on each side, and the middle by a chain of pearl rings, terminated at bottom with a knot mixed of leaves of pink velvet. The body is open, square in front, and crossed with lacings of beads. The sleeves are very short, and covered with *bouillonnes* of pink tulle, the last of which falls over the arm.

PARIS FASHIONS FOR FEBRUARY.

THE LATE WILLIAM HOLMES, ESQ.

This gentleman, the well-known politician, and long the "whipper-in" of the Tory party, was born in 1778, a native of the county of Sligo, and

THE LATE WILLIAM HOLMES, ESQ.

the son of Thomas Holmes, Esq., of Farm Hill, an opulent brewer, who realised considerable property, and filled the office of High-Sheriff of the county of Sligo in 1810. After completing his education at Trinity College, Dublin, Mr. William Holmes entered the army, served in the West Indies, and was military secretary there to Sir Thomas Hislop. In 1807 he retired from the service; and, in 1808, obtained a seat in the House of Commons. From that period until 1841, with the exception of one interval, viz. from 1832 to 1837, the hon. gentleman continued uninterruptedly a member of the Legislature, representing successively Grampound, Tregony, Bishop's Castle, Heslemere, and Berwick; and supporting, with undeviating consistency, the High Tory party. For many years he held the appointment of Treasurer of the Ordnance. Mr. Holmes was by the side of Mr. Perceval when he fell by the hand of Bellingham; and he also happened to have been within a few yards of Mr. Huskisson when that lamented statesman met his violent death.

In 1807, Mr. Holmes married Ellen, daughter of John Tew, Esq., of Dublin, and widow of the Rev. Sir James Strange, Bart., of Tynan Abbey, county Armagh, by whom he leaves a son, Thomas Knox Holmes.

The hon gentleman, whose health had been gradually declining, died on the 26th ult., deeply regretted.

CURIOSITIES.

THE FOUNDRESS' CUP, CHRIST COLLEGE, CAMBRIDGE.

This elegant Cup, belonging to Christ College, Cambridge, is presumed to have been the property of Margaret, Countess of Richmond, the

THE FOUNDRESS' CUP, CHRIST COLLEGE, CAMBRIDGE.

foundress of the College, and mother of King Henry VII. The Cup is peculiarly graceful in its outline; the ornaments are of extremely simple character, being chiefly semicircles burnished on a threaded ground, on base, shaft, bowl, and cover. There are, however, cable and a few other mouldings interspersed. The edge of the cover fits over the plain lip of the bowl, and has an embattled cresting round it, thence tapering in pyramidal form; its apex is surrounded by a thin plate of metal of octagonal form. Above this, the cover rises in the form of an inverted cone, surrounded by an upright portion octagonally enriched with lozenges and quatrefoils at the sides, and having pinnacles at the angles. On the top is an enamelled shield with armorial bearings rudely painted; but from them we should ourselves hesitate in ascribing them positively to be those of the noble lady to whom tradition assigns the Cup. The Cup is 10 inches high; and, at the lip, it is 5 inches in diameter; and the basement is 4½ inches in diameter.

The authorship of Sir E. Seaward's Narrative has been matter of dispute in the *Quarterly Reviews* and other literary journals. We (says the *Bristol Journal*) shall be able, ere long, to prove that our late highly respected fellow-citizen, Dr. Porter, was the writer. We hear that a tablet to the memory of Dr. Porter and his sisters, Jane and Anna Maria, the eminent authoresses, is about to be erected in Bristol Cathedral.

London: Printed and published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand aforesaid.—Saturday, February 1, 1851.

SUPPLEMENT.

VOL. XVIII.] SATURDAY, FEBRUARY 1, 1851. [GRATIS.

THE APPROACHING SESSION.

POLITICAL VIEWS OF THE MANCHESTER REFORMERS.

THE men who originated and carried to a successful issue the movement which attained its completion and triumph in the recent reform of the commercial policy of the nation, have, on the eve of the Parliamentary Session, and during a lull, which may be brief and transient, in the anti-Papal agitation, come forward with a statement of views on the present aspect of political affairs, which calls for especial notice, not only as embodying much practical commonsense and moderation, but also as emanating from an extremely earnest, intelligent, and reflecting, though small, body of politicians, who have exercised, and, at occasion arises, will again exercise, immense influence on the conduct and measures of the Government of the day.

The views thus set before the public have not been given in a formal programme, like the removes of a bill of fare, without reference to the national taste or capability, as is too much the fashion with our neighbours on the Continent, in their "improvised" theories and constitutional dogmas; but have been delivered, according to the good old English custom, in a series of speeches addressed by distinguished members of Parliament to their constituents in public meeting assembled, and constitute the spontaneous expression, without pretence of conclusions resulting from experience, and held in common by them as political Reformers.

The meeting took place at Manchester on the evening of Thursday (last week), in the Albion Hotel, when the registration committees of South Lancashire and the adjoining districts, on the invitation of the leading reformers of the locality, enjoyed a species of intellectual entertainment called a "Social *Soirée*," which is in the great northern towns frequently superseding the public "dinner" that was hitherto deemed indispensable to the due inauguration, by a political party, of any one particular course of proceeding. Mr. George Wilson (formerly chairman of the Anti-Corn-Law League) presided, and amongst those present were Mr. Cobden, M.P.; Mr. Bright, M.P.; Mr. M. Gibson, M.P.; Mr. Brotherton, J.P.; Mr. Alexander Henry, M.P., &c.

Mr. Milner Gibson was the first M.P. who addressed the Assembly. The right hon. gentleman, after briefly passing in review the efforts of their party since the repeal of the Corn-Laws to obtain a thorough financial reform, and of their partial success in checking reckless expenditure in the army and navy, went on to say:—

"And now I trust we are going to reap the fruits of that reduction of the expenditure and increase of income arising from a more sound commercial and financial policy, in the removal of some of those taxes which most oppress the industry and prevent the employment of the capital of the country. (Hear.) I will say this, that I do not advocate the dealing with taxation entirely upon what I may be permitted to call the narrow grounds of whether there is a surplus or a deficiency. (Hear, hear.) It may be said, that it is more easy to make an experiment in our finances when we have a surplus than at a time when the income supports the expenditure. But the late Sir R. Peel set an example, which I think the present Government would do well to follow, of not basing our financial changes upon the mere fact of whether there is a surplus of money in the Exchequer, but upon a well-considered scheme of financial policy, to repeal those taxes that are the most oppressive to the industry of the country, and which in the greatest degree contract the enjoyments of the people (Hear, hear) and put to use our resources based upon something like well-considered principles; and, even if there should be a deficit at any particular time, I see no reason why a Ministry should not persevere in endeavouring to carry out those financial arrangements which would enable them to remove oppressive taxes without injury to the revenue, and with great benefit to the country. The experiments which Sir Robert Peel made upon taxation are pregnant with valuable lessons to statesmen. I wish them to profit by those lessons, to see that you may reduce a tax without losing revenue. (Hear, hear.) I would mention, for example, the tea duty. (Cheers.) I believe, if that were dealt with in a dexterous and sagacious manner, the revenue which might for a moment appear to be lost would be replaced (Hear, hear.) I was told by a gentleman, who is perhaps as competent as any man in England to judge of this question, that if a person had to 'farm' this revenue, in order to make it as large as he could, he would reduce the duty. (Applause.) Again, the duty on coffee would be reduced. (Hear, hear.) I think the foreign and colonial coffee should be equalised; and this might be done at the present time without the slightest derangement to any interest whatever. (Hear.)

There are many other taxes which are open to the same objection. I hear that the Window-tax is doomed. (Hear, hear,' and cheers.) * * * * * There is one description of taxation to which I have turned a little attention, and which some may consider to have obtained something like a claptrap title, though I don't think so; I allude to the taxes on knowledge. (Applause.) I hold that every consistent reformer must profess the diffusion of knowledge as one of the great mass of the community—who profess to be anxious to make efforts for the education of the people—is not acting consistently with itself, if, at the same time, it maintains the unpalatable impediment to the diffusion of knowledge. (Cheers.) I do not ask simply for the paper duty to be repealed, but also the newspaper stamp—(cheers) and the advertisement duty. (Renewed applause.) I believe, with respect to the paper duty, that it is a question becoming intimately upon the interests of the labouring classes, and especially in these districts. * * * * * I know that there is about the stamp duty a prejudice in many minds, I, for one, hold that if you want progress in a country, you must have a free press. (Hear.) You must have competition in your press. (Hear.) You must have an unshackled press, and you must have a cheap press. (Applause.) You cannot diffuse facts amongst the great body of the people, and facts are the foundation of all right knowledge—(hear)—unless you can publish newspapers at such a price as that the poorer classes can buy them. (Hear, hear.) I therefore advocate the removal of the stamp duty on newspapers.

The advertisement duty is another branch of this lot of taxes (hear, hear), and the repeal of which I know would be very beneficial to the trade of the country, and to the established press. The advertisements are the source from which flows a great portion of the profit of the newspaper—perhaps the greatest; and no fine people in the world are they advertised in a cheaper way, with some one to drive them to find out some other mode of making known their wants—the sure way of crippling the newspaper press, and of destroying its independence, and of preventing it from having all those means of support to which it is legitimately entitled. (Hear, hear.) * * * * * * * * * * * * And what is the amount of this tax? A paltry £168,000 a year! Why, the advertisements in the United States papers are legion as compared with ours; and I maintain that, in the competition between countries, a check to communications of this kind must have a very prejudicial effect. I hope we may see that, with a little pressure, these duties may be removed."

With respect to the Elective Franchise, the right hon. gentleman observed:—

"I have thrown out these few observations as concerning matters that I should be glad to advocate in our financial system. But I think we ought to have a direct item each stand where it does. (Cheers.) We advocate a large extension of the franchise; a better distribution of the electoral power; an abolition of that system which enables little corrupt boroughs to have a political power in the Legislature as boroughs like Manchester, and Liverpool, and Leeds." (Hear.)

Mr. Gibson next touched on the vexed question of the "Papal aggression:"—

"I suppose that at the present time it is considered that every man who presumes to have an opinion on public affairs should be able to say exactly what should be done with the Roman Catholic hierarchy. (Laughter and applause.) I am not so far advanced in this important branch of political knowledge as perhaps many others, although I have read a fair supply of arguments, of logic, and of declamation upon the subject in the papers—nearly the whole press has been teeming with 'No Popery!' Occasionally I fancied I was reading the *Morning Herald*, from the tone of the leading article; and making a minute examination satisfied me that the paper I had hold of was *The Times*. (Laughter.) In fact, the whole of the London press, with some one exception, seem to have taken views which—no doubt quite sincerely, and with great talent—the *Morning Herald* (laughter) has been taking on this subject for some time past. (Hear, hear.) Now, what is to be done, perhaps, with the Roman hierarchy? (A Voice: 'Let them alone.') The fact is, gentlemen, I really am quite at a loss to know what to do with what is called the Roman Catholic hierarchy, except to let it alone. (Laughter and cheers.) The American papers seem to wonder what is the matter with us. (Laughter.) A correspondent of one of them wants to know whether the nature of the demand of the Roman Catholic Bishops was that they should share in the temporalities of the Church (laughter), for he thought there must be more, in order to create such a burst of what is called indignation, than the mere attempt to carry out amongst themselves their own ecclesiastical discipline. (Hear, hear,' and applause.) I am afraid that the Church party, who feel that their time is coming ('Hear, hear,' and cheers), think it good policy to get us into a quarrel with the Pope, in order that they may be safe. (Hear, hear.) I contend that it is in the direction of our own church, in the direction of that 'ascendancy principle, that we have to turn our attention. (Cheers.) If we allow ourselves to be carried away by these bewilderments, and be contented with hunting a red herring instead of a real fox (laughter), then are we not using those political advantages of which we are possessed to the best account. ('Hear, hear,' and applause.) But this question involves many matters important to this country. If you make a retrograde step with regard to religious equality, it is not clear that you may not do so in civil and commercial freedom. (Hear, hear.) The same principle of injustice is at the bottom of political monopoly, commercial monopoly, and religious monopoly." ("Hear, hear," and applause.)

Mr. Bright, M.P., after adverting to the essentially "political," as well as social character of the *soirée*, proceeded to remark upon the more correct appreciation of the truth of the principles advocated by the "Manchester School," which had begun to be formed by many who, previously to the success of the anti-Corn-law agitation, and to the fulfilment of their predictions in matters of commercial policy by the results of that success, had believed them to be a most dangerous class of politicians—almost a treasonable set of men. He regarded that better intelligence of their views as as advance in the same direction as had been made by the men of the present day generally, as compared with the men of forty years back. Referring on this topic to Mr. Prentice's "Historical Sketches and Personal Recollections of Manchester," he said:—

"Reading over the first few chapters of this book, we find that people who lived now in Manchester are not at all of the same race as those who lived here in 1810. What was the Manchester Exchange then on a market day? It was not an assembly of rational beings, like the great majority of those who now assemble there; but the concourse was composed of a number of men who held principles of Church ascendancy of a most furious and bigoted character. They were actuated by a sentiment of the most brutal and cruel nature, which they called loyalty. They were in favour of war to the knife, and you would not expect to find among any tribe of savages (applause); and it is more akin to the character of the jungle tiger than to that of an Englishman (loud applause); and in their political partisanship they were so ferocious, that excellent, worthy, and intelligent men, who held opinions in favour of reform of any kind whatsoever, were, many of them, forced to leave the town, acting in other towns where political feeling did not run so high. And some men who have lived since to distinguish themselves above most men among whom they have lived, and who came hither and settled in the United States of America. (Applause.) From 1790 to 1820 may be considered the dark age of modern times. It was positively a reign of terror in Manchester; to be a dissenter was to be only some verminous animal, upon which high churchmen and the loyal and patriotic men who shouted

'Britons never shall be slaves,

thought they might trample with impunity. I speak in favour of reform of any kind, was to be prosecuted; and Church-and-King mobs assembled with impunity, broke the windows of a Liberal newspaper office, pelted the editor, demolished his property, and I think about 100 or 150 publicans in Manchester signed a solemn declaration that they would not have any of those pestilent Reformers of any kind whatever in their tap-rooms or bar-parlours, and that they would not even sell them anything to drink or give them any kind of entertainment whatsoever. (Laughter.) Now, that mad spirit went on up to 1820; and about then was the time when we may observe a turning of the tide. War all its consequences—were then telling upon this country, and telling very much upon the population in this town and in this district. In 1819 was the celebrated meeting about which we have all heard accounts since we were children, when the people were not permitted to publish openly their petitions for any reform or for a repeal of the Corn-Law. But thirteen years after that—not a very long time—the Reform Bill was passed; six years after that, the Anti-Corn-Law League was in operation; and eight years after that, that great bill, the Corn Bill of 1815 (that bill which really was the foundation of England's prosperity)—(laughter)—which gave sweeps that it took twenty years to repeal, a bill which was really the foundation stone of our modern constitution, was actually and positively repealed. (Laughter.) Now, I maintain that within that period to which I have referred—from 1790, and, in fact, from 1810 the people of this country have gradually accomplished a revolution; and that at this moment there are countries one could point to, which have had two or three revolutions of the most sanguinary character, and have imported into them all sorts of constitutions, and yet I don't believe there has occurred there a more entire change in their position and in their opinions, and in the principles upon which they act, than may be traced in the career of this country from that period up to this."

With respect to National Education, the hon. gentleman, after admitting the great difficulty and importance of the subject, expressed his belief

"That the only practical plan for receiving such an investment doing a real violence to the conscientious convictions of many, would be something like the plan which is laid before the public in the National Public School Association." (Loud and prolonged applause.)

Continuing his argument on the progress of the people of Manchester in enlightenment and civilization, he went on to say, in reference to the Papal Aggression movement:—

"Comparing ourselves with 1810, there is not very much intolerance here now. We have had it tested lately. (Applause.) There has been an attempt to frighten the country out of its propriety. I believe the Cockneys have been much frightened (laughter). I mean the parochial mind of the suburban divisions of London. (Laughter.) But now let us see what has been the state of feeling in Lancashire and Yorkshire. (Applause.) Beginning with Hull—the most ancient Church of the large towns in the district—the most important and widely circulated paper in that town has altogether repudiated the attempt to raise up a bigoted and fanatical cry against the free exercise of the Catholic religion in this country. The Leeds Mercury—a paper there of the largest interest and circulation by far the largest influence and circulation in Yorkshire—has given no countenance to this attempt. And I must say, that, of all the speeches that have been delivered upon this question, I think a speech delivered by Mr. Baines, the editor of that paper, at a meeting of the ministers and friends of the Baptist and Independent churches, was the most true to the point of any that I have read. (Applause.) But now let us see what has been the state of feeling in Manchester. You have two papers here of very large circulation, and in their respective walks are bound of great influence; neither of them have given any countenance to this intolerant cry, and one of them has very boldly and absolutely opposed it. (Applause.) Go on to Liverpool, and you find the papers there of chief circulation attribute the unwarrantable interference that has been taken by the papers in Manchester. Well, I am free to argue from this, and do argue from it, that all this attempt to disturb the public mind—all this attempt to point the finger of scorn at millions of your fellow-countrymen that differ from us in religion—(Applause) that all this has failed among the 3,000,000 of the population of this kingdom that inhabit the counties of Lancashire and York (Loud applause.) I do not know how it is, but there is something about two things that the people of this country have been discussing for generations past—corn and Catholics. (Laughter.) This time last year there was almost a terror about corn. Some people down here were afraid that corn was going to be shut out; and the 'squires were making a great disturbance about, not the Papal, but the corn aggression. It is about 500 years ago that there was a sort of Parliament—not, I believe, a very regular one—held at Kilkenny, where English interests very much preponderated. They passed what has been called the Statute of Kilkenny: a law by which they made it penal, to a high degree, for an Irish-man's horse to graze upon an Englishman's land. (Laughter.) Now, from that time to this, there has hardly ever been a session of Parliament when this question of Catholics has not been discussed, and old women of both sexes—(laughter) in all parts of the country, have been frightening themselves to death about this Papal aggression. Now, I have got a weapon myself, to put an end to fear on this account. It is a remarkably simple one. But you find that men who have been brought up to certain professions—the medical profession, for example—they don't believe in the virtues of cold water. They don't believe in the virtues of such simples—I was going to mention something very dreadful they give now and then; but they deal in something that is sure to be poisonous if you take much of it. Now, I have something very simple to recommend, and it is not the Queen's supremacy; it is not the Prime Minister's letter; it is not that indescribable twaddle which the Bishops of the Established Church, to their intellectual disgrace, have been writing. (Prolonged applause.) If it were a question of intellectual supremacy, why I should tremble for the Church of Switzerland—(laughter and cheers)—a very excellent churchman, a friend, of one of the Archbishops, speakme to me only the other day about Cardinal Wiseman's epistle, and of what the Bishops had written, said, 'I'll pension off Archer, Lord Archbishop of Dublin, and set him to work, as a committee, to draw up all their addresses to their clergy, they would not have been much less discredutable to them than they have been.' (Laughter.) Well, but now for my recipe. The thing which men call Popery—as I think the Dean of Bristol, in a speech that did him great honour, said is not confined to the Catholic Church. (Hear, hear.) It is to be found, probably, more or less, in almost every church; and it is that which we should guard against it is the giving up our own intellect and our own consciences into the hands of any man, or any body of men. (Applause.) It takes a more offensive shape in one church, probably, than another; but the Church of England, while it repudiates the doctrine of authority on which the Church of Rome rests, has not got the courage to adopt the other theory (hear, hear), and to take the principle of free inquiry as its basis. (Applause.) It is free inquiry as against the Church of Rome, but it is authority as against Dissenters. (Applause.) Now, my prescription is this—that we should not attempt in any way whatever to control opinion (hear, hear); but that we should encourage among all classes of the people that sound and healthy constitution of mind by which they will be able to discern and to determine for themselves, and by which they will be instructed enough to repudiate and repel every effort of every priest of every church that shall endeavour to take from them that liberty which the New Testament were worthless if it did not inculcate. (Applause.) And with regard to this question, let us never forget that there is a country, three or four hours' sail from us, which we call part of the same empire, inhabited by 7,000,000 persons acknowledging the Roman Catholic religion; men who have had guaranteed to them, if anything can guarantee in such a manner, as full liberty to worship as we possess who are not of their church. And let us bear in mind, that for hundreds of years one great department of our legislation has been directed to the sole object of exterminating that religion; and yet, in spite of all that Parliaments and Monarchs, Queen's supremacies, and Prime Ministers' letters could do, Catholicism has gradually and certainly submerged every county. Cromwell planted Tipperary, the northern counties were planted by English and Scotch; in whole districts of that country there was to be found a majority of Protestants; but there is no majority of Protestants to be found in any country of that country at this moment. Three hundred years ago, Bacon said, 'Let us not try to put down Catholicism in Ireland by persecution; but let us try to make Catholicism by Protestantism.' If that had been done, assuming Protestantism to be better and purer than Catholicism, why, I have not a shadow of a doubt, if the world is not intended to roll backwards instead of forwards, that at this moment, if the Catholics of Ireland had not become Protestants, they would at least not have abhorred Protestantism, and their minds would have been open to free inquiry upon the question of religion, as Catholics are in many other countries, and as they decidedly are to a large extent in the United States of America."

Mr. Bright sat down amid enthusiastic applause, the meeting rising to do him special honour as they cheered the conclusion of his speech.

Mr. Cobden, M.P., on rising, was received with great applause. He said:—

"When I entered this room I was not quite aware of the character of the present meeting; but when I looked around upon the countenances of the gentlemen assembled, I perfectly understood its character. It comprises, I can vouch for it from personal knowledge, the pith and marrow of the Reform and Free Trade party in South Lancashire. It comprises men who worthily represent those who cannot be present in this room—men without whose co-operation no election can be carried in South Lancashire, Manchester, or Salford, and against whose opposition it is equally important to know that no victory can be won. I am glad to have had the opportunity of beholding the cordial, kind, and flattering reception with which you have greeted those who represent you in Parliament. (Hear.) Those are the men who stand the brunt of abundance of abuse; they have to meet detraction coming from your own city, and probably, to express your own sentiments. The shafts of calumny, the base insinuations of base motives are continually flung at them those unfair weapons of political warfare which are never resorted to except when men are either conscious of a bad cause or actuated solely by personal pique and spite. (Hear, hear.) It is right, therefore, when they have to encounter the brunt of such attacks, that they should, when they meet you, receive the rewards which you confer upon them. But I, for my part, come here not to answer to you for my conduct in Parliament, nor to share in the tribute of respect and gratitude which you have bestowed upon them; it is as a listener and spectator that I am here. I am come to learn, to say a few words. This has been called a meeting to talk over all sorts of subjects. Now, I am not going to deal in vague generalities, nor range the wide topics of political controversy. I will say generally, that after we succeeded in the Free Trade controversy, I set myself a certain task in public life. I thought that the natural and collateral consequence of Free Trade was first to endeavour to give the people, along with physical comfort and prosperity, improved intellectual and moral advantages. I thought the country which had bargained for itself to enter the lists of competition with the wide world, seeking no favour, but asking only for a fair field and free competition, would act absurd to economise its resources, and attempt in every way to mitigate a load of taxation which must impede the success of any trade which we pursued in the field of competition with more favoured countries. I thought that when we had said 'We offer to trade with the whole world, and we invite the whole world to trade with us,' that by that very declaration we made a call for peace and, more than that, for good-will between men. (Hear, hear.) I set myself the task of endeavouring, by every effort I could bring to bear, to stand prominently forward as the advocate of education, peace, and economy. Whether I have done right or wrong, I have met with keen opposition, and upon two with obloquy and derision, I see progress making and made, which will encourage me to persevere in the advocacy of those principles and the renewal of similar efforts. (Applause.) I find education assuming a prominence and importance, even by the admission of those who, until lately, have been opposed to it in every form, that cannot leave a doubt upon my mind that public opinion will be brought to bear on that topic with such irresistible force, that ere long we shall find a solution for this, which is one of the most difficult problems of our social existence. And I find that the question of peace, even in the eyes of those who leave our attempts to ridicule its advocates, has become a leading topic of the day. I find that what I told you in the Free-trade-Hall, just three years ago, that we might live to see the time when the expenditure which sufficed for 1835 would suffice again, is in process of being realised. We have already made such progress, that some four or five millions of reduction in our expenditure has taken place. (Cheers.) I have no doubt that further retrenchments are going on at this present moment. As fiscal questions will engage a good deal of attention in the ensuing Parliament, I would have you rigorously to draw a distinction between two questions which are very often fumbled together, causing great confusion in the public mind —I mean the difference between a surplus caused by an increased revenue, and a surplus caused by reduced expenditure. The Government may come forward with a surplus of £2,000,000 arising from an increase in the receipts of the various existing taxes; and it is then too apt to take credit to itself for the great merit of having created a superabundant revenue. They do not tell you it is; are too apt to forget it—that this surplus is merely the effect of your having given up part of your property to the Government of the day. The Chancellor of the Exchequer in one year than you did in the last year; and then the Chancellor of the Exchequer tells you, 'I have £2,000,000 more than I estimated; I will return it to you.' But I will say that when the Chancellor of the Exchequer brings forward his budget, you would examine critically the amount of the reductions of his estimates for the next year's expenditure as compared with the estimates of the last year. (Hear, hear.) The surplus that is now being estimated is upon the present year's estimates; I want to see the next year's estimates and the budget, that we may judge of the Government by their estimates, and not by any revenue they have created. (Cheers.) I have not since the close of Parliament addressed any audience upon general political topics. I have addressed peace meetings. I have addressed meetings of freehold land societies, I have addressed education meetings, but I have not addressed a meeting where so wide a range of discussion and observation has been permitted as is now open to us in this assembly. I very much regret it, because I should like to have said a few words upon a controversy which has been raging in this country for two or three months, and which I should be guilty of cowardice, seeing it is always my practice to deal with the prominent topics of the day, not to refer to. I speak to you only as a politician. For the last two or three months there has not been a calm in this country. We have heard of a great political calm, but there has been one in the country. Agitation has been almost an agony. It has, I admit, been mainly sectional; but it has been wide-spread, and it has occupied almost exclusively the attention of the leading public prints. I need not tell you that the question is that which is called 'The Papal Aggression.' The remark I wish to make is, that the discussion of this topic has overlaid, arrested, and smothered for a time every political topic. In this country the public mind entertains but one subject at a time; therefore the discussion of this topic as a political topic has prevented the public mind from occupying itself upon fiscal questions and questions affecting reform in the representation, and other questions which posthions have had for many years at heart, so that we approach the meeting of Parliament without the opportunity being afforded or taken by the country or the Government of their views they take upon the various questions. I wish you to bear in mind that when we meet in Parliament, our time will then, I fear, be very much occupied with the discussion of this same question; for, if we may judge by what has been said in the House of Commons, and by very large assemblage, every political, social, fiscal, or reformatory question must be suspended until this one great question be settled by the House of Commons. (Applause.) What I want to ask is, 'Is this a question that can be settled by politicians?' (Loud cheers.) I may settle it in my own mind as a Protestant, and as a Protestant I may have my opinions. But I want to ask, if there is any reason why religious questions should not be removed out of the domain of politics, the same as in the United States of America?' Lord Carlisle, when he honoured himself by coming out of the Cabinet to deliver an address to the Mechanics' Institution of Leeds, made a remark which, coming at such a time (I did), I think expressed more than words would entirely do, when he said, 'I do confess I

envy the complete toleration which exists in the United States.' (Loud cheers.) In the United States the Pope may appoint Bishops wherever he pleases; he may parcel out that vast continent into as many dioceses as he pleases; he may send as many cardinals as he pleases; and no matter by what pompous phraseology all this be done, the United States politician, or the United States Legislature at Washington, would be perfectly indifferent to it all. Why cannot we, in this country, as politicians, leave, with the same security, to private and individual judgment, the settlement of this question, as it is in the United States? Is it that we are so ignorant, or that we are so liable to be misled? Then, I say, we are less sharp and follow the advice given by Mr Laurence, the American Minister, and not to ourselves. (Loud cheers.) But I am told that the reason is, that we have a State Church in England. Well, but does a State Church render the people of this country less able to protect themselves, by their own unaided judgment, knowledge, and sound sense, from aggression? Are the people less able to protect themselves against error because they have a State Church? Will that be the confession? No. But the State Church has been made the obstacle, or attempted to be made the obstacle, in every parish, to the promotion of the same liberality that exists in America, and against every progress with regard to liberty, whether civil, religious, or commercial. (Loud applause.) We are, and have been, continually tempted to be obstructed by the cry of the Church in danger! yet, in every case, the pursuers of the Church have found their predictions singularly falsified After the Repeal of the Test and Corporation Act—after the accomplishment of Emancipation—after the Reform Bill was secured—then was the same cry; but I believe it will be found that both by churchman and dissenters, the Church never was so active and prosperous—never were so many churches built—and never had the establishment greater authority, than after the last of those great reforms down to the present day Where, then, are the grounds for fear on the part of churchmen for the security of the Church? I do not stand here as the advocate of the partisans of the Roman Catholic body. As a politician, I do not presume to offer my opinions on the faith of any man. But I may be allowed to say, that I am no friend to the organisation of the Roman Catholic body. It is too subtle, too intellect, and too centralising for me. But, at the same time, let the Roman Catholics living in England judge for themselves, not on my or their own faith and motives, but of the motives which they have ascribed to the organisation that will follow religious teaching (Loud cheers.) Why should you donate to Roman Catholic Bishops whether they govern by a Cardinal, an Archbishop, or diocese? They do not come to me as a politician to ask me to give force and validity to their tales, or to give them stipends out of the public purse. What right have I, then, as a politician, to come before a public meeting or to get up in the House of Commons to say a word upon the subject of their faith, or on the polity of the Roman Catholic Church? (Hear.) We shall be told, pretty often, no doubt, that, unless Government interfere to restrict the just prerogatives of the Queen of England will be invaded by the Pope—not by Cardinal Wiseman. Cardinal Wiseman is a British subject; he cannot invade the prerogatives of the Crown without being guilty of high treason; and if he is guilty, let him be tried by law. But what prerogative has been invaded by the conduct of the Pope? Not the temporal prerogative Why, the Pope has, at this moment, in his army a thousand French and Austrian troops, and I have it on the best authority, that, if these troops were removed, dire would be the dismay and speedy the flight of the whole body—Pope and Cardinals. (Cheers and laughter.) It is not, then, the army of the Pope that can threaten the temporalities of the Crown. Are the temporal prerogatives threatened by sea? You may have a list of the entire naval force of the Pope well amounts to two gun-brigs and a schooner (Laughter.) Put one quarter of an effective service on the coast of Sussex, it would be quite sufficient to guard the whole island against it. We are told, however, that the spiritual dominion of the Queen is to be purified. We are told, by politicians, that we are going to vote money for ordnance and for shot and shell to meet and repel the aggressive enemy that meets us with similar weapons are we to forego the spiritual artillery with which we are to meet the aggressor? (Cheers.) We are, I beg you to consider how capitally we are suited in the House of Commons for that purpose (Loud cheers and laughter.) Admitting, if you please, that we are the great majority of us eminent for our piety, how are we constituted? (Laughter.) Are we all churchmen, owning to the spiritual authority of the Queen? Why, about 40 of us are Roman Catholics, and, mark me, you will have a great many more Roman Catholics returned from Ireland at the next election. (Hear.) We have an Independent or two, we have three or four Unitarians, and we have a Quaker I am sorry to say that we have had a good many more (Great applause); and we have a prospect of having a Jew. (Laughter.) Now is not that a very nice body of men to uphold the Queen's supremacy as head of the Church? If you would purify the Church, purify the House which should last till Doomsday, then give us the task of settling the question of Papal aggression. (Cheers.) I say, give it to the politicians to settle, if you want it never to be settled at all. As the law now stands, and as Mr Bright, politicians have been at the work already for 400 or 500 years. They have tried every available means; they have tried fire and faggot, and every conceivable means which were ever heard of at length short of extermination. What has been the tendency of the last century? Constant relaxation, a tendency more and more to religious toleration. What has been the effect of the last century upon the mind of this country? Why, to their honour be it said, the greatest and most illustrious statesmen of the last sixty years were so far in advance of the latent bigotry existing in this country that they were ready to sacrifice power, office, and were willing to forego place, patronage, everything which statesmen and politicians hold most dear, rather than lend themselves to the commission of a system which I very much fear there are many men now in this country who think distinction in public life to having been identified with the principles of toleration to which we are constantly more and more progressing, who are now ready to rally their fair fame, and their stainless shield, round the banner of political career, on entering into the political session of 1851. (Cheers.) Gentlemen, I entreat you to remove the question of religious opinions—remove it out of the domain of politics, if you wish only to make peace—if you wish only that which we cannot delay, but if you wish to prevent a retrograde policy. It will not end in a mere return to the position of intolerance which we held. I entertain to conduct you in a retrograde track in questions affecting our temporal interests, and for which many of those who fancy themselves sincere are now leading the cry, and voices when they raise this fanatical intolerance, and, mark me, you Gibson completely, that if this country suffers one step backward in the career of religious toleration, you are endangering yourselves on questions in which you feel most nearly interested. (Hear, hear.) I never did like the expression of the word come across my mind on the subject of returning everything we have gained in the way of social improvement, mist. I saw the account of a county meeting in Essex, which has had its constant meeting in row ever since Bright spoke at it, which Sir John Tyrrell was one of the most prominent actors, when he called for three cheers for Lord John Russell. (Cheers.) Look at the actors throughout the country at the present movement against what is called the Papal aggression Who are they? Have you seen those men advocating the repeal of the Corn Laws? (Hear, hear.) Have you not seen, in every case, that the most prominent actors in those county meetings are the men who have resisted the establishment of that principle of commercia. reform? (Hear, hear.) When I ask you if by any account, such accidents as may happen in our constitution, we are the proper parties at any moment—when I ask those who agree with me upon the subject of commercial freedom, and generally upon questions of liberal policy in a sense affirm—when I ask them to answer me this question. Suppose a general election were to take place, and those who are prominent in opposing religious toleration succeeded and I am not sure that they would not succeed—in returning to Parliament a majority for re-enacting the disabilities and restrictions upon Roman Catholics, would it not be a majority that would either tamper with the Corn Laws or take care to indemnify themselves for what has been taken from them? (Cheers.) It is not about those who are acting that we have so discreet on this case as to conceal their belief in the possibility of retrieving their monopoly. I say to those who have generally been favourable to commercial freedom—who have been, in fact, friendly to civil and religious freedom, and who join in this cry, and lend themselves to the support of this party who are in favour of religious restrictions—I say they would, in my opinion, bring back on themselves commercial monopolies and political monopolies; and I say to them as inconsistent men—for I don't address myself to those who oppose freedom in every shape, but to those who are generally with us in advocating civil and commercial freedom—I say, if they gain the object of re gious intolerance, and if they gain along with it a monopoly in food as well as political institutions, they richly merit their fate. (Loud cheers.) But there is one thing that has been said by those who preceded me—they have alluded to the bigotry, and fanaticism, and ignorance which prevailed fifty years ago among the mass of the people of this country. Now, there is one singular point about the only symptom, which has consed me in the agitation for religious disabilities, and it is this: the calm, passive, and in many respects contemptuous silence and indifference with which it has been met by the great mass of the people of this country (Cheers.) If the same tumults had occurred fifty or sixty years ago, owing to the then ignorance and bigotry of the mass of the people of this country, half the Catholic chapels would have been given to the flames, and half their occupants' lives in danger. (Hear, hear.) And I thank the demonstration only for this—that it has given me, more than anything else, a conviction of the great progress that has been made in the enlightenment of the great mass of the people, especially in the north of England. (Cheers.) I will not say so much of the south. And I cannot say much of the Corporation of London. (Cheers and laughter.) Why, only think of that corporation professing to represent the city. Only think of it! Last year setting itself up and agitating for payment of the Queen's debts—setting up a patrotism in favour of religious liberty to the Jews. (Hear, hear.) When has there been such a spectacle, even so absurd a spectacle, exhibited as that which was shown when the Lord Mayor's coach took its usual grand procession broad coach, the pattern of two hundred years ago, and clothed themselves in that Bartholomew Fair dress of theirs, and took a man with a fur cap, whose pattern dates back, I believe, to the time of Henry VIII., with a beard on his chin at the other set of the paraphernalia of the corporation of London, and went down by the railroad to Windsor, in order to present an address to the Queen, in order to put down—[laughter]—the aggression of Cardinal Wiseman! (Loud cheers and laughter.) If you want to see mummeries, go and see the Lord Mayor's procession I have seen the grand ceremonies in the Vatican at Easter; I have seen the most pompous religious processions the Church of Rome can boast—but I never saw anything half so absurd, or half so offensive to intelligence or common sense, as the mummeries in which the corporation of London indulge

[Cheers.] Now, gentlemen, I am not to say of the North of England, that the mass of the people here have not joined in this imbecility (Hear, hear.) I only regret that cream to see have prevented themselves being sold in the Free-trade—all, but I might have heard the cheer which should have had from 5000 auditors, in expressing the sentiments I have just enunciated. Now, gentlemen, only one word more—as a politician, but not as a party politician, if you please. Something has been said about confusion or misconduct during the last session. I do not come here to answer you, because I have not the honour of representing most of you. But thus I will say, I am exceedingly tolerant of every member of the House of Commons who strains a point to vote with the Government, because he has been some fifteen or twenty years longer in the political arena than I have been. I believe my friend Mr Brotherton, for instance (cheers), aims as much at benefiting the cause of the people in this country, in every form in which he can do it, as I (cheers); but I believe Mr. Brotherton has a stronger sentiment of reliance on years and loyalty towards the present Government than I have; and it is easily accounted for. Mr. Brotherton entered Parliament during the passing of the Reform Bill and shared their struggles in obtaining that bill, which I still regard—notwithstanding what Mr Bright may say—as a great progress in political reform. He shared all their struggles in carrying that bill, and it is natural that he should have those sympathies. But I will say this in vindication of myself, that I entered somewhat at an advanced time of life for a man who has taken up the discussion of a public question, and I did it resolved to devote my labours to the solution of that question, without reference to the temporal interests or consequences of any existing political party. And the result of that agitation in the case of the Corn-Laws has convinced me that if anything is to be done in this country for the great mass of the people, if you are to succeed in establishing any reform of magnitude, it can hardly be done by any party in power and in the House resolving to do that one thing, and totally disregarding the existing political parties in that House. I desire to see something accomplished. I have not entered the field as a candidate for any office, and I can say from the one most dear to my heart is the advocacy of a more peaceful and conciliatory policy in the intercourse of nations—I would especially say, the intercourse between this country and weaker nations If you want to wound my principles most acutely, it will be to show me England violating the principle of even salutary and humane policy when it has to deal with a weak power which is also a child in its grasp. I look upon inhumanity, rudeness, or violence, on the part of England towards a power less state like Greece, with additional resentment, just as I should regard that man as a coward as well as a despot who mistreated and ill-used a child. Feeling, then, that my principles were violated in the case of Lord Palmerston in the Greek affair, I voted against him on that occasion, and I should do so again, if the same circumstances were to be expended on the issue of my vote. (Loud cheers.) Now, gentlemen, let me give one word of advice to those who are in Manchester or elsewhere, and take up a hasty conclusion against some of our members, with whom you generally agree, and in whose judgment and sagacity you have some confidence, to beware how you tase sid against them, merely because you see in certain public prints a certain line of policy argued Give them credit for being wary; they have a better opportunity of sifting public men than you have. (Hear.) A man must be a fool if he does not, after being in Parliament some years, or age—years, and sitting in committee with nearly all the members, and hearing their motives when they are disclosed—not on the platforms, but when they are chatted over by friends in private. (Hear, hear.) I expend upon it, your members will have rather better opportunities than you will have of judging of the conduct of public men. And if you suspect in them that Lord Aberdeen has changed his views, I think you may maintain a fixed duty long after Lord Aberdeen had become the advocate of total repeal and unmixed bread—if, notwithstanding certain other symptoms I could mention that lead me to suspect that Lord Aberdeen did try to maintain a fixed duty long after Lord Aberdeen had become the advocate of total repeal and unmixed bread—if, notwithstanding certain other symptoms I could mention that lead me to suspect that Lord Aberdeen did try to maintain—if, I say, notwithstanding you have an impression in favour of Lord Palmerston, and if your members come to a different conclusion, why, give them credit for the same honesty of purpose and truthfulness with yourselves, and bear in mind that they have the better opportunity of forming an opinion than you have. I have no desire to stand out sinecurely in my votes. As was well expressed by Mr. Bright, I am a party man; I like to do so; and I would be far more agreeable to make companionship with those men on the Treasury benches, instead of trusting on their toes, and poking them in the ribs, and making them uncomfortable. Is it any satisfaction to me, do you think, that Lord Palmerston's organ, the *Globe*, has denounced me, over and over again, as a disappointed demagogue, and hurled language at me which no other journal—the *Times*, for instance has ever levelled at me? I know perfectly well that on the Manchester Exchange, and the Leeds Exchange, and the Liverpool Exchange, where the *Globe* paper is taken, and that being a Whig paper, when persons see I speak in such terms of the member for the West Riding, they are apt to think there must be a great deal in it, and that the member must be making himself especially odious in the House of Commons. (Hear, hear.) I am not a disappointed demagogue; if ever there was anybody who ought to be satisfied with its public career, it is I. (Enthusiastic cheering.) I thank you for giving me the opportunity of relieving my mind to a certain extent of great cogitation in saying so. (Renewed cheering.) Well, as I said before, my position is not the same as that of Mr. Brotherton. I have lived so long that I cannot see the line of demarcation between Tory and Tory. I cannot see what Lord John Russell is to advocate which the Tories do not advocate. I find from Lord John Russell in the House of Commons, not simply great impatience, but petulance, and I had almost said great peevishness, when he is questioned on the subject of foreign affairs. I cannot refuse to pay respect to the speeches that he has made to our friend Mr. Bright—who I am sure is very indifferent to the remarks I have made on him—but they are not calculated to increase the confidence that was supposed to be the leader of our party. (Hear, hear.) I must confess that, in regard to Ifeal matters, I am bound to say I believe the opposition party would do quite as well under the Aberdeen Government as they would if they got their own. But this I say—if I cannot say that I have at least the liberty of voting in the House of Commons according to my conscience. Deprive me of that and I cannot hope to see some change and some reform—at least if I am not allowed the free advocacy of my own opinions for some distinct principle different from that which I have the misfortune to entertain. I am not going to be the man sitting up til. twelve o'clock every night in the House of Commons? This 'disappointed demagogue' wants no public employment. If I did I might have had it before now. I am not going to be the man sitting up through Bright's speeches. (Hear, hear.) I want nothing that any Government or any party can give me; and, if I am in the House of Commons at all, it is to give my feeble aid to the advancement of certain principles in which I have strong convictions. Deprive me of that power, tell me I am not to do this because it is likely to destroy a Government with which at the present moment I can have no sympathy: I say, then, the sooner I return to private pursuits, and abandon altogether that sterile sphere up in the House of Commons might. after night in that way, the better for me and my friends (Hear, hear.) I have come here, then, merely to renew personal acquaintances; or rather, anxious, by a short sojourn in this neighbourhood and in Yorkshire, not to lose old acquaintances which I highly prize and value. I come, moreover, in order to have an opportunity of taking the current of public opinion a little, and sounding its depths, to see whether it be an uneasy tide, or a steady permanent stream. I think this meeting has demonstrated to me, that, whatever has existed in other parts of the country, here, at least, there is no reaction. (Loud cheers) And, if we are found true and faithful to our recorded opinions, you in Lancashire, and I hope my friends in Yorkshire, will always be found true to their principles."

Mr. Cobden sat down amid loud and long-continued cheering.

PROTECTION TO NATIVE INDUSTRY.

On Saturday a meeting was held at the Old Fellows' Hall, Pocklington, to take steps relative to the present state of agriculture. The room, which will hold about 800, seemed to be full, and principally of those connected with agriculture. The chief personage on the occasion was Mr. Busfield Ferrand, who was announced in the advertisement to take part in the proceedings; and as this was the first time he had addressed the farmers of this part of the East Riding, considerable curiosity was excited to hear what he had to say. A train on the railway station, where he was hailed with cheers, and then escorted into the town. The Hon. A. Duncombe, M.P., Mr. C. A. Darley, Mr. R. Denison, of Waplington, Mr. Jonathan Harrison, and other gentlemen were present

Mr. Denison was called to the chair, and having briefly addressed the meeting, read over a number of resolutions, which were agreed to, setting forth the agricultural interest up to the present time, in the course of which he animadverted severely upon the policy of the late Sir R. Peel, said:

"I warn you that you must put your own shoulders to the wheel—that you must exert yourselves, and not leave everything to Sir R. Peel. We have his policy and let me tell the landed proprietors, that if they are not careful how in future they conduct themselves upon this great and vital question, they will for ever separate the tenant farmers from them. (Cheers.) You have no fair or honest review your position for the last 20 years. From 1831 to 184. Sir R. Peel, now deceased, fought your battles in the House of Commons against the Whig government and the Free Trade school. In 1841, the Whigs brought forward a measure for a permanent fixed duty of 8s. upon foreign corn result? Peel went down to Tamworth, issued his manifesto, telling the farmers that if they accepted the 8s. duty ran would never obtain them, and nothing but the sliding scale could save them (Laughter.) He implored you to throw the duty overboard, and you did so, he pledging his word that ... would stand up for you, and never take less than what would secure you 56s per quarter for your wheat. Well, in 1845 he betrayed you; he handed you over to the Manchester school, and you were sacrificed to serve their interests. (Hear, hear.) They told you, first of all, 'Oh, don't be alarmed, the price of corn won't fall with a repeal of the Corn Laws; you will always have remunerating prices' A great many of the farmers believed this; but they were not long before they found out that it was what Cobden calls a 'bugaboo' cry. ('Hear, hear,' and laughter.) Then came the *Times* newspaper, saying, 'Oh, don't be alarmed, farmers of capital; keep your corn at home; don't thrash it out; save it in your stacks until spring; by that time all the foreign corn will be consumed, and you will get remunerating prices for your corn in spring. We admit that there are many farmers who can't do this; and those who can't, let them transport themselves to the towns and elsewhere.' ('Hear, hear,' and laughter.) Well, the farmers, or some of them, did so; and what was the end of it? Why, corn rose 2s. a quarter and fell 3s. Mr. Frankland Lewis, chairman of the Tory party, and the rest of the Whig organs, said, 'Oh! it's not a question now of the prices of corn; it's all high breeding and high farming.' Now, with respect to that, let us take a leaf out of our enemy's book. '*You eat of all kinds down*' (Hear, hear.) What says this said *Times* itself of high breeding? 'It is not merely the first outlay, however lavish, that will place the beginner in the rank of a first-class breeder of short-horns. He must be prepared to exercise every other consideration on his farm to their welfare, and after he has collected his herd, and fed and watched them with the utmost care, he must stand the risk and uncertainty attending their management.' If so in that case, how is it that the high-priced and high bred cows missed having calves, and so great are the risks attending this system, that only a few farmers can carry on itself into their hands. Men of station and wealth embark in it frequently as a hobby, and some, like the late Lord Spencer and the present Lord Ducie, are successful; but such cases are exceptional.' So much for the *Times* on high breeding (Hear, hear.) Well, then, now we come to high farming. I consider that that means an immense expenditure to force the land to yield an unnatural increase of produce. Now, suppose for *Times* sake, we adopt the system of spend £1000 extra in producing 1800 quarters of wheat, to carry to the Hull market Sir Robert Peel said, you could not grow wheat at a profit unless you sold it for 58s. a quarter. Well, you take your 1800 quarters to Hull, and what happens then? You are met with foreign wheat which pays the grower at 36s. a quarter. (Hear, hear.) Was there, then, ever such madness for men professing themselves to be sane—to recommend you to do that? I say, then, that I think you cannot produce your corn except at a ruinous sacrifice? (Cheers.) They (the Manchester men) say, now that high farming and high breeding may answer, it is all a question of rent with you. But I maintain it is not rent in the question of rent. Land does not pay more than 2½ per cent.; and I think no person should be allowed to pay a landlord at that rate per cent. for the use of land But it is not a question of rent to the landlord merely; it is a question which comes home to the tradesmen. Suppose I reduce my rents 25 per cent., I put 25 per cent. into the pocket of my tenant, but what happens then? I should have £1000 less a year to spend. Where has the 25 per cent. gone to? It has gone to the foreigner—to the buying of corn produced by the foreign labourer. (Hear, hear.) What is the country? Why, the tradesmen of Pocklington can no longer spend the money he used to do among his tradesmen, and in support of charitable institutions. A majority of the landed proprietors are small men. They have possessions handed down from father to son. Why are these men to be sacrificed for the spinning-jenny and the power-loom? I am not here to sow a bad feeling between the landed interest and the manufacturing interests; but I have a right to ask you where they come from? The first Sir Robert Peel boasted in the House of Commons, that, when he was coining money as fast as he could count it, he had a thousand orphans in his barracks, or his mills, whom he had gathered from as far as Scotland, and whom he handled over to a state of slavery more dreadful than anything I can picture. (Hear, hear.) Those thousands of orphans were never raised above the rank of a labourer. What good did the spinning-jenny do to them? or what good did the power-loom do for the happy home of the handloom weaver? Why, it has been turned into a desolate wilderness, and has been destroyed, that the power-loom might get faster for the Lancashire spinners. It was no unusual thing for children of five and six years of age to be worked 19, 20, and 21 hours a day by these spinners. (Hear, hear.) Oh! we say to the Lancashire cotton-spinners what you have suffered frightfully, and a great injustice has been done you, but we are going to confer a great boon upon you, you shall be prosperous, contented, and happy, and live in a paradise. Suffering will be forgotten in the joy that is going to spring a repeal of the Corn Laws. Ireland would then shake off all her misery, Scotland would rise from her ashes like a phoenix, and England would go forward "like a giant refreshed with wine." Those are the words in which we were made. Now, let us glance at the condition of each of these countries. And first, as to Ireland. When the Corn Laws were repealed there were 7,000,000 of people in Ireland, and they were principally engaged in agriculture. Now? I believe that 1,000,000 of people have been driven, like houseless beggars, from their homes in Ireland, and forced to find shelter in a foreign country. (A voice: 'Through the Encumbered Estates Court.') Why the Irish themselves to foreign countries, and hundreds and thousands of labourers have come from this country to Ireland, to supply the deficiency of labour which the manufacturing system worhasses, and the following short extract from the *Waterford Mail* will show the extent of emigration that is now going on. It is headed 'Emigration.' 'On the 10th inst. the Cork steamers, the Waterford steamers, were filled with nearly 200 persons on board bound for America. As we progress in the new year, the wild mania of emigration appears to increase. Among those who proceed westwards are many comfortable farmers, and we devoutly hope that their golden anticipations will not be disappointed; but we fear, with too many they will. When the *Mare* was leaving at two o'clock, these poor fellows seemed in a wonderful state of excitement and confusion on board. It was only an effort, for immediately many, both on board and on shore, burst out crying' (Hear, hear.) I say, in the name of our common country, why are these things? Why is a wide-spread misery and ruin on Ireland? Is there one man who will dare to say that the manufacturing system has not been the cause of Protection not being restored. Unless this is the case, it is only will the landed interest—composed of landlords, farmers, and labourers, and tr deemen of every description—be reduced to ruin more rapidly than you can almost count the minutes, but also the manufacturer himself will find the home-market destroyed,

and himself beaten out of foreign countries by competition abroad I have been rather prominently mixed up, during the last twelve months, with a movement connected with the growth of wool and flax in this country. It is true the Frenchmen, and the Prussians press, attacked and abused me as being worse than a madman, but in less than twelve short months I have lived to see my proposition adopted and recommended by Lord Clarendon, the Lord-Lieutenant of Ireland, as the only means to rescue it from its prostrate and ruined condition. I call on farmers to study well this question, for I tell you there is a profit connected with the growth of flax; and when the Lancashire cotton-spinners find the farmers produce for them the raw material to be spun by hand, you will never hear again of their threatening to close their mills, and marching 300,000 men to London through the agricultural districts. I also recommended to the farmers to wear wool instead of the cotton-raised Alsace-grown cotton. They have adopted my advice to an immense extent. I told them it would rise in price. It has risen in price, and my advice to those who have last year's old suit, "Hold hard!" I have no doubt that it will rise again, and that before next January it will be 15d. or 16d. per lb. I would then say "Let it go, because, if you sold it too long, cotton may again come into the market to compete with it, and be a cheaper article for the manufacturers to spin. When you can get a fair remunerative price let it go, but I don't think you will get such a price till you get 15d. or 16d. per lb." (Mr. Forrand concluded by warmly supporting the resolution amidst cheers.)

The motion for the adoption of the petition, as well as that of a similar one to the House of Lords, was put to the meeting and carried with only two dissentients, and this was followed by three loud cheers for Mr. Forrand.

The proceedings were terminated by votes of thanks to Mr. Forrand and the Hon. A. Dunscombe, M.P., for their attendance, and to the chairman for his ability in the chair.

BRITISH AGRICULTURE.

BY THOMAS ROWLANDSON, R.G.S.

PART VIII.—OXFORDSHIRE.

The boundary line of the county of Oxford is very irregular, as also are the dimensions of the county in various parts; being only seven miles across near the middle, at Oxford; whilst in the more northern part the width is thirty miles; the southern end is narrow, not being more than twelve miles across in any part.

The climate of Oxford is cold, particularly towards the western part of the northern division. On and adjacent to the Chiltern Hills, particularly about the poor land at the foot of those hills, it has always been observed that the frost takes effect sooner, and continues longer on their soils than on others in the vicinity. The chilling climate under notice arises principally from the difficulty which the rain-water experiences in finding its passage to the natural outlets, streams or rivers, and the great tenacity with which the Oxford clay retains moisture. The chalk adjacent to the Chiltern Hills is rendered cold from being watered with water of iron springs.

About one-third of the soil of Oxfordshire is composed of what is known as stonebrash (composed of a loose, dry rubble soil, largely mixed with fragments of limestone, forming a good turnip soil), in the vales of the district there are some good tracts of meadow-land. The Chiltern district occupies about one-sixth of the county, and consists of a great mixture of soils, much of which is poor; plentifully intermixed with flints and chalk, near the banks of the Thames, however, there exists a good loamy sand. The redland district in the north of the county is composed generally of a reddish sand, rendered tenacious by intermixture with clay. The remaining part of the county is composed of soils exceedingly miscellaneous, and occupying a third of the area.

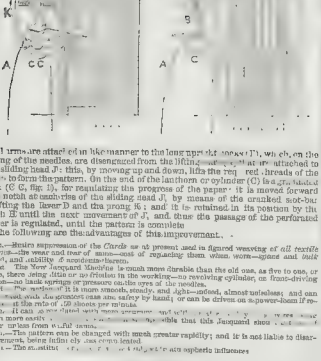
The breeds of cattle found in Oxfordshire are very various for dairy purposes, Devons and short-horns predominate, Herefords are, however, preferred for feeding. The greater part of the cattle in Oxfordshire are maintained for the purpose of the dairy, a large amount of butter being weekly forwarded to London, the skim and button-milk being employed mixed with pea and barley-meal to feed pigs, especially what are termed dairy-fed porkers, the greater part of which are fattened for the London market.

Of late years this county has given a name to a breed of sheep, derived originally from a cross between the Cotswold and improved Leicester, and an animal better suited for the purpose of dwelling in a chilly climate and moist soil cannot be found; the improved new Oxford sheep possess all the hardiness of the old Cotswold, with it the fattening property of the new Leicester. Splendid animals of this breed are always to be seen at the Smithfield Cattle Show, and at the meeting of the Royal Agricultural Society.

The tillage husbandry of Oxfordshire has hitherto consisted principally in following for wheat on strong lands. The low price of wheat, and the scarcity of tillage on retentive clays, must, however, compel all farmers on heavy soils to lay them down with grass: this would, no doubt, have been done long ago, but for the extreme difficulty that farmers find in converting heavy tillage into pasture lands. The best mode is to sow with rape after a fallow, soil with sheep, and sow with grass seeds. Mow the first year; top-dress the fields with guano or other portable dressing; stock hard with lambs and hoggets during the autumn and spring following; and the succeeding summer will find the field covered with a sufficiently rough sward to carry a heavy sheep without poaching the soil.

MARTIN'S PATENT IMPROVED JACQUARD LOOM.

This improved machine, is in operation at the factory of Messrs. Knill and Co., of Wood-street, Cheapside. Fig. 1 is an end elevation, and fig 2 a section through the middle A (figures 1 and 2) is an endless coil of perforated paper passing over the lantern or cylinder (C), by which it is raised to the needles (B), and lifted at once immediately over the perforations. The needles are connected by wires to the horizontal arms of the griffe levers D. The short vertical arms are attached in like manner to the long upright needles B, which, on the lifting of the needles, are disengaged from the lifting arms, and are attached to the sliding head J: this, by moving up and down, lifts the required threads of the warp to form the pattern. On the end of the lantern or cylinder C is a ratchet-wheel (C C, fig. 1), for regulating the progress of the paper: it is moved forward one notch at each rising of the sliding head J, by means of the crooked rod-bar I lifting the lever D and the prong K; and it is retained in its position by the latch E until the next movement of J, and thus the passage of the perforated paper is regulated, until the pattern is complete.



The following are the chief advantages of this improvement.

1st.—Entire suppression of the *Cards* as at present used in figured weaving of all textile fabrics—the wear and tear of which, and consequent loss of regularity in the pattern when worn—ignorant and careless workmen frequently occasion.

2nd.—The New Jacquard Machine is much more durable than the old one, as five to one, or more, there being little or no friction in the working—no revolving cylinder, or frame-driven surfaces—no brass springs or pressure on the eyes of the needles.

3rd.—The machine it is more smooth, steady, and silent in its motion, and can be worked with the greatest ease and safety by hand, or can be driven on a power-loom if required—at the rate of 120 shoots per minute.

4th.—It can be worked with more economy—as with the old Jacquard there are frequently more than one hundred needles—while this one has Jacquard needles only to the number of 400.

5th.—The pattern can be changed with much greater rapidity; and it is not liable to disarrangement, being fully as easy to understand.

6th.—The machine is not affected by any atmospheric influences

LONGEVITY.—From the *American Sun* of January, 1850, amongst the summary of deaths of remarkable persons during the year 1849, we extract the following:—Samuel Jenkins, aged 116, at Lancaster, Ohio. M. D'Ussel, formerly a page to Louis XV., Lieutenant Colonel of the 5th Regiment of Dragoons in 1794, and created a Baron of the Empire by Napoleon, aged 102; Pete Jackson, a negro, aged 122, at Amherst, Massachusetts; Louisana Thrower, at Ogechee, aged 133, and according to some, 137; Jean Baptist Roisdard, the oldest man in France, at Fontenoi, aged 113 years, 4 months, and 2 days; Mrs Elizabeth Barnett, at Gulberville, Paris, aged 111

PICTURESQUE SKETCHES OF LONDON, PAST AND PRESENT.

BY THOMAS MILLER

CHAPTER XXVI.—WINDOWLESS HOMES.

OUR contemplated and slowly-progressing sanitary improvements, cannot be accomplished perfectly without a sufficiency of light and air. We may limewash and drain for long years to come, but while we shut out the bright and cheerful sun, and refuse entrance to the refreshing breeze, we deprive ourselves of the very elements which are essential to health and life.

We call in the aid of darkness as a punishment for crime; and confine only the worst of felons in the dark and silent cell. We also punish poor industry in the same way; and, by our laws, close thousands of rooms in England against the light. That which God gave to all, we refuse to let man have—to cheer and ventilate his dwelling-house—unless he pays for it. The sun, and moon, and stars, and the sweet air of heaven, we tax indirectly; for, unless we pay, they are not permitted to shine upon us—neither by day nor night. We, poor worms! dare to tax the glorious works of our Creator! as if we had laid on "main pipes" that reached to heaven. "Let there be light, and there was light," said the Omnipotent. "Let there be a tax on light," said man; and he came with his shiny trowel, and he shut out our view of the windows of heaven. The sun beats and shivers his golden beams upon the high dead-walls, and endeavours in vain to reach our rooms, and turn our thoughts to the Creator, who left him swinging in the centre of space: the sweet breeze, also, that has come for miles laden with the fragrance of many a field and many a flower, flutters and sighs on the dead brick-work, like an imprisoned bird that would fain thread its way in and out between the branches. Alas! it can find no way through.

The doctor feels the pulse of his sinking patient, and calls for more air in the room, while Death grins behind the bricked-up window in triumph at the folly of man. The venerable vicar comes to administer comfort to the dying, and breaks his right reverend shins over the utensils in the dark passage, for they cannot afford to pay the tax for a fanlight over the door. "Illuminate our darkness," them comes from his very heart.

We, who were doomed to sleep in a dark attic in our boyish days, well know the miserable deprivation which this foolish and cruel tax entails on the poor. When, only morning from night by the dull sounds in the adjoining street—no ray of light penetrated the room in which we slept—we groped about for our clothes in the darkness: no morning sun shone upon us when we knelt down to pray: the light of the new day we saw not until we descended the creaking staircase, and beheld it sleeping (as if in mockery) on the hard pavement of the street. In that hot, low, dark, old room, have we lain awake many an hour, and wept because the sun was not allowed to look in and gladden us by his light. That was our first trial when, by the time we had numbered ten summers, we were compelled to leave our poor but happy home, and labour for the crust we ate in tears. Innocent, honest, and industrious, our childish hearts then unspotted with a crime, we were driven to the dark attic, on the ground we had died on the long days of June, to sleep on a pallet, on which the sun never shone, no not even through a broken pane: the dim twilight of more than a quarter of a century, do we now look upon that gloomy garret, and remember how with little cheped hands we knelt, and, while the tears fell on the dark floor, prayed to God for the sweet light.

Were we alone? Alas! there are tens of thousands at this very hour who are praying for light and air as we then prayed, and who are slowly taxed until they groan again beneath the load.

Plants die for want of light and air—without these elements all living things perish. God gave them to all, "the just and the unjust." Were a man to brick up a fellow-creature in a breathless room, to deprive him of air, and destroy his life, that man would justly hang for murder. Yet the law bricks up and kills thousands, and escapes—because the LAW IS NOT A MAN. Who can say how many thousands, that were swept away last summer, might have been living and in health, had they but dwelt in well-lighted and well-ventilated rooms? Are we not all, more or less, guilty of their deaths? Tax anything but the sun and air; deprive us not of God's gifts, lest in his just anger He should withhold them. In the proof-plates of this paper we stand and preach, and our text is "*Let there be light.*"

A wise Legislature would tax dirt and darkness, not light: what a mockery for the Commissioners to cause the removal of the dark windowless cellars, as they did during the late dreadful epidemic, yet to tax them the instant they put into lighted rooms! What a doing and an doing is this law! It says "Here you shall not live!" and the poor say "Then we cannot afford to live." So sanitary drivers between light and darkness, like paupers whom no parish will harbour. Better that our wines and spirits were taxed an hundredfold, than that thousands should perish for want of light and air. Charge us a guinea a bottle for our claret if you please, but let the "golden-nob" which runs on all the gates of Heaven fall untaxed and free. Make us pay through the nose for turtles, pine-apples, grapes, and champagne, but not for what you never gave us, never could make us pay for, and never could value the lives of your loyal subjects. If you could supply us with sunshine and air, on a dark, foggy November day, you might tax us. A fine day for a pic-nic party would be worth purchasing, or even for your own annual whitebait dinner; but you know such a blessing is not yours to bestow. Tax us, my Lords and Gentlemen, for what you alone have the power to withhold or give; but meddle no longer with the gold of your creator. We admit your "necessary evil," but call not the light of Heaven by such an irreverent name. Let the "World's great comforter," as an old poet calls the sun, shower God's gold upon rich and poor untaxed; add not to the "necessary evil" of taxation, by depriving us of what you neither sowed nor reaped. Were the moon inhabited, the tax for her light would be the just due of her indwellers, for the splendour shed upon our nights; and, could they see you, any honest jury would find a verdict for them. Give us more untaxed windows, and you may awaken "some mute" Hemchal in our courts and alleys. All have not the courage to struggle into the light, as we have done, through the darkness that shadowed the days of our childhood.

Let us remember and make open non-military men pay for not looking at the shako, or perukes, or hair dye, so that we may distinguish our gasoline antiques from the real young ones; or mosaic jewellery, or well-molesman, or those who are the true gentleman, and "live without their means;" or men who make long speeches, and love to hear themselves talk; or any other egotistical little evil or vanity. But—as you love to see your own images in a glass—let the dear bright olden golden sun come and go, in at every crack, and out at every crannie, as he did in the early mornings of the world, when there were neither bricks nor mortar to break the long lengths of his golden beams, between earth and heaven. We asked for a repeal of the Window-Taxes, and you gave us cheap corn: for light, which is as essential as bread, and you gave us fire-baked stones.

Repeal the Window-Tax, and pass an act that no houses shall be built, in future, without a thorough draught through them—windows in front and behind; no more dead-walls on which the breath beats and comes back again, and tries in vain to escape; but places where the sunbeams can come in shirt-naked, as God sent them out of heaven, and where the air, when it once enters, is not kept a prisoner, but as free to come in and go out as the wind that revels around the haycock, or tosses the dead leaves up, and laid bare the curly violets. Let the linen of the poor laundress wave on the clothes-line which stretches across her room. Let the dingy locks of the pale needlewoman be uplifted by it. Let the little children steal noiselessly out of their beds to see the dawn (even those) the sun gilding the window-panes in the morning, when he passes, and tinging them with crimson and hazy gold, when he sets at night. No fibs, and millions of little hearts will bless you.

Bless you measure;

even as ours would have done when we lay in that gloomy old attic, in the days of our childhood, or knelt weeping amid the darkness which had been made by our former legislature, and which too many even now upheld. Let there be little noses flattened against the panes in the morning, and little eyes uplifted, and sweet voices raised, as with hands on their tiny brows, they shade off the golden glory, and exclaim, "Oh, what a sweet sunshiny morning to play in!"

To show how unjust this tax is, we will look in amongst my neighbours. One is a bookbinder; he requires light for his business—the laying on of gold, &c. He is compelled to pay for twenty windows in all he lives in the kitchen, as he must have a good light for his workpeople, who number about twenty hands, and can't work by bad light enough. He growls and pays the tax, £5 19s. 3d.; sometimes makes a sacrifice to save his "goods and chattels" from being seized. Another neighbour is in the same trade; he has double the number of windows and twice the number of work-people; but his is only a workshop, and he pays no tax at all, except for the ten-windowed little villa he goes home to every night at Norwood. Is this just? His profits are above a thousand a year. Our poor dwell-on-the-spot friend cannot make both ends "meet and tie." Here the admitted "necessary evil" between man and man falls heavily on hard-handed industry. The burthen is not fairly borne, and we are sure every thinking man, whether in Parliament or not, will admit that this is unjust. Then, again, there are limits to the size of windows: if they exceed a certain measurement, they are charged as double. Thus the little light we are allowed is meted out to us, as if poor foolish man himself had made the blessed sun, and had more calls for its light and warmth than he could supply, so was compelled to measure it out with a sparing hand. We almost marvel that there has been no attempt to form a "flying island," such as Swift created for his inimitable Gulliver, so that it might hang suspended over anti-window-taxed towns, and keep off the light and rain, until they left off pattioning and ceased to murmur. Had we a little bit of land of our own, we would live in a tent until the window-tax was repealed.

Ask the doctors what kind of atmosphere hangs about these windowless rooms, and they will tell you that it is poisonous, and that no healthy person can inhale it without feeling its injurious influence. There is a sour and sickening smell about the unaired bed-clothes, and you feel as if the abiding-place of fever was amid those dark curtains. An air not such as God sent for man to inhale hangs about these places; the wind knocks against the blocked-up windows, but can find no entrance; only the stench in the damp kitchen throws out its noisome vapour, and gains admission; there is no breeze to disperse it. You have a taste as of copperas in the mouth the moment you enter these airless abodes. The "child-bed woman" sickens her time; and, when she is able to sit up, she looks on the blank walls before and behind her, until the monotonous level rows of brick become painful to her sight, and she cannot refrain from counting them over and over again. The bed on which the dead lay is occupied the next night by the living; for there is no other spot saving the close court or open street in which it could be placed for the wind to sweep over it, and carry off all its impurities.

You are making laws for giving the dead ample room in the open cemeteries, where the sun will shine, and the gentle grass blow over them when they "are chill to praise or blame," and can neither feel the warmth of the one nor the reviving sweetness of the other.

Another and a double standard: there are old city companies possessing halls and gardens, in the very heart of London, and these are hemmed in by buildings, hundreds of which have only dead walls to face these "green nestling spots;" nor dare the owners of these houses put in a window that would overlook the only open breathing places which our forefathers left us. Hundreds of such "legal" barriers as these must be overthrown before the great purification can be perfected, before the dark shadows are swept away which have for long years hung over and settled down upon those gloomy, airless, and windowless rooms. Let the sun shine "on the evil and on the good," and light be thrown on the dark dens which Man (more selfish than God) compel not the poor sempstress to burn her candle an hour earlier than she ought to do, for want of another window in her confined apartment; but let the rising and the setting sun flash upon the casement, even if it be only reflected from the lattice of her neighbour. Who can tell what dormant faculties may be awakened through the sun shining by day, and the moon and stars being mirrored on the casement and reflected on the chamber-floor by night, in place of the dull, dead, unmeaning blackness which ever relieves these scantimened rooms? Instead of the dim literary eye of thoughtless ignorance, an intellectual light might break forth, such as ought to stamp the expression of the features which were made "in God's own image," in stead of

> Two eyes, not dim, but of a healthy stare.
> Wide, sluggish, base and ignorant, and strange,
> Predominant in the lower deep
> A look or motion of intelligence
> From infant-conning of the Christ-cross row
> Or passing through a primer, line by line,
> Till perfect mastery crown their pains at last. WORDSWORTH

Repeal this tax which makes darkness a necessity, and let in a flood of golden light into our rooms—a shimmering of sunbeams on our walls: windows through which happy and innocent faces can look; openings into which the air will come, and blow the dusty cobwebs across the pretty eyes of the children, while they watch with wonder the bee or butterfly, which has lost its way in our miles of streets. Let there be light and easy places, where the root of violets, primroses, or the cheap geranium can stand in the window, and catching the sun and wind, live on for a few weeks, and bring pleasant memories of the green and far-away country. As gas has extinguished the smoky cressets and the dim oil-lamps that but served to make the "darkness visible" by night, make a law to knock through these blind walls and blocked-up windows, and let the sunny gold which God showers from heaven on rich and poor "on the just and on the unjust," stream even upon the dark nooks in which guilt shelters: then will the sun shine "with healing" on his beams, and more than one-half of your plans of improvement are accomplished.

MUSICAL REVIEW.

THE MUSICAL BIJOU FOR 1851. D'ALMAINE AND CO.

As usual, this volume is very beautiful decorated. The covers, presentation-page, the [illegible] are elegant designs. The frontispiece, the "Minstrel Knight," has merit in the grouping; but the figures are not so correctly drawn as could be desired. The portrait of Mrs. Sims Reeves is admirable. The pen-and-ink pieces comprise Sir Wellington marches, entitled "Waterloo," "Assaye," "Salamanca," "Vittoria," "Chudad Rodrigo" and "Barossa." Glover; quadrilles, polkas, and waltzes, by Ricardo Lenter, M. Sckiely, J. M. Jolly, and Wellington Guernsey. There are ten vocal pieces, the poetry by Bartholomew, Bruton, Beattie, E. J. Gill, Herrick, Byron, A. R. Samuels, Kirke White, H. Abrahams, and Mrs. Mackinlay; and the music by Miss A. S. Mounsey, Mrs. Mackinlay, Messrs. J. L. Hatton, A. Lee, G. B. Rodwell, W. H. Holmes, S. Glover, J. H. Cave, C. F. Desanges, E. Flood, and Alary. The volume is edited by F. H. Burney, and, with the names quoted above, as poets and musicians, it may be concluded that the handsome volume maintains its former reputation.

JULLIEN'S ALBUM FOR 1851. JULLIEN AND CO.

Edited by Mr. THOMAS BAKER, the clever violinist, this Album contains some very attractive and pleasing compositions. There are fourteen ornamental pieces, including Osborne's "Swiss Girl" dances, Jullien's quadrilles, polkas, and marches, by Jullien, Knight, Vogler, Fitzgerald, Laverna, and Balfour. The music of the songs is by Balfe, Edward Loder, Bishop, C. Barker, Laverna, G. A. Hachfurth, Frank Albert (Julien), Joseph Warren, Geo. Linley, Henry Smart, Walter Maynard, G. Stanley, A. M. Lee, Frederick Angelina, with poetry by Shirley Brooks, J. W. Lake, D. Ryan, G. Linley, E. J. Gill, H. J. St. Leger, Colonel Addison, and Mr. Rolls. The remaining portion of the work contains [illegible] stirring portraits of Jenny Lind and Sontag, Grisi, Persiani, Lablache, Tamburini, and Staudigl.

"I'VE WATCHED THE TREES IN THE FOREST GLADE. CARMONEL, composed by ROBERT ANDREW STOTT. DARWEN AND CO.

We notice this carmonet because the words are free from the sickly sentimentality of the ordinary run of modern ballads; the melody wedded to the poem is plaintive and expressive.

COCKS'S MUSICAL ALMANACK. COCKS'S MUSICAL MISCELLANY. Cocks and Co. The "Almanack" contains a variety of useful information in the smallest compass, and as it is [illegible] might be read, increased if more care and attention were bestowed in the compilation. It would be but fair, also, if the numerous extracts from the journals were acknowledged. The "Miscellany" is a monthly journal of music and musical literature, issued [illegible] magazines at a very cheap subscription. Four numbers have appeared, and each and each have been given in the editorship. With each number is a separate sheet, four pages of sacred or secular compositions are given, [illegible] which are the names of Beethoven, John Bishop, Jeremiah Clarke, Cairn Haydn, Warren, Dr. Hayes, Dr. W. Croft, &c.

THE ENGLISH NUMISMATIC MEDAL.—This "Royal road" to the knowledge of coins has lately been issued by Mr. Webster, and consists of three Russell-street, Covent-garden. Within the compass of a crown-piece not only grows a chronological list of the Sovereigns of England from William the Conqueror to her present Majesty Queen Victoria, with the years and dates of their accession to the throne, but furnishes likewise a complete fabulous series of the silver coins (and silver only) owned by each Sovereign. Thus we find that Edward VI. minted the greatest variety, comprising the farthing, half-penny, penny, half-groat, threepence, groat, sixpence, shilling, half-crown, and crown. Extraordinary or unusual pieces, struck on special emergencies or particularised in the margin, or exergue, as "Elizabeth struck three-farthings and three-halfpenny pieces;" "Charles I. struck ten and twenty shilling pieces in silver," &c. To the numismatic student, this medal must prove invaluable as a reference; and even the more experienced collector will have a retentive memory, may find it a serviceable pocket companion. It has been executed by Mr. W. J. Taylor, of Little Queen-street, Holborn, where, also, the medal may be procured.

THE MANUFACTURE OF GUN-BARRELS, AT BIRMINGHAM.

THE STEAM HAMMER.

The manufacture of fire-arms is one of the most extensive trades carried on at Birmingham, and in all its various departments, of which the gun-barrel is considered the most important, employs a large number of persons. The Government Manufactory, for the production of arms for the Army and Navy, is established in Birmingham, and gives employment to about 300 persons. The Government factories of arms are under the superintendence of a Commissary-General, who resides in London. There are two Inspectors of Small Arms, who reside in Birmingham, and have the superintendence of the proving and viewing of arms, and of the workmanship of the various contractors. The Inspectors and Commissary, who are accountable for the correctness of the arms, have under them a number of clerks, gunmakers, armourers, viewers, and other persons employed in the proving and viewing of arms. The Government factory is situated in Lancaster-street, Birmingham, and is a large building, with extensive workshops, and a proving-house for the trial of the barrels. The Government establishment for the manufacture of arms for the Army and Navy is under the superintendence of a Principal Storekeeper, who resides in London, and has under him a Storekeeper and Clerk in Birmingham, and a Storekeeper and Clerk in Liverpool, who barter the arms in the African and Guinea stores for gold dust and other produce. It is asserted that many of these guns find their way to Europe, and that the Prussian gun-traders are the principal purchasers with whom the African Royal and Chiefs have commercial connexions. Many thousand muskets were exported to Africa in the year 1842. Within the last few years the Government factory has been greatly enlarged, and the number of persons employed increased. During the last year the number of barrels proved at the Government proving-house was 1,200,000, and the number of locks proved was 1,000,000. The number of persons employed in the manufacture of arms for the Government, and the number of persons employed in the trade generally, are not known, as the masters are not required to make any return of the number of persons employed by them. The Government factory employs about 300 persons, and the wages for the artificers are considerably higher than the wages for the artificers of private manufacturers.

The manufacture of a gun-barrel is as follows. Messrs. Sargent, in addition to supplying the Government factory with barrels, have a large private manufactory, and are considered to be the largest manufacturers of gun-barrels in Birmingham. The process of manufacture is the same in the Government factory as in the private manufactories. The barrels are made of iron, which is imported from Sweden and Russia, and is considered the best for the purpose. The iron is received in bars, and is first cut into lengths by a large pair of shears. The bars are then heated in a furnace, and are afterwards rolled into thin plates, which are again cut into lengths by the shears. The plates are then heated to a red heat, and are rolled round a mandrel, or iron rod, which is the size of the bore of the barrel. The edges of the plate overlap each other, and are welded together by the hammering they receive from the rollers. The barrel is then heated to a white heat, and is welded by the hammering it receives from the rollers. The barrel is then heated to a red heat, and is welded by the hammering it receives

THE MANUFACTURE OF GUN-BARRELS AT BIRMINGHAM.

GRINDING THE GUN-BARRELS.

quarters of an inch to an inch thick, but are stripped through with as much ease as they were pieces of wrapping paper. At every descent of the quiet but powerful shear, a new length is severed. These lengths of cold iron are destined to be made into gun-barrels. Taking one of these lengths, let us trace its progress. After being cut it is cast into the forge, and heated to a white heat. It is taken out of the furnace by a workman called a roller, who, seizing it with his pincers, passes it between two rollers, revolving upon each other, and moved by steam-power—the one concave, and the other convex. Issuing from the side opposite to that which it entered, it is seized by the pincers of another workman, also called a roller, and is found to have curled round in the form of a tube. It is now passed in the same way through a smaller pair of rollers of the same construction, under the pressure of which its edges are brought a little closer than by the first operation. This having been done, a mandril, or long bar of iron is passed through it, and it is once more consigned to the furnace. When of a proper heat it is taken out to undergo the next process, which is that of welding. The business of the welder is to hammer it round and round on the mandril, so as to make the edges cohere, and to make the mould a perfect tube, without seam or jointure. In this state the mould is not above eighteen inches long, and is much too short and thick for a gun-barrel. It is more it is consigned to the fire, whence issuing, the mandril is inserted through it, in order that it may be subjected to the operation of a pair of rollers, which in less than half a minute squeeze it out to about double its former length. While still red hot, it is passed back by the workman through a smaller pair of rollers, and receives a few inches of additional length. On an average, each mould is subjected seven times to this process, at the end of which it is to all outward appearance a gun-barrel, but rude and rough, and requiring much additional labour of a very different kind to complete it.

"In this manner are formed the barrels of all the common and cheaper kind of guns, such as are used for the export trade to Africa, and also contract guns of superior kind for the military."

The twisted gun-barrel is are formed in a somewhat different manner. The length of Damascus steel is twisted while cold around a mandril, and is then placed in the furnace, till it is of a red heat. It is afterwards welded by the hammer in the manner shown in the Engraving.

"The gun-barrel, whether of the common steel or of the twisted Damascus, is now ready for the next operation, which is that of boring. The business of the gun-barrel borer is to clean and polish the interior of the tube, and at the same time to work it to the size or bore required, and to give it a perfectly smooth and even interior surface. This operation is performed by steam-power, and is superintended both by men and women. The process of boring is performed by an angular rod of the hardest steel, which is made to revolve in the barrel by steam-power, and scrapes the inner surface as it turns, till it is as beautifully smooth and polished as a mirror.

"The [illegible] is next [illegible] it is passed into the hands of a workman who [illegible] by the other end a steel plug, [illegible] and tapers [illegible] which [illegible] [illegible] [illegible]

A STORY OF THE PRESENT DAY.

BY AUGUSTUS MAYHEW,

ONE OF THE AUTHORS OF "THE GREATEST PLAGUE OF LIFE," "HOW TO GET MARRIED," ETC., ETC.

CHAPTER I.

SPITALFIELDS AS IT WAS AND AS IT IS.

In the days of glorious Dick Whittington and his much-respected cat it was firmly believed by all true Englishmen—who had never been to London—that its streets, courts, and alleys were all paved with bright red gold. The very wisest of our old forefathers—those who lived in the *green* country—not only placed implicit faith in the tradition, but, bringing forward, in support of their day-dreamings, a strong host of highly imaginative anecdotes, would talk of the field upon which the famous beer-drinking boor who should dare to doubt that which the oldest inhabitant himself had accepted as truth. Newspapers had, unfortunately, not been invented in those days, and the extreme difficulty of a gentleman at York obtaining any correct information as to the condition of the metropolis gave the imaginative traveller an almost tyrannic sway in the realms of fancy.

The high-road to London was then looked upon as the high-road to Fortune. Had any one in that golden age—when bankers were supposed to be the great contractors for paving—dared to hint at the possibility of a Londoner ever wanting bread, he would have been the laughing-stock of the whole village. The end and aim of every good father was to hoard up as many crown-pieces as would purchase a stout cob, and furnish a strong saddle-bag, to enable his son to make the journey to the great city. For to their simple minds, to pick up a living in the metropolis consisted in helping themselves to a few golden pebbles for immediate use, and laying by three or four good large paving-stones as a store against a rainy day.

It is difficult at the present time, when a gentleman in a hurry can lunch in London, dine in Birmingham, and sup in Edinburgh, to account for the stupidities of our wise old forefathers. The task of explaining away these Californian dreams must be left to those who have walked down Fleet-street on a wet afternoon.

Although some hundreds of years have passed by since the days of the worthy Lord Mayor and his much-respected cat, still there are many spots to be found in England where the inhabitants entertain ideas of London no less splendid and incorrect. In their own minds they have settled the important fact that it is the most delightful and fairy-like spot in the world. They picture it to themselves as a huge assemblage of palaces, cathedrals, monuments, and mansions, spaced out by pleasant green fields, shaded by noble wide-spreading trees, and covered in by a bright blue heaven.

There is nothing more calculated to convey an erroneous idea of London than its street and district nomenclature. The stranger starts with astonishment on being told that Milk-street cannot boast of a single dairy, that Bread-street never thinks of baking, that the Poultry has discarded cocks and hens these hundred Mayors, and that Birchin-lane has not a single school to bless itself with. Custom has so blinded us, that with an old-timey only equalled by watermen and postboys, we still cling to our ancient callings. Hence it is, that if a pestilence breaks out, the first spot it attacks is certain to be an Elysium-terrace; or, if a frightful case of poverty and suffering is brought to light, it is sure to have been discovered in a Paradise-row.

Among those districts, whose name is an insult to it, we may rank poor Spitalfields. The strongest will not be the brilliant imagination, will feel convinced, by one glance down the Bethnal-green-road, of the absurdity and almost cruelty of its title. A pauper might as well be christened Rothschild.

There is nothing about the poverty-stricken place that even approaches to the pastoral. It is true, that, about six centuries ago, this now overcrowded district was covered with rich meadows. In the midst of them stood the hospital founded by good Walter Brune, citizen of London, and gentle Rosa, his wife. Now, as that same one, the foot-sore and dust-covered traveller would beg the bed and meal he was too poor to purchase in the City. Here, too, were welcomed those who suffered from sickness or distress, to be carefully tended, and gather health and strength from the soft breezes that swept by the wooden turrets of the priory. To these rich meadows would the London 'prentices bear their May-pole, striped with gay colours, and ornamented with quaintly-trimmed foliage, amongst which dark green leaves were the hand-some bunches of bright flowers. There, as the long silken streamers floated in the breeze, they would tread down the daisies and the buttercups, till the brown earth marked the ring they had danced.

A few centuries have "told dreadfully" upon Spitalfields. Its happy youth has passed away, and it now stands, poor and miserable, well stricken in years; for London, like a sturdy lad, soon grew out of all knowledge. As it weaned or hemp kept within the city walls, it threw off its confinement, and, stretching itself, thrust out its stony arms, and seized upon the country. What had been the father's pleasant rustic home, became the son's busy City warehouse. Islington, from being a town, became a parish; and the buildings of the City, instead of covering only 370 acres, as of old, soon spread over the vast extent of 46,000 acres. The spot where Walter Brune's timber-built priory stood, in the Spitalfields, is now marked by a paved square of sober-looking brick houses. Instead of the poplar, the fashionable tree now raised its lofty head; and the breeze that blew the rustling leaves along the grass, and smelt of wild flowers, now blinds one with black smoke, and reeks with the anches of some neighbouring court or alley.

In the year 1685, Louis XIV., yielding to the bigotry of his advisers, revoked the edict of Nantes, which Henry IV. had granted in favour of French protestantism. The frightful butchery that followed this—the fiercest and most inhuman act in the history of religion—belongs to the saddest tale of persecution that ever disgraced the records of a country. But out of this immense evil, flowered, as from a dunghill, a certain small seed of good; for to the religious persecutions of France, England is indebted for its knowledge of the art of silk-weaving, a craft that up to the above period had been one of the boasted proofs of the superiority of French skill. Many of the French Protestants, loving their religion better than their country, made desperate efforts to convey away their property in their place of refuge; and the greater part of these emigrants fixed upon Spitalfields as their resting-place, settling themselves in their several trades and occupations, the weavers more especially

For many years the poor refugees formed a colony amongst themselves. The French language was but little understood, and the manners and customs of the strangers were so opposed to those of their English neighbours, that there could be little or no companionship between them. Their sons and daughters intermarried, and to this day there are many families able to trace the history of their descent back to the troubled days of the Huguenots. In this way the race has been preserved, not only in name, but also partly in appearance.

* * * * * * *

It was Easter Monday, and the Bethnal-green-road was in a determined holiday making mood. Houses in clean flannel jackets were shiny silk hats, and walked along the road smoking long clay pipes. At the corners of many streets, canvas booths had been fitted up. At one, cheap toys were sold; and along the roof of the canvas shop were fixed rows upon rows of showy red rattle-bags whizzing round and round in the breeze, causing some little wooden soldiers to work very briskly, in spite of an awful lack of stiffness in their joints. At another, a tall, half gipsy-looking girl, ornamented with copper earrings and a bead necklace, thrust out before each passer large gutta-percha-looking spicenuts. Presently the coalman's or greengrocer's cart, filled with chairs, would go walking past, with "To Stepney" chalked upon the panels; whilst the driver, in his white shirt-sleeves, stood upright on the footboard, holding the reins tightly, and energetically waving his whip in the air. Sometimes one of these carts would gallop past, the chairs crowded by giggling girls, who would weigh the cart down behind so much, that the shafts stuck up high above the noseys in the horse's head, and nearly lifted the animal off its legs. As friends met each other, they would talk for a moment, and then, arm-in-arm, hurry to the nearest public-house. Inside one of the largest "palaces," where huge tubs with gilt hoops are seen through the plate-glass windows, a "row" is going on, and a woman's screams are heard far above the shouting and swearing. Not a labourer is to be seen on the scaffolding around the half-built spire that is slowly creeping up high over the houstops. Occasionally a family party hurries past, the mother carrying the well-filled pic-nic basket, and in a flutter from looking after her girls every now-and-then pulling down the creases in their frocks, with a jerk that nearly pulls the unlucky one backwards; whilst the father, in his glossy Sunday coat, with his collar nearly hiding his ears, carries the baby, its little face all smeared with lime and red from the paint it has sucked off its toy. At the end of the road where it turns off to Stepney, there is a large crown outside the tavern; and a fair in the small way is going on, for every minute or two the shadow of a monster swing suddenly darts across the road and back again, like a huge pendulum.

Among this throng, a thin delicate girl, whom want and poverty had quickened into seeming age, was trying to make her way. It was as much as ever she could do, for the people were strolling lazily about, and standing in small crowds, looking at the stalls. Sometimes, to save time, the girl would run along the road; at others, she would squeeze her way behind the people that blocked up the pavement. So she had plenty of time, push and struggle as she would, to look about her at the fairings.

It was easy to see that the child was not bound for Stepney. The look, with its white tired-all-over face, sticking up in her gown; the brass thimble had been unremoved from her finger, telling too plainly the sad tale of want that priced a holiday with starvation. Still there is a charm in the gladness of others that silently creeps over us, forcing its soothing goodness upon the unhappy, until, as in a deep sleep, all sorrow is forgotten, and the heart, eased of its burthen, gains strength in its peace. So, as the girl gazed on the merry crowd before her, a smile stole over her poor face, hushed as it was for want of many a meal, and her cheeks grew red as if health had coloured them.

There was one booth that cost her a longer and a stronger struggle than any one she had yet passed. It was the largest she had seen; and, according to the long yellow spider-legged letters on the red board over the stall, was "The Temple of Fashion, from Paris." Not that the proprietor or his wife looked very French, as they both were in English admirably. Their stock, too, was purely British, consisting of the usual assortment of Scottish shepherds and shepherdesses, whose cheeks and plaid dresses admitted of bold colouring; of framed portraits of huge-eyed spaniels and their interesting families; and plenty of china lambs, with wool that looked prickly to the touch, like horse-chesnuts. In fact, there were all kinds of costly and beautiful articles, from silk mittens at 4½d. "*distingué*," to gold brooches at 2s. 6d. "very chaste." The proprietor seemed to be in a very large way of business, for over a glass case full of artificial flowers, where the woman was flocking chick as blackbirds to a cherry-tree, hung a placard stating that "600 hands were wanted directly."

"Dear, dear!" said the girl, looking at it, "I wonder if he would give me some work," and she stood, as if doubting whether to ask or not. But there were so many people buying, and the gentleman who wanted the "600 hands directly" seemed so busy with his own single pair, that she did not dare to go to him. To see as much of the Temple as her hurry would allow of, the poor girl, when she had passed it, continued her journey backwards. Suddenly, as a magnificent bunch of florid roses with glass dew-drops fixed her admiring eyes, a slight collision brought her thoughts, that were hard at work arranging the tempting flowers in the straw bonnet she wore on Sundays, back to Spitalfields

On recovering from the shock, she found herself in the centre of a group of workmen, one of whom, as he pointed to a shattered pipe on the pavement, asked in a gruff voice "What did you do that for?

"I am very sorry, sir; it was an accident. I was walking backwards," answered the girl, greatly frightened.

"I've a pleasing good mind" continued the man, going close to the poor frightened thing, "to give you summut as shall break you of that habbit of yourn; and then, perhaps, you won't go spending your holidays breaking gentlemen's pipes!" And the man lifted his open hand as if to strike her.

As she tried to shrink away from him, the man caught sight of a bottle she carried half-hidden in her shawl. Taking hold of it he pulled it from her with the knowing look of a clown stealing sausages, and held it up in the air about three inches from the ground.

"Mother has rheumatiz pretty early during fair time," cried one in a red plush waistcoat with pearl buttons festooned over it.

"How much did you stand him?" asked a second bullying-looking man with a glossy spaniel under his arm, and whose curiously trimmed whiskers stood out like box-edging.

As if stung with the laughter that followed this coarse sally, the girl, losing all her fear, answered boldly and sharply, "The bottle isn't for that; I'm going to the doctor's"

On hearing this there was another roar, and another shower of witticisms.

"They've got some wery refreshing medicine down at the Red Lion, at fourpence a quartern," exclaimed a coster-boy, with a knowing wink; until the trembling girl, finding that the crowd that surrounded her would not let her depart, began to cry. Her tears, still sobbed down by the two or three of the mob, as if softened by the sight of tears on a holiday, cried to the man whose pipe had been broken, to "let her go her ways." But the huge bully fellow seemed little inclined to comply with the request, and was about to begin the spree over again, when a tall woman, armed with a huge cotton velvet reticule, almost as big as a horse's nosebag, forced her way through the throng, intent on rescuing the girl from her mercy.

As soon as she had gained the centre of the ring, she turned fiercely round on the man with the box whiskers, as she knew he must fall its bows nestled like corn in a breeze, and cried, "Call yourself a man, do you, to go and teaze the poor thing like a set of wermits as you are? yes, all of you! How would you like it yourself? You was young ones yourself, you was, for all your nasty big red wary whiskers." And then, despite the cries, shouts, and laughter of the spectators, some of whom were imitating the spitting of cats very cleverly, she advanced to the astonished girl.

"What's your name, my dear?" she asked.

"Kitty Lemore, ma'am," answered the girl.

"Where does your father live?"

"In Slater-street, ma'am. he's a weaver by trade, if you please."

"And what was you doing with that bottle, my dear?"

"My father is ill, ma'am, and I was going to return it to the doctor, and get some more stuff for him, if you please."

Kitty now found herself under the protection of some dozen ladies, consoling her to their utmost, and each one so full of sympathy that they could not help every now and then casting a look of red-hot indignation on the populace; and adding that, though they might fancy themselves to be men, they considered them to be quite the reverse.

Kitty's father was one of the many who, in the side of the road, was once more on her way, she began to think over the danger she had escaped from. "I wonder," she asked herself, "what should make people so cruel to me. I never stir out but some one is unkind to me, and yet I try to wrong no one." and as her face grew more and more sorrowful, she continued: "It is because I'm poor that man ill-treat me, and bark and snarl at me like a lady's dog at a beggar girl. If I had worn a thick rustling silk gown, covered with pretty flowers, such as father weaves, that man would not have been so angry for the loss of his pipe. He did not say a word until he saw this poor patched-up gown. Dear, dear! I wish I was rich" and as she turned the handle of a chemist's door, she added, with a sigh: "Even here they speak harshly to me.

A young man with long hair was as busy with a pestle as if he were churning. When the little bell over the door tinkled, he swung back his locks, and stared the modest girl full in the face, as he said "Now then, what's up"

"I come from Mr. Lamere," answered Kitty.

"Brought back the bottle—eh? Well, then, the stuff's on the counter waiting; he's to rub his chest with the one, and take the t'other;" and to work went the pestle again.

"Is this the one he's to take?" asked Kitty, holding up one of the bottles with a timidly doubtful look.

"No! would you poison him?" returned the youth.

As Kitty walked homewards, she reasoned with herself: "Yes, no one has a kind word for me! The rich alone can be happy; misery is the lot of poverty alone, and it is because men hate suffering that they hate the poor; we remind them only of the bitterness of life, and they drive us away as they would the sadness we breed;" and with these thoughts, the girl, no longer caring for the merry sights around her, hurried down the close damp lane that led her homewards.

(To be continued.)

JENNY LIND.—The Queen of Song has arrived in New Orleans where she was to give three concerts. The price of tickets ranged between 5 and 10 dollars. She will shortly leave for Havana. The nightingale had a very narrow escape from shipwreck in her recent tr, from Wilmington to Charleston.—*Halifax Morning Chronicle.*

GREAT EXHIBITION OF THE INDUSTRY OF ALL NATIONS

SPLENDID PRESENT
TO SUBSCRIBERS TO THE ILLUSTRATED LONDON NEWS.

In preparation,

A MAGNIFICENT VIEW OF THE EXTERIOR OF THE VAST BUILDING

DESIGNED BY MR. PAXTON

FOR THE GREAT EXHIBITION IN 1851.

This View will be Engraved in a very superior style, and printed on a large sheet of fine paper: it will be published at the time of the opening of the Great Exhibition. The Print will be given to all Regular Subscribers to the ILLUSTRATED LONDON NEWS.

Also in preparation,

A SPLENDID VIEW OF THE INTERIOR

OF

THE GREAT EXHIBITION BUILDING.

*** Further particulars of these Prints, together with other Engravings in preparation connected with the Great Exhibition, will be duly announced.

198, Strand, September, 1850.

TO CORRESPONDENTS.

B Z, Illescas.—The Rev Lord John De la Poer Beresford, brother and heir presumptive o the Marquis of Waterford, has four sons

INQUIRER.—The National Anthem, according to the best circumstantial evidence, was composed by Dr John Bull, on the occasion of King James's visit to Merchant Tailors Hall, after the discovery of the deed of Fawkes. The pronoun "Thee" or "Her" is quite immaterial.

M C Ufton Foreign pupils are admitted at the Paris Conservatoire on the same terms (which are very low) as natives; but we would not recommend the friends of a young lady to send her to Paris, as the model details her education at the Royal Academy of Music at very reasonable charges

E F B—The fines at the Police-courts are distributed to deserving objects, by the presiding magistrates

G S L or Anon—"Hints on Etiquette," published by Longman and Co

A Z—Sir Wesley's Red Books on Civil Engineering

LAUNCESTON.—The Land-Tax Act may be had of any bookseller, with the details

A SUBSCRIBER, Oil Jewery, had better consult some work on Cane-sabbing, as that publication is beyond our literary ken

CARNON, Glamorgan.—See the "Handbook of Billiards," and "Mingaud's Treatise on Billiards"

A SUBSCRIBER, Ross.—Application should be made to the contractor

G H—Treatise on Chinese Colour Painting by Mr Scott, sign the Impression required

B H and MINNA SMITH—The names of admissions to the Great Exhibition have not yet been decided upon; but, as soon as done, we shall have no time in communicating the same to our readers

A CONSTABLE.—The Clerical Agency Office

W T D, Sherborne.—Apply to Mr. Weale, publisher, Holborn

J D, Aberdeen.—We have seen WALLACE'S Autographic Press in successful operation

ALPHA.—There is no particular work which professes to give upon the terms you state

T—The word Electro-Biology literally signifies the relation of Electricity to the vital fonction. A work on that subject has been published by Mr Simon. We have heard, however, that some person is visiting the north of England exhibiting various conjuring tricks under that title

C H A Constant Subscriber).—Burke's Dormant Universal Calendar

E A Hall.—Treatise on Backgammon," published by Ball, Fleet-street

A C, Wakefield.—We have not the address in question

MERCURY.—Quicksilver, a channel, but we have not room for the Illustration

C B Baldock.—Dr Wolff was in a native of Seville

N N.—See Sir Rumbley's recent work on the Cape of Good Hope

J H, Kilmarnock.—There are no such words as Ben-magnon-more-ambrosial

Old Subscriber.—Permanence of Mr. Dent's magazine

M A.—The Queen has not yet conferred any such honour

A Y.—Thee is no such word as Yeo—you wish to obtain

Q Y R (first No of the Jewish newspaper reviewed January 1, 1848

Q Y R (first No of the ILLUSTRATED LONDON NEWS containing the History of Wood Engraving may be had at the office; or, it is reprinted in a handsome volume, with many additional illustrations

A SUBSCRIBER, Liverpool.—We cannot inform you

CAPTAIN J H, Tiverton.—1. The arms of Drake are—"Arg a wivern, wings displayed and tail nowed, gu. *Crest*: A demy arm, erect, couped at the elbow ppr, holding a battle-axe, as, headed or." 2. An eagle displayed gu. *Motto*: Aqua non nunquam nocet

INQUIRER, Bristol.—Apply to Messrs Ball and Co, Parliamentary booksellers, 59, Parliament-street, Westminster 2 The Hand of "Gentlemen at Arms" is composed of forty gentlemen, who have received the personal appointment, subject to the approval of the Captain. 3. Lord Sydenham died unmarried

P P.—The Duchy of Cornwall, we believe, in Hunter's "History of Hallamshire, or Doncaster"

DE VERE—To what country did the Knight referred to belong?

J O P.—We do not trace any privileges at Christ Church, Oxford, belonging to the family of Canterbury

GEORGE.—We do not find any arms registered to the name in question. "Rebecca's Heraldry" is a very correct collection of arms

A CAVALIER.—The arms of Bonville, sometimes written Bonneville, are—"Sa. six mullets arg."

AN INQUIRER.—In establishing your parentage, in recovering from an Assurance Company, or in any other case, you need not employ a barrister

MILITES.—Refer to the History of the Regiment

HERALD.—The arms of Boyne are—"Sa. on a chev, between three Hons' heads erased or, three towers of the field on a chief barry of six wavy of the first, and az. an anchor between two fleurs-de-lis of the second." 2. *Crest*: A lion's head erased, entired with a wreath, all ppr.

M S.—The Prince Dora Pampilli is one of the wealthiest and most prominent of the aristocracy at Rome

PHILO.—No persons holding a military or naval commission are entitled to place a cockade on their carriage hats

A T S.—The Obituary of the *Gentleman's Magazine* for 1838, and you will find a memoir of Mr

A CONSTANT READER.—No Deans in question are entitled to the style of Very Rev. We do not see why the Dean of Christ Church should not be possessor to precedence over others of the same rank, as Chancellor of the University. The parties to whom you refer are entitled to the style of "Honorable"

H S.—The present Duke of Cambridge succeeded to the title he bears by right of descent from his father, on whose death he succeeded to the Dukedom of Cambridge, as a new creation

FITZ-HILDEBRAND.—Chalmers is the authority to whom Sir Walter refers

P, Bristol.—The arms of Lord Bexley are—"Arg, on a bend sa. between three talbots' heads erased or." More anciently the family bore "As. semée of estoiles, a crescent arg."

A CONSTANT READER.—We know not what you mean by "a term to set out for good to be unkind," is taken?

M H R.—Natives of English parents, no matter where he is born, is an English-born subject

ANON.—A kindly corrects an inaccuracy in a recent number of our Journal. One of the late Mr. [illegible] was not a Bishop, but a Dean

ROY.—There are no arms to the name in question. The official history of a Pursuivant at Arms is very trifling—a few pounds annually. The officer makes his income by his professional business in the Heralds' Office. It is probable, as a matter of course, that he grants arms and changes of names, in making genealogical researches, &c.

INVESTIGATOR, Rochester shall be answered next week

ALBARD.—The arms of Dewsbury, of Dewsbury, Yorkshire, are—"Or, three Hens barruly gu. *Crest*: A cock-a-mountain. The origin of this crest, says tradition, was the circumstance of the death of Percival Creasore, who, it is asserted, was attacked and killed by a wild cat from one of the little woods of Barnborough. Arn. Creasore, the eventual heiress of the family, married John Dewsbury, Esq., one of the celebrated Councillor, Sir Thomas More

R L S.—The heraldic blazon of the arms subscribed cannot be correctly given from the Engraving, which does not indicate the different colours. The nearest approximation to accuracy is—"Quarterly, in the second and third quarters a griffin segreant over all, a bend cotised gu, charged with a leopard's face between two fleurs-de-lis *Crest*. A tiger sejt erased ppr, collared or, and in the paws a shield." We can trace these bearings to no family of the name

S M E.—We will endeavour to ascertain by next week the crest and motto of Sir B M

LILIAN S.—The Royal Italian Opera, Covent-Garden, will hold the largest audience of any London Theatre

P G.—Mr Lockey is unmarried. Miss A. Williams, the soprano, sister of Miss M. Williams, the contralto, is married, and has a child

VISITOR.—The arms of Dacre, of Dacre, &c., are—"As. three Hens rampt. crowned or. *Crest*: A demi lion rampt. gu, holding in the paws a cross patée or." Arg. a chev. vert between three bulls passant gu. *Crest*: A bull passant gu." Of Hard, "Or, a chev. between three swords erect or."

R S, Middlewich.—We will try and obtain the desired information

C H.—The best plan for you is to adopt the name, and the very usage by you will legalise the assumption

A CONSTANT READER.—The present Viscount Templetown was formerly the Hon. Henry Montagu Upton.

X Y Z.—The younger daughter of a Baron, married to the younger son of a Commoner, takes precedence of the wives of her husband's elder brothers

A OLD SUBSCRIBER AND CONSTANT READER.—The Wyvern may be simply an emblem, not placed on an heraldic wreath, the bearer will not be liable to the use of armorial bearings

B, AN OLD SUBSCRIBER.—The arms of Astley of Astley are—"As. a cinquefoil pierced erm." *Crest*: Out of a ducal coronet arg a plume of feathers gu surmounted with another plume or.

A OLD SUBSCRIBER AND CONSTANT READER, Scotland.—Ireland has rank and precedence among one another according to the dates of their respective patents

B, AN OLD SUBSCRIBER.—Mrs Chetwode, Rector's, Rector Hall, the Foundling, the Temple, &c

ALICE-MARIE Castellan is a Frenchwoman Mdme Anna Thillon is an Englishwoman

M A R.—The office of the Royal Naval Female School, No. 32, Sackville-street. (See Low's "Charities of London")

A SUBSCRIBER, Scarborough.—The admission prices of the Great Exhibition are not yet fixed

M C V.—See Mistress's Handbook of Needlework" Wax Flowers," published by Routledge and Co., Soho-square

ONE OF OUR CONSTANT READERS.—The house in question, in Chandos-street, was not burnt down, but taken down for improvements

P S S S.—Hide in the first part of the second half of the 13th century

DAGUERREOTYPE PLANTAGENET.—As the Great Exhibition, the House will not be "lighted up," the colouring suggested for this purpose would be unadvisable

J C H, Bradford.—See "Pappo Pastile" Damping the paper and passing over it a warm iron will remove it

T B.—The proper form is "Mr" and "Mr. Henry

G T N, Liverpool.—The Foreign Postage Notices referred to were official: probably the reduction will take place in the next month or two

W A B.—We are not in possession of the dimensions of the Habaron Monument, or we should have given them with the Illustration

EMILY, Guildford, is recommended to apply to the Secretary

A SUBSCRIBER CAPTIVE, Liverpool.—See the Recognition Supplement of our Journal

J L P, Leeds.—The printing in Reference to the Ordnance Survey was not in the Hague Collection

DACTYLO &c.—See the "Clerk" in Knight's "Industries"

YORK.—Apply to Mr Lumley, bookseller, Chancery-lane

A CONSTANT READER, Torquay, is thanked; but we have [illegible] Illustration

T S.—The London Post-office Directory [illegible]

R N, Dublin.—We believe the colossal Horse, [illegible] Wellington monument, in Phœnix-park, Dublin, is the largest equestrian statue in existence

E B, Liverpool.—The words commencing "Full many a gem of purest ray serene," is from Gray's "Elegy written in a Country Churchyard"

S H G, Taunton.—Three Engravings of St Barnabas' Church, Pimlico, appeared in the ILLUSTRATED LONDON NEWS for [illegible]

A SUBSCRIBER, Leicester.—We cannot inform you

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLER, 198, Strand aforesaid.—SATURDAY, FEBRUARY 1, 1851.—SUPPLEMENT.

THE ILLUSTRATED LONDON NEWS

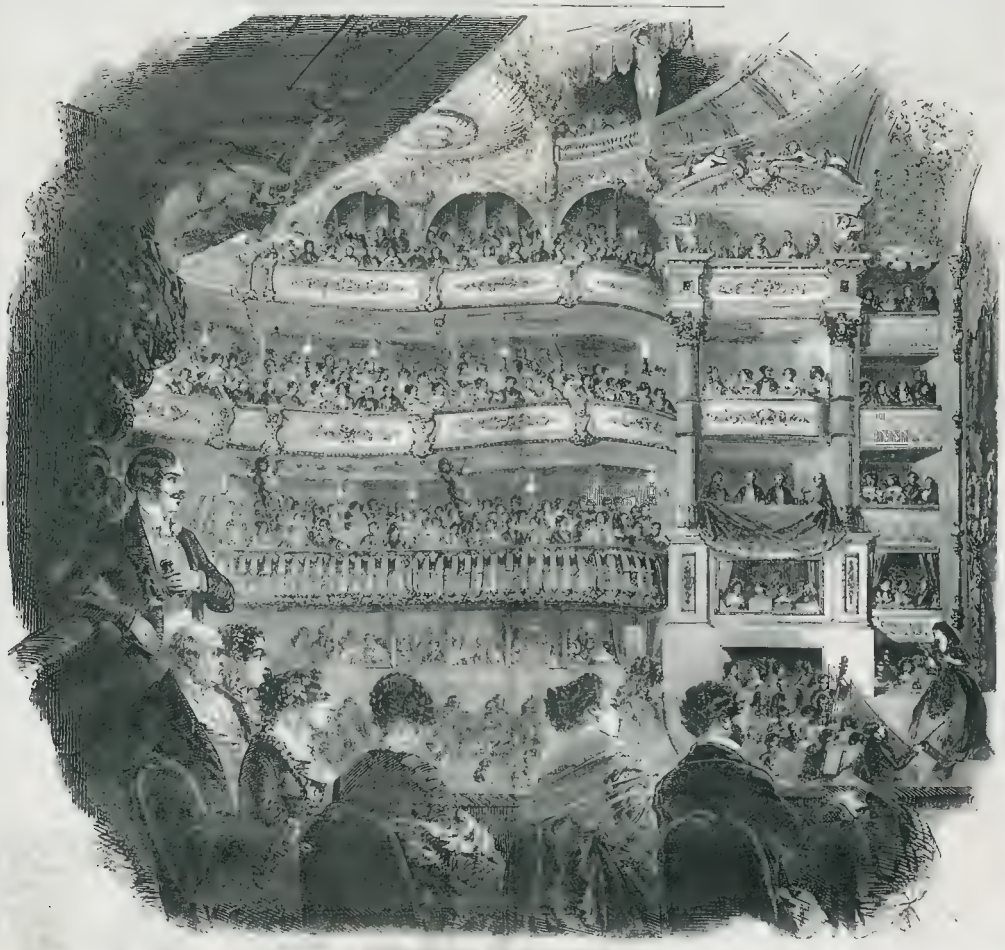
No. 468.—VOL. XVIII.] SATURDAY, FEBRUARY 8, 1851. [TWO NUMBERS, 1s.

THE FREE-TRADE AND FINANCIAL BUSINESS OF THE SESSION.

ALTHOUGH the Royal Speech prudently left unmentioned many of the topics which must soon occupy the attention of Parliament, the debate on the Address, uninteresting as it was, and, except for the *escapade* of Colonel Sibthorp, unusually dull and flat, showed pretty clearly what course the great current of talk that periodically sets in at this time of the year, and which continues to flow until August, is likely to take in 1851. From these indications, it is clear that neither the Papal question—although it will claim and receive preeminence both as a matter of talk and of work—nor Agricultural Distress, nor any one of the topics mentioned by her Majesty or the Ministry, will be allowed to monopolise the attention of the Legislature, to the neglect of these great fiscal questions which affect the employment and the earnings of the lower and middle classes of the people.

Those questions resolve themselves into two classes—one of indirect, and the other of direct taxation; one of Free Trade, and the other of Revenue. In the first class are included the Excise Duties on Paper and Soap; the second comprises the Window Duties and the Income and Property Tax. Although there are other items of taxation which press for consideration—such, for instance, as the Tea Duties—the four we have selected are the most urgent, and are capable of abolition on the one hand, and of adjustment on the other, without the necessity for making a very serious inroad upon the national resources.

Hitherto, every experiment which has been made in reducing and abolishing taxes that directly prevented the employment of the people and the extension of trade and manufactures, has been successful. The revenue, apparently sacrificed, has speedily been replaced; so that the Treasury has been no loser by those wise remissions. The abolition of the Excise duties on glass, of which Sir Robert Peel set the example, and of those upon bricks, which we owe to the present Chancellor of the Exchequer, should encourage the country to demand, and the Ministry to grant, the immediate abolition of the Excise Duties on those two important articles Paper and Soap, which are yet subject to them. A Ministry that avows itself to be a friend of Free-Trade, and of which the individual members notoriously pride themselves on their adhesion to the liberal principles of commercial policy which dictated the reform of the tariff by Sir



Robert Peel, cannot fail to see the necessity of taking off such clogs upon industry, even at the risk of some present loss of revenue. Free-Trade is but one-sided and partial, as long as any important manufacture is impeded by the visits of the exciseman. Did no question of public morality and public health enter into the consideration, the mischief of Excise duties upon these two articles would be great, preventing, as they do, the employment of perhaps a quarter of a million of people, and acting, as the Paper Duty is proved to do, as a direct tax upon an immense number of trades and pursuits, and upon the exportation of almost every class of goods manufactured in this country. While a manufacturer who wishes to convert the almost worthless refuse of the cotton-mill or the corn-field into such an article as paper, is prevented from doing so by a tax of £14 per ton upon that refuse—whether it be cotton-dust or straw—as soon as he attempts to make it useful, it is a mockery to assert that the principles of Free-Trade have been fairly or fully carried out. We have so often dwelt upon the injurious operation of these two Excise duties—especially the first—and its effects upon the education, the literature, and the morals of the people, that we need not, on this occasion, travel over the well-known ground. It is as a question of Free-Trade alone that we would urge, at the present time, upon the Legislature the policy as well as the justice of the abolition of both of them, whatever the immediate apparent sacrifice may be. The money they produce is no gain. A couple of millions per annum levied upon the exercise of trades which are not injurious to public health or morals, but the very contrary, and the levy of which prevents the employment of many thousands of people, cannot be profitable to the State to the whole amount at which it figures in the estimates. It acts badly in at least three different ways: it interferes with manufactures, which is one evil; it increases to the public the price of the commodities by at least a double the amount which the State receives, which is the second evil; and it increases the number of persons dependant upon the poor-rates for support, which is the third, and by no means the least. It may fairly be estimated, that for the couple of millions of pounds sterling levied from the paper-mills and soap-works of this country, the people pay four millions more than they would otherwise have to pay for those articles; besides, in all probability, half a million of pounds sterling in poor-rates, which would not otherwise be required. When, in addition to these considerations of Free-Trade, it is a question of education and enlightenment, that the materials for instruction should be free, it is evident that true statesmanship should put the sponge upon the Paper Duty as a source of revenue, and look elsewhere for the necessary taxation. The question of the Excise Duty upon Soap is scarcely so important as that upon the Paper Duty, but the same arguments apply to it. To tax soap, is to tax a necessary of health and cleanliness; and, as a dirty people cannot be a moral people, even the Soap Duty becomes, like the Paper Duties, a question of social happiness and elevation.

The other class of fiscal questions comprises two which are somewhat different. They may both be considered as property taxes, which are in themselves, though the most disagreeable, the most just of all imposts, and which must continue to be levied until those happy days when we shall have paid off our debt, and can manage to live and play our part in the world without large military and naval armaments. But, as at present levied, both taxes are either unwise or unjust. The Window Tax is, in its very nature, unwise, because it is a tax that destroys the beauty of our street architecture, the comfort of our homes, and the health of large classes of the people. There is every reason to believe that the doors of this tax are so small that the advocates of its abolition may spare themselves the trouble of pointing out in any further detail its manifold and manifest evils. The Income and Property Tax, which expires in April next, must be renewed. There is, unfortunately, no room for doubt upon that point; but, if the Government be wise, it will take the opportunity to make the tax a more just one, by making some slight difference between precarious income and realized property. As long as the present iniquitous system of making both pay alike is continued, so long will the State place itself in the position of a wilful wrongdoer, and so long will many persons consider it no offence, or, at most, a very venial one, to evade a tax which they feel to be unjust. They will take false returns of their incomes, and glory in the deed. No tax ever imposed in this country has been productive of more immorality in this respect than the Income Tax of Sir Robert Peel; and the Government will remain unpopular, and the people to some extent immoral, as long as its injustice is allowed to continue. The returns show too clearly to admit of doubt, that a systematic evasion of this tax, to a large and increasing amount, is annually practised.

All these are serious questions, and must occupy the attention of Parliament during the present session. Yet a very simple remedy might obviate the evils of all the obnoxious taxes which we have specified. By the increase of the Property Tax to five per cent.—leaving the Income Tax as it stands, at three per cent, and taxing all realized property, under as well as above £150 per annum—the Chancellor of the Exchequer, with his present surplus, might totally repeal the Window Duties and the Excise Duties upon Paper and Soap. By this modification, the unfairness of the Property and Income Tax would be removed, and the holders of property would not be more heavily burdened than they are at present; for they would, in consideration of the additional two per cent., be relieved of that minor property tax the Window Duty. They would, in addition, enjoy, with the rest of the tax-paying classes, the advantages of cheaper education and cheaper literature, even if cheaper soap should be considered too trifling a boon to enter into their calculations. Whatever may be the present opinion of the Chancellor of the Exchequer upon these subjects, we would impress upon the advocates of the abolition of the Excise Duties upon Paper and on Soap, and of the Window Duty, not to relax in their exertions to obtain their repeal. There is no time so favourable as the present; and arguments, supported by facts, cannot fail to influence the Government in its determination, if they are brought forward with sufficient energy and perseverance.

THE ITALIAN OPERA IN PARIS.

The frequenters of the Italian Opera-houses in London, in glancing at the Engraving of the interior of the *Théâtre des Italiens* in the French capital, will be at once struck with the difference in the arrangements of the places. Here, privacy is as much sought as possible, and the private boxes with the curtains, are constructed to achieve that purpose. In Paris, on the contrary, the great ambition of the *habitués* is not only to see, but to be seen. The private boxes are therefore fronted after the rows of stalls, commodious *fauteuils* in fact, for the visitors; and thus the display of elegant *toilettes* is one of the most fascinating attractions of the Opera-house. The pretty hand, the well-shaped arm, or *le blanche épaule*, can be exhibited to perfection in the brilliantly lighted Theatre. The present edifice, in which the Italian Opera performances take place, has been formerly devoted to divers undertakings: at one time it was a kind of Sadler's Wells as in the olden days, and was called Théâtre Nautique; at another period it was a third lyric theatre, under the title of Théâtre de la Rénaissance, at which Madame Thillon made her *début* in Paris, as *Lucie*. About eight or nine years since, the Italians, after having been some time at the Odéon, took possession of the Salle Ventadour, and have remained therein to the actual epoch.

The Italian opera in Paris is not of such ancient date as the establishment at Her Majesty's Theatre. The first organized opera —Buffon, as it was styled was in 1753; but it was a failure, as was that in 1778. Its resuscitation, in 1789, was the work of the *coiffeur* of the unfortunate Marie Antoinette; but the exclusive privilege granted to this amateur hair-dresser was sold by him to Viotti, who established the opera at the Théâtre de la Foire Saint Germain, under the direction of the famed Cherubini, with Mestrino as chef d'orchestre. In those days the works of Cimarosa, Guglielmi, and Passiello were the rage, executed by the celebrated buffo Raffanelli, the basso Rovedino, the *prima donna* Mdme. Morichelli, &c. Such was the success of the speculation, that a body of shareholders built a larger theatre in the Rue Feydeau (it was called, in compliment to the Count de Provence (afterwards Louis XVIII.). Théâtre de Monsieur. The reign of terror, in 1793, broke up the Italian Opera undertaking, which remained dormant until 1801, when it reappeared at the Théâtre des Victories National, in the Chaussée d'Antin, under the direction of Benucci. It was opened with Cimarosa's "Matrimonio Segreto," which had been produced three years before at Vienna. The locality being inconvenient, the Italian Opera was removed in 1802 to the Salle Favart, which was opened under the direction of Mdlle. Montansier, with a Government grant of 80,000 francs per annum. The lady-director failed in the speculation, and then the artists carried on the theatre for a year on the commonwealth principle, dividing the receipts, but it did not prosper. In 1804, the Emperor granted a subsidy to Picard, of the Théâtre Louvois, and the Italian Opera was again removed. The popular composers, in addition to Cimarosa, were Mosca, to whom is ascribed by Fétis the invention of the *crescendo*, (which is also attributed to Rossini), Farinelli, Mayer, Weigl, and Fioravanti. The *débuts* of the famed Spanish tenor, Garcia (father of Malibran and Viardot), in 1808, in Paër's "Griselda," caused a revolution in the Italian lyric drama. He became the life and soul of the Opera Buffa, introducing works not only by the composers we have named, but those of Gnecco, Martini, and, above all, of the immortal Mozart, besides producing his own opera, "Festa Indostana," which had an extraordinary run. Garcia was succeeded, as director, Spontini, the composer of "La Vestale" and "Fernand Cortez." The performances were then increased to three times per week, at the Odéon; Tacchinardi, the great tenor (father of Mdme. Persiani), was included in the troupe, with Crivelli, Angrisani, Porto, &c. After two years in the Imperial capital, Spontini gave way to Persuis and Sir Napoleon Paër retained his post as Director of Music even after the fall of the Empire, when the privilege was granted by Louis XVIII. to Madame Catalani, as a reward for her mortal antipathy to the fallen Emperor. A liberal annual grant of 120,000f. (£4800) accompanied the license. During the Hundred Days she had left the Bourbons but after Waterloo returned to Paris, and was again entrusted with the privilege. It is related of the husband of Catalani, that when asked by Paër what company should be engaged, he replied, "Ma femme et quatre poupées." For some time, this system, of excluding all *artistes* who might endanger the monopoly answered, and Rode's variations sufficed to fill the Salle Favart; but the public became fatigued at last with *perdrix, toujours perdrix*," and, in 1818, her reign terminated. Curiously enough, two young *artistes*, who afterwards created a prodigious sensation in the operatic world, Mdlle. Cinti (afterwards Cinti-Damoreau) and Madame Pasta made their *débuts* in 1816, without the slightest suspicion as to their future glory, under Catalani's management Paër returned to power, and improved the *troupe*, but was bitterly reproached for paying Blasis his own "Agnese" and "Camilla," and for not producing the work of the popular star of Italy, Rossini. At length Paër brought out the "Inganno fortunato," and the "Italiana in Algieri," of the same, of Pesaro, but no impression was made; and even the "Barbière," mounted at the instance of Garcia, was but frigidly received, Rouzi de Beguis being the *Rosina*. But when Madame Mariselle Fodor appeared in the part, Rossini's genius was recognised with rapture. Berdogni, Pellegrini, and Graziani made their *débuts*, and afterwards Levasseur. When the Opéra Italien was joined to the Académie Royale de Musique, Viotti became director of French opera declined, and the former dominated with Rossini's masterpieces, Pasta's *Desdemona* being a veritable triumph, with Garcia's *Otello* and Levasseur's *Iago*. Galli, Naldi, and Zucchelli (the latter an Irishman) had afterwards great success as bass. In 1824 an important event occurs, the arrival in Paris of Rossini in his wife's (Colbrand's) train for London, and the *petit Liszt*, as he was then styled, made his *début* at a concert in the Théâtre Italien. Curioni and Donzelli were also added to the troupe, and Garcia, the latter especially in *Otello*. Then came Rubini, in 1825. He appeared as *Ramiro*, in Rossini's "Cenerentola," but he remained only a season, and it was not before 1833 he created a great sensation. Meyerbeer's "Robert le Diable" and "Il Crociato" made head against Rossini's "Semiramide." In 1825, Mdme. Sontag made her *début*, as *Rosina*, in "Il Barbière," with immense enthusiasm. In 1827, the great contralto Pisaroni appeared; and, in 1828, the unrivalled Malibran made her *début*, as *Desdemona*, to the Otello of Garcia. Shortly afterwards, his son, Manuel Garcia, brother of Viardot and the teacher of Jenny Lind, made his first appearance, as *Figaro*, to Rubini's Count. He has left the stage to be the first singing-master in the world, as he now is. Niedermeyer, a Genevese musician, was tried in a new opera; and then Halévy, the composer of the "Juive" and "La Tempesta," with "L'Artisan," sustained by Malibran. After Sontag quitted the stage to become Countess de Rossi, Mabbran was left in undisputed possession of the Italian Opera; but in 1831 she made her *débuts* for England. Donizetti's "Anna Bolena" next fixed public attention; but the *début* of the Titan of basses, Lablache, as Figaro in "Il Barbière," was a grand event for the Italian Opera in Paris. Then came Ivanhoff, Tamburini, Judith Grisi, and Mdlle. Dugher. During the management of Robert and Severini, at the Salle Favart, Bellini's "Puritani" was produced for Giulia Grisi (the Grisi), Rubini, Tamburini, and Lablache. Donizetti's "Marino Faliero" and "Don Pasquale" were mounted for the same distinguished body of artists. Between 1834 and 1840, Mariani's "Bravo" and "Ildegonda," Mercadante's "Vestale" and "Briganti," Costa's "Malek-Idel," Persiani's "Ines de Castro" and "Il Fantasma," Donizetti's "Lucia," "Lucrezia," and "Elisir d'Amore," were the chief novelties. Madame Persiani's *début* in the "Sonnambula" was in 1837; and that of Viardot, in *Desdemona*, was in 1839. Lablache, jun., appeared in *Figaro* in 1841. Salvi, Mario, and Ronconi were the successors of Rubini and Tamburini. In 1845 Verdi's operas were produced, and works by Ricci and Pacini. M. Vatel was the director after the retirement of M. Viardot, who married the *prima donna* Pauline Garcia. The Italian opera was then given at the Odéon, but M. Vatel ultimately leased the Salle Ventadour, where he made a large fortune, until the revolution of 1848 occurred. He then assigned his privilege to a M. Dupin, whose reign was very brief. Ronconi, Mdlle. Steffanone, Mdlle. Cruvelli, &c., of the Académie, and of Monfant, the tenor, the theatre was deserted. He struggled through 1848 and 1849 to the end of the season 1850, Angri making her *début* in this last year, but was ultimately compelled to retire by ministerial decree, and the privilege was granted to the present director, who took the house in November last, with Madame Sontag, who has been as popular as she was twenty years before. We have recently recorded the triumphant *début* of Mdlle. Caroline Duprez.

Such is the rapid sunnary of the progress of the Italian Opera House in Paris. There is one great advantage for the speculator—there is no ballet. At eight o'clock the opera begins; between the acts there is a long delay, passed by the gentlemen in the *foyer*, or saloon, where the *journal du Soir* is sold, and by crowds of the dry or moist throats. The interior of the theatre is handsome, in form it is semicircular; the private boxes behind the open seats are elegant and commodious: the *façades* of the different circles are tastefully decorated. The ceiling and proscenium were painted by Ferry; the plafond is in the shape of a cupola, with a rich chandelier; the figures supporting the tiers of boxes are by Klagmann. The theatre will hold about 1200 persons. The ordinary season is from October 1 to March 31; but, as Mr. Lumley began a month later, it will only terminate the end of April. The prices of admission are moderate: the tariff is 10 francs for a stall; but this is raised, according to the degree of attraction, by the ticket hawkers. There is an open pit behind the orchestra stall, for which the entrance is only about three shillings; and the amphitheatre or gallery is fifteen pence. The private boxes are let by subscription for the season. In the proscenium stage box, with the dress circle, is seated the President of the Republic, who is a constant visitor. Since the management has been in Mr. Lumley's hands, the fashionable aspect of the Theatre has been greatly restored, and the display of diamonds and rare lace, and the gaiety of the tints of the ladies' costumes, render the *ensemble* on a full night very brilliant. The orchestra is not very large; it is conducted by M. Bousquet. It will be perceived by our Engraving that there are boxes on the stage, behind the curtain; these are generally filled by the friends of the *artistes* and by the *personnel* of the establishment.

LAMENTABLE ROBBERY.—On Wednesday, information was received by the police, that some expert thief had effected an entrance into the premises, Suffolk-street, Pall-Mall, stealing £2000 worth of railway shares, 80 sovereigns, jewels value £200, and other miscellaneous property, getting clear off with his booty.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The President of the Republic, following up the advantages he has hitherto gained on the political cross-board over the coalition of the Mountain and the majority, has got his "transition Ministry" to propose to the Assembly a measure for an additional pecuniary allowance, to enable him to meet with becoming dignity the necessary expenses of his high position. The Dotation Bill, as it is called, was submitted to the Assembly on Monday evening, by the new Minister of Finance, M. Germiny, who simply asked for an additional credit for [illegible] francs, [illegible] francs, and [illegible] francs. He [illegible] said he had no reasons to submit for his present proposition beyond the [illegible] in the past year; and should, therefore, leave it at once to the decisive propriety of the Assembly.

No discussion followed, as the President intimated that the bill must be referred to the *bureaux*, in order to appoint a committee to inquire and report upon the subject. The committee has three days to be appointed, and it is said that thirteen out of fifteen of its members are hostile to the measure. The [illegible] however, is very prevalent that the bill will be passed by the [illegible] standing.

M. de la Roche has presented a proposition to the National Assembly, to the effect that the reporting of judicial trials calculated to injure public morality or the honour of families, shall be interdicted, under a penalty of a fine of from 100f. to 1000f.

A report, founded upon a private letter from Venice, states that the Duke of Bordeaux was lying in a dangerous state, without the slightest hope of recovery. This rumour, as may be naturally supposed, excited great consternation and grief among the Legitimists; and it was thought, last week, that the death of the Duke's death, the Legitimists and the Orleanists would unite in supporting the claims of the Count de Paris to the throne. This report, however, requires confirmation.

A political conspiracy is said to have been discovered, which implicates General Lahitte, while holding the office of Minister of Foreign Affairs, by carrying on a correspondence with the Duke of Bordeaux, with the view of encouraging Legitimist principles.

M. Léon Faucher has written to the *Débats* to contradict the statement made by [illegible] that the Government had [illegible] of Lyons, praying for a revision of the Constitution, and a prolongation of the President's powers.

PRUSSIA.

From Berlin the only news of consequence is, that, on the 2nd instant, the ministry sustained a severe defeat in the Lower Chamber, by the rejection of the 30th section of the Government Ministerial Responsibility Bill. The numbers were—For the clause, 100; against it, 184.

AUSTRIA.

The spirit of Absolutist control and of military encroachment which the authorities have recently displayed, with reference to the very circumscribed civil liberties which the subjects of Austria are suffered to enjoy, has led to the revival of political conspiracies in Vienna; the advices from which city, under date the 30th ult., state, that a conspiracy had just been discovered there, which was very extended in its ramifications. Even part of the garrison of Vienna had been implicated, and the [illegible] was fixed for [illegible] Many persons—students, citizens, and officers on half-pay—have been arrested, but as have been effected for the apprehension of those persons who still [illegible] to mislead the soldiers. The Austrian press will not be allowed to [illegible] these facts.

The Imperial ordonnance relative to the definitive organisation of the [illegible] administrative authorities in the kingdoms of Lombardy and Venice, have been published. According to this arrangement, the territories of Lombardy and Venice are distinct. The Austrian element in the former territory and the intrigues of Mazzini have caused the number of troops sent to be considerably augmented.

SCHLESWIG-HOLSTEIN.

By the advices received this week from Kiel, we learn that the affairs of the Duchies have at length begun to assume an aspect of satisfactory adjustment. The Holstein Ministers have been transferred their ministerial powers to the new Provisional Government appointed by the German Confederation, which consists of Baron Heintze, Interior; M. Brun, Finances; M. Maumes, Justice; M. Heintzelmann, Education; and Count Blome, President of the Ministry.

In their proclamation, announcing the new order of things, the Stadtholders declare that the German Confederation intends to protect the established relations between Schleswig and Holstein.

The new Government has published a proclamation to the inhabitants of the Duchy, declaring in what the fundamental laws of Schleswig, 1848, are abolished; the Diet is dissolved; the Frankfort fundamental laws for Germany are likewise abolished; and it is decided that all laws, decrees, and enactments which were passed since the 24th of March, 1848, will have only a provisional validity.

The Danish Government undertakes the guarantee for the paper-money issued by the late Holstein Government.

The Danish prisoners (760 privates and 10 officers) have been escorted to Rendsburg, whence they will be brought to Kropp to be exchanged.

The King of Denmark has published laudatory addresses to the army and the navy.

One thousand eight hundred Austrian troops are preparing to occupy the city of Lubeck.

BELGIUM.

In our accounts this week from Brussels we have an official notification of the increase derived by the state from the indirect taxes in the year 1850, from which it appears that the prosperity of Belgium was on the increase, even previous to 1849. In that year there was a considerable augmentation in those taxes, and in 1850 they amounted to above 4,000,000 francs more than in 1849.

The office of Minister of War has not yet been filled.

UNITED STATES.

We have accounts this week from New York to the 2nd ult. Since our last advices, Congress has discussed several interesting subjects. On the 16th ult., petitions for a modification of the tariff were presented for the silk manufacturers of New Jersey; resolutions were adopted, calling on the President for all correspondence relative to Central America and the armed interferences there of her Majesty's ships; and correspondence relative to Cuba was also called for.

Washington accounts state that a large number of the leading members of Congress had signed a declaration of hostility against a renewed renewal of the slavery agitation at last year. The Secretary of State had accepted the tender of the services of Southampton, offering the use of that port (with free transportation of the goods to Vauxhall, which stands outside of the building, for the Exhibition) for the American vessels conveying goods to the world's fair. The Secretary of the Navy had ordered Commodore Stanly, at Southampton, that orders will accordingly issue to the commander of the *St. Lawrence*.

From San Francisco we learn that another great fire had occurred in that city on the 14th of December, causing a damage to the amount of £50,000 sterling. It commenced in the store of Messrs. Cooke Brothers and Co. During the period from November 12th, 1849, to December 12th, 1850, 28,956,035 dollars of gold dust were shipped to the United States from San Francisco custom-house.

The steam-ship *Atlantic*'s non arrival, though 29 days out, continued to be a source of great anxiety. Some of the journals expressed a belief that she had met with an accident and run for shelter to the Azores.

WEST INDIES.

By the arrival of the usual mail from the islands, we have intelligence from Jamaica and Barbadoes of Jan. 14, Demerara and Trinidad of Jan. 11, Antigua of Jan. 15, St. Thomas's of Jan. 19, and Vera Cruz of Jan. 7. The cholera was still prevalent at Montego Bay and Hanover; but at Kingston, Port Royal, and in other districts, it had almost disappeared. Dr. Cooke, a skilful medical practitioner, had unfortunately fallen a victim to the disease. The other islands were generally healthy, and the crops appeared promising. At Barbadoes a larger crop of sugar was expected than had been known for years.

The specie imported had amounted to above £60,000 sterling, and a member of the Assembly was charged with being concerned in the same.

Jenny Lind has reached Havana, and, if we may believe the last accounts, was already the heroine of the day.

In the course of the year 1850 the number of German emigrants from the port of Antwerp is quoted at 7016. Of these 6 went to New York; 737 to New Orleans, and 145 to Valparaiso. The number of emigrants from the port of Hamburgh amounted to 7364 [illegible]23 went to New York; 575 to New Orleans; 1026 to Rio Grande do Sul; 53 to San Francisco, in the Brazils, 110; to Valparaiso, 332; to Quebec, 887; to San Francisco, in California, 312; and to Australia, 477. The number of emigrants [illegible] was, at 1849, 10,260; in 1848, 11,078; and in 1847, 14,619. These figures show a steady decrease of German emigration—at least, so far as the port of Antwerp is concerned.

On Sunday afternoon, as some boys, who had clandestinely obtained possession of a waterman's boat, were rowing near Bugsby's [illegible], the vessel got foul of a tier of shipping, the tide running strong at the time. Being unskilful and afraid, they rose from their seats in great alarm, and capsized the boat. Their cries brought a number of persons to their assistance, and three were saved, but two were unfortunately drowned.

CHURCH, UNIVERSITIES, &c.

OXFORD

A summary of the numbers of the University, up to January, 1851, shows an increase, as compared with the summary of January, 1850, of 58 members of convocation, 47 members on the books, and of determining bachelors: the whole, at the same time, shows a decrease of 24 undetermining bachelors and 5 regents. The Responsion List contains the names of 273 candidates, and is the first published under the new system, although it combines a great many names under the old system. The new examination statutes relating to the responsions state, "that the first responsions under the new system and the last responsions under the old will be carried on at the same time and under the same masters of the schools in Lent Term, 1851." The masters of the schools will require the attendance of those undergraduates only who offered themselves for responsions under the new statute in the schools on Monday last.

THE EPISCOPAL CHURCH IN SCOTLAND.—The *Inverness Courier* states, that "the venerable Bishop Lowe, finding that his resignation had not been accepted or acknowledged by the bishops, and that other irregular proceedings had occurred, has withdrawn his resignation, and continues to be bishop of his diocese."

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently been made:—The Rev. Robert Eden, to the Bishopric of Ross and Moray, Scotland. *Incumbents Found.* The Hon. and Rev. Horace Powys, Rector of Warrington, Lancashire. The Rev. J. S. Upton, Rector of Tankersley; the Rev. John Ward, to Catterick. *Rectories:* The Rev. John Wakefield, to Bughley, near Much Wenlock; the Rev. Ralph Will am Lit-tel Tolleniache, to South Witham, Lincolnshire; the Rev. John Marsh Lakin, to Gilmorton, Leicestershire; the Rev William Brodie, to New Alresford, Hants; the Rev. John Stephen Hall, to Dalby, near Terrington; the Rev. Robert Wilson, before-n Batrye, to Hever, Kent; the Rev Vernon Guise, to Little-Birch and Aconbury; the Rev. Carey Brock, to St. Pierre-du-Bois, Guernsey; the Rev. F. M. Cunningham, to East Haled, Acton, Hants. *Vicarages:* The Rev. Wm. Morgan, to Llanidloes; the Rev. H. T. Shelton, to Redborne Cheney, Wilts. the Rev. Reginald John Mapleton, to Great Glen, Leicestershire; the Right Hon and Rev. Henry William Powlett, Lord Bentinq, to Hannington, Basingstoke; Tuddenham annexed, in Norfolk; the Rev David Williams, to Llanwnnen, with Silian, Cardiganshire; the Rev. R J Geanne, to Alfreton, Derbyshire.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and affection: The Rev. Richard Roe, from the Sunday-school teachers, on his resignation of the charge of the parish of Leigh, Dorsetshire; the Rev. J. C. Harris, from the inhabitants of the parish of Crewkerne, Somersetshire; the Rev. Thomas Hutton, from the congregation of St. Sepulchre's Church, Northampton; the Rev. Charles Overton, from the ladies of the parish of Cottingham.

VACANCIES.—Crickhowell Rectory (sinecure), Brecon; value, £103; patron, Duke of Beaufort. Llanwrnog Rectory, Denbighshire; value, £439; patron, Bishop of Bangor; and Ruthin-Ward with Llanrhaiadr Kinmerch, Denbighshire; value, £263, with residence; diocese of Bangor, patrons, Dean and Chapter of Westminster; Rev R. Newcome promoted. Mastership of Martock Grammar-School, Somerset; patrons, Trustees; Rev. G. M. Gould promoted.

PAPAL AGGRESSION.

THE COUNTY OF CAMBRIDGE met on Saturday, in pursuance of a requisition signed by nearly 900 freeholders. Among the gentlemen present were The Earl of Hardwicke, Lord-Lieutenant; the Hon. E. T. Yorke, M.P., Mr. R. G. Townley, Mr. H. M. Tinders, M.P., Sir Vincent Cotton, Bart.; the Hon. and Rev. H. Yorke, the Rev. Dr. Webb, Master of Clare Hall; the Rev. Dr. Fardell; and a great number of clergymen. The resolutions, being of the usual character, were severally proposed and seconded by the Earl of Hardwicke, Mr. G. R Townley, Mr. C. Sliders, Mr. Cox, of Wisbeach, Mr. St. Quintin, Mr. Lilly, of Wisbeach, Mr. Alderman Foxwell, of Cambridge, and Mr. Osler, of Whittlesford. An address to her Majesty, with a rider referring to the concessions made by the Government to the Catholics, proposed by the two latter gentlemen, was unanimously adopted, to be presented by the Lord-Lieutenant.

THE DUKE OF WELLINGTON.—Certain Protestants of Dublin have sent an address to the Duke of Wellington, by the hands of a Mr Thompson, remarding him that he had said, on passing the Catholic Relief Act, in 1829—"That, I am dis-appointed in my hopes of tranquility, after a trial has been given to the measure. I shall have no scruple in coming down to Parliament, and laying before it the state of the case, and calling for the necessary powers to enable the Government to take the steps suited to the occasion." In or words, that, if the bill shou d prove a failure, your Grace would not hesitate to call for its repeal." They infer that it has failed, and they call on him accordingly to propose the repeal. To this address his Grace has sent the following reply, which, being worthy of preservation, like most of the letters of the veteran, we give entire:—

Strathfieldsaye, Dec. 13, 1850.

Field-Marshal the Duke of Wellington presents his compliments to Mr Thomas Hill Thompson He has received Mr Thompson's letter, dated November 26, in which Mr. Thompson has forwarded an address to the Duke, signed by himself and others, described as loyal subjects Inhabitants of the city of Dublin, on a subject on which he had received anonymous letters, and he had observed paragraphs in Dublin newspapers, but which he had not thought worthy the consideration of any reply or any notice.

In truth, each person, on perusal of the published record of the speech referred to, should have recollected that the speaker thereof was at the time the First Lord of the Treasury and the Minister of the Crown conducting the business of the government in the House of Lords.

If any doubt could be entertained of the meaning of the expressions used by the speaker in that character, such should have been sought for by a diligent and observant inhabitant

FEROZEPORE.—THE FORT.

INDIA.

Accounts in advance of the usual Overland Mail have been received during the week. They are dated Bombay, Jan. 3, and Calcutta, Jan. 21. The chief news by this arrival is the installation of Sir J. Grey at the head of the Bombay army, and Sir W. Gomm as Commander-in-Chief of the forces in India; and the departure of their predecessors in office, Sir C. Napier and Sir Willoughby Cotton. The latter general arrived at Malta on the 27th ult. Previous to his departure he was complimented at Bombay by a splendid entertainment, consisting of a dinner, and a ball and supper, which were given in the Town Hall on the 31st of December, and were attended by the whole *élite* of the community, the late Commander-in-Chief having enjoyed a high degree of popularity in the presidency

Sir C. Napier left Ferozepore on the 18th of December, *en route* to Kurachee, where he was expected to arrive about the 8th of January, the steam-frigate *Meanjfir* has been placed at his disposal by Government. It is expected that he will leave Bombay for Europe by the mail steamer of the 17th of January Sir Charles has published a farewell general order, deprecating the propensity of the officers of the Indian army to incur debt, the extravagance and luxury of messes, and the fatal facilities for officers borrowing money at usurious interest afforded by the north-western banks of India. Sir Charles held his last Indian review at Ferozepore, on the 11th of December, and was enthusiastically received. In the evening he was entertained by her Majesty's 78th Highlanders; and, in returning thanks for his health being drunk, took occasion to declare that he had never known a more worthy and truly noble-minded man than his predecessor, Lord Gough; and spoke with the highest possible praise of the gallantry and efficiency of the Sepoy armies of the three Presidences.

The Governor-General was on his progress northwards towards Peshawur. He had met with a splendid reception at Lahore in December; he was to meet the Maharajah Goolab Singh about the 24th of that month, and the ceremonies were expected to be most august on the occasion

Sickness continued very prevalent among the troops in the Punjaub—about 10 per cent. of the garrison at Lahore were in hospital; at Peshawur there were 1400 men in hospital—they had lately 2600; the mortality, however, had not been great.

The act of the Legislative Council, authorising land to be procured for the use of the Calcutta Railway, had become law, though not till half the cold season had been lost. The first cargo of rails for the Bombay line had arrived, and matters were proceeding favourably.

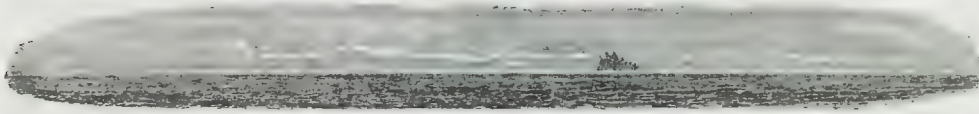
Mr. E. K. Pringle, late Commissioner in Scinde, had resigned the service

The systematic and long undetected falsification of the books of the North-Western Bank occupies the papers very much. They comment on the case as furnishing an instructive instance of the insufficiency of the usual precautions (regular audits and published accounts), as they are usually applied, for the protection of the shareholders of joint-stock companies.

CLIPERTON ROCK.

(From a Correspondent.)

This most dangerous Rock and shoal in the North Pacific is but very little known, and thought by many not to exist; and the dangers are very often treated most carelessly by perhaps many who have navigated



CLIPERTON ROCK AND ISLAND, IN THE NORTH PACIFIC OCEAN.

these seas. It is, therefore, important to guard those who may have to pass this way *against* such *indifference*; and this is the more necessary, as the Rock lies in the direct road to San Francisco.

Cliperton, or Cliparton Rock and Island, is situated in the North Pacific Ocean, in latitude 10 deg. 13 min. 24 sec. N., and longitude 109 deg. 7 min. 30 sec. W. The Island is between seven and eight miles long, and is almost an even height from one end to the other, and about six or eight feet above the sea level. The Rock in its highest point is about 150 or 170 feet; the width of the Island it would be but wild conjecture to state, but to judge from appearances it is not more than 1700 or 1800 yards. The Island is of the whitest sand, and the only appearance of vegetation is one continuous fine brown line, supposed to be a species of grass or rushes. The Rock is conical, unequal, and jagged, and at the northern end has a circular hole right through, about 50 feet from the top. Breakers are seen tumbling over each other in wild confusion the whole extent of the Island to windward and at the north-east and south-west ends, at different distances from the sand-bank. As the calms are sudden in these latitudes, and the winds variable—Cliperton being on the edge of the south-east trade—if a ship is anxious to sight it, let her pass to eastward of it, as the western side is evidently the windward side, if it becomes calm when they are in the neighbourhood; there is less danger when they are to leeward—the swell will throw them off. This Rock is laid down in some of the latest charts; for instance, Arrowsmith's large chart of the Pacific Ocean, in latitude 10 deg. 26 min. N., and longitude 103 deg. 20 min. W. As there appears nothing to be gained by sighting this danger, all merchantmen are recommended to give it as wide a berth as possible. Ships may know when they are in the vicinity, by the presence of numerous sea-birds—the white gannet, wide-awake, and booby, which occupies the island of Cliperton, are sometimes found roaming 50 and 60 miles, and very often much farther from their home.

Cliperton is the most naked, solitary danger that imagination can picture, situated as it is in the midst of the ocean, 800 miles from Acapulco, and 500 from Socoru and Gallejo. The sand-bank seems ill able to support the weight of the huge rock, and the Rock itself appears to be sinking into its treacherous foundation. The sight of this tremendous and distressing danger, and the reflections it calls up of the awful calamities it has been the cause of, reminds one of the sublime truth of M. de Lamartine's remark, when he was surveying some of the ruins of the Hill of Baalbeck, that "Silence is the only language of man, when what he feels outstrips the ordinary measure of his impressions." There is an association with the ruins in the midst of a desert, and this solitary Rock standing in the midst of the pathless ocean

Our informant passed the Island on the 1st July, 1850, at five P.M. The Rock may be seen in clear weather, at a distance of ten or twelve miles, and resembles a sail at first, as you approach it, it has the appearance of an immense castle. The colour of the Rock is very dark, in fact nearly black

CHURCH LATELY ERECTED AT VIZIANAGRAM
RESIDENCY OF MADRAS, EAST INDIES

This neat Church has recently been erected at the entrance to the Cantonment, on a site presented for the purpose by his Highness the Rajah of Vizianagram. The first stone was laid in October, 1849; the building was completed in May, and opened on Sunday 25th of August, 1850, when Divine service was performed by the Rev. J. C. Street, A.M., Chaplain of Viragapatam. The edifice is capable of holding about 150 persons, and on the above occasion four children were baptized, three of whom were of poor native Christian parentage.

Vizianagram has for many years been a military station, but has never yet had the benefit of any place of public Protestant worship. The Church was built by general subscription, assisted by the Church Building Society. It will rejoice many of our readers to hear, this is the second church erected during the last few years within the Chaplaincy of Vizagpatam; and that a third is now in course of building, at Chicacole, a civil and military station, about forty miles to the north of, and also in the same Chaplaincy

CHURCH LATELY BUILT AT VIZIANAGRAM, MADRAS.

(Advertisement.)—Mr. Masterman, treasurer of the Fistula Infirmary, gratefully acknowledges the receipt of a munificent donation of £200, paid by an individual, confidentially, to Mr. Frederick Salmon, the honorary surgeon and founder of the institution; and begs to apprise the donor of this truly charitable, generous, and serviceable gift, that, in accordance with the desire expressed to that gentleman, the amount has been carried to the credit of the building fund of the new hospital about to be erected in the City-road, upon the site of the Dyers' Almshouses, which has been purchased for that purpose by the committee of the Infirmary.—35, Nicholas-lane.

An Old Printer.—We have in our employ a printer, 76 years of age, who commenced his apprenticeship of seven years in the King's printing-office, London, in 1784, sixty-four years ago. He was a soldier under Sir John Moore, at Corunna, in Spain, in 1809, where he received a ball in the right arm He was present at the burial of Sir John, and remembers the minutest particulars of the scene. He was also with the Duke of Wellington through his whole campaign, and lost an uncle-bone by a grape-shot in the battle of Waterloo. This old man, after all his hard service, is still one of the swiftest and best compositors we have ever known, and, though lame from his wounds, is still able at "early dawn and dewy eve," while young men are wasting the golden hours in sensual pleasures, or snoring them away in bed, to ramble over the fields and through the woods in search of wild flowers, with which he forms tempting bouquets for the belles of the village, or to gratify the wishes of some favourite little girl. It speaks well for the heart of the old soldier, that the children all love him.—*Blackstone Chronicle*, United States.

The beautiful tower erected in commemoration of the late Sir John Barrow at Ulverstone, on the coast of Cumberland, was, on Thursday night, the 30th ult., struck by lightning, which partially destroyed the cupola and damaged other parts of the building. After the many instances of such casualties, it is a matter of surprise and regret that early means are not resorted to for guarding such beautiful structures against the destructive effects of atmospheric electricity.

RECENT ASCENT OF MONT BLANC.—(SEE NEXT PAGE.)

THE GRANDS MULETS.—EVENING VIEW.

THE AIGUILLES SANS NOM, SEEN FROM BELOW THE ROCHER ROUGE.

RECENT ASCENT OF MONT BLANC.

IN September last a very interesting ascent of this "Monarch of Mountains" was accomplished by Mr. Edmund Galton, who, at our request, has obligingly placed at our disposal the Sketches of his perilous adventure, accompanied by the following letter:—

LOXTON MANOR HOUSE, near Wells, Somerset, January 10, 1851.

SIR,—In reply to your letter requesting to be allowed to publish some Sketches of mine, of the ascent of Mont Blanc, which you have heard of, I write to say that you have my permission to do so, if you think them worth insertion in your excellent paper. I am not accustomed to sketch. The pictures you heard of were copied from my rough ones, by Mr. Jewitt, of Plymouth, to whom I am very much indebted for his great skill in improving my ones. I think it as well to send you my original sketches: you may judge for yourself as to the probability of their being sufficiently correct. From these sketches and some great attitudes, it is impossible to make more than a rough outline at the time, so I filled up the remainder after my descent.

The account bound up with these pictures, at the end of Auldjo's work, was taken from my Journal, and was written there to amuse my intimate friends, and to save myself repeating over again the same tale. You can take any extracts from that you may think necessary to explain the pictures, provided you do not use the names of any one mentioned there, as I, of course, cannot take the liberty of allowing other persons' names to be published.

I am, sir, yours obediently,
ERASMUS GALTON.

We add, from Mr. Galton's journal, the substance of his narrative of his ascent, in which are omitted the portions already described by Mr. Auldjo:—

On Sept. 4, 1850, at seven o'clock in the evening, the weather looking fine, I made up my mind to ascend Mont Blanc.

On the morning of the 5th, the weather looking doubtful, it was not till ten A.M. that my party started. * * * * It consisted of six guides*, seven porters, one volunteer (a young guide), and a German courier (for their names see the vocal Journal). I found all the baggage I had brought having just increased, I had to diminish, and, having stripped off my coat, waistcoat, neckcloth, turned-up shirt-sleeves, &c., we began the ascent in earnest; Victor Tairray going first, myself second, and the rest following; the pace slow but constant. At about one P.M. we reached the ice, which we never left again, crossing the Glaciers des Bossons and Taconnaz. The glaciers are very dangerous, as, on the left above, there is a succession of high precipices, down which avalanches are continually falling: they come down at a great pace, and, as the whole glacier is full of gigantic crevasses (see Sketch 1), it is impossible to get out of their way. Just after crossing the Glacier des Bossons, while we were crossing a steep slope of snow, one of the porters (the man who carried the ladder) slipped, and fell. He first shot down along the snow about 30 feet, then bounding off over the edge, he fell head-foremost into a crevasse, about 80 more. (See Sketch 2.) We all thought that he was killed. After some minutes, we got round to the other side of the crevasse; we looked down, and saw him lying insensible. He had fallen on a ledge of snow and ice, about 4 feet wide, with the ladder propping him up. Had he not bounded off the edge of the glacier with great velocity, and so on this ledge on the other side of the ice-green crevasse, he must have descended to the bottom, a distance little short of 60 feet. After a little time, he revived, and, being tied to the ladder, we all got hold of the rope and hauled him up. He was much shaken, his arm so painful, that we were obliged to leave him behind, with a porter to take care of him, and then we proceeded. This catastrophe detained us nearly an hour, and showed us how cautious we must be. By this accident my [illegible] was [illegible], so that I had no means of registering the degree of cold which we experienced. At 4.40, P.M., on arriving at a tremendous crevasse (of which the print in Auldjo's work gives a good idea), we left the porters behind to return to Chamouni, and, leading ourselves with the provisions and other requisites, which every load brought us, we crossed the crevasse without accident, and stepped out for the Grands Mulets, where we arrived at 5h. 45m. P.M. Here we were to sleep; so we all immediately changed [illegible] and began [illegible]. We had [illegible] to sleep on, and [illegible] to sleep. The guides rigged up a tent, made out of four Alpine sticks laid against the rocks, and then spread some light canvas. The whole width of the place was five feet (see Sketch 3); and, as I slept the middle night, I turned up [illegible] the degree of cold which we experienced. At 6h. 30m. P.M., on arriving at a tremendous crevasse (of which the print in Auldjo's work gives a good idea), we left the porters behind to return to Chamouni, and, leading ourselves with the provisions and other requisites, which every load brought us, we crossed the crevasse without accident, and stepped out for the Grands Mulets, where we arrived at 5h. 45m. P.M. Here we were to sleep; so we all immediately changed [illegible] and began [illegible]. We had [illegible] to sleep on, and [illegible] to sleep. The guides rigged up a tent, made out of four Alpine sticks laid against the rocks, and then spread some light canvas. The whole width of the place was five feet (see Sketch 3); and, as I slept the middle night, I turned up [illegible] [illegible] [illegible]

POSTSCRIPT.

PAPAL AGGRESSION.

A HERTS COUNTY MEETING was held in the Corn-Exchange, Hertford, on Thursday, to take into consideration the recent aggressions of the Pope; the high sheriff in the chair. The Ear. of Verulam proposed the first resolution, declaring that the appointment of a Roman Catholic hierarchy, such territorial titles, is an illegal interference with the prerogative of the Queen. The Rev. Mr. Redding, a Nonconformist minister, seconded the resolution, which passed unanimously. Sir W Heathcote moved, "That it is the duty of every loyal subject to resist these aggressions on the part of the Pope of Rome," which was carried unanimously, as was also a motion for an address of thanks to her Majesty for the firmness and manner in which she has conveyed to the country her resolve to maintain inviolate the rights of her Crown and the national independence against all encroachments. Petitions to both Houses of Parliament were adopted; and it was resolved, on the motion of the Marquis of Salisbury, that copy certified, and of the address to the Queen, be forwarded for signature to the market towns throughout the county. The meeting separated, giving three cheers for the Queen.

PUBLIC INCOME AND EXPENDITURE.—This parliamentary paper was issued yesterday (Friday) morning, by which it appears that the total income of the year ending on the 5th of January last amounted to £50,231,874 5s. 3d.; thus showing an excess of income over expenditure of £9,979 0665. 3d. The unfunded debt, on the 5th of January, was £17,701,000; and the balances in the Exchequer at the same date £9,243,576 is 2½d.

It is said, that, without waiting for the passing of the new bill, it is intended by the main parties to present an indictment against Cardinal Wiseman, and that Mr. Fowa James, Q.C., Mr. Hugh Hill, and Mr. Lush have been already retained on behalf of the prosecution

Sir Emerson Tennent, the newly-appointed Governor of St. Helena, proceeded yesterday (Friday) to Devonport, to embark on board the steam-frigate *Simpson*, Captain L. T. Jones, for conveyance to [illegible]

DEATH OF THE REV. DR. PYE SMITH.—This eminent Dissenting preacher, after occupying for half a century, perhaps, the most distinguished place in the Nonconformist ministry of this country, expired on Wednesday. The deceased scholar is principally known in theological literature by his works on the Socinian and Arian controversies, and on the connexion of geology and Scripture. His death occurred at Guildford, whither he had retired on leaving Homerton College a short time back.

SOUTH NOTTINGHAM ELECTION.—The writ for South Nottinghamshire has been received by the High Sheriff; and Tuesday next, the 11th inst., at half-past ten in the morning, has been fixed upon for the nomination to take place at Newark. Should the show of hands be in favour of Mr. Barrow, and a poll be demanded by the nominator of Lord Newark, the Friday and Saturday following are to be devoted to recording votes in the several districts.

LATEST FOREIGN NEWS.

FRANCE.

According to the accounts received yesterday (Friday) evening from Paris, the pecuniary embarrassments of the President of the Republic were said to be such, that in case the Dotation Bill was rejected by the Assembly, he would resign. But this is a rumour so obviously devoid of any truth or foundation whatever, that it is only mentioned as showing what the wishes of Louis Napoleon's enemies are, and how desirous they are of forcing him, by any means, to resign. It is the present commanding attitude he has assumed against the coalitionists, that makes it so dangerous, and an affair under by assailing him through his embarrassments. Another conflict between the Executive and the Assembly is accordingly expected upon this subject. The discussions in the Bureaux were very animated. The Committees whose opinions have been received, 24 are said to be for the Dotation, and 372 against it, two being doubtful. M. de Montigny has been elected President of the Commission on the bill, M. Druet-Desaunes, secretary, and M. Piscatory, reporter.

The Assembly have discussed at much length the Fruit-tax proposition of M. Jobez, for the abolition of the octroi duties on meat, fruit, &c. The Ministers opposed the motion, which was at length rejected.

The report of the death of the Duke de Bordeaux has been contradicted; and it has been even asserted, on authority which is considered unquestionable, that the illness of the Prince had never been of the serious character which the Vienna journals

AUSTRIA.

The Austrian and Prussian journals continue to report the dangerous illness of the Duke of Bordeaux, some of which go so far as to say that he had received the sacrament, and that the Duchess de Berri, the Duchess d'Angoulême, and the Duchess de Bordeaux were close attendants at his bedside. Private letters from Venice, however, declare that the Prince had only been unwell for about forty eight hours, and that he had almost recovered from his indisposition. It may also be noticed, in corroboration of the latter information, that the French Government have received dispatches from their Ambassador at Vienna, which make no reference whatever to the state of the Duke's health. This looks as if nothing very serious had happened to that Prince.

THE COURT AND HAUT TON.

ARRIVAL OF THE COURT AT BUCKINGHAM PALACE.

The Queen and Prince Albert, attended by the ladies and gentlemen of the Court, arrived at Buckingham Palace, from Windsor Castle, ten minutes before one o'clock on Monday morning. Her Majesty and the Prince were received by the Lord Chamberlain, the Master of the Horse, Lord George Lennox, and the Master of the Household. The court arrival in town, the Queens, attended by the Viscountess Jocelyn, went to Gloucester House, and visited her Royal Highness the Duchess of Gloucester. At three o'clock in the afternoon, her Majesty held a Court and Privy Council. At the Court, M. Marcoleta, Envoy Extraordinary and Minister Plenipotentiary from the Republic of Nicaragua, had an interview of the Queen, and delivered his credentials to her Majesty. Sir Edward C. Disbrowe, G.C.H., her Majesty's Minister Plenipotentiary at the Hague, was presented to the Queen at an audience, by Viscount Palmerston, and delivered from abroad. The Earl of Winchilsea had an audience of the Queen and her Majesty addresses from Dove Sandford, New Romney, Cold Ingham, Gunstone, Hythe, and other places in the county of Kent, also from Newark, all against Papal aggression. The honour of knighthood was conferred by her Majesty upon the following gentlemen:—Mr. James William Morrison, of Shares-brook, Essex; Mr Alexander Bannerman, Lieutenant-Governor of Prince Edward's Island; and Mr. James Meek, late Comptroller of the Victualling of the Navy. At the Council the Queen's Speech on opening the Session of Parliament was arranged and agreed upon. The Earl of Carlisle (Lord Lieutenant of the County of Lancaster) had an audience of the Queen, and submitted to her Majesty the names of gentlemen to serve the office of Sheriff for the county of Lancaster for the present year. In the evening her Majesty and Prince Albert honoured the Haymarket Theatre with their presence. The royal suite consisted of the Viscountess Jocelyn (lady-in waiting), the Marquis [illegible] (lord-in-waiting), Lord Charles Fitzroy (equery-in-waiting), and Major-General Hon. Alex. Gordon (equerry-in-waiting to the Prince).

On Tuesday the Queen went in state to the House of Lords, to open the Session of Parliament with a Speech from the Throne. Her Majesty returned to Buckingham Palace before three o'clock, and immediately afterwards the Court left town on their return to Windsor Castle

Her Royal Highness the Duchess of Cambridge and the Princess Mary left Kew on Wednesday, on a visit to the Duchess of Kent, at Frogmore.

On Thursday, the Queen, with his Royal Highness the Prince of Wales, drove out in a pony carriage in Windsor Park, accompanied by his Royal Highness Prince Alfred on horseback. The Royal dinner party on the same evening included his Royal Highness the Duke of Cambridge and her Royal Highness the Princess Mary, Viscount Jocelyn, Major-General and Lady Isabella Twysden, and Professor Sedgwick.

Lord Charles Fitzroy has relieved Major-General Wemyss in his duty as Equerry-in-Waiting to her Majesty; and Lieut.-Colonel the Hon. Alex. Gordon has relieved Lieut.-Colonel F. H. Seymour in his duty as Equerry-in-Waiting to his Royal Highness Prince Albert

On Wednesday her Majesty and her Prince Consort dined with her Royal Highness the Duchess of Kent, at [illegible]

Her Royal Highness the Duchess of Kent, attended by Baroness de Speth and Sir George Couper, arrived in town on Saturday morning from Frogmore, and visited the building for the Exhibition of the Works of Industry of all Nations. After inspecting the building, her Royal Highness went to Gloucester House, and visited her Royal Highness the Duchess of Gloucester. In the afternoon, her Royal Highness left town on her return to Frogmore

The arrivals from the country on Monday and Tuesday were very numerous, and, if we may judge from the numbers of the nobility who have arrived in London to be present at the opening of Parliament, the season just about to commence will be a very busy and brilliant one

The Marquis and Marchioness of Londonderry and Lady Adelaide Vane, with Lady Adolphus and Lord Ernest Vane, have arrived at Holdernesse House from Wynyard Park, for the Parliamentary season.

Viscount and Viscountess Jocelyn, and the Hon. Miss Cotton, have arrived at Belgrave-square, from Combermere Abbey The noble Viscount and Viscountess will remain in town only a few days, returning to Cheshire next week

The mortal remains of the lamented Lord Dalmeny were consigned to the family mausoleum, near Dalmeny Park, on Thursday. The Earl of Rosebery, Viscount Mahon, [illegible] rs of the family, attended the obsequies.

We are enabled to announce, that, in the course of next week, the marriage of Major the Hon. James Colborne, eldest son of Lieut.-General Lord Seaton, with the Hon. Charlotte de Burgh, daughter of Lieut.-General Lord Downes, will be celebrated in London.

METROPOLITAN NEWS.

AMENDMENT OF THE PATENT LAWS P[illegible] TO THE GREAT EXHIBITION.—A meeting of persons desirous of obtaining a diminution of the expenses and an increase of the security of British patents, was held on Monday evening at the Belle Sauvage Hotel, Ludgate-hill. Mr George Shepherd, civil engineer, the chairman of the Council of the National Patent-Law Amendment Association, presided; and the business of the evening was the presentation of a prospectus of the association, which, as was observed, pledged the council to nothing very specific, yet indicated the principle sought to be established:—1. Provisional protection at the cost of a few shillings, to be extended by others stalments. 3. A simplification of the mode of obtaining a full complete protection. 4. An index of all patents for reference. The assistance of assessors will be assisted with inventions, for the guidance of the Crown officers and courts of law, when necessary; and, 6 A declaratory statute of what is really the law of patents. In connexion with the general state of the patent law, it was observed that, if inventors must be specially taxed, the best plan would be to charge [illegible] for a patent, and *an ad valorem* stamp duty on patented articles, which would in most cases fall on the consumer. Mr. Lee, the chairman and all suggestions would be received by the council, and they intended to hold monthly meetings until a reform in the present system was obtained. Some few questions were put by gentlemen present, which elicited explanations of the prospectus, after which the meeting separated, without coming to any resolution, as this was viewed as a preliminary assembly.

LAW AMENDMENT SOCIETY.—A meeting of this society was held on Monday night, at their rooms, in Regent-street.

The following gentlemen were elected members:—

John Thomas Pearce, Cuthbert Edward Ellison.

James Pe[illegible], George Tomline, George Bowyer, D.C.L., John Warrington Rogers, and Joseph Needham. Mr. Vansittart Neale read a report from the committee on the law of property, on a subject which in [illegible] view of the late transfer it would not be practicable to organise an improved [illegible] of making landed property available as a security for advances of money. The report began by stating, that, while the public funds were nearly at par on an amount of three-and-a-quarter per cent, the landowner, who [illegible] property was compulsorily more secure, and on whose estates the [illegible] under was always sure to recover the whole amount of his capital, could not get the money at less than four per cent. One great cause of this higher rate of interest was to be attributed, no doubt, to the heavy charges which existed in various cases. But, at the same time, there could be no doubt, that, in variety of instances, where the title was not quite clear, it was at least as fair for all to deter any party from lending his money. The report, therefore, which the committee proposed was, the institution of a society, with powers to be obtained from the Legislature, which should act between the under and borrower, and become responsible to the lender for the security of the capital that he might advance to the landowner. The latter would, as now, pay all the expenses of investigating the title of his estate, and whatever other charges would naturally devolve upon him, while the society might receive from him money for him at 3 per cent, which they would advance to him at 3½ the fractional part being the amount of the charge made by the society for their operation Where doubts rested upon the title, an increase of charge might be made. Such a plan, it appeared, had long been known in Prussia. Mr Neale concluded by proposing that the report be printed and circulated among the members.—Mr. Stewart said that he had had occasion to investigate the Prussian system when he was in that country, and he found [illegible] tromeye well and simply; and that was remarkable, as the [illegible] house in Berlin was mortgaged to considerably more than half its value.—Mr Webster said that something of the same kind existed in Russia and Norway In Scotland, too, the banks were in the habit of advancing money on land. He was glad that such a system was prepo ed here, as it would have a tendency to lower the interest of money, and would be of advantage in a national point of view After some further desultory conversation, the motion of Mr. Neale was agreed to, and the meeting adjourned.

NATIONAL REFORM ASSOCIATION.—On Monday evening, at the London Tavern, Bishopsgate-street, the National Parliamentary Reform Association held the first of a series of [illegible] The platform were Mr. Joseph Hume, M.P. and Messrs. R. H. K[illegible] John Houghton (late Sheriff), W. H. Ashurst, and others [illegible] to the chair. Sir Joshua Walmsley said that was the first of a series which the association was about to hold for the purpose of teaching them their just rights, and of showing how to obtain them. Mr. Hume then delivered a long speech, reiterating his former opinions respecting suffrage-extension, and the necessity of the public enforcing their just rights by insisting upon a more extended franchise, whilst when [illegible] would crack the wasteful expenditure of the public money, and thereby improve the general condition of society. Mr. Ashurst, M.P., proposed that this meeting offers its sincere and grateful thanks to Joseph Hume, Esq., for his valuable and long-continued advocacy of Parliamentary and Financial reform, for the great benefits which he has conferred on the people at large, by his vigilant attention to their wishes, and more especially for the address. which he has just known, however, and efficiently discharged, of which he has this evening been pleased to deliver. Mr Kennedy seconded the resolution, which was carried by acclamation; after which the meeting separated.

LONDON FARMERS' CLUB.—A meeting of the members of this club was held at 39, New Bridge-street, Blackfriars, on Monday, the first of the discussions for the year 1851 took place. The question was, "How far taxation enters into the cost of agricultural produce?" Mr Thomas officiated as [illegible] in, and Mr [illegible]ethan, of the Grove, Southwark, introduced the discussion in a paper abound ng in statistics relative to the present national and agricultural [illegible] The meeting was subsequently addressed by Mr. Baker, [illegible] Bell, the Hon. Mr. Dillon, Mr. Mechi, Mr. Wood, Mr. Bennett, Mr. Wood, Mr. Williams, Mr. Tattershall, Mr. Shaw, Mr. Fisher Hobbes, and others. The question was ultimately carried as follows:—

That although this club will [illegible] undertake to define the exact amount of taxation which [illegible] upon the price of agricultural produce, yet they are of opinion that [illegible] produce are now become considerable by the great depreciation in the price of corn and cattle, and therefore [illegible] taxation.

The malt-tax was generally and universally condemned; Mr. Mechi adducing, in one of his [illegible]ons for opposing it, that the families of agricultural labourers were driven, by its operation, into the consumption of chicory and [illegible] tea; and another gentleman stating that in Cambridgeshire and elsewhere there was a small [illegible] result, in the [illegible] demand for cloth

METROPOLITAN SEWER AND WATER IMPROVEMENT ASSOCIATION.—On Tuesday evening a meeting of this association took place at the office, Duke street, Westminster, Mr. W. Yates Peasbody in the chair. It appeared from a report, that this association was formed for the purpose of improving the sanitary condition of the metropolis and it vicinity—for effecting the cleansing of the river Thames and its banks and sides, by the adoption of such a system of sewers as should obviate containing the drainage and refuse of all the sewers therewith, as at present—for supplying a uniform system of drainage and water to the numerous suburban parishes now neglected by the present Metropolitan Sewers Commission—and for instituting a public establishment, under the control and administration of the ratepayers, to comprehend the sewerage and water supply of the whole metropolitan districts In order to accomplish this object, it was proposed to divide the metropolis and its vicinity into a radius of six miles of Charing-cross, into eighteen districts, the ratepayers of which should elect commissioners (fifty-four in all), and the Government to appoint three commissioners, and that the commissioners and all vestries [illegible] supply of water of the whole of the districts should be under the said commissioners, and the whole metropolitan districts in

THE GREAT EXHIBITION BUILDING IN HYDE-

ROM THE NORTH BANK OF THE SERPENTINE.

THE GREAT EXHIBITION BUILDING.

VIEW OF THE EXTERIOR, TAKEN FROM THE NORTH SIDE OF THE SERPENTINE

So many exterior views of the Palace of International Industry have already been given to the public, in every shape and form, that it is almost impossible to find a new point from which to delineate the great example of the Victorian style of building.

Most of the views, however, have been taken from points on the south side of the Serpentine, which, in the present instance, forms the foreground of the picture. A spot near the Royal Humane Society's receiving house, on the north bank of the river, has been chosen by our Artist for this original illustration, presenting, in addition to the beautiful outline and external details of the main building, and its graceful and prominent feature the transept, some of the most attractive objects in the Park, [illegible].

It is not generally known, that when the project of the Exhibition was started, it was proposed, as a main feature in the scheme, that the Serpentine should be inclosed during the time of the Exhibition, for the full display of the most beautiful specimens of naval architecture, and models of floating bridges and steamers, of life-boats, and other similar humane contrivances; and that the most improved modes of using the diving-bell, and of blasting by electricity under water, should form, perhaps, the most unique and striking portion of the Exhibition; and it is to be hoped that, if a future occasion occurs, it will not be lost sight of.

The celebrated "Rotten-row," also forms a conspicuous part of the picture; not, however, merely as occupied by the few and select fashionable equestrians who disport themselves therein, removed from vulgar gaze, but as an additional drive through the Park, open to the *additional mill* on from the four quarters of the universe.

GREAT INDUSTRIAL EXHIBITION OF 1851.

Up to the 3d inst the influx of visitors to the Crystal Palace was incessant; yet, even as was the throng at present on the benches or platforms outside, those within the walls of the Building seemed scattered and few, so capacious and accommodating are its aisles, galleries, avenues, and transept. T receipts from the 5s. restricting fee exceeded on Saturday £300, and were glad to me on totals, as our readers may remember that the large accumulated fund, happily, is set apart for the relief of the sick and reward of the industrious. At one time it was calculated that some three thousand visitors were inspecting the various interesting features of the edifice; to these may be added some sixteen or eighteen hundred workmen; and yet the crowd was not inconvenient, nor was there [illegible] where detect an approximation to such a crowd as that of four or five thousand souls. We can, therefore, readily assure that twenty thousand spectators may, at any time, be safely admitted, when the marvels of the Exhibition are thrown open, without let or inconvenience. Outside the glass Palace, further space and accommodation is inevitably necessary; provision must be made by the Woods and Forests, and the semi-official suggestion hinted about, of remarking the Building temporarily independent and apart from the Park, should be acted upon. By removal of the iron railings on the south side, and throwing open the whole approach from the Kensington road, by cutting a road on the east a west into Rotten-row, and enclosing that famous ride, so as to form a clear circuit of the Industrial Palace, the confusion, obstruction, and danger, from the crowds of vehicles and masses of pedestrians, which would otherwise undoubtedly ensue, would be set aside, as far as the powers of the Woods and Forests are concerned. The expense of this arrangement, we are convinced, would not be of much moment, and would probably be met by the Commissioners of the Exhibition.

Though the admission of general visitors ceased after the 3rd instant, the Executive Committee accorded entrance for three subsequent days to the members of both Houses of the Legislature. No great number of these exalted themselves of the privilege, save on last day of session. H.R.H. the Duke of Kent paid a special visit on Saturday, and was received by the Executive Committee, and conducted over the Building; and among the general visitors were the Duchess of Sutherland, the Prime Minister, and the Marquis of Salisbury, accompanied by members of their respective families. Indeed, the number of those present on Saturday exceeded five thousand—a pretty test of what we may expect when the destiny of the structure is attained, and its space filled with specimens of industrial art.

The Building itself may now virtually be said to have been transferred to the Commissioners. Messrs. Fox and Henderson have yet to render proof of [illegible] water-tight; and the heavy rain on the 2nd instant, during the day, afforded them ample opportunity of investigating the character of leakage, slightly visible in parts of their extraordinary work. The singular accident which occurred on the 30th ultimo, viz. the sudden displacement of part of the roof by the wind, has been clearly ascertained, and the best means of preventing its recurrence provided for immediately and without inconvenience. The damage was but trifling, and was ready repaired. The flooring of the great central avenues is, as we previously remarked, laid to be seen upon; but the whole remainder of the larger portion of the goods, &c., and the north-western portion will remain untrusted till the machinery in its district is finally adjusted. The framework for the eight iron staircases into the galleries is now nearly all erected: each will consist of a double flight of iron steps, with oak treads, and a central iron string. The division of the spaces, by hoarding, &c., assigned for foreign countries, &c., as we last week described, is also rapidly and steadily advanced. Parts of the flooring of the galleries, which forms the ceiling of the basement or ground-floor, have been coloured in distemper, as specimens of decoration. No definite opinion as to the effect of this mode can be pronounced, as the experiments on such a very limited scale; the boards, however, being rough and unplaned, the joints of the flooring are visible, and the colours do not take to the rough surface. The adoption of a wash or paper the boards would immediately obviate the unsightliness, for it seems that the Commissioners would not pay the extra sum for planing the under side of the planks.

The great point under consideration by the Commissioners and the Executive, and so interesting to the public, has been the question of admission. It has been determined that *everybody shall pay*, even the Commissioners, the Executive, or members of the staff. Servants of exhibitors connected with the arrangement, protection, or disposition of articles, together with members of the public press, will alone be exempt.

The Commissioners were strongly advised by some of the best friends of the Exhibition in the country districts against any attention to Mr. Paxton's suggestion; some of the metropolitan clubs even expressed their dissinclination against an appeal at the eleventh hour to the public purse; and any inclination to the proposed demand on State money would have been quite at variance with the past policy of the Commission, which actually pays the Sappers and Miners employed on the Building—such men at least as have yet given for his services.

We have more than once adverted to the pressing and important labours of the Executive Committee. Exhibitors seem to care but little for the additional trouble and harrassing duty of the colossal [illegible] functions, for we hear that appeals and demands for space modifications abound from every quarter. Those having an allowance of vertical space require large or small additional counter space; those with counter space ask for [illegible] or [illegible] and [illegible] depth; and, as an authority on the subject declared, if all the counter exhibitors could have their own way, the Glass Palace would reach down to Whitechapel. It is estimated that the aggregate cost of the Exhibition, including the ground, this is merely a guess, as each exhibitor may exercise his own taste in [illegible] shelves, cases, pedestals, &c., which he may require for his contributions.

Hon. Ed. Howard Office and the Board of [illegible] have been in communication with the authorities, ought to take steps (w [illegible] an exposition of the enormous [illegible] be brought to the Exhibition [illegible] after May next. Mr. Dickens's *Household Words* promises the absence of any temporary accommodation for the humbler [illegible] crowds expected during sanatory provisions, both for our streets and houses [illegible] prepared, or London may become unbearable to its own permanent resident population. A proposal by Mr. Sidney, who was connected with the sanitary arrangements of the Royal Commission, respecting the repair [illegible] of lodging-houses in Lambeth, might be followed out, and certain [illegible] should create such register-offices, and modify their existence in each of these offices, and the accommodation entered on their books, being under [illegible] vast area of the police, would be highly useful and trustworthy.

M. Salvandezzo de Lamormaix, we remind our correspondents, is the head executive and responsible authority for all the communications from the exhibitors with the Royal Commission. The numerous staff-clerks, for correspondence and accounts; attendants in and upon the saloon of the French contributions in the Building, &c. (which body, it is calculated, will be needed for the next eight months); the presences of the special and scientific commissioners, who will prosecute inquiries into the character, &c. of the Exhibition, are provided for by the 170,000 francs (£6800) accorded by the Assembly in the [illegible] passed last week. The wools of the French contributions will be ready by the [illegible].

The assistance of the members of the Sectional Committees, Professor Playfair is preparing a complete classification of all the articles to be exhibited in the thirty different classes of productions, &c., which we have so frequently referred to. This gentleman will specially assist the decisions of the Jurors in [illegible] various departments.

[illegible] seven wash-paper baskets full of letters were received by the Commissioners on one day appointed for sending in the specifications by exhibitors for the catalogue.

The compilation of the English catalogue (320 quarto pages for one shilling) will be superintended by Mr. [illegible], who was connected with the lectures delivered in various districts on the objects and purposes of the Exhibition. Assistance will be supplied by Professor Andrew Ure, Dr. Lindley, Reports, Lyon Playfair, Professor Cowper, Mr. H. T. Hope, M.P., Mr. J. Bell (sculptor), Mr. H. Maudsley, Mr. Nicholay, and others. The out line list already in the press, of productions from Tunis, occupies twenty-four foolscap pages of the catalogue. There is an office in the Great Industrial Building set apart for the publishers.

The Executive Committee of the New York Agricultural Society have appointed the following delegates to the Great Exhibition out of 120 applicants:—Mr. M. Van Buren, of Columbia; Mr. H. Baldwin, of Onondago; Mr. J. A. King, of Queen's County; Mr. R. F. Prentice, of Albany; and Mr. B. P. Johnson, also of Albany. The appointment is merely honorary.

Attendance of servants of exhibitors, it has been officially declared, will not be admitted, until the goods which may be entrusted to them are deposited in the Building.

[illegible] such to the United States Commissioner at Southampton, announces that the [illegible] according to the United States have fixed Southampton as the port of arrival for the *St. Laurence* bringing [illegible] German contributions. All [illegible] by the dock and railway companies are withdrawn; and therefore, [illegible] official correspondence, all goods intended for the Exhibition, and brought by a United states' vessel to Southampton, will be conveyed thence to Vauxhall, without one bale of it [illegible] where the Exhibition is to be held, free of all charge, &c." The transport ship will accordingly leave from the navy department to the commander of the *St. Laurence*.

The sacred fanciful compositions in mosaic are to be sent from Rome, a half dozen from Guercino, of St. John the Baptist, worked in fine mosaic by Signor Castellini, is promised from the famous mosaic establishment in the Vatican. Landseer, &c. in the same art, are to be rendered by Chevalier Barbieri and Signor Berchetti. The Government, it is announced, will forward the two celebrated carara, engraved by the Chevalier Gromotti on oriental gems purchased by Prince Gregory, for the Vatican library.

In association of manufacturers at Sonneberg, near [illegible] are said to be [illegible] a German national [illegible] this scene being laid in [illegible] and its environs where the Prince Consort was born. [illegible] now by machinery; there are *yets d'eau* and music in the interior.

The French Government has written to the Commissioners on the [illegible] and that a [illegible] of the French contributions, which [illegible] valued at £600 000, or 20,000,000 [illegible].

As a proof of the interest [illegible] a essay has excited, essays have been already [illegible] Montreal, New York, and [illegible], in the English language; from [illegible] in Italian; and others in the French and German language, are, we hear, in preparation.

The rates of admission after the 1st May were settled by the price Committee on the 3rd inst. They await the sanction of the Commissioners before they are entirely announced to the public; meanwhile we learn that the issue of [illegible] is determined on, probably at 3 guineas each or so; these will admit their holders to all ceremonial and other occasions. The shilling admission-days [illegible] masses will be attended before the end of the first month; and graduated charges, from one guinea downwards, may be expected in the first instance. It is undecided, we believe, whether the charge should ever be lower than one shilling.

TRIAL AND SENTENCE OF MR. AND MRS. SLOANE.

On Wednesday Mr. and Mrs. Sloane were tried, at the Central Criminal Court, before Mr. Justice Cresswell, and Mr. Justice Coleridge, on the charge of ill-treating and starving their servant Jane Wilbred.

The Court was densely crowded on the occasion.

At ten o'clock the prisoners were arraigned upon these counts. Mr. Sloane was dressed in black, and her face was covered with a thick veil. She appeared a good deal affected.

Both the defendants pleaded guilty to those words in the indictment charging a common assault, and not guilty on the two first counts, which charged the prisoners with not giving to the girl sufficient food.

Mr. Chambers, who conducted the prosecution, said it was his intention to proceed with the counts of the indictment charging the defendants with having starved the prosecutrix, Jane Wilbred.

The defendants were then arraigned upon these counts. Mr. M. Chambers, Q.C., and Mr. Huddlestone conducted the prosecution. The defence was conducted by Mr. Clarkson and Mr. Bodkin.

Mr. Clarkson, in opening the case said, that the defendants having pleaded guilty to a portion of the indictment, which imputed to them the commission of a series of assaults upon a person named Jane Wilbred, it would only be necessary for him (Mr. Clarkson) to call the witnesses under whom she should endeavour to support the more serious charge against them, which was that of having neglected to provide the prosecutrix with sufficient food and nourishment. As some doubt had been suggested with regard to the question whether these counts could be supported in law, he would at once state that he entertained a confident impression that those counts were good in law, and came entirely within the construction put upon the law in the case of Rex v. Elizabeth Ridley, in which it was distinctly laid down to be the duty of a parent to provide proper food and nourishment for a servant of tender years, and that a neglect of doing so would amount to a misdemeanour, and subject the parties to be convicted for that offence. The learned counsel then proceeded to detail the facts of the case. The prosecution was instituted by the guardians of the West London Union, and the girl whose treatment by the defendants formed the subject of inquiry was a pauper, belonging to the parish of St. Sepulchre. In the year 1848 she went into the service of the defendants, and for a considerable time it appeared that she was treated very kindly, but upon the occasion of the death of a child in July, 1849, the treatment of the prosecutrix changed, and, according to the account of the girl, her food was altered, and she was subjected to a series of assaults; but, as the defendants had pleaded guilty to that portion of the charge, it would be unnecessary for him to enter into the particulars of those assaults. All they would merely be introduced to show the general treatment received by the prosecutrix. It appeared that in consequence of the harsh and cruel mode of the system of starvation to which the girl was subjected eventually reduced her to such a state of emaciation as to attract the attention of a gentleman who occupied chambers in the same house as the defendants. The police were sent for, and the child was removed to the hospital, where she was, upon examination, found to be in a most emaciated condition; and it would appear perfectly clear that this was the effect of the want of food, the amount and quality of which was by the administration of proper food, at first in small quantities, she entirely recovered her health and strength. The learned counsel then proceeded to detail several particulars connected with the treatment of the girl from the time when the girl, Jane Wilbred, first went into the service of the defendants, she was between 14 and 15 years of age, and at the time of the disorders having taken place she was but 16 years of age, and in the progress of the trial they [illegible] the jury had heard all the facts he should lay before them, they would be of opinion that the defendants ought to be convicted upon the two first, as well as the other counts of the indictment.

The learned counsel was then about to call the witnesses, when he was interrupted by

Mr. Justice Coleridge, who said that the case had been opened very fairly, but it appeared to him that the facts which had been detailed would not support the indictment. The charge of starving rested entirely upon the allegation that the party was a child of tender years; and he was of opinion that a girl of sixteen or seventeen, which appeared to be the age of the prosecutrix, could not be so considered. If there had been any evidence that the prosecutrix was imprisoned or prevented from going out to make a complaint, or to obtain any assistance, that would have altered the complexion of the case.

Mr. Chambers submitted that he was not in a position to bring such evidence before the jury.

Mr. Justice Cresswell said, his opinion concurred in opinion with his learned brother. As to the charge of starving, it was essential, according to the term, was one who was unable of acting or judging for himself; but that could hardly be said of a person sixteen years of age. The law allowed children much younger than that to enter into contracts, and it was impossible to consider a person between sixteen and seventeen as a child of tender years.

A short further discussion then took place, when Mr. Chambers said, that, after the strong opinion expressed by the Court, he felt that it would be an idle waste of the public time to proceed further with the case. It was, at the same time, he observed, a matter of consolation to them that there would be no failure of justice; for, if the defendants had been convicted upon the two counts now in question, it would only have subjected them to a very small additional punishment.

The jury then, under the direction of the Court, returned a verdict of "Not Guilty" upon the first two counts, and the defendants were removed from the bar. Mrs. Sloane, who looked extremely ill, appeared to be scarcely able to stand, and was assisted from the dock by one of the officers of the gaol.

At a later period of the day they were brought up for judgment, when Mr. Justice Coleridge addressed them in a solemn and impressive manner, as they were thoroughly well versed in a matter so simple as this, and who must have known what was his duty. The other, I regret to say, is a female and a wife—one who, it might have been thought, would have been the first to protect a young helpless girl who was placed in her power, but who, I regret to say, appears by the depositions to have taken an equal if not a greater part in all the indignities that were proposed. When, after several months' confinement, the poor child came under the notice of her natural guardians. It is impossible even to take into consideration the position of a parties charged with such an offence. One of you, a gentleman connected with your own profession, was in a condition that she could not even be sent back to the union workhouse, but the only place she could be sent to was a hospital.

It now only remains for me to pass upon you the sentence which has been decided upon for your offence, which is to you be severally imprisoned for two years.

The defendants heard the sentence without betraying any emotion, and at the close of the learned judge's address they retired hastily from the dock.

Mr. J. V. Godby has been appointed Chief Clerk in the Secretary of the General Post-office, in the room of Mr. G. Johnson, deceased. This station is one of the most important and [illegible] amongst those of a subordinate character in the Post-office department, and the person who fills it is the principal of that small band of official personages, whose names scarcely ever transpire in public, and yet are principally concerned in keeping the immense and complicated machinery of the Post-office department in regular and orderly motion.

A STORY OF THE PRESENT DAY.

BY AUGUSTUS MAYHEW

ONE OF THE AUTHORS OF "THE GREATEST PLAGUE OF LIFE," "HOW TO GET MARRIED," ETC., ETC.

(*Continued from page 83.*)

CHAPTER II.

THE HOME OF THE SPITALFIELDS WEAVER.

WERwill suppose that we are walking down the Bethnal-green-road On each side of it are small two-storied houses, many of them with gardens in front, hemmed in by green railings In some of these houses the garrets are furnished with a long lattice-like window similar to those we see in a carpenter's shop. In fact, it is just as if some eccentric being had placed the shop window in the garret, instead of the ground-floor.

These houses were once rented by the silk weavers, and these long windows were to let the light in upon the loom. Very few weavers live in these houses now. They are too good for them—which means, they are too expensive. One room to work, live, and sleep in, is all they can afford

Now let us turn down into one of those dark streets, that dart out from both sides of the Bethnal-green-road. They seem nearly all of them deserted, there are no children making mud pies, or floating paper boats down the gutter, as there are about St. Giles's. Here the "lights," as the weavers call their windows, have a very curious appearance. For the whole length of the street, the garrets, the second, and sometimes, the first-floors have got these long glass fronts, just as if panes had been used instead of bricks As you glance down the long line of dull sashes, they remind you of a huge factory; for in many of the workshops are so similar that it seems as if they belonged to one immense passage that ran from the first house to the last down each side of the street.

There is not a street in Spitalfields without these windows. You can almost read from them what is the condition of the inhabitants. They are a kind of barometer, a gauge in fact to tell whether times are stormy or fair with the trades. One or two in a street will, perhaps, have nice white curtains showing through the panes, with a bright red flower-pot or two along the window-sill. In others the glass will be pretty clean and sound, with the brown poles of tae loom standing close by. But in most of the windows the glass has gone, and in its old rag or a piece of paper supplies its place. In many of the last-named houses the shuttle is heard whizzing and the batten thumping as soon as it is daybreak, only to cease at midnight.

It is a perfect mart in Spitalfields there are 9000 looms constantly at work Generally, there is a family dependent on each loom, and the average rate of wages is from four to six shillings. Many of the weavers, after having starved happiness from their homes, and goods and chattels to the pawnbrokers, grow tired of their calling, and seek work at the Docks. Others get a little aid by carrying on two or three employments at once. They weave, keep pigeons, and snare birds; and this is the reason why there are so many pigeons circling in the air, and so many lath-built cages seen on the roofs.

Our story takes us to a street that tells the most wretched tale of any in spitalfields. It is wider than the rest, and the houses are not so black with dirt as many you have passed—for some of the men live in veritable pigsties. No! they are too filthy even for pigs. The street we were talking of is called Slater-street. On each side of it are to be seen the pots and beams of looms worn black with the labour. When want and despair have at last driven the weaver to sell the loom that starves him, he carries his loom to the brokers that live in Slater-street, and sells it for a few shillings, to keep life going whilst he seeks other employment. It is why this street tells a more wretched tale than any other

On a miserable worm-eaten bedstead lay a man, prostrate with fever, tossing about the few linen rags that served him as a covering. Time had passed so slowly over his head, that each year had left its wrinkle as it had grated by. His hair had dropped, in his old age, like leaves in autumn. The skin had tightened on his breast with want of food, as did the thick muscle on the arm that worked the heavy batten, showed that the labour was needless. His eye was dim, for the weaver was fated on the loom that stood against the window He was thinking to himself that each minute that passed lessened the morrow's loaf. He was so poor, he could not afford to be ill. And the room he dwelt in was such as none but the very poorest would have called it a home. The plaster had fallen away from the walls, so that the bricks and timbers were seen through; and what did remain was so black with the smoke and dirt of years, that it would require no whatever work he had taken to the warehouse. The ceiling, stained and soddened with the rain that had leaked through, had bulged in, and would have fallen had it not been propped up in the centre with an old bedstead. The only piece of furniture he could dispose of, which would give him a little whitewash to make the place look decent, as he said, offering to do the work himself; but the answer had been that the house was so old that it was not worth the repairing. So the dirt had remained on the walls, because the weaver could not afford that the walls—I would have cost him a meal. Long habit had taught him to look upon all cleanliness as a luxury beyond his station in life; whilst hunger was a tyrant that, fight and wrestle with it as he would, was sure of victory in the end. The break-work of the walls had sunk from the timbers, and the sun's rays were streaming through the void it had left. In winter, when the wind was in the east, the draught was such that it was difficult to keep alight the lamp the weaver worked by. Against the windows stood the loom, the silken threads, through which the wall was seen, seeming like a blue haze that dazzled the eye to look at, and strangely contrasting with the rough knotted string and huge stones that served as the weights of the web. Whilst at work, hung up over the loom was a box-windowed lark's cage, filled with wooden reels and [illegible] rubbish that might come in usefully. The bird it had belonged to used to be the weaver's sole amusement. It would sing to him as he worked, drowning in its soft full song the humming noise of his shuttle It was the only thing that seemed happy in that sad room; and as it poured forth its rich notes, peace and joy would steal over the workman's heart, and he would almost be cheered in his hard, gladness. But in the master bread became so dear and work so scarce, that the hungry man began to grudge the bird the very seed it ate. Whilst he and his daughter were starving, he thought it wrong to squander away their store in pleasure of

At last the weaver heard the footstep of some one feeling the way up the dark and broken steps of the staircase. It was Kitty, with the bottles from the doctor. "There are two more steps broken, now, father," she said, as she entered; "and it's as much as I could do to get up-stairs. The stench, too, is dreadful. It takes away your breath. No wonder the child died on the first-floor."

As her father did not answer her, she seated herself on his bed beside him. There was a look of despair in his face; and, as each bitter thought entered his brain, his forehead would wrinkle up, as the ripple on the water marks where the stone has fallen. His eye seemed so wild, that, hurrying to the medicine she had brought, she poured some into her hand, and rubbed his chest with it. From constantly leaning over the loom, the chest had become sore, so that he could not breathe without pain, and she thought he was suffering from it.

"It isn't that, Kit," he said, after a time; "it isn't that." Then, pointing to the loom, he added, "I've been at that velvet all this day, and yet I can't get that stam out. They'll dock me a penny a yard; I know they will!—I know they will! Last week they docked Jim Bacon a penny for a bit of dogspur in his face; and, as each let

RAT PIT AT PADDINGTON.

minutes—here the dog kills against time; at other times two dogs are matched to kill 20 rats, each dog having the pit to himself—time is kept, and whichever dog kills his 20 in the shortest time, wins. Again, in other [illegible] a time [illegible] what [illegible] have we [illegible] the [illegible] Dogs [illegible]

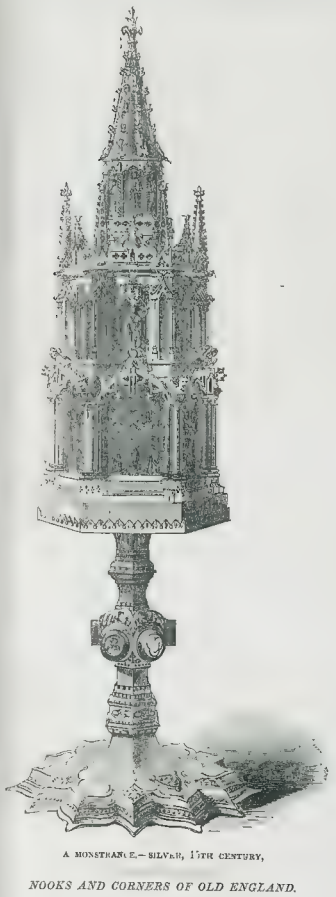
He [illegible] are [illegible] and for beauty of [illegible] many years [illegible] merit [illegible] nicety as to [illegible] of colour in the black, and [illegible] nr. The absence of white [illegible] a nominal price, we will say that a finish-coloured black-and-tan dog, with white on his feet, white in front of his neck (*collar* is felt, to his shirt), and a little white on his nose, is worth five guineas; take away the white paws, he is worth ten; with no white on his neck and chest, £20; with no white at all, £40. We merely mention a supposed price, to show how certain perfections raise it where fancied but not intrinsic merit is the standard by which [illegible] estimated. Spaniels are often to be seen [illegible] which would not be taken, and those not the [illegible] Prince the pattern of a [illegible] for the [illegible] comes [illegible] has been [illegible] The [illegible] for sporting purposes, the [illegible] is good for nothing. [illegible] but [illegible] for [illegible]

Italian greyhounds are chiefly valued for perfection in symmetry and colour. They are dogs of undoubtedly less intellect than other breeds, but, though it is not generally supposed to be the case, their speed is sufficient to enable a brace of good ones, on a level and smooth down, to catch a hare, if they get a favourable start. They may, however, in a general way, be held as quite useless.

To what is held as beauty in the Isle of Skye terrier we are quite a stranger, never having taken the trouble to enquire: who brought such shapeless little monsters into vogue, we know not; they have been a rich harvest, however, to the dog-stealers, for [illegible] looked [illegible] thought [illegible] Isle of Skye [illegible] speak but little in his favour, for they [illegible] stray vermin, which is the leading merit of the terrier, but few of the Isle of Skyes have any idea of the thing. We never saw one yet of a [illegible] in point of beauty of proportion, or a pair with [illegible] alligator; however, any one wishing to [illegible] as they may have, [illegible]

[illegible] shows of Fancy [illegible] there [illegible] shows where similar [illegible] the [illegible] information, he has only to personally visit either of the places mentioned.

FANCY DOG SHOW.



A MONSTRANCE.—SILVER, 15TH CENTURY.

NOOKS AND CORNERS OF OLD ENGLAND.

TOMB OF HOGARTH, IN CHISWICK CHURCHYARD.

Every lover of ennobling art will learn with regret that the tomb of our great painting moralist, in Chiswick churchyard, is falling into a perilous condition. A correspondent informs us that the tomb is "gradually assuming a position which the first high wind may determine, and the monument be lost to us for ever." Within a few months it has inclined some inches, and some time since it was from ten to twelve inches out of the perpendicular; and a mason, after examining it with his line, has confirmed this statement, and considered the monument unsafe, and thought four inches more would complete its fall. We trust that some kindly hand will rescue this very interesting memorial of true genius from decay. There surely needs no evidence of Hogarth's claims to support this appeal, though it is always pleasant to read the eloquent tribute of one man of genius to kindred merits. Charles Lamb has said:—

The quantity of thought which Hogarth crowds into every picture would alone overburden every subject which he might choose. The faces of Hogarth have not a mere momentary interest, as in caricatures, or those grotesque physiognomies which we sometimes catch a glance of in the street, and, struck with their whimsicality, wish for a pencil and a power to sketch them down, and forget them again as rapidly; but they are permanent, abiding ideas. Not the sports of nature, but her necessary eternal classes. We feel that we cannot part with any of them, lest a link should be broken. Hogarth's mind was eminently reflective; and, as it has been well observed of Shakespeare, that he has transfused his own poetical character into the persons of his drama, Hogarth has impressed a thinking character upon the persons of his canvas. This reflexion of the artist's own intellect from the faces of his characters is one reason why the works of Hogarth, so much more than those of any other artist, are objects of meditation. Our intellectual natures love the mirror that gives them back their own likenesses. The mental eye will not bend long with delight upon vacancy.

Coleridge, with truth, observes,

Another line of eternal separation between Hogarth and the common painters of droll or burlesque subjects, with whom he is often confounded, is the sense of beauty which, in the most unpromising subjects, seems never wholly to have deserted him. Hogarth, in whom the satirist never extinguished that love of beauty which belonged to him as a poet.

Fielding pays a very just and happy tribute to the genius of Hogarth, saying:—

He who would call the ingenious Hogarth a burlesque painter would, in my opinion, do him very little honour; for, sure it is much easier, much less the subject of admiration, to paint a man with a nose, or any other feature, of a preposterous size, or to expose him in some absurd or monstrous attitude, than to express the affections of men on canvas. It hath been thought a vast commendation of a painter to say his figures seem to breathe; but surely it is a much greater and nobler applause that they appear to think.

When his health, about the sixty-fifth year of his age, began to decline, Hogarth purchased a small house at Chiswick, to which he retired during the summer, amusing himself with making slight sketches, and re-touching his plates:—

This house stood till lately on a very pretty spot; but the demon of building (says Cunningham) came into the neighbourhood, choked up the garden, and destroyed the secluded beauty of Hogarth's cottage. The garden, well stored with walnut, mulberry, and apple-trees, contained a small study, with a headstone placed over a favourite bullfinch, on which the artist had etched the bird's head, and written an epitaph. The cottage contained many snug rooms, and was but yesterday the residence of a man of learning and genius—Mr. Cary, the translator of Dante.

The inscription upon the tomb is from the pen of the equally celebrated David Garrick:

Farewell, great painter of mankind,
Who reached the noblest point of art;
Whose pictured morals charm the mind,
And, through the eye, correct the heart.
If genius fire thee, reader, stay;
If nature move thee, drop a tear;
If neither touch thee, turn away!
For Hogarth's honour'd dust lies here.

TOMB OF HOGARTH, IN CHISWICK CHURCHYARD.

FINE ARTS.

Choice Examples of Art Workmanship. Caudall and Addey and G Bell

The Exhibition of Ancient and Mediæval Art, given in 1849 by the Society of Arts, presented so many specimens of rare excellence as to merit all the illustration it has received in this handsome volume. Never before, we think, had so costly a collection of articles of vertu been assembled in this country: the Royal and noble kindly lent their priceless heirlooms, their gems, and the richest contents of their cabinets, to add to the magnificence of this wondrous display of human art. Such an opportunity of commemorating some of its most exquisite triumphs was not, therefore, to be lost; and the artist and publishers of the volume before us have acted wisely, in availing themselves of the multiplied resources of fine engraving and printing to accomplish so desirable an object as seeking to perpetuate man's ingenuity and skill, profusely exhibited in these "choice examples." They include some seventy specimens, the *élite* of the collection, nicely drawn by Philip H. de la Motte, and engraved, under his superintendence, by C. Thurston Thompson, G. and E. Dalziel, W. G. Mason, Thomas Williams, O. Jewitt, Thomas Bolton, &c.

The Engravings are accompanied by descriptions reprinted from the Society of Arts' Catalogue. We have selected two specimens—one a Gothic Monstrance, in silver, enriched with tabernacle-work and figures of saints. The foot on which it is placed is of the 15th century. It is the property of H. Magniac, Esq.

The second specimen is a Vase of Palissy-ware, of the 16th century—a large vase enriched with Cupids holding festoons of flowers and masks—the property of H. T. Hope, Esq.

This ware, it may be interesting to add, takes its name from Bernard, of Palissy, a native of Chapelle-Biron, in France, who, on seeing an enamelled earthenware vessel, turned from his profession as a surveyor and glass-painter, to prosecute the pursuit of a white enamel with which to cover pottery; and, though he never attained his aim, he succeeded, after fifteen years' intense labour and constant sacrifice, in discovering a kind of enamel in imitation of jasper, which he produced adapted to earthenware objects in relief. Improving afterwards on this, he produced what he denominates *rustic pieces*, which consist of vessels having upon them reptiles, fish, insects, plants, and fossil-shells in relief and in their natural colours. There exist, also, by the same artist, arabesque ornaments in relief, and of varied colours, and others that are perforated; some of the former made after the designs of François Priot. He likewise executed figures and statuettes, some of them for garden decoration.

The Vases of various Mediæval ware are among the best engraved of these examples. We are glad to see the exquisite set of Ivory Carvings attributed to Flamingo, in the series.

The work has been produced in first-rate manner, so as to be in itself a fine instance of art-workmanship. Each example is printed upon a large leaf of thick vellum paper, tinted; and it has ample margin to display the beautiful form of the object. The printers are entitled to no small share of the praise to be awarded to the parties engaged in producing this volume of "Choice Examples," which must find its way into the library of every lover of tasteful art and vertu. It is likewise a beautiful record of a highly successful movement to advance the public appreciation of the triumphs of olden artistic skill.

A VASE.—PALISSY WARE, 16TH CENTURY.

Oriental Album: Characters, Costumes, and Modes of Life, in the Valley of the Nile. Illustrated by E. Prisse. With Descriptive Letterpress by J. A. St John. Madden.

The title of this work well bespeaks its aim and object; for here, in a set of some thirty large-sized portraits, we have a most characteristic picture of the native population of the Valley of the Nile, one of the most remarkable features of the "sacred face" of the Old World.

The several subjects are most spiritedly lithographed from sketches taken on the spot by Mr. Prisse; and these are most beautifully printed in tint, and coloured after nature. They are very properly selected from different localities, so as to present a picture of the characteristics of each. Thus, we have Arnaout and Osmanli soldiers from Alexandria; Ghwazi, or Dancing-girls, from Rosetta; Camels from the land of Goshen, Lower Egypt; an Egyptian Lady in the Harem, from Cairo; Nizam, or Regular Troops, from Kanka; an Abyssinian Slave; an Oulman, his shop and customers', a Janissary and Merchant; and a Lady, with her Galla slave, from Cairo; Bedouins from Suez; Fellahs; Women drawing water from the Nile; Peasants of Upper Egypt; Nomads of the Eastern Thebaid Desert, with their Dromedaries; Kafilah, with Camels; Arab Sheikh smoking, from the coast of the Red Sea; Nedji Horse, from Arabia; Nubians, Abyssinians, &c.: and it adds not a little to the picturesqueness of the illustrations, that each figure is backed with a scene from its native country. The frontispiece, we should add, is a whole-length portrait of the late George Lloyd, Esq., author of "Travels in the Himalaya Mountains," at whose suggestion the present series of Drawings was undertaken.

The letterpress is from the pen of Mr. St John, whose able work on "Egypt and Mohammed Ali" is sufficient warrant of his qualification for his present labour. Each portrait is accompanied by two pages of description, written in a sparkling, attractive manner, yet with attention to minute detail, and the every-day life of the persons portrayed.

We have engraved one of the subjects—"A young Arab girl returning from the bath at Cairo." After describing the hammams, or warm baths, Mr. St. John says:—"The little Arab girl, who, in the accompanying lithograph, is represented returning from the bath bearing a large basket

ARAB GIRL RETURNING FROM THE BATH, CAIRO.—FROM "CHARACTERS, COSTUMES, AND MODES OF LIFE IN THE VALLEY OF THE NILE."

holding the entire bathing apparatus on her head, is tattooed on the cheeks, chin, and forehead. To this barbarous practice nearly all the Arab women are addicted, though I never remember to have seen any marked on the forehead or cheeks. Occasionally, a pleasant effect is produced. I've cannot in the Delta to have seen a girl who had the representation of a small flower on her left breast, so beautifully delineated that it seemed almost to have fallen from a chaplet on her bosom. Occasionally, too, I noticed three stars in the middle of her bosom, which, contrasting with the fair skin, did not look amiss. But nothing could ever reconcile my eye to the Nose Ring, the chain of which, passing under which the lips are sometimes disfigured. The imitation of a bracelet on the wrist, or of bangles round the ankle, is sometimes very pretty; still it is, upon the whole, a custom which would be more honoured in the breach than in the observance.*

In the coloured lithograph, the outer upper dress is black, white under; the *chemisette*; lake striped trousers, and yellow slippers. The Arab servant presents an interesting specimen of Caireen house-building.

Altogether, this is one of the most elegant and complete works of its class which has for a long time been brought under our notice. The pictures are not merely from the artist's folio, but have the life-like impress of the country, and the distinctive features of the scenes which should recommend this "Oriental Album" to all who are anxious to possess faithful pictures of the people of one of the most interesting countries of the globe.

TOWN TALK AND TABLE TALK.

PARLIAMENT was generally expected, th s year, to commence, as March comes in—"like a lion." On the whole, however, the first sitting proceeded a good deal in the way in which March goes out—"like a lamb." Everybody looked for a slashing debate—a tremendous excruciating of the Pope by one party, and a virulent roasting of Lord John Russell by the other—a grand game of oratorical battledore, in fact, in which Lord Lincoln and uncle Cardinal would do disagreeable duty as a metaphorical shuttlecock. Nothing of the kind, however. The debate sunk to most "off-night" pretensions and interest. Mr. Roebuck spoke some of his rhetorical Whitechapel needles, but the quality of the metal was not considered as up to par; and then came a dreary gulf, until Lord John made one of his usual plump little official speeches, at once heavy and weighty; and Mr. Disraeli wound up with one of his usual showy, but phrased bits of declamation, composed of a small filligo of spirit and an unlimited supply of very nice hot water and sugar.

The members met in the old house, and most of the notabilities took their old accustomed places. Sir Robert Inglis, Harry Inglis, however, has gone bodily over to the Opposition. Since the accession of the Whigs he has generally kept to his seat on the front row of the Ministerial benches below the gangway. On Tuesday, however, he ensconced himself in the corresponding spot on the other side of the House, a circumstance to which Mr. Roebuck neatly alluded in his speech. The worthy Oxford baronet has lost not a whit of his buxom bloom by "Papal aggression," and he had as usual got himself up with a full-blown rose, which, with its leafy appendages, overspread half his coat collar. According to old use and wont, the movers and seconders of the Address always come down either in court suits or uniform.

The old tailor and personal peculiarities continue to characterise the House. Mr. Mantz's beard is in a highly flourishing condition; so are Lord Marcus Hill's white cards, and Mr. Grantley Berkeley's alarmingly striped trousers and dazzling and bewildering waistcoats. Colonel Sibthorp, hardly less so stout or strong as in former years, but his mental characteristics—*less* the onslaught on the Crystal Palace—are in as fine order as ever. The heads of the Manchester school met for the resumption of their studies upon a back bench below the gangway on the Ministerial side. Mr. Williams, formerly of Coventry, and profanely called Mr. Robinson Crusoe Hume's man Friday, has taken his old place by the side of his economic Gamaliel. Sir James Graham sat, as usual, alone, speaking to, but not coming with close arms in contact with any seat behind the principal Opposition bench, which last was, of course, tenanted as before by Mr. Disraeli, Mr. Herries, the Marquis of Granby, and Lord John Manners. If there is any personal remark to be made with reference to the leaders of the agriculturists, it is that the Marquis of Granby's pantaloons ought enter into formidable but friendly rivalry with Mr. Grantley Berkeley's. I heard a theory started that they were mythic and allegorical of the agricultural interest—the two stripes of the former representing fields of corn, grass, stubble, and potatoes; and the longitudinal and cross stripes doing duty as hedges, rasp ers, ditches, and harrows. The theory is ingenious, but I fear untenable. Mr. Brotherton, the advocate of early hours, moved that the House of Monday sit, made his usual annual announcement of a resolution pledging the House to disperse with the first stroke of midnight, just as a convocation of ghosts would vanish at the first faint remonstrance, at which everybody first calls out approvingly "Hear, hear," and then laughs, the good-natured vegetarian laughing with them: after which he takes half an hour's doze on a back bench; and then, suddenly waking up as fresh as a daisy on its feet, and says a couple of virtuously indignant sentences, which, being turned out of the Parliamentary end into the English tongue, mean, "Well, now, this is too bad! Here am I, sitting up night after night, and night after night I am obliged to give cook a hint or two to inform me whether you intend to go to bed at all? Eh! come now?" But it is of little use. The business is got rid of before any one interested thinks of moving; and then Mr. Brotherton, at half after two A.M., has the consolation of moving "That his House do now adjourn," which is almost tantamount to extinguishing the snuff of a candle with his fingers after some one else has blown it out.

The Earl of Shaftesbury has retired from the speakership of the Committees of the House of Lords, and the Earl of Redesdale rules in his stead. The former nobleman was a very excellent functionary—keenly alive to the merit and demerits of private bills, of the face of which he was, indeed, virtually the arbiter, hunting out jobs, with a miraculous fineness of scent, and never permitting them to pass. To a more indefatigable, acute, and staunchly honest scrutineer, Parliament could not have confided the great powers which virtually, if not officially, he enjoyed. His Lordship had another peculiarity, very useful in the discharge of his functions. He could speak faster than Mr. Charles Mathews. It was wonderful to hear the style in which he rattled—commas less—through the clauses of an unopposed bill. Never pausing, never stammering, but going ahead, with the smoothest and oiliest celerity, until he came to the final question spoken somewhat in this fashion: — "Mylordsityour pleasurethatthisbillnowpass thosewhoarethinkingitnecessary tomove thosewhoarethecontrary opinionmaytocontent thecontentshavelt!"

Things are fast tending to a change in our passport system—I mean the system of compelling Englishmen to take foreign passports for foreign countries. A few years ago the whole nuisance appeared to be in a fair way of demolition. The "vested interests" of the gendarmerie alone managed to arrest the catastrophe. Now, however, reaction, political and social, is rivetting the paper fetters in question faster than ever. Lately heard in France, and from a foreign minister, a phrase curiously indicative of the value as a police auxiliary of the system. Speaking of some very methodical and correct performance, the gentleman in question said, it was "as regular as a thieves' passport." The worthies of the Rue de Jerusalem are, it seems, famous for keeping the most perfunctionally exact "papers" in France. Not a jot or tittle prescribed by the rigid letter of the law do they neglect. There are sundry little pieces of ceremonial observance so to passports which will not officially be enjoyed. His Lordship had another peculiarity, very useful in the discharge of his functions. He could speak faster than Mr. Charles Mathews. It was wonderful to hear the style in which he rattled—comma

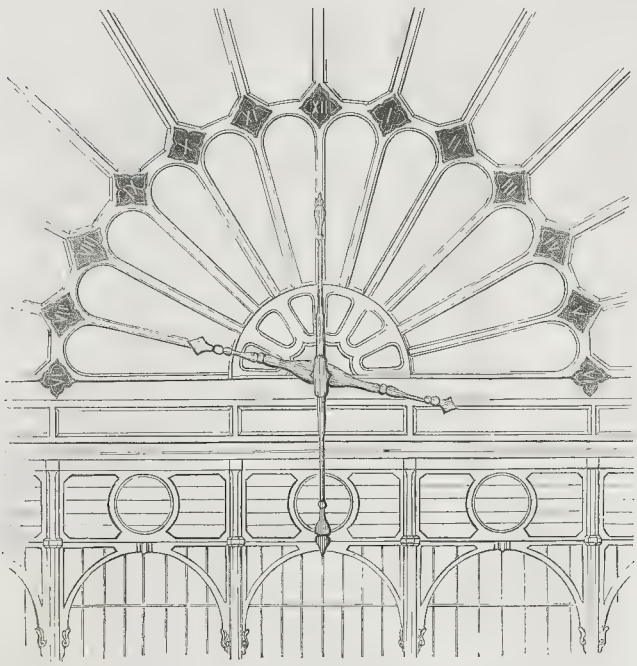
SHEPHERD'S ELECTRIC CLOCK FOR THE GREAT EXHIBITION BUILDING.



HANDS AND DIAL OF THE ELECTRIC CLOCK.

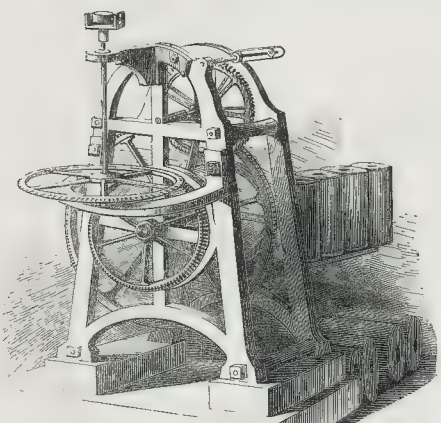
In adapting Mr. Shepherd's beautiful Electrical Clock to the external design of the building in Hyde-Park, now nearly ready for the reception of the world's industrial products, Mr. Owen Jones, to whom all matters of ornament connected with the building have been left, has ingeniously contrived a plan by which the conventional form of a circle for the face of the clock is done away with, in order that the elevation of the south end of the transept might not be disfigured. In our Illustration, showing the arrangement of the hands and figures, it will be seen that the clock-face in the present instance is a semicircle, having, as usual, twelve divisions, and that the figure 12 is, also as usual, at the top of the circle, the numbers corresponding with one o'clock, &c., likewise follow in the usual order: but, as with one hand only the semicircular dial would be left by the hour-hand for intervals of each alternate twelve hours, a second number 6 has been added on the west side of the dial, and also a second hour-hand, which points to the number 6 on the west side as the first hour-hand leaves the number 6 on the east side. The hour-circle is 24 feet in diameter. The hands are of copper, gilt. The minute hand is 16 feet long, purposely shortened so as not to descend below the fanlight frame. The 15 figure-plates, which are of zinc, are secured to, and correspond in shape with, the intersectional spaces formed by the second semicircular bar from the centre, and the radial bars of the great southern fanlight of the transept. The figures are painted white on a blue ground, in order to harmonise with the two prevailing colours of the external decoration of the building. The whole has a very unique and pleasing appearance.

Electrical Clocks are by no means new. We remember to have seen more than one in action, many years since, at Mr. Dent's, in the Strand; and Bain's Electrical Clocks were fixed in different parts of the house numbered 345, in the Strand, when occupied by the Electric Telegraph Company, and one on his plan at the office of the same company in Lothbury. There was also one fixed in front of the Polytechnic Institution, in Regent-street; and several have since been fixed at various private houses. Each of these last mentioned was worked in connexion with an earth-battery, which was found, in some cases, to afford, if not an uncertain, at any rate, an insufficient, amount of power.

The effect of Mr Shepherd's improvements in the application of electricity to horological purposes has been to attain a greater uniformity and certainty in the *going* of his clocks; and, at his establishment in Leadenhall-street, he has had one of his Electrical Clocks in connexion with a Smee's battery, at work for the last two years. At Mr. Woodd's, Hampstead, and at other private houses, they have been found to keep excellent time. At Mr. Pewsey's, St. Paul's Churchyard, eight of such clocks have been successfully used. The leading features in Mr. Shepherd's Clock are the application of the wonderful agent electricity to the winding up of the impulse-spring, or weight, in order to render the *escapement*, or impulse given, certain in its action; and to improvements in effecting the movement of the train in order to denote the hours, minutes, and other subdivisions of time.

In the Great Exhibition Clock, certain alterations in the details of the magnetic apparatus have been rendered necessary in order to suit the particular case; and here we may notice, that, besides the great Electrical Clock for the transept, which we shall attempt to describe, two dials of smaller size, one at the east and the other at the west end of the building, will also be set to work in connexion with it. The electrical current to each of the two auxiliary clocks will be transmitted through copper wires coated with gutta percha.

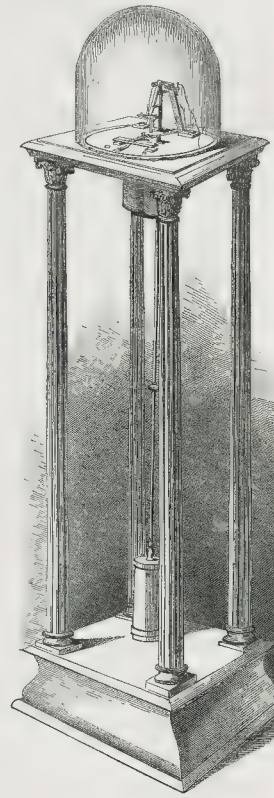
The mechanism of the Clock, a view of which is given, will be fixed in the south gallery of the transept, at about 48 feet below the centre of the dial, and motion communicated to the hands by means of a rod made up of several lengths of brass tubing screwed together, and of 1¼ inch in diameter. The clock frame is much lighter than usual, as the ordinary heavy weights are entirely dispensed with. There are two wheels within the frame, placed vertically—the escape wheel, to which the power is applied, of 10 inches diameter, and a larger or central vertical wheel, of 18 inches diameter, working into the pinion on the arbor of the escape wheel, which is in two parts, the teeth of each part being placed in opposite directions; on one part the click and ratchet escapement acts being moved by the electro-magnets, while the teeth of the other part are employed to lock the train and prevent it running forward from the action of the wind on the hands. The large wheel revolves once in two hours, the spindle of which projects beyond the frame, and carries a bevelled wheel of 12 inches diameter, placed vertically, which revolves with it. In order to give motion to the vertical rod already described, the bevelled vertical wheel works into a second bevelled wheel placed horizontally; and above the first, on the axis of the horizontal bevelled wheel, the vertical rod or shaft revolves; and by means of wheel-work at the top of the shaft, the hands of the Clock are also made to revolve.



MECHANISM OF THE ELECTRIC CLOCK.

The whole will be kept in motion by a series of powerful electro-magnets, eight in number, on which is wound a total length of 28,000 feet of copper wire, of the size usually denominated "No. 18, Birmingham wire gauge," the weight of the wire being nearly one and a half cwt. Six small batteries of Smee's construction will be used in connexion with the electro-magnets. Mr. Shepherd prefers Smee's battery to any other, on account of its simplicity and the ease with which it is recharged when required.

Besides the 24-feet dial on the south side of the transept, two smaller dials, already alluded to, each of 5 feet diameter, will be fixed in front of the galleries, at the east and west end of the building respectively, in the centre line of the main aisle, or, as some call it, the nave. All the dials will be governed by one pendulum, which will take its place among the other clocks intended to be exhibited. [See the third Illustration.] The pendulum is kept in motion by electro-magnetism, on a plan entirely differing from any method previously invented. The magnet is employed merely to bend a spring at each vibration to a certain fixed extent, the reaction of the spring giving the necessary impulse to the pendulum, by which means the variations which are continually taking place in the batteries have no effect on the time measured by the pendulum. At the end of each vibration of the pendulum it comes in contact with a small spring tipped with platinum, which completes the necessary circuit for giving motion to the several clocks. One of the great advantages of Shepherd's clock is, that the largest hands may be moved with all the accuracy of those of an astronomical clock. The impulse-spring is screwed on to a brass stud fixed on the bed-plate, through a slot in which the pendulum vibrates. It has a small arm extending nearly at right angles, and a second arm which projects from the armature, which being attracted down by the action of the magnet, the poles of which pass through the bed-plate, the other end of the armature comes in contact with the arm projecting from the impulse-spring, and raises it so as to lock the upper end in a detent, which is screwed on to the same stud as the impulse-spring.



THE PENDULUM.

The pendulum, in the course of its vibration, comes in contact with the upper part of the detent, which it lifts up, thereby leaving the impulse-spring free to drop on the side of the pendulum, and follow it for a short space of its vibration, so as to give it the necessary impetus, formerly what is technically called among clock-makers the *remontoir* escapement, and which, in the present instance, is in its most perfect form. The pendulum, as above mentioned, has been in action for some weeks past at the ancient Society of Arts, in John-street, Adelphi.

The Law of Cheques.—Cheques were first authorised by the stamp Act, 55 Geo. 3, c. 184. But that act was amended by 9 Geo. 4, c. 4, s. 13; the only amendment being that fifteen miles are substituted for ten miles, within which from the place of residence of the banker the cheque must be issued. If a cheque is issued without this distance, it is not only no cheque, but subjects the drawer or issuer and all concerned to penalties. A cheque must bear date on or before the day on which it is issued. A post-dated cheque is illegal. It is not perhaps generally known that a cheque for a less sum than 20s. is void and illegal, subjecting the parties to a penalty of £20, antiguide to not less than £5. If a party draws a cheque, and his deposit at the banker's is not sufficient to pay it, he is liable to an action, without notice of the refusal of the bankers to cash the cheque. The drawer of a cheque is not discharged by any delay of the holder in presenting it, provided the delay does not exceed six years. But if the banker fails, then a delay of more than a day after the receipt of the cheque, casts the loss on the holder of the cheque, whereas, had he (the holder) not delayed the presentation of it beyond the next day, he could recover from the drawer. It is, therefore, very dangerous to the holder of a cheque to delay presentation for payment. The banker is liable for all forgeries when cheques have been properly filled up, and the drawers have not been guilty of gross negligence. Cheques afford strong proofs of the payment of debts *Sharp.*

Railways.—The first propounder in print of a general system of iron railways with steam traction, for public transit, was Thomas Gray, in the year 1820. He also agitated specifically for a line between Liverpool and Manchester. But his object was slow travelling and heavy loads. He besieged every one, from Ministers of State downwards, with his plans, but lived neglected, and died poor; while men around him became rich by buying and selling shares in the lines he first agitated. George Stephenson was an inventor in the large sense of the word. He prophesied, i. e. foretold, a railway over a quaking moss, wherein a fire-steed might travel at thirty miles per hour, and for his pains was called a madman. He created practically a new combination out of materials till then very imperfectly understood, and still so.—*W. Bridges Adams.*

THE ILLUSTRATED LONDON NEWS.

No. 469.—VOL. XVIII.] SATURDAY, FEBRUARY 8, 1851. [TWO NUMBERS, 1s.

OPENING OF THE SESSION.

THE Speech of her Majesty at the opening of the Session of Parliament was expected with more interest than usually attaches to such documents, and will be perused throughout the country with more than usual attention. It has become quite a fashion to consider Royal speeches as vague and unmeaning, and to express dissatisfaction at the constitutional reservations of phraseology which are employed in them; but it cannot justly be said, that the Speech which the Administration prepared for her Majesty on this occasion, is of such a character. Several important topics are touched upon in it, with more or less fulness and perspicuity. In the first place, the signs of returning peace in Europe, and of the subsidence of the great revolutionary wave, were too obvious and too gratifying, to be passed over without prominent notice; and the highly prosperous state of the commerce and manufactures of Great Britain, which is still more obvious and still more agreeable, could not but receive from her Majesty a grateful record. Both in our foreign and domestic relations, the year 1851 has opened under favourable auspices. We are at peace with the whole world; and Europe, for the first time since 1848, begins to be at peace with itself. Free Trade, of which we have set an example to all nations, has proved even of greater advantage than its warmest supporters could have anticipated. Under its operation the working classes have constant and remunerative employment; mills, mines, and workshops are in full activity; there is a surplus in the national Exchequer; poor-rates have diminished; ship-building—a branch of industry which was to be ruined by the repeal of the Navigation Laws, according to the dismal forebodings of some false prophets among us—has proved more prosperous than ever; and agriculture itself, though depressed and said to be rumous to all engaged in it, is not more depressed than it was many times during the bygone days of protection and the sliding scale. Her Majesty, in expressing the hope that the generally prosperous state of all other classes will have a favourable effect in diminishing the difficulties of the owners and occupiers of land, and in promoting the interests of agriculture, will however, administer no consolation to the agricultural body. The prosperity of other classes necessarily reacts upon them; but their distressed condition, which they ascribe to Free Trade, is proved by their own history for the last thirty-five years to have nothing to do with that measure, and to be shared with the agriculturists of other countries, where Protection is still the rule. The farmers of France raise as piteous a moan of distress as ever was raised by the farmers of England, and complaint seems the habitual tone of agriculturists in every part of the civilized world where population is thick, and where manufacturers do not come largely to the aid of landed proprietors in supporting the people. The only prosperous agriculturists that we know of are those of the United States; and certainly in no part of Europe do we hear any other cry from them, but one of distress, because food is too cheap and farming unremunerative. Why this should be, we shall not here stop to enquire; but that the fact is so, is a proof, whatever may be its cause, that Free Trade has, in reality, nothing to do with it.

The other topics embraced in her Majesty's Speech foreshadow a busy session, in which there will be an immensity of talk, and no inconsiderable portion of work. It will be a matter of rejoicing to all classes of the community to learn that the great subject of law reform is to be taken up in earnest, and that the Government is prepared with a series of measures for the improvement of the administration of justice both in the Law and Equity Courts. Whether the result will be the codification of the law—that noble task which the great lawyers of England yet owe to their country, remains to be seen; but even if no other good should ultimately result from the Royal promises, the ministerial intentions, and the public anxiety upon the subject, than the cleansing of the Augean stable of the Court of Chancery, there will be much reason for congratulation. There is scarcely ground for the hope that the lawyers in Parliament, to whom the management of this question must be entrusted, will be enabled to carry it to completion during the present session; but the country may fairly anticipate, from the satisfactory beginning of the work in 1851, that no future changes of the Ministry or of policy, or any Parliamentary accidents, will endanger its ultimate success. The kindred measure, for the Registration of Deeds and Instruments relating to the Transfer of Property, which the Ministry have promised in the Royal Speech, if it have been carefully considered during the recess, will, doubtless, receive Parliamentary sanction at a much earlier period.

But, important as these subjects are, and interesting as the discussions that must arise upon them are sure to be, the topic which will excite most attention, and which caused the Royal Speech to be looked for with such extraordinary solicitude, is the unlucky question of the "Papal Aggression." Upon this subject, however, the Speech is so studiously guarded, that even Cardinal Wiseman himself, whose selfish and unreasonable ambition has thrown this unoffending country into such a tumult of dissatisfaction, will fail to discover from it what course the Ministers intend to pursue with regard to him. That her Majesty "will maintain the rights of her Crown and the independence of the nation against all encroachment, from whatever quarter it may proceed," neither he nor any other Papist can have doubted; but he and the Roman Catholics, as well as the Protestant people of these realms, will seek in vain from the Speech for any clue to the mode in which present and future encroachment is to be resisted, and whether the enactments in contemplation are or are not to be retrospective. It will be a satisfaction, however, to the friends of civil and religious liberty to know, that not even the impudent assertion of jurisdiction in this country which has been made by the Pope will be converted into a pretext for the imposition of any disabilities or the infliction of any penalties upon the professors of the Roman Catholic faith. Lord John Russell would have belied his whole previous career, and would have acted in hostility to the spirit of the age, and to the British Constitution as reformed by the Catholic Emancipation Act, and by the repeal of the Test and Corporation Acts, if he had become, even on provocation, a persecutor of the Roman Catholics, or of any other form of religionists. The good sense and loyalty of the leading Englishmen who belong to the Roman Catholic Church, some of them bearing illustrious and historical names, have greatly simplified the task reserved for Parliament, and rendered all the more easy the agreement of the Legislature in preventing or punishing for the future any invasion by a foreign power of the supremacy of the Sovereign of Great Britain. There is little, if any sympathy with Ultramontanism and Jesuitism among the Roman Catholics of England; and it would apparently be no great grievance to them whatever it might prove in Ireland, if Bishops and Archbishops of their persuasion were prohibited under heavy penalties from assuming any territorial designations in this country. Whatever be the form which the enactment may assume, it is to be hoped on

THE MARQUIS OF ANDOVER, M.P. FOR ANDOVER, MOVER OF THE HOUSE OF COMMONS' ADDRESS TO THE THRONE.—FROM A PHOTOGRAPH BY KILBURN.

MR. PETO, M.P. FOR NORWICH; SECONDER OF THE HOUSE OF COMMONS ADDRESS TO THE THRONE.

every ground that Cardinal Wiseman will speedily be thrown into beneficial obscurity, and that the year 1851 will see the last of those unhappy bickerings between Roman Catholics and Protestants which distract the attention of the country from matters of more importance. What our statesmen and thinkers have to struggle for is the increase amongst us of a well-employed, a well-fed, a well-clothed, a well-taught, and a moral and religious people; the diminution of burdens upon industry, and the gradual eradication of the great plague-spots of crime and pauperism. The continual babble of warring sects is a serious impediment to this good work; and the sooner it comes to an end, the better for us all.

There is one omission in the Royal Speech which is as cheering as it is remarkable—it does not say a word about Ireland. That country has undergone seven years' affliction and a heavy trial, but the worst has passed; and, in finding a solvent proprietary, Ireland has found the best remedy for the evils under which she has so long groaned. It will be happy for her, and for every other portion of the empire, if the good which has begun shall continue, and if there shall never more be occasion to mention Ireland in a Royal Speech.

PARLIAMENTARY PORTRAITS.

THE MARQUIS OF KILDARE, M.P. FOR KILDARE COUNTY.

Charles William Fitzgerald, Marquis of Kildare, eldest son of the present (third) Duke of Leinster, sole Duke and premier Marquis and Earl of Ireland, was born at Dublin in 1819, and educated at home and at Christ Church, Oxford, where he graduated in 1840. In the same year he was appointed one of the Commissioners of National Education in Ireland, and a magistrate and Deputy-Lieutenant for the county of Kildare. In the following year he travelled over the greater part of Spain. At the general election of 1847 he was invited to become a candidate for the county, and, as a Liberal, in favour of Tenant-Right, Free-Trade, and the repeal of the Navigation Laws, but opposed to the repeal of the Union, was returned, at the head of the poll, along with Lord Naas, in opposition to John Augustus O'Neill, the Repeal candidate; the numbers being—Marquis of Kildare, 544; Lord Naas, 413; O'Neill, 391. In the September of the same year his Lordship married Caroline, third daughter of the present (second) Duke of Sutherland. In 1849 he received the commission of Colonel in the Kildare Militia.

His Lordship spoke for the first time in the House on moving the Address on the Royal Speech. He referred, as matter of congratulation, to our amicable relations with all foreign powers; to the restoration of peace throughout Europe, and the influence the friendly offices of this country had had in its establishment; the Brazilian measures for the suppression of the slave trade, and the flourishing condition of our finances, notwithstanding the many reductions of taxation. The present depressed condition of agriculture was to be deplored, but there was good hope that that important interest would soon revive under the influence of the general prosperity of the other great branches of industry. The recent aggression on the part of Rome was matter of regret and rendered it the duty of the House at once to take measures for the maintainance of the Queen's supremacy and the established religion of the land, but with a careful regard to the religious liberty of the people. The promised reforms in Chancery, and the alteration of the law as to the registration of deeds, he considered of the greatest importance, as tending to the more cheap and speedy administration of justice in our highest court, and the more ready transfer of land.

At length Ireland afforded matter of congratulation; the people were turning from the disturbance of political agitation to industrial pursuits, and were entering upon a course of effort which, under the blessing of Providence would, he believed, lead that so long unhappy country to a pitch of prosperity she had never before enjoyed.

Our Portrait is from a Photograph by Kilburn.

SAMUEL MORTON PETO, ESQ

Until within the last few years, the moving and seconding of the Address was regarded as a piece of mere conventional routine, assigned by Ministers to some youthful follower of the Government, as a facile introduction to the practical formalities of Parliament. It was a duty entirely honorary, involving little labour, entailing no responsibility, and awakening no expectancy, for it was confined to the utterance of the simplest platitudes in support of the trite commonplaces of which then, as now, Speeches from the Throne are made up. Of late years, however, there has been a wholesome innovation on the practice, and Ministers of either party have been accustomed to look about them with yearly increasing anxiety for members of the Legislature whose abilities shall not only suffice for a comprehensive amplification of the topics glanced at in the Royal Message, but whose personal character and position shall guarantee, as far as possible, the honesty and disinterestedness of their advocacy. These requirements are possessed in an eminent degree by the member for Norwich. Identified with the people, of popular predilections, and, in his own person, a natural type and exponent of the material progress of the country, the splendid amplitude of his fortune exempts him from susceptibility to official blandishment; while the pride of good old English descent, and an honoured English name, give him an abiding interest in the maintenance of all that is worth preserving in our "territorial constitution." Hence the moral value attached to the support of such men as Mr. Peto—a support that, it must be admitted, was greatly enhanced by the sobriety of view, solidity of judgment, and manly tone which characterised his Tuesday's speech. While necessarily putting a free and liberal construction on the acts, and still more on the motives, of the Cabinet and its leader, he abstained from everything in the shape of indiscriminate panegyric calculated to compromise the principle that has governed him through life—the sentiment so expressively apostrophised in Smollett's ode:—

> Thy spirit, Independence, let me share,
> Lord of the lion heart and eagle eye.

Mr. Peto, the eldest son of Mr. William Peto—who, until the period of his death, which took place about two years ago, resided at Cannon Court, Cookham, Berks—was born at Woking, in Surrey, in August, 1809. He is, consequently, but little turned of forty years; and yet how familiar has his name, during the last twenty of them, been, as the operative constructor of many of the greatest architectural and engineering enterprises of the present century! Even before the attainment of his majority, the singularly practical aptitude of his talents had so matured the fruits of his seven years' experience, under the tuition of his uncle, Mr. Henry Peto, that, on the death of that gentleman, in 1830, he found himself the successor to a moiety of his very large business—his joint partner being Mr. Thomas Grissell, another nephew of the deceased, and who had had a share in the house for some five years previously. Mr. Peto also came into possession of a very large fortune by his uncle's will. The seemingly precocious ripening of Mr. Peto's judgment will appear to be less inexplicable, when it is stated, that, in pursuing the study of his business, he did not confine himself to a mere acquaintance with its theory, but gave a laborious and zealous devotion to the manual pursuit of the three several handicrafts chiefly required in such establishments. He worked—and those who know his character can judge of the energy he imparted to his labours—not as the relative and future heir of one of the leading contractors of the kingdom, but as if he were destined, during his whole lifetime, to earn his livelihood as a journeyman, in the capacity of a carpenter, a bricklayer, and a mason; and there cannot be a question, that, beside the sentimentale utility he derived from the insight thus voluntarily acquired into the mechanism of labour, so essential to his calculations in its employment in vast organised masses, he also thus became familiarised with what may be called the idiosyncrasy of the English mechanic, and he has, consequently, been enabled to convert such knowledge to the accomplishment of the moral results observable on his works. These render almost literally applicable to all his undertakings of a like nature, the remarks made nearly six years ago by the late exemplary Bishop of Norwich, who, on the occasion of opening upwards of eighty miles of railway belonging to the Eastern Counties Company, said:—

Mr. Peto is a Dissenter, and he (his Lordship) envied the sect to which he belonged the possession of such a man, and he would gladly purchase him at his own price; and heartily he prayed that he would ere long become a member of the Church of England. He was a Churchman, and holding such office in the Church, and believed that in that Church was the purest faith, but he was sure a Catholic Christian, and, as such, would view it as a sacrilegious act to say one word that could express his opposition, respect, and regard for the exertions used for the moral benefit of the railway labourers by Mr. Peto. He was always most anxious to see good done, and rejoiced to see it, from whatever quarter it came: and he could not, and would not, withhold his pleasure of gratification at the great good done by Mr. Peto. All down the line he had met with his agents, and had found them not merely giving directions and instructions, but also giving to the men religious and school books for the education of themselves and their children; and thus showing them that education can civilise the mind, reform the habits, and elevate the understanding. The gin-shops were left deserted, and the schools were full. The good and exemplary conduct of Mr. Peto's railway labourers under this system deserved to be a tale told "three times three, with one cheer more;" and let it be recorded as a fact, of which there could be no denial, not one labourer in the Norwich district had been guilty of misconduct that made him amenable to the law. The allusions of the Bishop to the orderly conduct of the labourers were corroborated by the Dean of Ely at a subsequent part of the evening. "For," said he, "in my district I have never had so little criminal magisterial business during the past year as when the bench was occupied in the progress of the works on the Eastern Counties Railway under Mr. Peto; although for a period of two years three thousand of his men have been in my immediate vicinity."

Lord George Bentinck, in his remarkable speech, recommending, as an antidote to the effects of the Irish famine the employment of twenty millions sterling in the construction of railways in that country, also made highly complimentary allusion to Mr. Peto's system of management among his English railway labourers; and Mr. Peto's observations on Irish labour in his speech on Tuesday, are particularly deserving of remark. The system pursued by him may be described, in brief terms, as combining discipline, personal freedom, moral admonition reduced to practice, and a total avoidance of ostentatious parsimony, in a degree never before exemplified in relation to the same heterogeneous and somewhat unmanageable materials. It is not, however, to be supposed that his effective controul over his dependants is owing to any of that brusqueness of mien and domineering manner which some masters believe to be essential to their assistance. On the contrary, his demeanour to his inferiors is as unassuming as moderate as his bearing to his equals is courteous, polished, and self-possessed. He has also the secret not only of attaching to him those immediately connected with him in his vast operations, but of imbuing them with the animus that impels himself to an ever-vigilant supervision of the welfare of the people or the interests committed to his care. Hence, though his works may be progressing in many different quarters, his spirit is equally ubiquitous, and with the like result in all. To enumerate those works, would be to name a large portion of the leading railway undertakings in England, for Mr. Peto has constructed above one-seventh of them.

The partnership subsisting between Mr. Peto and Mr. Grissell was dissolved by mutual consent in 1845, the latter gentleman continuing, on his own account, the erection of the Houses of Parliament, the greatest of the many public structures undertaken by the firm. Among such structures may be mentioned the Model Prison at Clerkenwell, Hungerford Market, the Reform and the Oxford and Cambridge Clubs. It is worth noting, at the present moment, when the Aladdin like celerity of Paxton's Crystal Palace is exciting such astonishment, that the Lyceum Theatre was built by the firm in sixteen weeks, and the St. James's in thirteen—two of the most perfect and elegant edifices of the kind in the metropolis.

Though, as we have seen, in the very prime of life, Mr. Peto is gradually withdrawing himself from the more active personal control of matters of this nature, but finds a congenial coadjutor in the person of his present partner and brother-in-law, Mr. Betts.

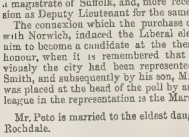
In our Sketch of Lowestoft, in September last, we took occasion to speak of the value and extent of benefits conferred on that delightful watering-place by Mr. Peto, who, in addition to being the Lord of the Manor of the township, is the New Town of Lowestoft is, or we should rather say, has been, erected, is also the proprietor of the extensive and beautiful neighbouring estate of Somerleyton, purchased from Lord Sydney Godolphin Osborne, a few years ago. Here he has re-constructed the family mansion in a style of massive splendour and taste well befitting the ancestral oaks surrounding it. Mr. Peto has recently still further added to his landed possessions by the purchase of the extensive Lancashire estates of Lord Stanley of Alderley, of his father-in-law, the ability of British agriculture, under proper direction, to sustain itself in its olden pre-eminence, no matter what may be the competition of the foreigner. He has, since his first connexion with Somerleyton, been a magistrate of Suffolk, and, more recently, has received his commission as Deputy Lieutenant for the same county.

The connexion which the purchase of Somerleyton gave Mr Peto with Norwich, induced the Liberal electors, early in 1847, to solicit him to become a candidate at the then expected election—no small honour, when it is remembered that for upwards of 40 years previously the city had been represented in the Whig interest by Mr. Smith, and subsequently by his son, Mr. Benjamin Smith. Mr. Peto was placed at the head of the poll by an immense majority. His colleague in the representation is the Marquis of Douro.

Mr. Peto is married to the eldest daughter of Henry Kelsall, Esq., of Rochdale.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

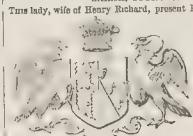
SARAH, COUNTESS OF WARWICK.



This lady, wife of Henry Richard, present Earl Brooke and Warwick, died on the 20th ult. She was born February 4, 1766, the eldest daughter of John, second Earl of Maxborough, and was twice married. By her first husband, John George, fourth Lord Monson, she had an only son, Frederick John, fifth Lord Monson, who died s.p., October 7, 1841; and by her second, the Earl of Warwick, one son, George Greville, Lord Brooke, M.P.

Her princely Castle in Warwickshire Lady Warwick was much esteemed and loved by rich and poor, especially in the neighbourhood of Her death is felt as a severe and general loss.

SIR FRANCIS LAWLEY, BART.



This respected gentleman, long the intimate personal friend of the late Sir Robert Peel, died, at his seat in Warwickshire, on the 30th ult. He was second son of Sir Robert Lawley, fifth baronet of Spoonhill, by Jane his wife, daughter of Sir John Thompson, Bart., of Escrick, county of York, and inherited the baronetcy in 1833, as the deceased of his elder brother, Sir Robert Lawley, who had been created a Baronet in 1828. He married, in the year 1801, Mary Anne, eldest daughter of George Talbot, Esq., of Temple Guiting, county of Gloucester, but had no issue. His large landed estates and the baronetcy will devolve to descend to his only surviving brother, John Berry, Esq., late M.P. for Warwick, who is heir-presumptive to the Yorkshire property of his maternal ancestors. The founder of the Lawleys, of Spoonhill, was Thomas Lawley, Esq., cousin and heir of John, Lord Wenlock, thirty-first Baron, to King Edward IV., and Knight of the Garter. The late Sir Francis represented Warwickshire in four parliaments, but retired in 1835.

The late German Composer, Lortzing.—We recorded the decease of this composer in our last Number. He was buried on the 24th ult. Meyerbeer and Kirstner, Dorn and Taubert, and all the artists of the Berlin theatres follow on the funeral car. On the head of the deceased was placed a wreath; and before the coffin was borne, on a velvet cushion, the laurel crown and massive silver conductor's stick, presented to him by the city of Leipsic. He was born in Berlin in 1803, and he made his début at Leipsic. He was afterwards director of music at Vienna, Dresden, Munich, and at Berlin at the Kœnigstadt. He was organising a new musical society at Berlin when he was seized with apoplexy. Meyerbeer was to conduct at a grand concert for the benefit of Lortzing's family.

Erratum. A mistake occurred in our recent memoir of Sir Willoughby Gordon. It is there stated that the two younger brothers of Sir Willoughby are deceased. We are happy to say that such is not the case. Both these gallant officers, Admiral Henry Gordon and Admiral Charles Gordon, still live to enjoy those honours which they have so well deserved of their country.

OPENING OF PARLIAMENT.

HOUSE OF LORDS.

On Tuesday last her Majesty opened Parliament in person, with a Speech from the Throne.

With the usual good fortune which marks all the Royal progresses in public, her Majesty was favoured with the brightest and most agreeable weather, which called out a more than usual throng of London's "thousands and tens of thousands" to witness the gay pageant. In front of Buckingham Palace an immense concourse of persons assembled to see the Royal procession start; and the enthusiastic plaudits with which her Majesty was greeted exceeded any similar public demonstration on such an occasion since the time of the Reform Bill; and a similar display was presented at the Horse-guards, Whitehall, Palace-yard, and other points on the route to Westminster.

The scene in the marble hall of Buckingham Palace is an extremely pleasing one; the groups of splendidly-attired officers, attendants, yeomen of the guard, &c., forming, with the gorgeous decorations of the staircase, a picture of much gaiety and elegance. The marble hall is of great extent, and has on its northern, southern, and western sides a raised portion, approached by several steps; its eastern side is formed by the main entrance, under the portico, and windows, looking under the same. The hall itself is somewhat dark, and the brilliant light from the skylight covering the staircase is therefore greatly enhanced, and, viewed from below, produces an admirable play of effect. The staircase is a single flight for a short height, and thence it turns to the right and left to the State Apartments, a continuation of the single flight being continued up an arched avenue, leading towards the Garter and other rooms. The stairs are of white marble; the balustrade, of ormolu, of an excessively rich and elaborate Grecian acanthus foliage pattern. The walls of the staircase are painted in imitation of marbles of various kinds, the imitations being absolutely marvellous—indeed, the finest it is possible to imagine; these were painted by Mr. Mexon, and certainly add materially to the rich appearance of the walls. The architectural members and all the modelled enrichments of the ceiling and walls are richly gilded, and heightened by various positive colours. In the spandrils of the ceiling there are frescoes of Morning, Noon, Evening, and Night, painted by Mr. H. J. Townshend.

Tickets of admission are issued by the Lord Chamberlain for a limited number of persons to see the brief pageant of the Queen leaving the Palace to go to the House of Parliament; and space in the hall and on the raised parts of the hall is allotted for the spectators. Yeomen of the Guard are stationed at the entrance doors, and at several parts of the staircase; and many other persons connected with the pageant are also in waiting in the hall: amongst others, two Yeomen Porters, in sombre-coloured court suits, with drawn swords, seemed quite relics of the days of George III.

The appointed hour of the Queen's departure having arrived, and the word given that the carriage was ready, in a brief space the Lords in Waiting, with all the gentlemen having official duties, came in succession down the thickly-carpeted stairs; and almost immediately afterwards, her Majesty, leaning on the arm of Prince Albert, and followed by the Duchess of Sutherland, &c., swept by, and entered the State-carriage, the guard of honour of the Coldstream Guards, stationed in the quadrangle of the Palace, saluting, and the band playing the National Anthem.

The Queen left Buckingham Palace at a quarter before two o'clock. The procession consisted of five carriages, each drawn by six bays, one carriage drawn by six black horses; and the state coach, drawn by eight cream-coloured horses.

The doors of the House of Lords were opened at twelve o'clock, soon after which the house was filled in every part. The peeresses and sons of peers attended in unusual numbers, having obtained *entrée* by means of tickets specially provided.

Among the earliest arrivals were the Duke of Wellington, who seemed to be in excellent health, the Dukes of Devonshire, Argyle, and Buccleuch, the Marquis of Winchester, the Earl of Devon, the Earl of Denbigh, Earl of Cawdor, Earl of Carnarvon, Earl Talbot, and Lord Cranworth. The Ministers present were the Marquis of Lansdowne, the Marquis of Clanricarde, Earl Grey, Lord Carlisle, and Earl Granville. Amongst the Episcopal bench we noticed the Archbishops of Canterbury and York, and the Bishops of Worcester, Hereford, Oxford, St. David's, and Manchester.

Among the Judges were the Lord Chief Baron, Mr. Baron Parke, Mr. Justice Coleridge, Mr. Justice Wightman, Mr. Justice Erle, Mr. Baron Martin, Mr. Justice Williams, the Lord Chief Justice of the Common Pleas, &c.

That portion of the House which is set apart for the Foreign Ministers was crowded, the representatives of the United States, South American Republics, and almost all the nations of Europe being present.

Shortly before two o'clock the Lord Chancellor took his seat on the woolsack, and soon after the booming of cannon announced the arrival of the Queen at the House.

Her Majesty was attired in a white satin brocade dress, embroidered with gold, and wore a splendid train and diamonds. She was led to the throne by the Prince Consort (who wore a field-marshal's uniform, with the Order of the Garter), the procession being closed by the officers of state, heralds, pages, &c. Her Majesty appeared in excellent health and spirits, and while awaiting for the attendance of the Commons, entered into conversation with the Duchess of Sutherland, by whom she was attended. The Marquis of Lansdowne bore the crown, the Duke of Wellington the sword of state, and the Marquis of Winchester the cap of maintenance.

The Prince Consort wore crape on his left arm, as mourning for the Queen of the Belgians.

When her Majesty had ascended the throne, the whole House rose, and remained standing until her Majesty motioned the House to be seated. At this period the *coup d'œil* presented was most brilliant. The sun shone with unwonted splendour for this season of the year, and heightened the effect of the gorgeous scene.

The gentleman Usher of the Black Rod was commanded to summon the Commons to the bar of the House. On their arrival, her Majesty very clearly and distinctly read the following Speech from the Throne:—

THE QUEEN'S SPEECH.

"My Lords and Gentlemen,

"It is with great satisfaction that I again meet my Parliament, and resort to your advice and assistance in the consideration of measures which affect the welfare of our country.

"I continue to maintain the relations of peace and amity with Foreign Powers. It has been my endeavour to induce the States of Germany to carry into full effect the provisions of the treaty with Denmark, which was concluded at Berlin in the month of July of last year. I am much gratified in being able to inform you that the German Confederation and the Government of Denmark are now engaged in fulfilling the stipulations of that treaty, and thereby putting an end to hostilities which at one time appeared full of danger to the peace of Europe.

"I trust that the affairs of Germany may be arranged by mutual agreement, in such a manner as to preserve the strength of the Confederation and to maintain the freedom of its separate States.

"I have concluded with the King of Sardinia articles additional to the Treaty of September, 1841, and I have directed that those articles shall be laid before you.

"The Government of Brazil has taken new, and I hope efficient measures for the suppression of the atrocious traffic in slaves.

"Gentlemen of the House of Commons,

"I have directed the estimates of the year to be prepared and laid before you without delay. They have been framed with a due regard to economy, and to the necessities of the public service.

My Lords and Gentlemen,

"Notwithstanding the large reductions of taxation which have been effected in late years, the receipts of the revenue have been satisfactory.

"The state of the commerce and manufactures of the United Kingdom has been such as to afford general employment to the labouring classes.

"I have to lament, however, the difficulties which are still felt by that important body among my people who are owners and occupiers of land.

"But it is my confident hope that the prosperous condition of othe

classes of my subjects will have a favourable effect in diminishing those difficulties and promoting the interests of agriculture

"The recent assumption of certain ecclesiastical titles conferred by a foreign Power has excited strong feelings in this country, and large bodies of my subjects have presented addresses to me, expressing attachment to the Throne, and praying that such assumptions should be resisted. I have assured them of my resolution to maintain the rights of my Crown, and the independence of the nation, against all encroachment, from whatever quarter it may proceed. I have, at the same time, expressed my earnest desire and firm determination, under God's blessing, to maintain unimpaired the religious liberty which is so justly prized by the people of this country.

"It will be for you to consider the measure which will be laid before you on this subject.

"The Administration of Justice in the several departments of Law and Equity will no doubt receive the serious attention of Parliament; and I feel confident that the measures which may be submitted, with a view of improving that administration, will be discussed with that mature deliberation which important changes in the highest courts of judicature in the kingdom imperatively demand

"A measure will be laid before you, providing for the establishment of a system of registration of deeds and instruments relating to the transfer of property. This measure is the result of inquiries which I have caused to be made into the practicability of adopting a system of registration calculated to give security to titles, and to diminish the causes of litigation to which they have hitherto been liable, and to reduce the cost of transfers.

"To combine the progress of improvement with the stability of our institutions, will, I am confident, be your constant care. We may esteem ourselves fortunate that we can pursue, without disturbance, the course of calm and peaceable amelioration, and we have every cause to be thankful to Almighty God for the measure of tranquillity and happiness which has been vouchsafed to us."

Having concluded the Speech, her Majesty replaced it in the hands of the Lord Chancellor, and, having saluted the House, retired in procession, the same order being maintained as upon her entrance.

From the public out of doors, loyal greetings, similar to those given on her progress to the House, saluted her Majesty on her return to the Palace.

Their Lordships, on her Majesty's retirement, having adjourned during pleasure, re-assembled at five o'clock.

THE ADDRESS.

Her Majesty's Speech having been read by the LORD CHANCELLOR and by the Clerk at the table,

The Earl of EFFINGHAM rose to move the Address in answer to the Speech. The noble Earl spoke in so low a tone as to be almost wholly inaudible to the gallery. He began by asking for the indulgence of their Lordships, not only because he had never before addressed them, but also because of the importance of the questions alluded to in the Speech, and of the inability which he felt to do justice to them. All those questions—but more particularly that which related to the recent Papal encroachment—ought, he felt, to be discussed with moderation and forbearance; and he had no doubt their Lordships generally agreed with that opinion. He should not trespass at any length upon their Lordships at any length, and would only briefly touch upon one or two of the topics contained in the Speech. When he called to mind the disturbances which had existed in Italy, and the state in which the affairs of Germany had been during the last year, it was certainly most satisfactory to be assured that the peace of Europe was not likely to be disturbed. He trusted that the danger which had led to the armament of Prussia and other powers had passed away, and that peace might be regarded as fixed on a secure foundation. In connexion with that wish, he could not help alluding to the Industrial Exhibition about to be opened in this country, as he had no doubt it would be the means of strengthening the bonds of peace and securing the amity of nations. (Hear.) It would also be most satisfactory to the people of this country to learn that we had taken measures for the suppression of the slave trade. With regard to the paragraph which noticed the commercial and manufacturing prosperity of the country, he might state that the wisdom of the reductions made in certain duties was proved by the increase which had taken place in the comforts of the people generally, and by the elasticity with which the revenue had recovered, notwithstanding the extensive reductions of taxation which had imposed for the last year showed a satisfactory state of trade, and the large increase in the excise proved that the bulk of the people were in the enjoyment of the necessaries of life. He assured all the agricultural interests that, with one or two exceptions, increase had taken place during the last year, not only of the amount of poor-rates, but of the number of persons relieved. That showed, he thought, that the people were (most employed, and that they were enjoying an ample share of agricultural improvement, such as drainage ("Hear, hear," from the Opposition); but those works could not be undertaken unless landlords and tenants expected to be paid by them (Hear, hear); and he was glad to find that what benefited the labourer would also do good to the landlord and tenant. He did not deny that pauperism existed among manufacturers at Manchester and elsewhere, but he firmly believed that the labourers were in a better condition now than formerly. He had already alluded to that part of the Speech which referred to the attempt of the Pope to establish a hierarchy in this country. He was not surprised at the excitement which had prevailed among the people of this country on that question, and he trusted the Legislature would sympathise with the feelings which had been manifested by the nation at her Majesty's subject with reference to it. In alluding to the question, he hoped he should not give offence to any of those who might differ from him respecting it. His own opinion was, that the measure recently so called for, and which, on the present occasion, they were not asked to consider any such measure. The recent aggression of the Pope would not have been submitted to by a Roman Catholic country; and he thought their Lordships would agree with him in thinking that there were still stronger reasons why it should not be submitted to by a Protestant country. (Hear). He rejoiced, therefore, to find her Majesty declaring her resolution to maintain the rights of the Crown and the independence of the nation against all encroachments, "from whatever quarter they may proceed." (Hear.) The recent feeling displayed by the country proved beyond all doubt that the heart of the country was sound, and that the people had no sympathy with Rome. (Hear.) The wish which he was sure was generally entertained was, that all classes should have full accommodation afforded them for the due observance of their respective modes of worship. He hoped the Parliament would always extend to every one full toleration of their civil and religious privileges, so long as they did not encroach upon the rights of others. In the exercise of their religion, however, he thought that the Roman Catholics might be content without establishing a hierarchy of their own. If they attempted this, he thought they would find to their cost that the means at hand to maintain that arrangement without infringing on the prerogative of the Crown. He thought, therefore, that their Lordships were not prepared to sacrifice any of the rights of the Crown or of the Parliament, though both might be ignored and set aside by the Church of Rome. He had been informed by a very high authority that the object of establishing a Roman Catholic hierarchy was to place the country under the absolute control of the Pope; but he believed it would be found, as, indeed, experience had already shown, that the operation of the canon law could not exist in a free Protestant country. (Cheers.) Their Lordships recognised the direct act of sovereignty on the part of the Pope of Rome, but the Queen's supremacy he hoped they would be prepared to maintain. (Hear.) He was not one of those who thought that if the aggressive act of the Pope had been done in a more inoffensive manner, it would have been submitted to: but the bold manner in which it had been carried out was felt as an aggression of the act. There were other subjects which were alluded to in her Majesty's Speech from the Throne, embodying matters of great importance such as those relating to the improvement of the administration of justice, to which their Lordships' attention was called. But any opinion he could offer to their Lordships would be of no value, and he would rather leave it to others to address their Lordships on that topic: he thought, however, that much ray, that any Act for the establishment of a system of registration of deeds and instruments relating to the transfer of real property, would receive with the assent of the House whenever it was proposed. In the latter part of her Majesty's Speech, which declared that we had every reason to be thankful to Almighty God for the measure of tranquillity and happiness which has been vouchsafed to us, he need not say he was confident all their Lordships would cordially join. He noble Earl concluded by moving an Address to her Majesty, which was, as usual, an echo of her Majesty's Speech.

Lord CRANBORNE said, he rose with some difficulty to second the Address which had just been proposed by the noble Earl. In doing so, he assured their Lordships that he felt much in need of that indulgence which they usually extended to those who complied the painful duty in which he then did. After the able manner in which the noble Earl had alluded to the topics contained in the Speech from the Throne, he felt it would be unnecessary, as it would be wearisome to their Lordships, were he again to go through them. But there were one or two which their Lordships might possibly think it fitting he should break silence; and in making a very few observations upon them, he sincerely trusted that it would not lead to a hostile discussion, or prevent a unanimous assent and concurrence in the adoption of the Address proposed. The important subject which, their Lordships had been told, had for some time engaged public attention, was the late proceedings of the Papal See, which had been of an aggressive character. The noble Earl had already alluded to the subject, and he need hardly say how entirely he concurred with him in the sentiments which he had expressed. No need hardly say how much gratification he felt at the circumstance of her Majesty recommending this subject to the consideration of the House and he sincerely hoped the their Lordships would be prepared to co-operate with her Majesty's Government against this invasion and aggression on the part of the Papal power. (Hear.) It was, however, most satisfactory to find the recommendation in her Majesty's Speech accompanied with assurances from which they might infer, that, whatever measures were to be proposed, they would in no way encroach upon the civil and religious liberty of any class—(hear)—that they would not be measures directed against the Roman Catholic subjects of her Majesty, but simply measures to resist this aggression on the part of the Romish power. He thought that many, nay, indeed, that most of the Roman Catholic members of the other side of the other House of Parliament, did approve of this policy; and that they, in common with their and our Roman Catholic ancestors, felt that it was absolutely necessary by an act of Parliament to check the Papal pretensions, and to check the spirit of aggression which always had, and which still animated the See of Rome. (Hear.) He now referred to another subject. Her Majesty had congratulated them on the general prosperity of the country, whether in commercial or manufacturing point of view; and there could be no doubt that the nation was so far flourishing. There was one exception, however, suffered to, and he regretted to say it was a most important exception. (Cheers from the Opposition benches.) Her Majesty was pleased to lament the distress which, to a great extent, prevailed among that important branch of her people who were the owners and occupiers of land. This was a subject well worthy of their Lordships' most serious consideration. (Cheers from the Opposition.) It was a subject which was closely connected with the well-being of the most important class: it was a subject which was intimately connected, not only with the manufacturers, but with the consumers. It might be said that this prosperity was maintained at the expense of the landlords, but such was not the fact. In reference to the state of Ireland, he could speak from his own knowledge; the sales of land in Ireland under the Encumbered Estates Act had been made with Irish capitalists chiefly, thus removing the impression that the lands would pass away wholly from Irish proprietors. (Hear, hear.) In fact, so highly did he appreciate the advantages of this act, that he should not object, under certain circumstances, to see a similar measure passed for England. (Vociferous cries of "No, no," from the Opposition). He thanked their Lordships for their kind attention, and, in conclusion, said he had now the honour to second the Address proposed.

Lord STANLEY said: As a general rule, I have always been of opinion, that, unless the Address in answer to her Majesty's Speech, from both Houses of Parliament, contains any declaration of principle in which it is impossible for the body of the House, or a large portion of the House, to concur, it is in general both most respectful to the Crown, and most convenient to your Lordships, and best for the discharge of public business, that this and the other House of Parliament should, on the first evening of the Session, receive the Speech which is submitted in the name of her Majesty as an indication of the principal measures and topics which are likely to come under the consideration of Parliament, without expressing any opinions at the moment as to the course which Parliament may take. And although, for my own part, I cannot say that I am altogether satisfied with the language of the Speech, although there are some things in it of which I do not approve, and some things which I think might have found a place in it, yet upon the whole I shall profuse the observations which I have to make to your Lordships by a declaration from me, at all events, and I believe from a great body of those with whom I have the satisfaction to act, that it is not our intention to bring before you any amendment to negative the Address to her Majesty There are some topics in the Speech of an ordinary and commonplace character. There are recommendations to amendments of the law, most important of themselves, but at the same time which may cause great dissatisfaction. There are alterations to which our attention has been invited with regard to the registration of deeds. With regard to these, I can only say, that when those new measures are submitted to this and the other House of Parliament, I am sure they will receive that deliberate consideration which is important for the matter requires. With regard to foreign affairs, I am happy to say that the noble Lord at the head of foreign affairs has been also actively employed. (A laugh.) It is undoubtedly satisfactory to this country that there is no reasonable apprehension that the peace of Europe will be disturbed. It is most satisfactory to learn that other governments are disposed to maintain peace as well as ourselves. I would say, between Prussia, under whose influence the German population has acted, and the Court of Denmark, have been appeased. How far that may be owing to the influence of her Majesty's Government, I will not take upon me to believe it has been due to the unanimous opinion of all Europe on the unwarrantable nature of the aggression, to the firm and dignified manner in which these transactions have been viewed by the Emperor of Russia, and, in my judgment, most of all, the forcible inducements and most powerful arguments which have been unsparingly exercised by the Emperor of Russia. But to whatever cause this is owing, I cordially rejoice in it. The noble Lord who moved the Address stated that Parliament would no doubt receive with satisfaction the announcement that the Government of Brazil had taken measures for the suppression of the slave trade. I certainly rejoice in the hope expressed by her Majesty. I hope against hope, not that the Government of Brazil will pass any new law, but that they will give *bonâ fide* execution to the laws already there. If I could look to the improvement of Brazil, and in my good faith, I should say that I cordially joined in the satisfaction expressed by the noble Lord, as I believe that no power in the world would be found to foster and promote the slave trade as Brazil. But while I look with some hope, if not with sanguine hope, after all we have done, that this traffic will be suppressed, I cannot refrain from calling your Lordships' attention to the fact that even if you thought fit to use it, a more powerful engine than any treaties for the suppression of that atrocious traffic in slaves, which you spend thousands and tens of thousands and hundreds of thousands of pounds annually, and valuable blood for the purpose of suppression, but which your legislation encourages. There are two topics in this speech, both of whom are of the deepest interest; and while I do justice to the general satisfaction with which the framers of this Address, I concur in nothing which he has said more than in the importance which he attaches to the treating both these subjects deliberately and calmly. I rejoice to find that the important causes of disturbance which have lately arisen in this country are spoken of with more respect—I had almost said with less disrespect—than formerly. It is a melancholy satisfaction to us, among the men of those connected with land, owners or occupiers, to find that the expressions (Protectionist cheers)—It is a melancholy satisfaction to us to know that although the resentment of our complaints is expressed in the deepest terms of distress, is acknowledged by her Majesty's government. Last year her Majesty "had heard with regret," not of the distress, but of the complaints of a "certain portion of the community." This year it is not her Majesty's sorrow simply, but a regret that the great body of the people, from the abundance that existed, were partaking largely of the comforts of life. Now, this year we are told that her Majesty laments the distress which exists, not only in the agricultural body, no longer a small fraction whose interests were discovered from the rest of the country (hear, hear), but the important body who are connected with the cultivation of the land. I concur with the noble Lord who seconded the Address that of all classes in this country, of all the manufacturers in this country, the most important interest, the most deeply and vitally connected with the well-being of the country, is the great class of the men who grow food. We are grateful for the sympathy which her Majesty has expressed for the sufferings of that important class—that important, that formerly wealthy, that still loyal, though deeply-suffering portion of the community. I say, that unless I should have received this Speech with more satisfaction, I should have concurred more heartily in the language of the Address, if I had seen held out, either in the language of the Speech itself, or in the language of the Address, that which we might have been authorised to hold it on the part of the Government, any expectation, any hope, however feeble, for the fundamental cause of distress. We are told that there is a great and general prosperity throughout the country that the manufacturing classes are prospering—and I shall have a word to say on that presently—but that connected with that prosperity with the well-being of the people, an interest the most important of all interests is suffering; and, at the same time, that, notwithstanding the reduction that has been effected in taxation, the state of the revenue is satisfactory. In pointing out and pointing it into less reserved language, there is at the disposal of Government a very large surplus applicable to the reduction of taxation. If it be the fact, that all other classes are very prosperous, and that one class is suffering, and suffering it suffering; if there be any relief to be given in the shape of remission of taxation, I ask her Majesty's Government what is the interest to which that remission of taxation can be most justly applied? Is it to be applied to the case of those who, in the language of Government, are in a state of unparalleled prosperity, or those who are suffering under great distress? I may ask her Majesty's Government to what it is that they attribute this long continued distress? I ask whether any man can deny that the distress among the owners and occupiers of land is attributable to that system of legislation which, be it right or wrong, be it for the general advantages of the community or not, you have introduced within the last few years, and which has borne heavily on the agricultural interest, and unexpectedly? I ask, can any of them deny that the present distress—not the temporary but the permanent distress (hear, hear)—is owing to the course of legislation which you have adopted, and, if it be, how can you immediately refuse to relieve that distress? Is this what you call an exceptional state? I ask whether the circumstances are exceptional? The year before last it was exceptional, because the grain in this country was very inferior, and it was necessary that there should be a large importation of foreign corn. Last year the cause of distress was the reverse of this. We had an abundant harvest concurrently with an abundant harvest in other parts of the world. Last year at this time prices were far below that which we were calculating for anticipating at the time the Corn-laws were repealed. We anticipated a price of 48s., and an import of three or four millions of quarters. Last year the price was something like 42s. We were told, nay, it was proved to us, that foreigners could not continue to import on terms that left them no profit, but a dead loss; that we had seen the lowest point of the depression in the price of agricultural produce. I am not quite sure whether it was not said the reaction would be so violent that we should have extravagant prices. And when there happened to be a rise of a penny, we were told that the reaction had set in. Well, the 42s last year dwindled to 42s., to 41s., to 38s., and, I believe that, at the moment I am addressing your Lordships, the average price of wheat is 37s. 2d. And during this time you have had poured into this country a continued stream, increasing in amount to four millions and a half quarters of wheat alone, and so far from finding that foreign importers cannot import at these prices, the cry is still they come, and our markets are swamped with foreign corn. Now I say to those who support the policy of Free-trade, that the results have not answered their anticipations. I know that many a man supported that measure, in the confident expectation that, though there might be a serious diminution in the price of corn, yet that any permanent reduction in the price of grain was not to be anticipated. I will not in any spirit of taunting remind the noble Lord at the head of the colonies of his prophecies as to the value of land. Yet I certainly did think that the noble Lord had some reason to believe that the value of land in the market had not risen. Why, the noble Lord who seconded the Address, in speaking of the benefits of the Encumbered Estates Act, and who seemed to suppose that we might expect it here—(Hear, hear)—the noble Lord spoke of the prices quoted as being as good as could be expected under existing circumstances; and, when he came to inquire what these existing circumstances were, it was not the large quantity of land thrown on the market at once, but the depreciation of all agricultural produce. Now, as I am on that subject, I must be permitted to say, that it may be a great convenience to certain nominal proprietors, who, having incumbrances on their estates to the amount of twenty or thirty years' purchase, find some friendly party to buy the estates at five or seven years' purchase, and transfer them again to the original owner. It may be true, that, in some cases, the estate has been purchased by the creditors, as the best means of getting in a bad debt; but that the noble Lord sitting near the operation of the act, seeing that the prices have been from four to nine years of the net profits of the estate, appears to me surprising. But I thought, when the Encumbered Estates Act was introduced into the and, that that country was to be renovated by a new class of capitalists from England, but the noble Lord and hardly any money had come from England. Consequently, all this sacrifice can taken place, without the introduction of a single shilling of that all-pervading medium. Now, my Lords, I beg to enter my humble protest against the Encumbered Estates Act, which may be a summary mode of setting out of great difficulties, but which has performed, and is performing, what noble Lords seem to treat not only with indifference, but with approval. It has substituted altogether those who were the ancient proprietors of the soil. It may have been necessary in some cases, where the proprietors were merely nominal proprietors. In those cases I have no doubt that the transfer was advantageous, but, as a general rule, I say it is not desirable for the interests of the country—it is not an object to be aimed at. I do not say that it is not advisable to remove the difficulties and expenses attendant upon the transfer of property; but it is not a desirable object to break up the old connexions between landlord and tenant, and to substitute a new class of proprietors. I am desirous to maintain, if it be possible to maintain I am desirous, at all events, of doing nothing to accelerate the fall if it be impossible to prevent the fall, of the ancient landed proprietors of this country. I believe that the ties binding them to the occupiers of the soil is among the great securities for the stability of our institutions and the general content of the country; and it is to me satisfactory to me to know that if by your legislation the difficulties which have crowded upon and oppressed the owners and occupiers of land are found insuperable, a new set of proprietors may step into the places of those whom your legislation may have driven from their paternal home, and that you should find a new set of proprietors, without that feeling which connected the former proprietors with their tenants. The noble Lord will forgive me, when I say it is impossible that the owners and occupiers should have their means curtailed, their resources diminished, and the amount of their capita reduced to nothing, and at the same time the agricultural interest should not participate in their suffering. I may be told that there are great improvements going on in agriculture, and that there is great employment given. I do not believe that, as a general rule, that employment is given by the owners of land. I believe in most instances it is given to a most extraordinary amount by the owners of land, who, rather than part with their property, and to prevent the throwing the labouring classes out of employment, are employing them, although by their exertions they are furnishing the advocates of Free Trade with the argument that pauperism is diminishing, the numbers receiving relief being thus reduced less this year than last. There is one paragraph in her Speech to which I hope I shall not be called upon to subscribe. I do not join in the hope that the prosperous condition of other classes of her Majesty's subjects will have a favourable effect in diminishing agricultural difficulties. We receive with great respect the expressions of her Majesty. The noble Lord alluded to it in terms which I cannot attack; but I trust we shall not be called upon to share in the expression of a confident hope that these difficulties will be diminished to a considerable extent by the prosperous condition of other classes. I do not deny, that, with regard to certain parts of this country, the prosperous condition of the manufacturers results upon agriculturists, is perhaps, less reason to deny it than most. I am closely connected with a manufacturing town, and I am sure that the prosperity will react upon the agricultural community. We are not engaged in the cultivation of wheat crops. But with regard to the growers of corn, with regard to all those, although previous to the act of 1846 it is perfectly true that the prosperous condition of the manufacturing interest bore directly upon the agricultural community of this country, yet, since that period, it does not so bear upon it. But this prosperity of your manufacturers, this ability to purchase more cheaply may be counterbalanced by the agriculturists of France—(Cheers and laughter)—of that France which we were ridiculed for considering might one day become an exporting country—(Hear) may be exceedingly gratifying to the manufacturing interests of Poland, to the agriculturists of the United States, and to the whole boundless continent of America. All these, in my opinion, will derive from your prosperity advantages in equal proportion to your own people, and will contribute to the ruin of agriculture in England, for when you proposed to legislate in favour of a particular class, you at once naturally dissolved that close community of interest which had bound together, and should always bind together, the agricultural and manufacturing classes. (Hear, hear.) My Lords, I retain unaltered, nay strengthened, my opinion as to the value of the principles on which you have acted. And I am bound to declare that I do not see the possibility of the agriculturists obtaining any increase in prices under the existing law, or without some extensive alteration in your tariff, the production of this country will (hear, hear.) I will not therefore, hold out to the producers of this country a hope which I do not share. I believe present prices are permanent prices. And I believe that, if there are to be any permanent prices, the production of this country will be gradually diminished; and, with a falling off in the production, that there will be a materia diminution of the comforts and happiness of the most important portion of the population of this country. (Hear, hear.) I repeat, that by the reduction of the amount of the real capita. of the country, you will no longer be able to bear that enormous weight of taxation (Hear, hear)—that taxation and debt which no other country in the world could have borne, and which its consumption would never have been enabled to bear, if it had not been the wise policy of the Legislature for a long series of years to afford encouragement, and not a fictitious encouragement. (Hear.) to our own interests. (Hear.) I now, my Lords, approach a subject of the greatest interest and greatest importance—or at least I thought the greatest—of all the topics on which I have last touched. (Hear.) I feel the imperative necessity of dealing with this subject in the manner recommended by the advice and by the example of the noble Lords who have preceded me. It is impossible not to see that the aggression of the Crown of England—an aggression rendered the more insolent by the manner in which it has been attempted (Cheers.) I cannot, indeed, characterise those measures in more emphatic terms than they have been characterised by a noble Lord near him the responsible situation of principa. adviser of the Crown. That noble Lord, in a letter which I presume can no longer be treated as a private correspondence, has made the public aware of his opinion as a statesman of the measures introduced a most serious and lasting impression upon the public mind. That noble Lord tells us, "There is an assumption of power in all the documents that have come before us, which is incompatible with the supremacy over the realm of England—a claim to sole and undivided sway, which is inconsistent with the Queen's supremacy, with the rights of our Bishops and clergy, and with the spiritual independence of the subjects, as asserted even in Roman Catholic countries." I trust the noble Lord printed that sentence; when he sent this forth as the declaration of the Government of this country, that Government had announced to this Protestant nation that the Queen's supremacy had been invaded, that the civil and religious independence of the country had been attacked, and that the rights of the bishops and clergy of the Church of Ireland had been struck at by a foreign power, the noble Lord could never have written, still less have published, that letter without being prepared for the influence which it would have, either of the Government or of the people of that extent which we have witnessed, it would be likely to produce. [Lord Stanley was here understood to say, that, while not expressing any opinion as to the accuracy of the letter, he considered it to be a matter of history, and could not be and justified.] And when the first Minister (Lord Stanley proceeded to say) the expressed his opinion, and thus called forth so fervent a Protestant feeling as must be obtained for himself that point was made by the noble Lord, carefully the magnitude of the struggle he was entering on, for your Lordships were now going to deal with a single act, but with a series of acts of aggression on the part of the Court of Rome. What we have to protect against is, the invasion and illegal intervention of a foreign power in the domestic affairs of this country. This is, indeed, no question of religious controversy. (Hear, hear.) It is not the time, and I trust we shall not find it to be the case either in this or in the other House of Parliament, when we can discuss the comparative purity of the doctrines of the Roman Catholic and the Reformed Churches. We have nothing to do with such questions. God forbid that, on account of their religious principles, we should ever attempt to deprive our Roman Catholic fellow-subjects of that full, perfect, and unrestrained religious freedom, or that we should ever seek to take from them one jot of the rights which we have already guaranteed to them. (Cheers.) If that be indeed what is meant by the Protestant feeling which has been aroused, I, for one, could not share the triumph or partake the gall; and such are far from the considerations with which I have approached the subject. (Cheers.) But the consideration we shall a Roman Pontiff, shall a Roman Catholic Prelate be permitted to exercise in this country a malicious and dangerous interference—not with names or bases, not with shadows or ideas—but with substantial realities, and, in one word, with the government of the country? (Hear, hear.) That is the question you have to ask, that is the contest you are entering on. If the letter of the noble Lord (Lord John Russell) means anything, it means this—"I will vindicate the supremacy of the Crown; I will vindicate the rights of the Bishops and clergy, I will vindicate the independence and the sway of her Majesty and of the Parliament; and I will not permit any foreign power whatever to interfere in any manner in the administration of this country." The aggressive policy of the Church of Rome has been too often overlooked, and the principle of unlimited concession may have been carried dangerously far since 1829. I regret that these aggressions were not checked at the outset; because I find that every act of concession has been met by new aggression; and, growing with impunity, and encouraged by excess, these encroachments have at last become so

(*Continued on page* 110.)

SKETCHES IN NEW ZEALAND.

CROFTON PARK, OMATA DISTRICT.

THE SETTLEMENT OF NEW PLYMOUTH.

EVERY accession to our acquaintance with the characteristics of New Zealand tends to increase our admiration of the scenery of this beautiful country. The settlement of New Plymouth, or Taranaki, founded in 1841, affords abundant evidence of this assertion, which we are fortunately enabled to illustrate, by the favour of Major Lloyd, lately returned from New Zealand, and who has favoured us with the accompanying Sketches. They represent the town of New Plymouth, with views on the Waitera River, and other favoured localities in the same district; with Portraits of three of the Natives.

Our Correspondent adds:—The following extracts from a letter addressed to me by Mr. R. B., of New Plymouth, may, with the accompanying Sketches, prove acceptable to persons interested in New Zealand. Mr. B.'s experience of many years in New Zealand, and thorough knowledge of the country, the natives, and their language, proved most beneficial to me during my late sojourn of six months in New Plymouth, and from this gentleman indeed, I may say, from all our countrymen in that settlement—new settlers will meet with kind and ready help.

VIEW IN CROFTON PARK.

VIEW ON WAITERA RIVER.—NORTH BANK.)

New Plymouth, 9th April, 1850.

Your sections abound with most beautiful fern-trees, and offer every imaginable tint of foliage to the view: the Tui's (the mocking-bird) and other singing-birds are numerous; and altogether these sections are most picturesque and park-like. The views from them are beyond conception, embracing Tongahoro Pah (native fortification), the Sugar-loaf Islands, the ocean, and the white cliffs of Mimi, distant 40 miles; the mountain ranges of Patua and Puakai, rising 4500 feet above the level of the sea, without concealing the graceful and majestic peak of Mount Egmont towering fully as many feet above. Tongahoro Pah overlooks the snow-capped mountain of Tongariro, distant about 100 miles, and an unlimited extent of country. In England such views are never seen, my description, therefore, may appear to be exaggerated: the sketches in your possession give but a faint resemblance of the natural beauties they are intended to portray.

The Tapuae block, adjoining the Omata, contains several thousand acres of unchosen land of the most desirable description, is an extremely picturesque country; and beyond that there is a vast extent of fertile level land not yet purchased from the natives, but which, as the country beyond has been already sold by them, will, in all probability, be ere long alienated to the Europeans. I am, as you are aware, as well acquainted with the district and the country down to Wanganui as any resident here, and I confidently assert, that that district would, in addition to supporting the present small native population residing on it, graze 100,000 head of cattle, and provide food for more than a million of human beings. The flax alone growing on it would provide employment for many thousand individuals; in fact, only capital, enterprise, and industry are required to render the district the granary of the Australasian Colonies.

I have made these few notes, thinking that my nine years' experience might possibly be useful to you in describing the resources of the New Plymouth Settlement. This is not a California (although, by the by, our millions of tons of ironsand will, I imagine, be turned to account at some future period, when New Plymouth will become the Sheffield or Birmingham of New Zealand.

Here, children, far from being a burthen, are a decided advantage: at seven, the boys drive the oxen; at nine, they plough; at twelve, engage in all sorts of farm work; and, at fifteen, take to the axe, and clear the forest. Where every one works, no farm labour is considered degrading, idlers alone are exposed to ridicule, and excite pity.

As for domestic servants, parties who want them must bring married people from England.

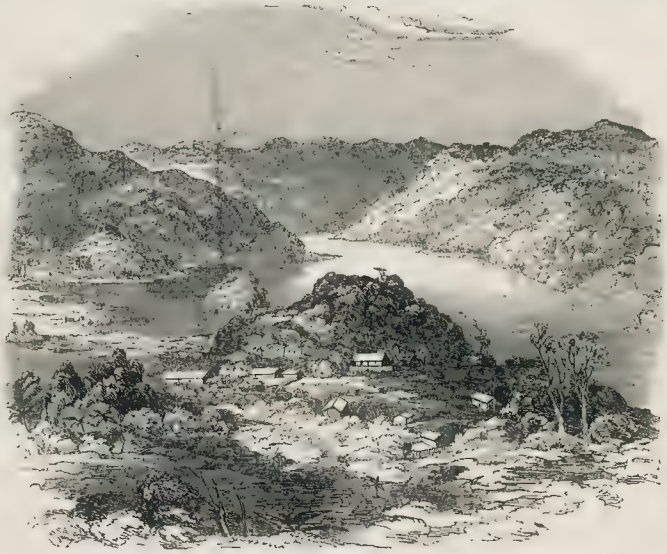
You will, no doubt, be questioned as to the safety of living amongst the natives. In the most troubled times, we never even had, or required, any other protection than the moral influence of the well-disposed portion over the others. You have seen them work for you and your neighbours—engage in all sorts of farm work, employed as domestic servants. You are aware that hundreds of them can read and write, are shrewd at making a bargain; that they understand the value of a written contract, and are, in fact, less savage than thousands of our own countrymen. You also are aware how truly useful their labour is at present in this settlement; and that, in a very short time, the Omata district will not have a native residing in it unless employed by the European residents.

Many persons object to this settlement, because it does not possess a good harbour; they are not aware that the roadstead is a safe one; that vessels are loaded and unladen far quicker than in any port; and that no life has been lost by boating since the first establishment of the settlement. In many other settlements possessing a harbour, people have embarked their capital in the township, to the detriment of the country: here, the former is an inconsiderable village and the farmer flourishing.

Truly yours, (Signed) R—— B——

To Major Lloyd.

To the above, my late sojourn in New Plymouth enables me to add, that families, who will work and keep clear of public-houses, may enjoy there a happy home, with plenty of bread and butter, even Devonshire cream. Men, who seek to gratify horrid selfishness, without regard to the future welfare of their children, will be disappointed if they expect all their troubles to cease on landing in New Zealand. No; such persons will make difficulties, whilst the self-denying men will hold the plough without looking back, and here I would caution



MOKAU RIVER, FORTY MILES NORTH OF NEW PLYMOUTH.

SKETCHES IN NEW ZEALAND.

NORTH BANK OF WAITERA RIVER, NEAR NEW PLYMOUTH.

new settlers not to forget the Sabbath in their numerous avocations. It may be asked, why did I leave "the happy home?" My answer is, I have purchased near New Plymouth a considerable property, to which it is my present intention to take my family. J. T. Lloyd.

The accompanying Views prove that Mr. Hursthouse does not overrate the scenery of New Plymouth and its district; the scenery on the Mokau River, for example, is charmingly picturesque. The portraits of the three natives are very characteristic.

We learn, by the way, by the latest intelligence received from New Zealand, that the mortality among the ruling chiefs of New Zealand has recently been very great, and is ominous of the breaking up of the tribes at no distant date. There is hardly one left, with the exception of Te Whero Whero, the Waikato chief, worthy of the name of leader. With this exception—and he has become English in habits and feelings—there is scarcely another worthy of notice from one end of the island to the other In August no less than four of the leading northern chiefs died; viz. Heki, Pomare, Waharoa, and Taki Waru, the brother of Te Whero Whero In the southern province the same fate has awaited the ruling chiefs; Warepori, Rauperaha, Heko, the son of Te Pahi, who visited England many years ago, are all dead; E Puni is now old, and his influence is

TAHANA HONI.

solely amongst the Port Nicholson tribes. Rangihaiata has lost caste, and is regarded by the natives themselves with feelings of aversion; with the exception of these, there is not another worth notice from Port Nicholson to Mokau, nor any likely to be ever again troublesome. The ordinary natives, devoting themselves with energy to commerce and agriculture, are falling into our habits, and form, of themselves, colonially speaking, a most valuable class of settlers, as praiseworthy for their diligence as for the sobriety and order observed in their social communities.

We subjoin the following from Mr. Hursthouse's Account of the Settlement:—"By sea, New Plymouth is 180 miles from Wellington, 160 from Nelson, and 120 from the harbour of Manukau, whence there is an excellent road of only six miles to Auckland. This central situation, between the Company's principal settlements and the capital, gives it ready access to the best home-markets; and, as part of New Zealand, its relative position to the Australian continent—to the beautiful islands of the South Pacific—to countries rich in tropical productions—is an important feature in its natural capabilities."

VIEW FROM THE TOWN OF NEW PLYMOUTH.

HOUSE OF LORDS.—TUESDAY.

(Continued from page 107.)

ceivable, that the Prime Minister has to declare, that to tolerate them longer would be inconsistent with the independence of the Crown and the liberty of the nation. Do not, then, my Lords, underrate the nature of this contest you are now called to. If you mean nothing—if you purpose to introduce some measure, to put some enactment on the statute-book to be treated as a dead letter, and to be evaded and overlooked; if you forbid the assumption of the title of the Bishop of Nottingham, but still leave the Roman Catholic Bishop of Nottingham, or any Roman Catholic Bishop, to complete a synodical organisation, and, through that, to exercise boundless control over the consciences of our Roman Catholic fellow-subjects, you will, I tell you, have done nothing towards meeting the evil. (Hear, hear.) I tell you, unless you touch the substance of the evil, you make your Roman Catholic fellow-subjects the victims of a tyranny, which it has been and by the noble Lord, the first Minister, and has been repeated to-night by one of the noble Lords who had introduced the Address, would not have been tolerated in Roman Catholic times by our Roman Catholic ancestors, and under a Roman Catholic Sovereign. (Hear, hear.) I will say, further, that what you do with regard to England you ought also to do with regard to Ireland. (Cheers.) That which is a violation of the supremacy of the Crown in England is a violation of the supremacy of the Crown in Ireland. (Hear, hear.) You cannot separate the two; the English Church is the Irish Church; and you cannot separate those churches, which, one for all, were indissolubly united at the period of the Union. (Hear, hear.) I ask you then, again, my Lords, not to shut your eyes to the gravity of the occasion. Do not, after raising the expectations—I will not say after rousing the prejudices of the Protestant community of England, Ireland, and Scotland, falter with so grave a question. Do not come to a lame and impotent conclusion—do not avoid the substance and confine yourselves to the shadow of the injury (whether you have so vehemently complained, and which you have so much aroused the nation to resist. You, the Government, have gratuitously kindled this excitement; the enkindling of which, under any circumstances, I, for one, deeply deplore. But, as you have enkindled it, cease not until, by the intervention of Parliament, you have allayed it by a deliberate and final settlement of the one chief I will not consent to rob my Roman Catholic fellow-subjects of one jot or tittle of their civil rights as conferred on them by the Act of 1829. I know not what may be the measures directed to this question which we shall be invited to consider by her Majesty's Government. Whatever they may be, we will, at least, hope for a realisation of the expectations which the First Minister has excited. (Hear, hear.) I hope to find in them a means by which the Roman Catholic worship will still be left free, and by which Roman Catholics will be still permitted full possession of every one of their civil rights But I hope also, that I shall find in them a means of reconciling these results with a satisfactory vindication of the supremacy of the Crown. (Hear, hear.) I hope not merely for words, but for substance; I mean for such a complete repudiation of foreign interference by either Pope or Cardinal as shall render it impossible for us ever to see a Roman Catholic hierarchy doing what it has recently done in Ireland in regard to the Irish colleges. (Hear, hear.) You must relieve us from the danger of any such interference as this, an interference in the face of the opinion of a large proportion of the Roman Catholic community, and in opposition to the wishes of one-half of the Roman Catholic bishops, and an interference which was doubtless the consequence of false representations made as to the state of public feeling in Ireland; and while, as I said, before, you maintain inviolate the religious freedom and the civil rights of our Roman Catholic fellow-countrymen, the measure which you introduce must give to the Crown and to the Parliament an unmutilated and entire independence in the administration of our own internal affairs, of whatever character these may be, ecclesiastical or temporal. (Cheers.) I will not enter further into this subject. I await with anxiety the intimation of the course which it is intended to pursue. I warn her Majesty's Government, that, if they fall short of our great expectations, if they suggest a pretence and do not apply a fact, if they offer us no remedy against these wrongs, and no revenge for these insults, if, after such language, we find them prepared with no deeds, then there will rest on the head of the noble Lord (Lord J. Russell) a heavy load of responsibility, for having trifled with the deepest and the holiest feelings of the country, for having raised the hopes and the expectations of all Protestants, nay, if they would speak out, of a large proportion of the generous liberal Roman Catholics (Hear, hear) and they will have reduced this country, or, certainly, every Roman Catholic inhabitant of it, to a submission to the court of Rome, which, when it had a large Roman Catholic Parliament, and were a Roman Catholic people, we never consented to endure (Cheers.) Firmly but dispassionately consider, now, the whole question of the relation in which the Roman Catholic subjects of this country stand towards the government of this country. (Hear, hear.) In 1829 there were certain securities introduced into the great act of Catholic emancipation, which it was supposed would be adequate guardianships against all invidious and insolent aggressions affecting our constitution or our church. I think it is the duty of her Majesty's Government deliberately to examine these securities (Hear, hear.) If there be any of them offensive to Roman Catholics, and at the same time offering to Protestants no real security, if they are acts declaratory against aggression, yet not capable of being enforced, let them at once be swept away, and let us proceed to the investigation of declaring without having the benefit of enacting. But if there be any case in which, from encroachments having taken place not contemplated at the time, you find yourself defenceless against the acts of Roman Catholic synod or in Ireland, then, I say, provide securities, and make those securities adequate to protect you from the dangers of which the noble Lord in his letter has spoken (Hear, hear.) Your Legislature, in effect, must be ready to meet any contingency. You must look the whole case in the face, and you must meet it boldly —dispassionately, but boldly. (Hear, hear.) You must not trifle; you must go to the full extent of the difficulty. And I will conclude, my Lords, by saying that the course pursued by her Majesty's Government, no feelings of party shall actuate me, or that great body with whom I have the honour to act (hear, hear) We do not wish to deprive them of the great popularity which they will obtain by fully enforcing the just rights of the Crown, and the complete independence of the Church of England, while, at the same time, we shall be ready to abstaining from interfering with the civil rights of those who dissent from that Church (Hear, hear.) But, on the other hand, I warn them, that if they do not mean to act boldly and unanimously in the whole matter, they had better would it have been if they had never attempted to legislate at all upon it—far better would it have been if they had submitted to this last and crowning encroachment—far better would it have been if they had openly confessed that our blood has been too cold and temperate, and that it was not to be stirred even by this indignity. Far better would it be to do nothing, than, with a pretence of strength, to achieve nothing—the vanity of our weakness. (Hear, hear.) Deal with the difficulty, then, boldly, or not at all. Do not attempt to control a power by merely ignoring its exercise, or by imposing inapplicable penalties for a violation of your enactments. If you be bold, you will have the support of the political opinion of the country at large. Falter in the course now—flinch from this difficulty—seek mere y to mitigate it, and not to remedy it, and you will incur—I would regret to use the phrase, but you will incur the contempt of your countrymen, and you will have proved your own incompetency (Cheers.) The noble Lord concluded by saying that it was not his intention to move any amendment on the Address, but receiving an earnest and an anxious hope, that, at the proper season, the Government would give evidence that they were prepared to act in reference to the Papal Aggression in a manner worthy of the occasion.

The Duke of RICHMOND complained of the extremity to the distress inflicted upon the owners, occupiers, and labourers of the land by the conduct of the manufacturers; and inquired what measures of alleviation the Government intended to propose. He was not at all surprised, that when the Pope of Rome found a great number of their Lordships, and, with a but very few exceptions, of the other Bishops voting for the admission of Jews into Parliament, he should at-

Russell's le ... the subject no further.

The Earl of WINCHILSEA considered the state of the country as one of the most unexampled degree. The great danger came from Ireland, and was the necessary consequence of the Act of 1829, which he had all along foreseen. A great storm was at hand between British Protestantism and the religion of Rome, which might involve the nation in civil war. Referring to the policy of Protectation, the noble Earl concluded by expressing his apprehensions for the value of the home market, which he feared we were irretrievably sacrificing for the presumed advantage of foreign commerce.

Lord CAMOYS, as an hereditary Catholic, distinguished between the authority exercised over things purely spiritual and things temporal. For the former, he looked to Rome; but, with regard to the latter, in common with the large majority of his co-religionists in this country, he owed loyalty to the Queen, and would protest equally against any foreign interference in political consciences, and every attempt the Pope might make to exercise temporal jurisdiction here. He argued for the perfect maintenance of toleration, and submitted that the Roman Catholics in Ireland had not violated the compact made with them by the Crown when they were admitted to civil privileges. Some expressions in Lord John Russell's letter he looked upon as insulting to himself as a Catholic, but he considered that speech as written in a merry mood generally. He concluded by saying that he had an exhibited by all sections of the Catholic clergy and laity, in spite of the violent denunciations hurled at them, and the obloquy to which they had been subjected.

The Marquis of LANSDOWNE said—The noble Lord behind me has delivered his sentiments in a manner which all your Lordships must have felt indicated a degree of good judgment, of candour, and of manliness upon the subject (Hear, hear), which reflects on him the highest honour. (Hear, hear.) I have, and must have, the greatest satisfaction when I refer to these sentiments, coming as they do from a person connected by hereditary ties, for certain purposes, with the Roman Catholic body of England, and expressing as they do the result of his own observation and knowledge of the subject. (Hear, hear.) Such sentiments, I am justified in observing, outweigh a hundred-fold those sentiments and those proceedings, which I believe it can be proved have originated in the most profound ignorance of the state of the country and of the present condition of this country. (Hear, hear.) With regard to the topics adverted to in the course of this debate, it would be quite unjustifiable in me to detain your Lordships by going into them in detail. I may, however, be allowed to advert to one or two points which will, I dare say, be deemed of some importance by noble Lords on all sides of this House. (Hear, hear.) The noble Lord opposite, in alluding to particular points in her Majesty's Speech, made some remarks which deserve notice. Although he has maintained some reserve, and hesitated to strike, yet, with regard to the most important propositions in the Speech, and the outline of the policy which it indicates, he has expressed his entire concurrence and full approbation of the sentiments so ably uttered, both by my noble friend who moved, and my noble friend who seconded the Address—sentiments, in every one of which I am able to express my entire concurrence, and which I believe met with the general approbation of this House. I shall refer to two or three points to which the noble Lord more especially adverted The foremost in point of order was the foreign policy of this country. To that he had nothing to object, except that the Government betrayed somewhat of indifference to the affairs of foreign countries, and did not take those active measures of interference which, in some quarters, were deemed essential. I can refer you to the transactions which have lately taken place in Germany—to the difficult negotiations intended to have settled a question of right—a question which was complicated by other questions of policy throughout the German empire, which presented, at one time, every sort of difficulty; and, referring you to cases, I ask if the policy of this country has been at all indifferent in its character? On the contrary, although it did not become this country—which was not directly interested—to bring itself forward as a principal in a contest in which it had no legitimate share, except from a regard to the general interests of Europe, it did interfere; and I am quite warranted in saying, that, during the whole of these transactions, there was not an instance in which the interference of this country was not beneficially employed, and was not acknowledged in a proper manner by every one of the states brought into conflict and opposition. (Hear, hear.) I am not disposed, in any degree, to diminish the tribute of respect which has been paid by the noble Lord to the Governments of almost all other countries. I can, however, assure the noble Lord, and this House, that the Government of this country has not made itself heard less distinctly, during the whole course of the progress of these transactions. (Hear, hear.) The noble Lord afterwards referred to the state of distress in this country, under the influence of what is called Free Trade. I am not prepared to raise the general question now. I shall take the opportunity at the proper time of pronouncing my opinion on the subject. In the meantime, however, I deny the proposition which he has laid down; for although it be admitted that considerable distress exists amongst particular classes of the community, it is not for one moment to be allowed that the whole of the population is affected by that distress, or even that the whole of the population in agricultural counties (hear, hear) are in a state of distress, for a considerable proportion of the agricultural counties enjoy general prosperity. It is impossible, my Lords, to deny that many of them, and those the most productive, are in a state of progress and increase, those unequivocal proofs of prosperity which are certainly visible. We have seen an increasing consumption, which marks the welfare of the great mass of the country could produce. That consumption has been going on from year to year, not by starts, nor suddenly, nor accidentally, but with a slow and measured pace, affording proof that the general prosperity has not been checked

which onward progress is the distinctive mark by which we seek, on all occasions and on every occasion, to say we are honoured—in that nation, and at that time, and by that Administration, and by that Prime Minister, the first real backward step is attempted to be taken. (Hear, hear.) "On looking over the honourable gentleman, "to the antecedent of the noble Lord at the head of the Government, are they not in themselves a guarantee for his conduct?" There was a time that I should have said so, but not now. (Hear, hear.) Last year I would have spoken as the hon member has done; I would have said that the antecedents of the noble Lord would be a sure guarantee that it would be impossible that in him we should find the first real invasion of civil and religious liberty since the year 1829. (Hear, hear.) What are the antecedents of the noble Lord? He was distinguished amongst us as being chosen by the Duke of Wellington to be the Leader of the House to bring forward the bill for the repeal of the Test and Corporation Acts! (Hear.) That was his special business; it was the first step to civil and religious liberty, and he was the person who was put forward in this House: and on that occasion I heard it remarked—and I beg to call the consideration of the hon. gentleman who seconded the Address to the fact—that the real objection to the repeal of the Test and Corporation Acts was, that by relieving the Dissenters from disabilities, and by relieving Protestants from the yoke that Protestants had put upon them, they would enable them to keep the yoke upon the backs of the Catholics. (Hear, hear.) That was the observation of one who knew well the human mind; that was the observation made by Mr. Canning. Mr. Canning said, "Beware! if you are doing a little what you are doing now. So soon as you relieve the Dissenters of this country from the disabilities they labour under, you will find in them your bitterest foes, when you propose to remove the disabilities of the Roman Catholics." (Hear, hear.) I find in the hon member an apt illustration of that. We have no longer disabilities on the Protestants, we have a united Protestant country confronting us; and I am ready to place disabilities upon Roman Catholics. (Hear, hear.) But I was remarking upon the conduct of the noble Lord; and when, I ask, is it that the noble Lord has chosen to date this new backward? At a time when the Members have put into the mouth of the Sovereign a statement with respect to the advance that has taken place in the country, and the happiness that prevails among the labouring classes, in consequence of the law that has been passed removing the restrictions on labour, on trade, and industry, and the advantages that have been experienced from so doing. (Hear, hear.) He puts into the mouth of the Sovereign words of gratulation, and he calls on the House of Commons to join in the thanks he pays to Providence for the happiness we now enjoy. (Hear, hear.) Since 1829 we have been going onward in one peculiar line of legislation. On the ground, the great Protestant leader, whom all now see and deplore, and whose loss we this day feel—(Hear, hear)—yielded to experience

and to the pressure of circumstances in Ireland; and the Duke of Wellington, who had seen more years of war than almost any man of his time, and most of those years of civil war, knowing what the mischiefs of civil war are, said, "To relieve my country from one month of it, I would give up my life at once." (Hear, hear.) Under that pressure Sir Robert Peel and the Duke of Wellington acted. (Hear.) Then the question was, civil war or emancipation; and those men, those great statesmen, taking away your disabilities, examine it frankly: and Sir Robert Peel directly stated, when it was suggested to him to pay the Catholic clergy, that he had considered the question, and it was one worthy of all consideration; but that he could not bring forward the bill, as was the proposal of Mr. Pitt, sanctioned by Lord Castlereagh, and that he would not interfere in the internal polity of the Catholic religion any more than he would interfere with the Wesleyans. (Hear, hear.) The noble Lord, and the party to which he belonged fell great pain, and, I will use the word, great jealousy, that these, the enemies of all liberty the enemies of the emancipation of the Catholics—should come at that time and sweep away the last code for which they had been so long contending; and it was the complaint of the party to which the noble Lord belonged, and of the noble Lord himself, that they had been about to fight the battle of emancipation through all its difficulties and trials in this House, and that the honour of carrying emancipation was gathered by another party. (Hear, hear.) The assent of the party to which the noble Lord belonged was given to the measure on that occasion; the thanks and gratulations of all the members of that party were given for it; and they showed that they did assent to the principle that had been laid down, and that if the Government had not given that measure they would have persevered in their demand for emancipation. They said their wishes were gratified, and they were delighted to see that the Catholics were now on the same

footing as their Protestant brethren—that they were not in any way to have civil disabilities imposed upon them in consequence of their religious belief. (Hear, hear.) Now, sir, were such a state of things to occur, instead of an onward progress of opinion, what does the noble Lord propose to do? He tells us the Queen's Speech being the noble Lord's speech—that she has received many addresses from large bodies of her subjects in respect to the late Papal aggression. She is referred by a foreign power, and the noble Lord does not leave us in doubt as to his intentions on the subject; for this evening notice has been given that the noble Lord will bring in a bill to prevent the exercise or assumption of any ecclesiastical title or honour that may be conferred by any foreign Sovereign or Prince in respect of places in the United Kingdom. (Hear, hear.) That he will not permit the assumption of territorial titles that have been granted by the bishop who is called the Pope of Rome. If the noble Lord means to say that there happens to be a resemblance between the names of the bishops of the Roman Catholic Church and the names and titles of persons in this country, if that be what the noble Lord means, it is a fair course for him to pursue, and it would be an object against which to direct legislation. (Hear, hear.) (Laughter.) (Hear, hear.) The noble Lord has always shown himself to be, and I believe him to be, a frank dealing man; and I ask him, is it not against the Bishop of Rome his acts? (Hear.) Who is the Bishop of Rome? Is he not, as the head of a Sovereign Prince as well as Bishop of Rome. He might cease to be Prince of Rome to-morrow, but he would still be the Bishop of Rome the head of the Roman Catholic religion, from which he derives his spiritual power, and the very essence of the Catholic religion; and to say to the Catholics, that they shall not have Bishops who derive their power from the Pope of Rome, is to say to them, "you shall have Bishops of the spiritual power of the Pope, but not of his religion." (Hear.) In other words, it is gross persecution (Hear, hear.) But I am to be met with the words aggression on her Majesty's prerogative. Papal aggression, territorial aggression, is a phrase that has been introduced by our American friends—it is called the title of political capital. (Laughter.) It is an admirable phrase, when applied to capital; it is a fine subject, a noble (Laughter); and I think the noble Lord is obtaining political capital on the faith of this proposition. (Hear, hear.) They speak of territorial aggression. Now, sir, I ask whether the Lord Lieutenant of Ireland, the Chief Governor, will cede one inch of territory on the present occasion with the people of this country. (Hear, hear.) This Papal aggression of which he now complains is no new thing. He was aware of it and must have been aware of it for years. (Hear.) Suppose, he will prove to your satisfaction, no matter how prejudiced you may be on other matters, that this Papal aggression began years ago, and has been accustomed by the noble Lord himself. (Hear, hear.) England, the noble Lord says, has been parcelled out by a foreign power—by the Pope of Rome; but when? The other day, when this bull was introduced and a Cardinal created, and Dr Wiseman consecrated Archbishop. But was the first territorial aggression or the first partition of England? Ever since I have known England I have known Catholic Bishops to be there. Talk, for instance, Bishop Baynes! he was called Bishop of Siga in partibus infidelium; but suppose he was called Bishop of Bath and Wells, what difference would make, or where would be the aggression on her Majesty's prerogative? (Hear.) Or, suppose I believe Dr Baines was called Bishop of Siga in partibus infidelium; but suppose he was called Bishop of Bath and Wells, what difference would make, or where would be the aggression on her Majesty's prerogative? (Hear.) Or suppose I believe Dr Baines made by the greatest man amongst us, so far as power is concerned, is preposterous. Can it tend to violate her Majesty's prerogative that Dr. Wiseman should be called Archbishop of Westminster instead of Archbishop. But was the first territorial aggression or the first partition of England? Ever since I have known England I have known Catholic Bishops to be there. Talk, for instance, Bishop Baynes! he

OPENING OF PARLIAMENT.

HER MAJESTY DESCENDING THE GRAND STAIRCASE AT BUCKINGHAM PALACE.—(SEE PAGE 116.)

complaints on this head which were now so rife throughout the country? (Hear, hear.)

Colonel Sibthorp imputed the Catholic aggression entirely to the meddling of Lord Minto, and the rashness of Lord Clarendon, backed up by the carelessness and indifference of the Premier—rated the Cabinet for their coldness to gricultural distress, and fervently hoped that a rattling hailstorm would smash the Crystal Palace, and discomfit the mob of pickpockets who hoped to make a harvest by it.

Mr. Grantley Berkeley echoed the complaint as to the Ministerial coolness to agricultural distress, and enlarged upon the necessity of sweeping colonial reform.

Mr. H. Grattan called attention to the unimproved condition of Ireland, and to the deplorable drain now going on of the agricultura bone and sinew of the country. Notwithstanding this, however, he warned the Ministry, that, if they thought they could go back to the dark ages of religious persecution and penal enactment, they would find themselves egregiously mistaken. Were it to be proposed to extend the measure to Ireland, he would divide the House upon every stage, and the committee upon every clause.

SKETCH FROM THE LINE OF THE ROYAL PROCESSION.

OPENING OF PARLIAMENT.

HER MAJESTY LEAVING BUCKINGHAM PALACE.

Mr. Baines, while waiving the present consideration of the Papal aggression system, reminded the House of the number of distinguished Roman Catholics who disapproved of the proceedings of the Pope; and then, passing to the agricultural question, invited Lord John Russell to be as explicit as possible upon the intentions of the Cabinet with reference to the present depressed condition of the landed and farming interests. They had been told a year ago that agricultural distress was only a passing cloud; and the allusion to the subject in the present Royal Speech was so vague and cold as to excite his fears that little or nothing would be undertaken for the agriculturists during this session than had been effected in the last. So long as free importation continued, the prosperity of the manufacturing classes would have but little influence upon the well-doing of the agricultural; and he was the less willing to place confidence in the hopes expressed by the Government for the future, inasmuch as every Free-Trade prophecy of the past had proved a signal failure. Did they intend to wait until the difficulties of the landed interest became distresses—until their distressed deepened into ruin? If not, he called upon the Government to state what remedy they had in view.

Lord J. Russell then rose and said:—Mr. Speaker, I am rejoiced to find that we are not likely to have a division on the question of the Address, and that that Address is likely to be passed by the House with unanimity. I will, however, endeavour to address myself to the various topics which have been touched upon by the various gentlemen who have spoken, and I will take rather the order in which the topics have been mentioned in the Queen's Speech, for the sake of convenience. My honourable friend the member for Montrose began by regretting that it had been thought necessary to advise her Majesty to make so much reference to our relations with foreign powers. With reference to the principal topic that is there mentioned, it cannot be unknown to us that the hostilities between Denmark and Germany that have for some time been carried on in Schleswig-Holstein were of the greatest importance, not only as threatening danger to the peace of Europe, but as also interfering materially with the commerce of this country. (Hear, hear.) And I cannot think that my honourable friend has to learn that those differences that have subsisted are in fair course of adjustment, and that at least the danger of hostility which hung over us is likely to be averted. (Hear, hear.) I cannot but rejoice myself that such should be the case; and I hope that the endeavours that were made by my honourable friend near me to represent to the contending parties—to the one not to enter into hostilities, or to continue those hostilities; and to the other, to adopt measures of conciliation—have not been abortive. But my honourable friend went on to say, that this country should not have permitted Austria to undertake certain measures, should not have allowed her to occupy Hamburg with her troops, and to act in a manner contrary to the freedom of Europe. I really think that complaint is most inconsistent with the former complaint. The first complaint was, that her Majesty's Government had interfered between foreign powers; but if her Majesty's Ministers had listened to the latter complaint, we should now have been engaged in a war with some of the principal powers in Europe. Our course has not agreed with either of these proposals; we have used our influence in the manner which we thought might tend to preserve the peace of Europe, both in these and in other cases, and very important they were. With respect to the interests of the various states of Germany, we have not thought it our duty to interfere in any way but, at the same time, we cannot but feel that the settlement of the affairs of Germany, as being the maintenance of a great power in the centre of Europe and the maintenance of harmony there, is of the utmost importance; and we do hope that while that great empire maintains its power, the various states that form the confederacy may not only preserve those constitutional liberties which they have now held for a long period of years, but that their institutions may be rendered still more favourable to liberty. Such is our wish and our prayer for the welfare of Germany; but we do not consider ourselves bound to interfere in the concerns of forty millions of people. We feel satisfied that they will obtain that freedom and power to govern themselves which they seek. The next topic to which I shall assert is that in respect to which the hon. gentleman who has just sat down has spoken; but, though I agree in the sympathy which he has expressed for the agricultural interest, and have advised her Majesty to use those expressions to which he has adverted, I fear I must widely differ in the conclusions to which he has come [illegible], I hold so far with his views—but I am afraid it is but a little way—that [illegible] have wished the transition with respect to the Corn-laws—the transition from an extremely vigorous and exclusive system, to one of complete freedom of imports—had been less abrupt than it is. I believe, myself, that if, in 1840 or 1841, this House had adopted either the measure which we proposed then, or a measure similar to that which we adopted in 1846, that either of those measures, continuing the duty for some years, would have prepared the agricultural interest for that complete free trade which now subsists. Sir, I certainly feel for the difficulties and distresses under which the agricultural interest now suffers, for it is an interest which must always be one of the main sources of the prosperity or adversity of this country

SKETCH FROM THE LINE OF THE ROYAL PROCESSION.

but, while I say thus much, I should be deceiving the hon. and learned gentleman if I were to say that I think that the adoption of those measures in 1840 or 1841 would have laid the foundation of a system of permanent duties on agricultural produce. I believe that the progress of opinion, and the increase of the commercial and manufacturing classes, would have led, perhaps before this time, to some such law as we now have. But, be that as it may, my opinion decidedly is, that, with respect to corn, you have adopted a system which is consonant with the great interests of the country, which tends to the material happiness of the country, and that will add to its political and moral tranquillity. (Cheers.) I believe that if, instead of proposing in 1846 the abrogation of the Corn-laws, the Government of that day had endeavored to maintain to the last hour the continuance of those laws, that they would have failed in that object, and that, whatever advantage the agricultural interest might derive, or might be supposed to derive, from the system which then prevailed, they would have failed to retain, but, in losing it, they would likewise have lost to the Government and Parliament of this country a great portion of the attachment of the nation; and that it would have been not only a loss of the Corn-laws to the agricultural interest, but that it would also have been a loss to the authorities of this country of much of that respect and regard which they ought to possess. (Cheers.) I, therefore, cannot think that we have adopted a plan which is at variance with the interests of the country. I have never pretended to say though others thought that they had reason sufficient, which, of course, I never thought that I had, to say—that a particular price of wheat would prevail at a particular time. There always seemed to me to be too many circumstances, too many elements, to enter into that question; and, for anybody even to pretend to perceive, certainly, for some years to come, what would be the particular prices of any article. I have never founded the course which I have taken on any other consideration than this—that, if there is a great manufacturing and a great commercial population in a very thriving condition, and a population accustomed to consume great quantities of food, and if they can obtain it, and more especially meat and the more costly articles of food, that those who are close at hand, those who are cultivating the soil as the neighbours, and in the immediate vicinity of those who make this demand, cannot fail ultimately to prosper from the continuance of that prosperity. I cannot think that the agricultural interest is totally to depend, as I think the Corn-laws induced them to depend, chiefly on the immediate price of wheat in any particular month or any particular year. It may be, perhaps, that the continuance of these laws induced the farmers of this country, and the owners of land in this country, and especially in particular parts of it, to look too much to the wheat crop as the source of their remuneration. Now these great changes in the laws cannot fail to be accompanied by great changes in habits and manners; and, in the adaptation of different soils and climates, no doubt great change will take place with respect to agriculture; but it is impossible not to see, as any honourable friend who has seconded the Address to-night has shown you, that, with this large population well employed, you would increase the demand for meat. You find, at Glasgow I think it was, that some 30,000 more oxen went to market in one year than had done one or two years before. That is merely a sample, which will show you that agricultural production must be in increased demand, if you can by your laws, or rather by the removal of laws of prohibition and monopoly, obtain a satisfactory and prosperous state of the manufacturing and commercial interests. The honourable gentleman talks of this being the second year in which the difficulties of the landed interest have been mentioned. But, if I am not mistaken, in 1836, and again in 1837, there was a low price of wheat—a price as low as the prices that have lately prevailed—and I think that on both those occasions mention was made in the Speech, or immediately afterwards, of the distress of the agricultural interest. Therefore I cannot believe that any law could pass, or any such measure as the hon. gentleman had hinted at, would secure the agricultural interest from prices being occasionally too low to be remunerative. (Hear, hear.) But there are no strong reasons which at the present time influence prices. It has always happened that when there has been a great dearth of any article, and when there have been very high prices, the consequence has been a great increase of that article, a very increased production, and that increased production has again produced cheapness. Cheapness has again produced increased demand, and the price has then again returned to some thing like its usual rate. Now in this country, in 1847, we were suffering very much, and France was likewise suffering from a very high price of food: although we had a good harvest in this country, in France the harvest was extremely deficient; and we know, both from the accounts of the French wheat and flour that came to this country, and from the complaints of the farmers, that they, with their protective system, were in a state of great and increased distress. But the system that we have adopted must be considered as a whole. It must be considered as affecting very many articles of manufacture, and many articles of agriculture; and Parliament must be prepared to decide, if the question should be brought before them, whether that system is founded on sound principles or not. I remember, some quarter of a century ago, when Mr. Huskisson was introducing practically, and therefore, somewhat timidly, changes with respect to certain articles of manufactures; he took the articles of gloves, and for a long while nothing was more frequent in this House than complaints that the manufacturers of gloves could not make gloves so good or so cheap as the French manufacturers, that they must be totally ruined, and we were implored to wear bad gloves, and dear gloves, in order to maintain the manufacturers of Yeovil and other places. Mr. Huskisson did not listen to those complaints, and it happened, fortunately enough, that the glove interest was not so powerful an interest as to induce this House to depart from his resolution. Well, no doubt there was dissatisfaction for a time. There is no reason to suspect that the complaints then made were ill-founded; but what do I hear at the present day, some twenty-five years after that law came into effect? Why, I hear from trustworthy persons, from persons resident in that part of the country, that the manufacture never was so flourishing as now at Yeovil; that the country people eight or ten miles round are asked to furnish labourers and members of their families to be employed in the glove trade, and that these gloves that we were told could not be made as good or as cheap as the French gloves, are now exported to France, and find a ready sale in that country. (Cheers.) This may be a small example; but I hope it may be some comfort to the honourable gentleman, and some assurance that the system which we have adopted is founded on some principles, and is one to which we shall adhere. (Hear, hear.) I certainly cannot hold out to the honourable and learned gentleman any expectation that a 5s. duty is likely to be established either on this or any other Government. (Cheers.) I am quite sure, putting aside any opinions of the members of the present Government, that any members of a Government sitting on these benches, when they came to consider the question when they came to inquire into the opinions and dispositions of the people of this country would shrink from imposing any duty on the import of corn. (Cheers.)

SKETCH FROM THE LINE OF THE PROCESSION.—"STANDS TO LVI."

I do not believe that a 5s. duty would be valued by the farmers, who still cling to Protection, in any other way than that it was a symptom of a return to a system of protection, and that a larger duty or a sliding scale would therefore be imposed. (Hear, hear.) But that very expectation on the part of the friends of Protection would alarm all those who have enjoyed the benefits of the present system; and I must say that every account which I hear (although it refers to the dissatisfaction among the occupiers of land) shows that in the agricultural districts, as well as in the manufacturing districts, the great mass of the labouring people never had such command over the necessaries of life as they have now. (Cheers.) From some calculations at which I was looking today, I find that those who had 12s. a week, and now have 18s., with their 12s. could command sixteen loaves weekly, and with their 18s. they can command twenty-four loaves (Hear, hear, hear)—that these who had 16s. formerly, and now have 28s., with their 16s. could command thirteen loaves weekly, and that they can now command nineteen. This I believe to be a very fair sample of what is the general state of the labouring population of this country. There are exceptions in certain counties, but I believe that such is the general state of the country. I believe that the poor now obtain a greater command of bread, and that they have at the same time a greater remainder from their wages with which to purchase sugar at the diminished price, and to purchase various other articles which are comforts of life, and which they could not obtain before. I believe that many of the labouring families now have fresh meat, which for many years scarcely was at their table. If this is the case, will the honourable and learned member seriously consider what the Government would have to do who said to the great mass of the people of this country, "You are now in the enjoyment of a larger command over the necessaries and comforts of life than you ever had before; but this system is entirely wrong, and you must revert to another system, under which your privations were great." (Cheers.) What chance would that Government have, I will not say of carrying such a measure, but of carrying with them the convictions and esteem of the people, even if they had success in carrying such a measure through Parliament? I believe, sir, although the statement of the honourable and learned gentleman has induced me to go into these illustrations, that a great part of those who were favourable to Protection, although they may not have changed their opinions, though they think that the system of Protection was a wise one for this country, have come to the opinion that it would not be wise in any Government to attempt to revert to that system. I pass now to another question, upon which a great part of this debate has turned, and upon which, of course, a serious discussion in this country for the last few months. And in doing so, I must, of course, refer to the opinions of the hon. and learned member for Sheffield, who began this debate, and who has placed the Government, and blamed me more especially, for the part that I had taken. The hon. and learned gentleman said that he approached this question with great pain, and that it was not merely from compliance with custom that he had these words, but that he really felt great pain on this subject. Now, allow me to suggest to the hon. and learned gentleman that I think his pain would be diminished if he would not fall into that way of supposing that some mean motives have always actuated parties, and the leaders of parties, in this country; and, if he would admit that, though they may differ in opinion, and honestly maintain, as we do, that we are somewhat higher motives for their conduct than he at present seems to suppose. (Cheers.) For, if no other than those very low motives actuated public men, he is in a country which is governed by one party or the other, and who have some mean jealousy or hope of a fleeting popularity to gratify, and over whom no other and better motives have influence. It appears, according to the honourable and learned gentleman's statement, that, when Sir Robert Peel proposed to relieve the Roman Catholics from their disabilities, that a great jealousy immediately arose on the part of those who had been always friendly to that measure. Now, that is a gratuitous assumption on the part of the honourable gentleman. The fact is, that we gave at the time the utmost support to that eminent statesman, now deceased, who was taking a course which we thought greatly for the benefit of this country, and he expressed his grateful sense of the support which he received from us. I remember, during one of the debates on that measure, some member of this House taunting me here for having changed their opinions, and I said that I hoped, during the whole of the discussions that took place on the bill of 1829, there would be none of those reproaches for change of opinion which the members who had spoken seemed to be inclined to indulge in. When we saw that when we had always thought a great benefit to the country prop. sed, and that which we thought necessary for the peace of Ireland about to be accomplished, our course was not one actuated by jealousy that it was not proposed by ourselves. We did not claim credit for any extraordinary pitch of heroic virtue, but we had real feeling that we were anxious for the welfare of the country, and we were glad to see it proposed. So with respect to that letter which I wrote to the Bishop of Durham: it was not to make political capital that I wrote that letter, but because I entertained the sentiments that I then expressed. (Cheers.) and rightly or wrongly, I could not refrain from giving expression to them, or from giving publicity to those expressions. (Cheers.) Well, then, perhaps the honourable and learned gentleman may in future save himself some of that pain which he has felt, if he will take rather a more charitable view of others, and thus he will not expose himself to the retort which I have sometimes been accustomed to make to those who throw out these reproaches, namely, an observation that was made by the great Prince of Condé, when he read some pamphlets that had been written against himself and the Cardinal de Retz. He said, "These gentlemen make us act as they would themselves act if they were in our places." (Hear, hear.) Well, now, sir, with respect to that question, which every one must admit has occupied the attention of the public during the last three months in a very great degree, I must say that I cannot at all take the view which the honourable and learned member for Sheffield takes of it, and which I have no doubt that he sincerely takes, that this was a mere use of a title; that it was a matter of no difference, and that it might have been foregone. I own I do not agree with him that it implies any ignorance of history that I should have taken a different view. On the contrary, I consider that history teaches that what ever may be the opinions of the Roman Catholics in different countries, that the Court of Rome—properly distinguished from the Church of Rome by the hon. and learned gentleman—that I say the Court of Rome has for ever watched opportunities of making aggressions, and of making aggressions not on the spiritual conscience, but on the temporal interests of the kingdoms with which it was concerned. (Cheers.) This history teaches, and I do find that some of the greatest friends of liberty—Sir John Elliot (from whom, and his colleagues was descended), Pym, Hampden, Lord Somers, and John Locke all of these men, friends of liberty as they were, in a long succession of Papal assumptions and Papal aggressions. (Hear, hear.) Well, sir, what was the condition of the Roman Catholics in this country? For it has been represented as if we, the Protestants of this country, had assumed the forehead of brass, years all suddenly seized with a rage for persecution, and could not refrain from raising a cry of bigotry and tyranny against our Roman Catholic fellow-men. Now, what is the true state of the case? In 1791 the period of the Roman Catholic relief bill and the Roman Catholics were allowed complete freedom in the exercise of their religion. In 1829 they obtained complete freedom to sit in Parliament, and have all such employments, with three exceptions. The Crown has, on various occasions, alterations have been made and innovations introduced with r to our laws favourable to the Roman Catholics. With respect to the acts payment of the privileges granted in 1829, the present Government, at least, cannot be blamed by the Roman Catholics; for, whether in the Queen's household, or the civil administration, or on the bench of justice, the talents of the Roman Catholics have been acknowledged and admitted as fully as those of any Protestant having offices of civil employment. At this moment, of the three chief Judges of the courts of law in Ireland, two are Roman Catholic. With respect to instances, we have been blamed rather for giving to Roman Catholics precedence and titles which gentlemen think they were not entitled to. One instance has been cited by the honourable and learned member for Sheffield, which certainly occurred, but of which, till lately, I did not know the history; namely, that in the Lord Chamberlain's department it was stated that the Roman Catholic Primate and the Roman Catholic Archbishop of Dublin had precedence at the levée at the Castle; but that no sooner was found to be the act of a subordinate in the Lord Chamberlain's department, and it was entered in the *Gazette* quite unknown to me, and during the hurry of her Majesty's visit. With regard to other cases, a person in my situation, [illegible] and more favour than some gentlemen consider they could fairly claim. But what I am contending for now is, that there was not in any respect on the part of the Roman Catholics with their full and free exercise of their religion—with all the civil privileges they enjoy quite as much as Protestants—what right have they to complain of their situation? Well, it is true that the titles of their bishops, there having been vicars apostolic in this country for three hundred years, having had vicars apostolic, and nothing but vicars apostolic during the reign of James II., when they were one of the principal causes of the King not being a Roman Catholic—the Romish synod the Court of Rome to issue a sort of edict, saying that this country was to be divided into an archbishopric and bishoprics; and the chief person created by these orders, an archbishop—and archbishop of Westminster, of all other places—(Hear, hear, hear)—in his letters immediate y proclaimed to all the people of this country, "We govern, and shall continue to govern, the counties of Middlesex, Essex, and Hertford" (Hear, hear.) Sir, was that a spiritual change? "The counties of Essex and Hertford!" I see the hon. gentleman the representative of these counties nodding assent. Were these counties merely bodies of Roman Catholics? It must be; indeed, the whole wording and construction of the documents appeared to be a pretension to rule those counties, and all the counties of England under the whole sway of this new hierarchy of Bishops. (Hear, hear, hear.) I might have been mistaken in this, but there was a person of great eminence, of great learning, of great talents, whom we all have to deplore as having ever left the Protestant Church and joined the Church of Rome—I mean Mr. Newman. And Mr. Newman said there was scarcely ever an instance that had happened before of a native which had entirely abandoned the Church of Rome returning again to its communion; but he was happy to say that that example had occurred in England, and he said that the English people had now returned to obedience to the Holy See. (Hear, hear, hear.) Why, what does that mean? If the Queen had come down to Parliament, as Queen Mary came to Parliament, and had declared at the time was come when the nation should return to the faith and to the obedience of Rome, and had declared that having over all

stances, have led to consequences very dangerous to this country. Sir, I come now to the observations made by the noble Lord on that part of the Royal Speech which refers to the difficulties of an important body among her Majesty's subjects. Sir, the noble Lord, when he addressed us, and when he admitted the extreme difficulty in our experience by which that class of the agricultural body -the noble Lord he said he need to me to be offered almost an apology to the House for not proposing that fixed duty which my honourable friend near me somewhat unexpectedly introduced into the discussion But while the noble Lord deplored the distress which he did not foresee, and the continuance of which he acknowledged to surprise him, I am really astonished that it did not occur to the noble Lord and to colleagues on some at least that they were not themselves now to ask that a body of men distinguished by so much industry, so much energy, and so much enterprise as the British farmers are distinguished certainly for the possession of, should be subjected to any one single change that they have succeeded in producing from the soil a greater quantity of produce than any farmers in any other country have—(Hear, hear)—I am surprised that the noble Lord and his colleagues, should not have come to us in which the House they have pondered over the continued distress of the agricultural interest: I am surprised that they did not ask themselves—" Will it be reason that, when all other classes of the country are to our belief flourishing, when they are so numerous, so wealthy, so industrious, and so intelligent, should be experiencing this constant and continuous depression?" (Hear, hear.) It might then, perhaps, have occurred to them that there must be some deep cause in our system of this country which produced such exceptional but such particular results and if the noble Lord had remembered that when he was last in England a financial system which has been built up upon the energy and resources of one class of the country in particular, and that that class has permitted its energies and resources to be taxed, because you thought fit by an artificial system of legislation to measure it is a market, and, on the average, a certain remunerative return, I wonder it did not occur to them, that probably that peculiar system of finance, when the artificial supports were withdrawn, might have occasioned this depression, which has now continued so long, that even Ministers are astonished, and is producing effects which must ultimately, I am convinced, be injurious to all classes of the community. Now, Sir, this is the way which I would have the noble Lord put the noble Lord: for what is the case of her Majesty's Ministers? They say all classes but one important class are flourishing; but we will not inquire what is the reason that particular class is depressed. We cannot penetrate—perhaps it is wise not to penetrate—the cause; for the cause may be this—that this class is contributing the capital by which all other classes are at this moment flourishing. (Hear, hear.) Under all circumstances

PARLIAMENTARY PORTRAITS.

THE EARL OF SHAFTESBURY, LATE CHAIRMAN OF COMMITTEES OF THE HOUSE OF LORDS.

All who have had any experience in the private business of the House of Lords must be well aware how important are the duties which the Chairman of Committees is called upon to perform. Many of our readers may not know that on that officer rests the great responsibility of examining all the private bills which are brought into that House, and

RIGHT HON. THE EARL OF SHAFTESBURY, LATE CHAIRMAN OF THE COMMITTEES OF THE HOUSE OF LORDS.

seeing not only that such bills are consistent with the statute law of the country, but that they are not productive of injury to the public or personal interests of individuals. The announcement made to the House of Lords on Tuesday, of the retirement of the Earl of Shaftesbury from that high office, will be received with the deepest regret by all who have, in the course of Parliamentary business, had experience of the strict impartiality with which that distinguished nobleman performed his very onerous duties. The estimation in which Lord Shaftesbury's conduct is held by the House of Lords, and we are sure we may add by the House of Commons also, was admirably expressed by Lord Stanley, who said "He was sure that every member of their Lordships' House, on whichever side he might sit, must bear in grateful recollection the long and faithful services of the Earl of Shaftesbury to that House, and that all would share in the regret expressed by the noble Marquis, that advancing years and increasing infirmities had compelled that noble Earl to resign an office the duties of which he had so long and so ably discharged. Hear, hear.) He concurred with the noble Marquis in the importance of finding a fitting successor to the noble Earl, and he was sure there were many noble Lords who possessed many qualifications for the due discharge of the office. It was, indeed, but faint praise, and well deserved, to the noble Earl whose retirement was now announced, to say that for the long period of years for which he had held the office, he had acted with unquestionable integrity, performing duties most essential to the character and well-being of that House and the community at large; and in which, to men of unscrupulous feelings, there were temptations, and, at all events, opportunities, of gratifying personal friends and serving private interests without any apparent dereliction of duty. But he (Lord Stanley) was sure that every one who had had any communication with the noble Earl would agree with him that beyond all men living that noble Earl was impartial, and uninfluenced by any personal or private considerations that would be injurious to the public and inconsistent with the rules of that House, no matter from what quarter it proceeded or what interest was involved in it. (Hear, hear.) No temptation whatever could have induced the noble Earl to swerve one moment to the right or to the left." (Hear, hear.)

This well-deserved tribute was received by the House in a manner which marked most strongly their sense that it was the truth, the whole truth, and nothing but the truth; and most gratifying must it be to the noble Earl to hear the eloquent eulogium on his services delivered by Lord Stanley, echoed by the Marquis of Lansdowne, the Dukes of Wellington and Richmond, and, in short, by the leaders of both sides of the House.

The House of Lords is a grave body, very chary of its praises, and could only have been warmed into such an expression by the recollection of how long the noble Earl had acted as Chairman of their Committees, and how heavy had been the labours of his office during these many years; for it will be a matter of surprise, more especially to those who have experienced the great care which it was Lord Shaftesbury's custom to bestow upon every bill brought before him, to know that during his chairmanship about nine thousand private acts have become the law of the land. And, when it is remembered that, in addition to this branch of his important duties, Lord Shaftesbury sat in Committees of the whole House upon nearly seventeen thousand public Acts, and as Chairman of the Committee for Privileges, and also, day after day, as Speaker of the House, our readers will share with the House of Lords in the regret felt for the loss of so excellent a public servant. His Lordship has held this important office since the 10th November, 1814.

JOHN WALTER, ESQ., M.P. FOR NOTTINGHAM.

The subject of our memoir, eldest son of the late John Walter, of Bearwood, Berks (and which county he represented in two successive Parliaments), by his second wife, daughter of Henry Smithe, Esq., of Eastling, Kent, was born at London, in the October of 1818. In 1828 he was sent to Eton, where he remained until 1836, when he entered Exeter College, Oxford, where, in 1840, he took his degree of B.A., with second-class honours. In the same year he entered as a student at Lincoln's Inn, was called to the Bar in 1845, and in 1842 married Emily Frances, eldest daughter of Major Henry Court, of Castlemans, Berks, Deputy-Lieutenant for the county.

In 1841, the late Mr. Walter (who raised the *Times* Newspaper to its present power and position at the head of the press), after a severe contest, was returned for Nottingham. On the dissolution, which took place within a few months, he again stood, was defeated by Sir George Larpent and Sir J. C. Hobhouse; petitioned against their return; Larpent retired; Walter again stood, and was then opposed by Joseph Sturge, whom he defeated by a majority of 84. On petition, in 1843, the election was declared void; and, as Mr. Walter could not again become a candidate in the same session, his son came forward, and was opposed and defeated by Mr. Thos. Gisborne, who retained the seat until the dissolution in 1847. The general elections were in progress, when, on the 28th of July, Mr. Walter, sen., died. The candidates in the field for Nottingham were Mr. Feargus O'Connor, Mr. Thomas Gisborne, and Sir J. C. Hobhouse. Immediately the news of Mr. Walter's death reached the town, the idea seemed at once to seize upon the constituency, that they owed it as a debt to his memory to elect his son. He was nominated on the same day, had the show of hands; and at the close of the poll on the 29th the numbers stood—Walter, 1683; O'Connor, 1257; Gisbourne, 999; Hobhouse, 893. Mr. Walter's address was not published until after his return, when it was one of thanks to the constituency for his his election as a grateful remembrance of the services of his able and lamented father.

Mr. Walter has been a diligent attender at the House, and careful of the interests of his constituents. His first speech was in favour of the Irish Coercion Bill of 1848, which drew down upon him some severe

MR. WALTER, M.P. FOR NOTTINGHAM.

attacks from Irish members. In the same session he spoke and voted against the renewal of the Income-tax, on the ground of the injustice of its unequal pressure upon property and income; and last year in favour of Lord Ashley's Factory Bill, and Mr. Halsey's Small Tenements Rating Act. He has spoken but seldom and briefly, but always so as to command attention. In the sessions of 1849 and 1850 he served on the Army, Navy, and Ordnance Committee; and last year was an active member of the committee on official salaries, in which he voted for a complete revision of our diplomatic arrangements, for the abolition of the offices of Master of the Mint and Lord Privy Seal, the reduction of the salary of the Lord Chancellor, and against the reduction of those of the Puisne Judges. He voted with the Government for the repeal of the Navigation Laws, the Commercial Marine Acts, and Jewish Disabilities Bill; against them on the Greek question, and also as to the African squadron, in favour of the withdrawal of which, as of proved insufficience, he voted with Mr

WILLIAM OF NASSAU, AND THE MONEY-LENDERS.—PAINTED BY CLAUDIUS JACQUAND.—FROM THE GALLERY OF THE LATE KING OF HOLLAND.—(SEE PAGE 119.)

QUEEN'S COLLEGE, BELFAST.

Hutt. He supported the Irish Encumbered Estates Bill, and voted against Mr. Disraeli's resolutions on Poor-rate Establishment Charges; against Mr. Stewart Wortley's Marriage Bill; against Mr. Hume, on Parliamentary Reform; and Mr. Berkley, on the Ballot; he is, however, in favour of a large extension of the suffrage. He votes for the repeal of the Window-tax and Paper-duty. He is opposed to the repeal of the Malt-tax, but in favour of such constant revision and reduction of taxation as shall tend to the equitable apportionment of burdens, the interests of industry, and the security of the national credit. He is in favour of an equitable property-tax, but opposed to the renewal of the income-tax on its present oppressive and inequitable basis. He would appropriate a portion of all surplus revenue to the reduction of the debt, and would at once abolish the taxes on marine, fire, and life insurances.

Our Likeness is from a Portrait by Lucas.

QUEEN'S COLLEGE, BELFAST.

THE style of architecture adopted by the architect (Mr. Charles Lanyon, of Belfast) in the above building is the Perpendicular.

The whole length of the front elevation is 310 feet; that of the wings, 130. The central tower is 95 feet in height.

The materials used in the construction are red bricks, with Scotch stone dressings, and occasionally black bricks, built in diamond patterns, are introduced.

The main entrance and the bay windows are boldly ornamented with carved tracery.

Through the central tower entrance is obtained to a hall, 50 ft. long and 25 ft. wide, covered with an open timber roof of simple design, and lighted by a large traceried window, filled with stained glass. To the right of the Entrance Hall is situated the Examination Hall, 80 ft. long and 40 ft. wide, occupying one half of the central building. The walls are wainscoted to the height of 10 ft. The roof affords a handsome specimen of a Gothic queen-post truss, with hammer-beams carved into the form of angels holding shields, on each alternate one of which is emblazoned the arms of Ulster.

The other side of the central building is occupied, on the ground-floor, by Lecture-rooms, above which are situated the Library and Museum, which are approached by a handsome stone staircase.

The south wing (shewn on our Engraving) is appropriated to the residences of the President and Vice-President, with two Lecture-rooms in the centre.

The north wing, in which is an entrance for students, is occupied by Lecture-rooms and Laboratories. In the rise of this wing and of the central building is a spacious Ambulatory, or Cloisters, from which access may be obtained to the Lecture-rooms on ground-floor, Examination and Entrance Halls.

THE WESLEYAN NORMAL COLLEGE.

THIS important educational establishment is now in course of erection in the densely populated neighbourhood of the Horseferry-road, Westminster. The purpose of the establishment is a twofold one—that of training schoolmasters and mistresses, and the education of children residing in the locality. It consists of principal's residence, college for students, school-rooms for children, and residences for under-masters. The buildings cover a space of upwards of five acres, and are shown in the accompanying bird's-eye View.

Fronting the Horseferry-road is the principal's residence, which, when completed, will contain, in addition to the domestic apartments appropriated to the use of the principal, a committee-room, secretary's room, and library, with rooms for porter, &c. The frontage consists of three gables, divided by massive buttresses—each gable having an enriched oriel window—two stories in height, with open traceried parapet, and the angles terminated with gargoyle heads for the discharge of water from the lead flats. Central is the large open archway communicating with the Normal College; on the right, the private entrance to principal's house; and that on the left, to committee-room, &c. The appearance of this building, with its moulded archway, deeply recessed mullioned windows, tracery, and carved work, renders it characteristic of the design, forming a bold and handsome entrance.

Proceeding through the archway, we enter the quadrangle of the Normal College, with its lofty central tower and projecting wings. In the centre is the octagonal tower, 80 feet in height, with an embrasured parapet; and in the lower part an enriched oriel window overhangs the entrance doorway richly decorated and carved work. On either side of the tower are three gables, with gargoyle heads between each, for the conveyance of water from roof. A terrace, eight feet in height, extends the whole length of the front, approached by a handsome flight of steps; and on either side the wings are adorned with pointed traceried windows between each buttress, the label mouldings terminated with foliated bosses. The cornice mouldings are enriched with paterae and gargoyles, and the parapets battlemented. Entering the building through the centre doorway, is the hall or vestibule, which occupies the lower compartment of the tower, and communicates with the rooms on either side by means of a spacious corridor. A flight of steps leads also to the quadrangle of the practising schools. Approached by the corridor on the left, are the head-master's room, the third class rooms, and retiring room for the male students, the lecture hall, and gymnasium. The lecture hall is 40 feet in length by 30 feet in breadth, and has a handsome open timber roof, with hammer beams and carved ribs and principals, the spandrils of which are enriched with tracery, and the corbels at the springing richly carved. It is fitted up with a gallery at the further end beneath the large decorated window. On the right of the entrance-hall, and approached by the corridor, are the female students' retiring-room, mistress' room, and dining-hall; the latter is 50 feet in length by 22 in breadth, and the ceiling panelled, with moulded ribs, and foliated bosses at their intersections. At the upper end is an arched recess for the reception of an organ, this room answering the double purpose of music and dining hall. On a level with the quadrangle, and underneath the dining-hall, are the domestic apartments, with an entrance adjoining the back part of the principal's residence, the communication between which and the College is by means of an arcade.

The whole of the first and second floor, save a portion used as an invalid department, is appropriated to the male students' dormitories, approached by means of a stone staircase on the left. A corresponding stone staircase on the right communicates with the female students' dormitories, which occupy the whole of the third floor; the communication between the apartments of each sex being kept separate and distinct. Each student has a separate sleeping-room, 9 feet by 7 feet, and 7 feet in height; supplied with water from a cistern in upper part of tower, and furnished with gas-burner. A corridor extends the whole length of each floor, and communicates on either side with the dormitories. There are also lavatories and baths on each floor. In communication with the servants' department, on the right, is the lift for the conveyance of dinner to the hall, and linen, &c., to the dormitories. The servants' dormitories are situated above the dining-hall.

Proceeding through the entrance-hall in the lower part of the tower we enter the quadrangle of the *Practising Schools*, by means of a broad flight of stone steps: there are also two other entrances, one from Peter-street, and the other from the lodge entrance in Allington-street. The front of these schools is towards the south, and consists of a projecting centre gable, with oriel window, and, on either side, cloisters communicating with the belfry turrets at each angle. On the right are the masters' residences; and, on the left, the Normal College. The plan consists of four spacious rooms, 60 feet in length by 30 in breadth, and 20 feet high, appropriated to infant juveniles of both sexes and senior boys. Each school-room is fitted up with a gallery, and suitable school furniture. There are eight class-rooms in connexion with the junior and infant schools, and two to each of the other school-rooms, with a gallery in each. An open cloister, for exercise in wet weather, extends round three sides of the quadrangle, which is appropriated to the boys' play ground, and is fitted up with gymnastic poles and swings.

In communication with the Practising Schools, and on the east side of the quadrangle, are the *Masters' Houses*, comprising every convenience connected with a domestic residence. They overlook the playgrounds, or quadrangles, on each side.

Passing through the cloisters between the master's residence and the schools, we enter the playground of the *Model School*, which is a detached building, in the Early English style of architecture, with an entrance-porch and lancet windows. The dimensions are 40 feet in length by 30 in breadth, and 20 feet high, fitted up in a similar manner to the other schools, with gallery, desks, &c. Underneath the school-room, and of the same dimensions, is a covered playground, 7 feet in height, with open arches communicating with the playground, which is fitted up for gymnastic exercises.

The style of architecture adopted is that of the sixteenth century usually denominated Perpendicular English. The basis of education adopted is the Glasgow system; and the building has been rendered in every respect contributory to the wants and requirements of the establishment.

The building has been erected from the design, and under the superintendence, of Mr. James Wilson, F.S.A., of London and Bath, by Messrs. Curtis, contractors, Stratford

WINDSOR ELECTION.—Mr. Hatchell, the new Attorney-General for Ireland, has again addressed the electors of Windsor, asking their votes at the ensuing election. The election is fixed for Monday next. Mr. Hatchell is the only candidate.

THE WESLEYAN NORMAL COLLEGE, WESTMINSTER.

HOUSE OF COMMONS.—THURSDAY.

(Continued from page 115.)

HOUSE OF LORDS.—FRIDAY.

Their Lordships met at five o'clock.

Several petitions against Papal Aggression were presented by the Earl of BANDON, the Earl of CARLISLE and the Earl of ENNISKILLEN.

Lord BROUGHAM brought in a Bill to extend the jurisdiction of County Courts to cases of Bankruptcy, by which a saving would be effected of the whole expense of the bankruptcy costs, except the expenses of official assignees and clerks.

The LORD CHANCELLOR would not venture to give an opinion on the measure, until he should have had time to study the provisions of the bill.

In reply to Lord STANLEY, the Earl of MINTO reiterated his declaration that he was entirely ignorant of the intention of the Papal Court to create a Roman Catholic hierarchy in this country.

Their Lordships then adjourned.

HOUSE OF COMMONS.—FRIDAY.

The Speaker took the chair at four o'clock

THE QUEEN'S ANSWER TO THE ADDRESS.

Mr. LASCELLES, Comptroller of the Household, appeared at the bar, and read her Majesty's answer to the address of that House as follows:—"I have received with much satisfaction your loyal and dutiful address. Your expression of attachment to the Throne is very gratifying to me, and you may be assured of my determination to maintain the independence and uphold the constitutional liberties of my people."

Mr. WILSON PATTEN moved the appointment of a Select Committee to consider the mode in which the duties heretofore attached to the office of Counsel to the Speaker, with regard to private business, shall be performed, and to propose such regulations respecting private business generally, as they may think fit. He complained of the noble Lord the last year, without his consent obtaining, abolished the important office of Counsel to the Speaker; and it appeared to him that some such appointment was essential to the proper management of private business. It would be for the Committee to consider whether that officer should be re-appointed, or whether some other party should be appointed to fulfil the duty.

Mr. VERNON SMITH, as chairman of the committee which had recommended the abolition of the office of Counsel to the Speaker, explained the course he had thought it advisable should be adopted for the future, and which, they believed, would have the effect of expediting the business, and diminishing the expense.

Mr. LABOUCHERE said, his opinion was that when there was a vacancy in the office of Chief Clerk, some arrangement might be come to which would, as to the public, and that was the object he noble friend had in view in abolishing the office. He entirely approved of the motion of Mr. W. Patten, as it was most desirable that the whole subject should be re-considered.

Mr. SHAWE hoped some arrangement would also be come to in order to reduce the expenditure and facilitate the progress of private bills

Mr JOHN STEWART thought Lord John Russell had made a great mistake in abolishing the office in question.

The motion was then agreed to.

THE PAPAL AGGRESSION

Petitions from places in Essex and other parts of the country were presented by Sir R. Inglis, protesting against the recent Papal aggression; by Mr. Frewen, from Sussex; by Mr. Thompson, from Durham; by Alderman Humphrey, from Southwark; by Mr. Moody, from Suffolk; by Mr. Mostyn, from Wales; by Sir W. Verner, from Armagh; by Mr. Plumptre, from places in Essex; by Mr. Fuller, from several parishes in the same place; by Mr. Vyvyan, from Cornwall; by Mr. Moody, from Cheshire; by Mr. Miles, from several places in Somersetshire; by the Marquis of Granby, from Leicestershire; by Sir B. Hall, from 14,600 inhabitants of St. Pancras—(cheers); and by Mr. Bankes, from Dorsetshire.

WINDOW TAX.

Petitions in favour of a repeal of the WINDOW-TAX were presented by Mr. Holand, from Hastings; by Mr. C Lushington, from the Westminster Reform Society; by Mr. Pigott, from Yorkshire; by Mr Alderman Sydney, from Stafford; by Sir B Hall, from St. Marylebone and St. Pancras.

In answer to Mr. John O'Connell, Sir WM. SOMERVILLE said he could not say whether the Government would bring in any measure for the amendment of the law of landlord and tenant in Ireland.

Mr. DISRAELI having a motion for Tuesday next affecting the whole taxation of the country, wished to know whether Mr. Cayley, who had a motion on the subject of the repeal of the malt-tax, would not permit him to take his proceeding, and he would then be afforded an opportunity of expounding his views on that question.

Mr. CAYLEY had no alternative but to give way—(Hear, hear) but if the hon gentleman did not succeed in carrying his own motion, he hoped he would take up the question of the malt-tax. (Great laughter)

Mr. DISRAELI said, the terms of his motion (notice) on Tuesday next, would be, that severe distress existed amongst the agricultural classes of the country, and that it was the duty of her Majesty's Government to take such steps as would be most efficient for the relief thereof

Mr. ANDERSEN gave notice of motion, for the 18th February, relative to the imposition of an additional duty on Spanish ships

In answer to Mr. Lawless, Lord JOHN RUSSELL explained the nature of the fire at the Houses of Parliament a few days ago, observing that the origin of the fire was still involved in obscurity, and that fresh reservoirs for water would be required, according to the report of Mr Barry.

In answer to Sir B. Hall, relative to abuses existing in the Ecclesiastical Courts, Sir GEORGE GREY said the subject was under the consideration of the Government, and it was intended to bring in a measure to divide populous parishes

In answer to Mr. Goulburn, Mr. B. HAWES said there would be no objection to lay any despatches relative to the ravages of cholera in Jamaica on the table.

In answer to Mr. Herries, Sir G GREY said the Trade and Navigation Returns would be laid on the table of the House on Monday.

PAPAL AGGRESSION.

Lord J. RUSSELL then rose, amidst the most profound silence, and said the House would readily believe the deep responsibility with which he approached the important subject then before the House. When he referred to the various meetings, addresses, and petitions that had been presented, he considered that responsibility still further increased. He had further been warned by the hon. member for Sheffield not to take a retrograde step; and on the other hand he had been warned by the hon. member for Bucks, not to legislate at all unless he did it in a large and comprehensive spirit. His congregation, however, would be that of a man who, when a blow was aimed at his head, made a step backwards to enable him to raise his arm. He would briefly refer to the circumstances which had rendered the present measure necessary. In the course of last year a Roman Catholic Archbishop had been elected in Ireland, in an unusual manner. Instead of the three ancient Sees being selected, another person, whose name had not been mentioned at all, was appointed by the See of Rome. It appeared that he had thought it right to call himself Archbishop of Thurles, a town which had a few thousand inhabitants, and addresses, and petitions that had been presented, he considered that responsibility still further increased. He had further been warned by the hon. member for Sheffield not to take a retrograde step; and on the other hand he had been warned by the hon. member for Bucks, not to legislate at all unless he did it in a large and comprehensive spirit. His congregation, however, would be that of a man who, when a blow was aimed at his head, made a step backwards to enable him to raise his arm. He would briefly refer to the circumstances which had rendered the present measure necessary. In the course of last year a Roman Catholic Archbishop had been elected in Ireland, in an unusual manner. Instead of the three ancient Sees being selected, another person, whose name had not been mentioned at all, was appointed by the See of Rome. It appeared that he had thought it right to call himself Archbishop of Thurles, a town which had a few thousand inhabitants, and address should be issued to the people of Ireland, and that was carried by a majority of 13 to 12 the thirteenth person being the individual sent over in the way he had referred to before. A great portion of the Roman Catholic clergy were up with condemning a system of education in colleges established by the Queen in conformity with the wishes of the Legislature, as endangering the faith and morals of the Catholic laity. Another part of the petition was taken up with reference to the state of the unfortunate peasantry who had been evicted from their own dwellings; and no language was withheld calculated to excite the feelings of the people against the owners of land. He would say nothing with regard to those colleges, as that might be matter of spiritual discipline; but he appealed to the House, whether this second matter was one of spiritual arrangement, and whether it was such a synod of the clergymen as ought to entertain and discuss, when met for the first time ostensibly for purely spiritual purposes. He contended that this was the beginning of a system of influencing the minds of the people, and interfering with the temporal supremacy of the Crown which would be pushed much further when the occasion offered—(Hear)—and he found that this document had been signed by Paul, Archbishop of Armagh, Primate of all Ireland." (Hear.) The Lord-Lieutenant had called his attention to the matter, but, on consulting the law officers of the Crown, it appeared that there was no proof that the document had been affixed by Dr. Cullen himself, and therefore no notice could be taken of it. The noble Lord then referred to the case of the Sardinian Minister, who, because he did not retract or atone for some conduct which was deemed by the Roman Church as affecting its interests, was refused the sacrament of the church on his death-bed. These things might appear distant, as far as England was concerned, but it must be recollected that they had been told that Rome was unchanged and unchangeable; and, when opportunity offered, the same force would be brought to bear in this country. (Hear.) He then referred to the case of Belgium, in which it was supposed that some proceedings hostile to the interests of the Church of Rome had been taken by the Belgian Government, and which the Government was obliged subsequently to explain away. He now came to this country, and referred to the rescript that had appeared in the month of September last, relative to the appointment of an Archbishop and Bishops, and, with regard to that letter or rescript, he would state, that it was done entirely without the consent or the knowledge of the Government of this country. Nay further, he had been informed some time previously, that it was the intention of the Court of Rome to make these appointments, and he had stated that it would not meet his approval. He did not believe at the time that the Court of Rome would have consulted her Majesty by such a step. (Loud cheers.) It was insinuated in a letter of Dr. Wiseman's that Lord Minto was privy to this, but Lord Minto had most positively denied it. (Cheers.) In the interview he had with the Pope, a paper on the table was pointed at which contained, he was told, something that concerned him, and that was all. (Hear, hear.) He believed it was the nature of all ecclesiastical bodies to infringe upon the temporal authority whenever they could. (Cheers.) He had himself endeavoured to repress it in the Church of England But if it was true of any ecclesiastical body, it was particularly true of the Church of Rome; that Church, claiming infallibility for itself, always exerted more power than any other over the minds of those belonging to it. He need only refer to the time of Boniface the VIII., when that power was at its utmost height, and when the temporal authority was compelled to bend before it. He might remind the House, also, of the continual antagonism that existed between that Church and France, which was itself a Catholic country. D'M. Dupin's work upon the liberties of the Gallican Church, the arrogant assumption of the Church of Rome was well pointed out and ably exposed; showing that the Church of Rome had learnt nothing, and forgotten nothing, and that its constant object was to assume complete dominion and control over the whole of the community. He referred to the rule which existed in France, that no order or regulation of the Court of Rome could be received in that country without the consent of the Sovereign—(Cheers)—that any person introducing any bill or rescript affecting excommunication upon any individual for anything done in the service of his Sovereign, all his goods and chattels should be forfeited. Such were the safeguards that existed for the Church in France under the Monarchy. He then referred to the alterations made in the dioceses and parishes of France as the result of a concordat between the Government and the Pope of Rome. But there was the result of a distinct understanding between Napoleon and the Pope; and, although an attempt was subsequently made to alter the arrangement, the Court of Rome found itself unable to maintain the second concordat, and the former one was again had recourse to. It would not do after that to tell him that the Roman power would not undo what it had done. (Cheers.) He would next refer to what was the law of Austria. That country was a great Roman Catholic power, and her laws set forth that no appointment should be good which had not the sanction of the civil power; and that every document which proceeded to impose spiritual punishment must be submitted to the civil power, or that it otherwise would be of no effect. (Cheers.) He was sorry to say, however, that law had been in some measure altered He believed, however, that in no Roman Catholic state were bulls allowed to circulate without coming under the cognizance of the State in some form or other. (Cheers.) In Prussia, when the introduction of bulls was proposed, that power referred to the treaty of Westphalia, and refused to permit the introduction of bulls as was necessary by the Roman Catholic law. But even in Europe, which valued its own independence, which would have permitted the insult which the Pope passed upon England. (Cheers.) He now came to speak upon the measure which he intended to introduce into England. (Hear.) In that bull there was not a single word from beginning to end as to the power of the Crown, and Dr. Wiseman was appointed to a jurisdiction in which the Queen held her crown, and the Parliament held the sittings. (Hear.) In the mandate of the Pope he appointed bishops to English counties and titles, and the excuse made for that presumption was that there were certain Sees which it was necessary for the Roman Catholics to fill up. But there was another form which should also be observed. (Cheers.) There was a form which said that Victoria, "by the grace of God," was Queen of England (Immense cheering.) The bull passed over her titles, and so they were told. Why, he knew that well enough; but it was necessary to suppress the assumption of a power on the part of the Pope in this country which did not belong to him. (Cheers.) In this country, our Sovereigns were at all times jealous of the power assumed by the Pope; and in the time of William the Deliverer, the King would not permit a bull of excommunication to be circulated without his sanction; and so it was also in the time of Edward I. and Edward III., and Sovereigns after them, when the Roman Catholic religion prevailed in this country. When the Government became acquainted with the measures of the Pope, they immediately consulted the law officers of the Crown, and the conclusion to which they came was, that the assumption of titles by the Romish bishops was not contrary to law, and could not be suppressed; but that the introduction of the bull was illegal. In consequence, however, of the long deaus of prosecutions for such an offence, they thought, that, if a prosecution were instituted, it would fail. There was a passage in the writings of Jeremy Taylor, which it seemed to him, although not strict law, was good morality, and which applied to this subject, and in which it was, in effect, stated, that many things might be injurious to the State which were not prohibited by Act of Parliament. Although the penalties attached to the introduction of bulls in the time of Elizabeth had been taken away, still the introduction of bulls was not permitted, but, on the contrary, prohibited. It appeared to him, that they could alter the law only in one of two ways either by imposing the penalties contained in the statute of Queen Elizabeth, or by saying that bulls should be subjected to the civil government of the country, as was the practice of foreign governments, and as they were allowed to do in the country. It would, however, be a very great inconvenience to follow either of those two courses; and, after giving the subject their best attention, the Government had come to the conclusion to propose one of them In the present state of uncertainty on the subject, whether the aggression was intended, or was a blunder, he thought it would be inadvisable to adopt any very stringent measure on this subject. When the Roman Catholic Emancipation Act was proposed by Sir Robert Peel, he said he objected to the assumption of territorial titles by Roman Catholic Bishops in Ireland, and a provision to that effect was introduced into the Act (Cheers and laughter.) After the passing of that act, twenty-six bishops and archbishops of the Roman Catholic Church issued an address, which differed very greatly from the language now used towards the Protestant Catholic clergy of this country. He would be well if Archbishop Cullen and Archbishop M'Hale used the same moderate and legal language. They therefore proposed that the assumption of title by Roman Catholic bishops should be illegal, and that all acts done by them in that capacity under such titles should not go to them, and all acts done by them in that capacity should be null and void. If it were necessary to introduce further measures, they would be brought forward. He did not say that it would be necessary to submit any more stringent measure to them. He therefore proposed, in the first place, the provision to prevent Roman Catholics of any titles, not any from any diocese now existing, but from any territory in any part of the United Kingdom. (Cheers.) And, in the second place, that no person assuming those titles will become possessed of property vested in them in trust under such titles. (Cheers.) If Cardinal Wiseman had any respect for himself and the Roman Catholic religion, he would not do it, it would be better for him to do what he told him (Lord John Russell) he would do, that is, to reside in the immediate vicinity of the Court of Rome. (Laughter.) He was in favour of religious freedom, and he considered it conducive to religion interfering with the temporal supremacy of the State, and he had throughout his life acted upon that his firm conviction. He had so acted with his own church, the Church of England; and, because he would punish no man for any peculiar notions with respect to a church which put forth notions totally opposed to civil and religious freedom. (Cheers.) Even in the present day the Church of Rome presented the reading of such works as those of Robertson and other popular writers. Admitting therefore full liberty to the Roman Catholics, he proposed that they should not admit a transmontane power. It might be said that they were acting inconsistently with the course which they had taken before, with respect to religious freedom; but he could not see that they were doing so, for there was a great difference between the present time and that of former times, inasmuch as they had given every possible and considerable relief to the Roman Catholics; and they were, therefore, in a position with consistency to oppose any measure assuming temporal power which was inconsistent with the supremacy of the Crown. The noble Lord concluded by saying, "Let us stand against these attempts in all these points and with all our power" (Great cheering.)

Mr. ROEBUCK entirely concurred in all that the noble Lord had said in opposition to ecclesiastical power and ecclesiastical usurpation; but he applied those arguments, which were applicable only to states where the Roman Catholic religion was established, to one in which it was not acknowledged. The case of the United States was the only analogous case to that of this country and the noble Lord had referred to the example of the United States of Austria, France, and Prussia were right in their legislation, because they contemplated the infallibility of the Pope; but in this country, and in the United States of America, that was not proper. The proper course for the Government to have pursued would have been to say to these bishops, "You may call yourselves what you please, but we only know you as we do Mr. So-and-so." (Laughter.) The Pope had no power, by a small matter of negotiation, might obtain the withdrawal of French bayonets from Rome, and the Pope would be a vagabond on the face of the earth. Why, would stopping payment of the Dutch debt affect the Dutch? No, by a declaration could relieve the mind of that poor man from that error. He would direct his law officers against all pests as much against a Methodist preacher or the Bishop of London as against Cardinal Wiseman, and he would direct the law against them by the general name of Priest. He found the Roman Catholic bishops were not called by their titles by the authorities themselves. This measure was a step backward in obedience to a prejudice out of doors, and to the prejudices of great among ourselves. All could say about it was, that it was bad, that it derived its benefit from its utter inanition. His advice to the Roman Catholics would be to treat it without any particle of regard; for the Roman Catholic archbishop would then precisely be the same power under those titles as he had under the title of Archbishop of Westminster. Call him Archbishop of Heliopolis, with power in Westminster, how could Government get out of that? how would Government prosecute? It did not happen, and he hoped that some information would be afforded them on that point by the law officers of the Crown. But would not the Roman Catholic bishops of Ireland treat the measure with scorn? Would they not say that it was well while to risk the tranquillity of Ireland for such a bill as this, which was a bill for mischief, and for mischief merely for what would be the consequence if they were to impose a penalty on Roman Catholics in Ireland? Would it be worth while for them to contend that great and mighty England was insulted because one powerless priest chose to call himself by a wrong name? Was the Queen or the Archbishop of Canterbury hurt thereby? Was not Cardinal Wiseman as amenable to the law as he had been before he was archbishop, if he broke the law? But with regard to Lord Minto, he understood that the noble Lord had received a letter from Mr. Berkeley Hamilton, a Scotsman residing in Rome, and a Catholic, recalling to the noble Lord's recollection that the noble Lord had stated to him that the brief organising the hierarchy had been shewn to him, but that he had refused to look at it because it concerned the internal regulations of the Catholic Church, with which he had nothing to do. The Government had acted wrongly towards the Roman Catholics throughout these transactions, and more especially in its attempt to re-enact obsolete laws. He could not but regret that in this instance the noble Lord should have surrendered his mind, his heart, and his hand to the control of the ignorant multitude.

Mr. JOHN O'CONNELL said the noble Lord had done wisely at the eleventh hour, in courageously daring the ridicule to which he would be subjected for bringing forth this mouse of legislation, and for standing up against the bigotry, the outbreak of which had disgraced this country for the last three months. The honourable and learned gentleman then proceeded to defend Dr. Cullen and the Pope against the attacks of the noble Lord, and explained that Dr. Cullen had been appointed in consequence of the irreconcilable divisions which had taken place among the Irish prelates. The hon gentleman then proceeded to contend that Sardinia had been guilty of bad faith in its negotiations with the Court of Rome, and that the Sacred law enacted upon the petty spot of the Continent, and that all was had taken part in passing those laws had incurred the censure of the Church. Austria had retraced her steps; and in every instance in this country in which Catholic monarchs had opposed the Church of Rome, they were invariably disgusted with the disgrace of their subjects. With regard to the supremacy, the Protestant bishops themselves were not agreed on the point, and the Dissenters repudiated the spiritual supremacy of the Queen. Her temporal supremacy was admitted by the Catholics, and they would resist any attempt to encroach upon it. With regard to the territorial division of the country, that division was quite complete under the vicars apostolic as the Irish hierarchy. The noble Lord had disturbed the country, and had concluded with a contemptible measure. Nothing that the Legislature could do could prevent the spreading of the Catholic religion. The power of the Sovereign, and that alone,

hear.) Was it for this that the Prime Minister alluded to the time when the Spanish Armada darkened the shores of England?—for this that the countenance, that the Universities, and the great city of London, went to Windsor to address the Throne, and that the electric telegraph lost not an instant in reassuring the courage of the metropolis. This measure merely prevented the pretence from assuming a territorial title, under the penalty of perhaps 40s. Was an act of petty persecution the only weapon it could use? Not a single principle was asserted or vindicated. If the noble Lord had been about to revive the penal laws, the proportions of his speech could not be more colossal. He had warned his constituents that this was a wide question and that you could not legislate for England without legislating for Ireland. That view was derided, and yet they found the noble Lord going at once to Ireland and treating the question of the Synod of Thurles and not the aggression of Dr Wiseman, and yet he produced a bill which bore no relation whatever to any Synod (Cheers.) He had expected that the Government would have brought forward a measure consistent with the statement of the Prime Minister. The Pope's letter was described to-night as a blunder on the sudden; perhaps some people might think that some other proceedings were blunders on the sudden. (Cheers.) He thought that the directions of the Government in Ireland and in the colonies with reference to the Roman Catholic Bishops, the Viceroy of Ireland had been in communication with the Pope. For his own part, he could not believe that the step which had been taken by the Pope of Rome had been taken without due encouragement. He could not forget the terms in which the noble Lord had expressed himself in June, 1845, when he stated that he had not thought that those clauses preventing a Roman Catholic Bishop from assuming the titles of a bishop of the Established Church. That opinion was duly noted at the Vatican; and when the representative of our Sovereign was communicating with him in terms of homage, and when, in consequence of the mistake of a most convenient subordinate, Catholic bishops were received at the Queen's court, could they wonder at the conduct of the Pope? He would not enter into the question of the conduct of my Lord Minto, although he must express his surprise that when being told there was something that touched England nearly he should not have asked, what is it? My Lord Minto had certainly run the most extraordinary diplomatic course of any man. He certainly should, for the future, prefer a professional diplomatist to an amateur. (Hear, hear.) He thought it was a great pity to baulk the feeling of Europe, and that was preferable to the career which the noble Lord had chalked out this evening. Suppose there were another Papal aggression, there would be a fresh agitation and a new measure of repression. That would produce another blunder, and thus they would go on year after year, and England would be governed by a perpetual Perish plot. It was a great national evil to have a hostile hierarchy in a country, unrecognised by the law. How to reconcile these difficulties was a difficult problem, but not insoluble; certainly, it was not to be solved by a *concordat*; but it was the duty of a statesman, who, like the noble Lord, had raised the people to solve it, but not by such a miserable measure as this. He should not oppose the bill, but it would not solve the question, it would only give them breathing time. It

NIMROUD SCULPTURES IN THE LOUVRE GALLERY, PARIS.

Eshshetan, with whom all Franks are supposed to be acquainted, to convert the stones he so carefully dug up into the precious metal. At length he was so utterly interrupted, that an appeal to the Porte became necessary, and for a whole year his proceedings were arrested by the negotiations between the French and Turkish Governments, for the purpose of securing him the permission to excavate. Upon the French Government undertaking that all the gold and treasure which might be discovered should be given up to the Turkish authorities, the firman was granted, but not without the appointment of an officer specially to watch progress; not merely to prevent the private abstraction of the supposed treasure, but to see that during the night the Ghiaour Botta did not transmute into gold the stones recovered by day—so impossible is it to make a Turk comprehend that a sane man would spend money to dig up old stones, merely to examine or carry away because they have on them unintelligible writing. At length M. Botta was permitted to carry on the excavations at Khorsabad, and was ultimately rewarded by a discovery which has excited the curiosity and interest of all the civilized world. It will thus be seen that we are only performing an act of justice towards M. Botta, in according to him the merit of first breaking ground which has since proved so rich in archæological treasures; for it was to his energy, resolution, experience, and tact that we are indebted for overcoming obstacles which, being once removed, render subsequent researches comparatively easy. There yet, however, remains one great difficulty to surmount before we can arrive at the most precious remains, namely, the excavation of the largest mound in the plain opposite Mosul, at a place called by the Arabs Nunia, and supposed to be the true Nineveh. The difficulty arises from the existence upon this mound of a mosque sacred to all Mohammedans, as containing the tomb of the Prophet Jonah. Some of the contiguous mounds, however, have been excavated by our energetic countryman, Layard; and we anticipate the arrival of the results so soon as our Government ceases to emulate the Turks in the obstacles they offer to promoting these interesting researches.

The first produce of M. Botta's labours arrived in Paris in the year 1846, and the Engravings we have prepared are from among those deposited in the Louvre, and will be found to form valuable links in the chain of those we have already described from our own Museum.

No. 1 represents an angle of an entrance, showing part of the side and return of the door. The angle shows the profile of the human-headed bull, the right side of which will form the whole of the jamb of the door, as will be better understood by reference to the bull and lion described in our Number published October 26th, 1850, which example was built into the wall or flanked by other sculptures. In the present instance the return side of the same block is sculptured with a figure of the Assyrian Hercules, bearing his emblems, the lion and serpent. The figure stands in a shallow recess, the outer sides of which are flat, and form a sort of frame round the principal figure. At the base of that on the right side is sculptured a small figure of the divinity Nisroch, holding the basket and pine cone; and on the right side is a figure of a priest, holding the bunch of pomegranates in one hand, while the other is upraised. The panels in which they stand reach nearly as high as the knee of the Hercules. The figure of Hercules himself is bare-headed, the hair being represented in bold relief in front, but highly curled at the back; and the beard is peculiarly elaborately ornamented. He is dressed in the long furred robe, with the fringed tunic and furred upper dress, we have before remarked upon as a distinguishing feature of Royal personages. As regards the long mantle, he differs from another figure of Hercules in the French collection, in which he is represented as clothed simply in the short-fringed tunic. The portion of the bull shown has a richly-ornamented cap, surmounted by feathers, the double horns, bull's ears, and the usual curled hair, beard, and dewlap: the front feathers, indicating the wings, are carried over the shoulder.

No. 2 is a bronze lion, like those found by Layard, and which we have, in a former article, assumed to be a weight; it is placed on a stone engraved with cuneiform characters.

No. 3 is a small figure of a divinity in wood, which has suffered considerable damage from the operations of time.

No. 4 is a figure of the same size as the preceding, and likewise of wood. It appears to represent the King, or a divinity, with a truncated cone-shaped head-dress, surrounded by the double horns. The robe is long, but the whole figure too much mutilated to distinguish the particulars of the costume.

No. 5 is a bracelet of bronze, with carved bulls' heads for terminations.

No. 6, A spear or arrow-head.

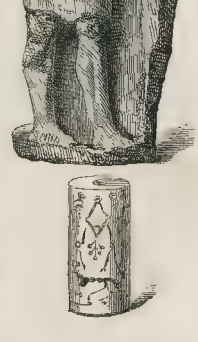
No. 7, A crescent-shaped implement of ordinary spear metal.

Nos. 8 and 9, Engraved cylinders of agate, exactly like those found in the ruins of Babylon. Cylinders of this description have been known in Europe from time immemorial; and no less than 20 years ago, Mr. John Landseer suggested that they were worn by the Assyrians as amulets, and that they bear the name of the individual, as well as some astrological signs with reference to his birth. Recent discoveries seem to confirm these suggestions.

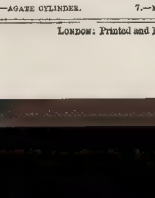
1.—HUMAN-HEADED BULL, AND ASSYRIAN HERCULES.

3.—FIGURE OF DIVINITY OR KING, IN WOOD.

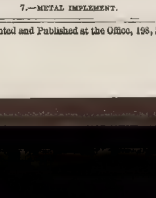
2.—BRONZE LION, ON STONE.



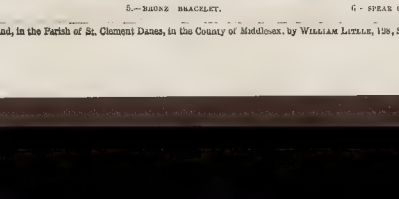
4.—FIGURE OF DIVINITY, IN WOOD.



8.—AGATE CYLINDER.

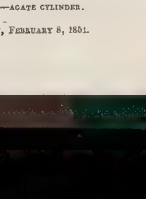


7.—METAL IMPLEMENT.



5.—BRONZE BRACELET.

6.—SPEAR OR ARROW HEAD.



9.—AGATE CYLINDER.

THE ILLUSTRATED LONDON NEWS

No. 470.—Vol. xviii.] SATURDAY, FEBRUARY 15, 1851. [Sixpence { WITH SUPPLEMENT, GRATIS.

MR. DISRAELI'S REMEDIES
FOR AGRICULTURAL DISTRESS.

It was not wise in the Ministry to regret in the Royal Speech the existence of Agricultural Distress, or to make any mention of the subject, unless they were convinced that that distress was the result of legislative enactment, and was capable of removal by the same agency which caused it. It cannot be imagined that the Ministry have any doubts upon the subject, or any misgiving, that, after all, either the policy of Free Trade or some other act of the Legislature might be to blame; and it therefore was, to say the least of it, exceedingly impolitic to excite hopes which they knew they could not realise, and to encourage the respectable and estimable people, who cultivate the land, in the false notion, that they are a class apart and to be aided in their business at the expense of all the rest of the community.

Mr. Disraeli, as leader of the Protectionist party, has not been slow to take advantage of the weak amiability, or the amiable weakness of the Ministry upon this subject, and before the session was a week old, has come before the House and the country with a woful repetition of a woful story. He has proved that agriculture, like the new-born babe in the Eastern poem, "wept when all around it smiled;" and that the cheapness of food, which made all other classes prosperous and happy, was ruin to every one engaged in the cultivation of the land. There is no doubt that agriculture in this country is not prosperous; but it should be remembered that it never was prosperous within any traditionary or historical period, or within the recollection of any living man, except when bread was at famine price. Protected or unprotected, British agriculture has been constantly dissatisfied. Its woes began with the Peace; since which period, it may be safely stated, it has allowed no peace to politicians, and has all but monopolised, with Roman Catholic grievances and Papal aggressions, the whole attention of the Legislature. The lament of Thomas Moore in 1826 applies to 1851:—

> What! still those two infernal questions,
> That with our meals, our slumbers mix;
> That spoil our tempers and digestions—
> Eternal Corn and Catholics?
>
> Gods! were there ever two such bores
> Nothing else talk'd of, night or morn;
> Nothing in doors or out of doors,
> But endless Catholics and Corn!

Mr. Disraeli, and all who advocate, directly or indirectly, the cause of Protection, blame Free Trade for the present distress of the occupiers of land; forgetting that they were quite as distressed under the Protective system as they are now, and ignoring, for the purposes of their present arguments, their whole history for upwards of thirty years. The agriculturists desire what they cannot get—a higher price for their commodity than the market price of the world; and a price which, if they could obtain it, would ruin the commerce and the manufactures of this country, and draw us, not by slow, but by rapid degrees, into the vortex of as sanguinary a revolution as ever afflicted any nation in the world. That Free Trade is not to blame for their distress, is proved not alone by their own history, but by the complaints of the protected agriculturists of France, who allege, like their English compeers, that they cannot cultivate the soil at a sufficient profit, and who, having some protection, are clamorous for more. They would have a minimum price of food, and would measure out the contents of the horn of Amalthæa—even though it overflowed as in the Golden Age—at a famine price, to an eager people. They never calculate how long the people could pay such a price, or whether the attempt to make a nation pay more than the current price of the world for its food, is not ultimately ruinous even to agriculture itself.

Mr. Disraeli announces that he has abandoned the cause of Protection in so far as Parliamentary effort to overthrow the system of Free Trade is concerned. Accepting Free Trade as a fact, not to be set aside unless by the deliberate verdict of the constituencies—which he knows full well can never be obtained—he desires that agriculture should be freed from any unjust burdens that may weigh upon it, in order that it may compete freely and fairly with the whole world in the raising of food for the British people. "What," he asks, "is the reason that when all are prosperous, an important class should suffer? Why is it that the cultivator of the soil, whom we all recognise to be a man of energy and of enterprise, and whose great virtues we now recognise—what is the reason that the cultivator of the soil in the United Kingdom should not be able to compete with the foreign cultivator?" He affirms the reason to be, the weight of taxation to which the cultivator of the British soil is subjected, and calls upon the Government and the Legislature to relieve them of a large portion of those burdens. Mr. Disraeli does not seem to think, that, taken in the aggregate, the taxation of the British people is excessive, but that the owners and occupiers of land are proportionally more heavily weighted than any other class. Upon both of these points, the non-agricultural class will be prepared to join issue with him, and to assert that the whole British people—agriculturists as well as manufacturers, country and town, all classes and interests of society—are enormously taxed, but that agriculture does not pay a fraction more than its share. The three burdens which Mr. Disraeli especially seeks to remove, with the view of lightening the pressure upon agriculture, are—the prohibition to grow tobacco and sugar, the malt-tax, and the excessive amount of local rates. Let us take these questions one by one, and see what the agriculturists, or the country, would gain by their removal.

In the first place, the permission to grow tobacco, even if accorded, would be but a small matter. The total value of the tobacco imported into this country is, as the Chancellor of the Exchequer informed the House, but £500,000. If the English and Irish farmers were allowed to grow it, could they compete with the tobacco-growers of North and South America and Cuba? Under a system of Free Trade they most certainly could not; for tobacco from those regions could be supplied cheaper and better than it could be grown in Great Britain or Ireland. If they desired to protect British and Irish tobacco by a prohibitory duty, the impudence of the demand would almost surpass credence. A sacrifice of revenue to the extent of £3,250,000 would be a necessary accompaniment of this scheme. The consumers of tobacco would pay the present price—that is to say, the net value of the tobacco, £500,000, plus the present duty; which, instead of going into the national exchequer, would go into the pockets of the tobacco-growers; and the deficiency of £3,250,000 in the revenue would have to be made up from the general resources of the people. the agriculturists really think that Protection, being banished from bread, is to be restored upon tobacco, they are blinder than we take them to be; and, if Mr. Disraeli really believes that such a scheme has the remotest shadow of the fraction of a chance of being sanctioned by this or any possible Parliament or Government, he is not the man of ability or of common sense that the world is willing to believe he is. As regards the sugar question, we should think that

FIRE AT KNOLL'S GARDENS BERLIN.—(SEE NEXT PAGE.)

[COUNTRY EDITION.

the unhappy result of the Emperor Napoleon's attempts to introduce into France the manufacture of sugar from beet-root would be a sufficient warning to all parties in this country. Sugar can be made out of beet-root; but that native sugar from beet-root can be produced as cheaply as tropical sugar from the sugar-cane, remuneratively to those engaged either in its culture or its manufacture, is much to be questioned. Upon this point, however, there is no reason why experiments should not be made. But for the privilege of growing sugar a loss of revenue would be incurred, which the agriculturists, in common with the other classes of the community, would have to make good, either in direct or indirect taxation. Thus the advantage to agriculture would at best be small.

The second grievance is the Malt-Tax. We willingly admit this to be, like every other tax, an evil; and we see no reason why the poor man's beer should be the subject of taxation any more than his bread. But that the tax is a burden upon the agriculturist, except as a consumer of beer, we cannot admit. The Malt-Tax affects the labourers, mechanics, and handicraftsmen of towns and cities quite as much as it affects the farmer. The immense beer-drinking population of London are, in fact, far greater sufferers by it than the growers of barley. Doubtless the tax operates so far injuriously upon the agriculturist that it restricts the consumption of beer, and therefore interferes with the market which the farmer might otherwise obtain for his barley; but, to claim the whole tax as a burden upon agriculture, as Mr. Disraeli does, is voluntary or involuntary error. Voluntary error is dishonesty, of which we do not accuse the Protectionist leader; but involuntary error in a question like this is quite as damaging to his cause, and almost as damaging to his reputation. The tax is a large one, and it is likely enough, that, some day or another, it will be taken off; but, at the best, the amount will have to be re-imposed in the shape of an income and property tax. Possibly such a change might be for the benefit of agriculture; and if the farmers and the country would like to make trial of the substitute, there is no reason, that we are aware of, why they should not be gratified. But whether anything be done or not, Mr. Disraeli has as greatly exaggerated the burden, as he has the relief to agriculture which might be expected from its removal.

The third grievance is, the alleged undue pressure of Poor and other local rates, which, according to Mr. Disraeli, affect land to the extent of seven-twelfths of the gross rental, while Mr. Disraeli's errors in this respect were pointed out last year, when he brought the same subject before the attention of the Legislature. His courage in returning to the charge, after the complete exposure of his inaccuracy which then took place, is not a little extraordinary. As if his statement had not been refuted over and over again, he could sit down as an agricultural burden the whole amount of the poor and other local rates, although houses, docks, railways, mines, and all the lands upon which railways are built, are sharers in the burden. The Chancellor of the Exchequer slew this dead fallacy a second time. Doubtless, it will be revived once more, if not by Mr. Disraeli, by some of his followers; but it is really high time that the error, or the misrepresentation, should give up the ghost once for all, and so make an end of it.

There is no doubt that the agriculturists are heavily taxed: in this country, we are *all* heavily taxed. Let the agriculturists, instead of considering themselves a class apart, make common cause with their fellow-citizens, in calling for a reform and re-adjustment of our whole fiscal system, and they will do good service to themselves and to the country. But they will not have done so by Mr. Disraeli—setting class against class, and interest against interest—can effect no good for agriculture. It leads the farmers astray, distracts their attention from their business, and impedes a work, which, sooner or later, must be attempted in justice to the whole industry of the country—whether it be exercised in the corn-field or in the workshop, in the production of food, or in that of calicoes and hardware.

DESTRUCTION OF KROLL'S AT BERLIN.

ONE of the chief places of amusement of Berlin, the Linden establishment known as Kroll's, was totally destroyed on the night of the fire; of the large building, which, with its gardens, and square two of which was the ornament of the Thiergarten, nothing remained standing but the walls. The [illegible] which [illegible] balls and masquerades, formed one of the longest galleries in Europe. The decorations of the Chinese *Saalordnung* had not been removed, and in the centre saloon the great panorama of the Mississippi had been for some days exhibited. A concert was to have been given there in the evening, but at mid-day on the 1st a fire broke out among the decorations and tapestries of the interior, and in a few minutes the whole of the interior was in flames. From the open space of ground between the Brandenburg Gate and the building, the progress of the fire could be distinctly seen as it spread from end to end of the interior. The immense panorama is destroyed—the whole interior, in fact, is completely gutted. The alarm was immediately given; but when the few engines arrived, there was such a scarcity of water that they were of little use. A detachment of Lancers and a body of the mounted police kept back the crowd of people from the enclosure round the building. The Prince of Prussia, Prince Carl, and Prince Albert were all on the ground with General Wrangel. The fire raged from noon till three o'clock, and it rather burnt itself out than was extinguished. At half past three, however, the [illegible] got out, the great engine of the city, which is worked by steam, was slowly rolling up the Linden towards the Brandenburg Thor, far too late to be of use even if there had been water enough. The panorama destroyed belonged to Mr. Cassidy, the competitor of a Mr. Risley, who has another gigantic painting of the scenery of the same river at the Hôtel de Russie

Fortunately, no lives were lost in the fire: it was caused by the small spirit-lamp used to light the chandeliers. It was, as usual, fixed on a long pole, and the man, in moving about, brought it into contact with some of the light drapery, and in a few minutes the whole of the interior was in a blaze.

The King of Prussia has presented Mademoiselle Kroll, the proprietress of the establishment which bears her name, with the sum of 40,000 thalers towards its re-erection. The remainder, it is said, will be covered by the insurance.

The founder of this splendid establishment was Joseph Kroll, the proprietor of the "Winter Garden" at Breslau, in which the corporation of that city gave the King of Prussia in 1841, the splendid fête which pleased with the arrangement of the building; and encouraged by the Royal approval, Kroll ventured to apply for permission to found a similar *locale* in Berlin, on the grandest scale. Supported in his project by the minister, Count Von Stolberg, Kroll obtained the grant of a piece of ground in the Thiergarten (the whole of which is "Royal property"), not far from the Brandenburgh Gate, on the condition that the building erected on it should never be appropriated to any other purpose than that of a place of public amusement. The King and other members of the Royal family also advanced money towards the cost of the edifice, to a large amount; the site was, besides, afterwards extended, and space enough given for a pleasure-garden. The building was commenced in May, 1842, and opened with a public concert on the 15th of February, 1844. It contained extensive kitchens, cellars, billiard and smoking rooms, and offices of every kind under ground, suites of private apartments on the basement, and above it three saloons; the centre one square and lofty, with two others longer and narrower extending on each side of it, the whole length of the building. The centre hall was the Ball-room, and was surrounded by open *logen* for the Royal family, and galleries divided into apartments, in which, during the grand masquerades and balls, parties could be served with supper, and command, at the same time, a view of the glittering [illegible] below. The great saloons were [illegible] for public [illegible] and [illegible] a garden, and performances by a very talented troupe were given with great success. The property had passed to the daughter of the founder, Miss Kroll, by whom it was conducted with great spirit. The fire has swept away everything she possessed. The numerous servants and waiters saved nothing but their lives; the musicians, who always left their instruments in the building, have lost their means of subsistence. Of the whole large orchestra, nothing has been recovered but the triangle. The stock of written music, the labour of years, is totally destroyed.

FOREIGN AND COLONIAL INTELLIGENCE.

FRANCE.

The hostile attitude taken up by the Legislative Assembly (as represented by the majority and the Mountain) against the President of the Republic, has been aggravated this week, by the boldest and most decided step they have yet ventured upon, viz: a refusal of the pecuniary grant of 1,800,000 francs, demanded by Ministers, to enable Louis Napoleon to maintain in a becoming manner the great expenses of his exalted station in the Republic.

The measure had been referred to a committee of the Assembly for preliminary consideration, and M. Piscatory was named the reporter to the committee. On Saturday last, this gentleman presented his report to the Assembly. [illegible]

The following is a resume of its main arguments. It commences by recapitulating the various grants annually voted under different heads to the President of the Republic, and makes the sum total amount to 3,425,000f., supposing the bill to [illegible] The said sums are made up of the following items, according to the Constitution, 600,000f.; the dotal of representation, inscribed on the Budget, 600,000f.; expenses of the Elysée, inscribed on the Budget, 240,000f.; hire of a hotel adjoining the Elysée, 35,000f.; share assigned to the President in the funds of succour charged on the budget of the Ministry of the Interior, extraordinary expenses demanded by the present bill, 1,800,000f. The committee had heard several ministers, who referred to the statement of motives of last year, having no more complete explanations to give for the present, and had decided, by a majority of thirteen votes against two, to propose to the Assembly the rejection of the bill. The majority recalled its motives, which had determined the vote of last year, and maintained that the same identical grounds existed for repeating the grant this year, and for securing to the President a position suitable to his rank. The majority thought that perhaps it would appear unconstitutional to vote a supplement of salary to the President of the Republic. Nevertheless, in presence of the vote of last year, and of the considerations which had guided it, it did not think that circumstances this year were of a nature to [illegible] that which [illegible] 1,800,000f. demanded, the position of the President would be below the suitable style and dignity of the great power with which he was invested. On the contrary, this position was [illegible] of all proportion with every other functionary in the country where the division of fortunes was so great. The committee desired to maintain the executive power, but not to aggrandize it. The presidency is not royalty. The President is only the first citizen. He is not the head of the state; he is the head of the Executive power. When the Assembly voted, last year, the supplement of salary, it hoped that the danger with which such a vote might be accompanied, in its bearing on the claims of influence, a political instrument. But the Assembly had found a conformity of policy and a concurrence of action in the President of the Republic; and it trusted confidently to find them still. But this confident expectation has not been fulfilled, and the Assembly, justly alarmed, has not deemed it possible to keep silence. It deems it its duty to observe a conduct and to hold a language about which no person can fail into mistake. The union of the powers has saved France; all that tends to divide them excites the same uneasiness, the same regrets in everybody, although differently expressed. The Assembly can not speak with sincerity and firmness; otherwise, it would weaken the Legislative power, and tender bad counsels to the Executive power.

Monday having been fixed for the debate on the report, M. de Royer, Minister of Justice, in opening the question on that day in the Assembly, stated that it had appeared to him simply a financial one, but the committee having made it a political question of the first order, the Government awaited the decision of the Chamber calmly. M. Montalembert then ascended the tribune, and spoke amid deep silence. He would leave aside the money question, and apply himself to the political one. The majority, although differently disposed with regard to the best intentions in the world, had entered upon a systematic opposition. (Great noise. Cries of "No, no," and "Yes, yes.") Well, then, if they liked the phrase better, they had entered upon a "parliamentary" opposition. (Laughter.) He was not the President's adviser, but he could bear witness that he had been true to his mission, which was to restore society, and to suppress demagogy. (Noise.) The President had performed his mission with courage, honour, and ability. Then, proceeding to examine the acts of the President, M. Montalembert praised them all, with the exception of the letter to Edgar Ney, an event which [illegible] also to dismissal of General Changarnier. M. Montalembert represented the President as the expression of the country, which had need of defence. The speaker was often interrupted by the Left; and M. Baudin was called to order, with inscription on the *procès-verbal*. M. Piscatory followed Montalembert, and the bill was then rejected by 396 votes against 294, being a majority of 102 against the Government measure.

The next (Tuesday) morning the official organ of the Government, the *Moniteur*, published the following [illegible]

> In the anticipation of the rejection which has just taken place on the question of expenses of representation, numerous subscriptions were in course of [illegible] during the night. An amazing and unexpected sum has been collected in a few hours. At the moment of the President having been officially informed of the resolution of the Assembly, the [illegible] had already received and carefully classed [illegible] those who had exercised [illegible] But he feels it his duty to make sacrifice of a personal satisfaction in favour of the [illegible] Ministry has, therefore, refused all subscriptions, however spontaneous and generous they may be. The President, thus, refuses all subscription, however spontaneous and generous they may be.

The spirit of self-denial so adroitly displayed in this notice is said to have [illegible] the popular mind, and it is [illegible] that Louis Napoleon mighty in the popular affections, and [illegible] will prove to be one of his best "moves" thus to enact the persecuted man.

On the same evening he rode out on horseback from the Elysée, attended by a slight escort, when he had the [illegible] persons were assembled, and he was given him a most enthusiastic reception, their cheers being accompanied by vehement cries of "*Vive Napoleon!*" "*Vive le Président!*"

On Thursday there was a grand reception at the Elysée, that the President of the Republic would not hold his usual reception on that evening. This is among the first measures adopted by Louis Napoleon to economise the expenses at the Elysée, in consequence of the rejection of the donation list.

The Journals, of course, entertain very opposite views of the act of the President of the Republic, in refusing to accept the voluntary subscriptions raising on his behalf in various parts of the country; some of them denouncing his resolution indicative of a manly character and worthy of his high position, while others denounce it as an act insulting to the representatives of the nation, for which he ought to be called to an account.

The Legislative Assembly have re-elected M. Dupin as their President for the next three months; and General Bedeau, M. Daru, and M. Louis Faucher as Vice-Presidents. Five of the secretaries have been likewise elected.

The Finance Minister M. Fould, presented to the Assembly the budget for 1852, from which it appears that in the year 1849 a deficit of 73 millions existed, to which should be added six millions on account of the savings-banks. The deficit for 1849, which had at first been set down at 72 millions, and was afterwards reduced to 19 millions, was finally brought down to only fifteen millions. The deficit of 1849 would, in 1851, be brought down by the application [illegible] For the year just closed the estimates [illegible] by 12 millions, which would be added to the supplementary credits voted by the Assembly to the extent of 50 millions; but, by the augmentation that had taken place in different branches of the revenue, together with the new taxes which had been imposed by the present Assembly, this deficit had been brought down to 13 millions. The extraordinary works which had been executed last year amounted to 105 millions. With regard to the year 1851, he could not form any conjectures based upon the assumption that order and tranquillity would be maintained. The deficits of the three preceding years, 1848, 1849, and 1850, put together, with the gross sum of 646 millions, but he did not think that any dangerous or embarrassing position would result from such a consequence, seeing as he did the great resources which were at the disposal of the state. He estimated the increase of the revenue and the limitation of different [illegible] at a possible sum of forty-three millions. The Government [illegible] year, been enabled to sell twenty-two thousand hectares of land, to the value of twenty-five millions. He enumerated other additional measures [illegible] by Government for the reduction of the deficit above stated. The floating debt amounted to 977 millions, but it was not for all that to an extent to cause uneasiness or create apprehension. The cash in the Treasury and in the Bank exceeded 94 millions. The loan concluded by his predecessor would afford 36 millions, of which 31 millions remained to be paid. The amounts due by the Rouen and Northern Companies would give upwards of 40 millions, and he was confident that the ordinary expenditure would be fully covered by the revenue receipts. He then summarized the different reductions that would be made in expenses of the different departments, and concluded by setting down the extra receipts according to his estimate, at 1,382,675,967f., and expenditure at 1,272,978,928f., giving a surplus of 109,696,870f.

ITALIAN STATES.

From the Peninsula the only occurrence of importance which is noted is a very melancholy one, viz. the condemnation, by the criminal tribunals, of 42 [illegible] (chiefly at Genoa) to death for the part they took in the revolution two years back. Three of these had been condemned to death, three to perpetual imprisonment, and one to the galleys for 24 years; the remainder to lighter punishments. Long had, however, remitted the sentence of death. Much excitement is said to prevail [illegible] of these proceedings.

GERMAN STATES.

[illegible] Federal Diet [illegible] Executive Power is to be established, and that the Premiers of Austria and Prussia will meet at Dresden on the 16th inst.

SCHLESWIG-HOLSTEIN.

According to the intelligence received this week from Hamburg, the whole of the 4 July of schleswig was delivered up to the Danes on the 5th instant, who immediately took possession, and the national flag was hoisted on the fort and in the country round.

UNITED STATES.

We have accounts this week from New York to the 29th ult. The excitement and anxiety at the non-arrival of the *Atlantic* had become very serious; and the British revenue schooner *Daring* had sailed from Halifax on the 22d, in search of the missing steamer. This act of courtesy, on the part of the colonial Government, was highly appreciated and lauded at New York.

The elections were creating much excitement. Out of fifty-three senators elected, thirty were Democrats, twenty Whigs, and three Free-soilers. Nine were yet to be returned to make up the complement of 62, or two senators to each state. The representatives are elected according to population, causing the people in due proportion of numbers; but each state [illegible] voice in the senate, the senators representing, not the [illegible] but the Government [illegible]

From Congress we learn that in the Senate the motion of Henry Clay for inquiry into the expediency of attempting to prevent American ships from engaging [illegible] Appropriation Committee.

The French Spoliation Bill had also passed the Senate. This is a measure of indemnification to private sufferers, and also an act of national justice.

Great efforts were being made to [illegible] on account of the duties [illegible] iron, hemp, and glass.

The trial of General Henderson, on the charge of having been concerned in the invasion of Cuba, is terminated in the discernment of the jury.

From Havannah we learn that Barnum's experiment with Jenny Lind [illegible] was highly successful, the prima donna having realized extravagant sums, although the lady was greatly admired and applauded, the concerts were [illegible] finished after the third night. A charitable concert, subsequently given, was [illegible]

IMPERIAL PARLIAMENT

(Continued from page 126 of the Supplement.)

HOUSE OF COMMONS.—WEDNESDAY.

The House sat from [illegible]

Several petitions were presented for the Repeal of the Window Tax, and for measures against the [illegible]

SUPPLY.

The House having resolved itself into a Committee of Supply, a sum of £17,706,690 was voted for defraying the charges of unfunded Exchequer bonds.

Mr. HUME inquired what was the present rate of interest on Exchequer bonds.

Sir G. GREY: [illegible] &c.

PAPAL AGGRESSION.—ADJOURNED DEBATE!

On the motion for the adjourned debate on the Ecclesiastical Titles Bill,

Mr. P. HOWARD said that he felt it his duty to stand up for his faith, as his ancestors had done in ancient times; and he felt more ardent in doing so from the conviction that [illegible] union power [illegible] was identified with that of civil and religious [illegible] This attempt to get up an anti-Catholic feeling in this country [illegible] signally failed, a [illegible] was exemplified in Northumberland [illegible] several of the principal [illegible] Carlisle, and other places. The First Minister of the Crown had admitted, that, in what had been done, the law had not been violated, and where, then, was the wrong? was the Papal aggression? The fact that no prosecution had been instituted, was a sufficient proof that there had been no aggression. At all events, it was clear that the Roman Catholics, having violated no law, had a right to assume that they were justified in the course pursued by the principles of civil and religious liberty. A charge had been laid against the Synod of Thurles, that it interfered to oppose the [illegible] and national education in Ireland; but in so doing, the Catholic [illegible] only [illegible] followed the example set them by the majority of Protestant clergymen. He believed the assertion of Sir G. Grey by the counter-assertion of the Earl of St. Germans, who adhered that the Pope had not attacked the rights of the English church, having neither interfered with [illegible] legal recognition of the see of Westminster, which was himself created. For a similar conclusion, he referred to some expressions of the late Lord Chancellor, and to the arguments of Dr. Wiseman and Mr. Bowyer, in support of the assertion, that the Catholic hierarchy formularies observed in Ireland by the Catholic church [illegible] erection of new sees and the appointment of bishops. The change effected by the Papal letter was in strict accordance with these established principles, and he had the courage, with the glorious example set in Canada, where a similar proceeding was admitted to have been no aggression. In the [illegible] past [illegible] Cardinal Wiseman, the [illegible] proved, that there was no purpose of assuming a general or over-episcopal authority. The present debate was not confined in its topics to the narrow matter of limits of time or [illegible] stating [illegible] matters, and more [illegible] the Catholic pastors and their flocks; and in its provisions relative to charitable trusts, one of the most arrogant interferences with the right of private property that he had seen in the course of twenty years that he had been in Parliament. He warned the Government, that, should they succeed in passing the bill, patience and physical endurance would be tested as regards its enforcement, and [illegible] handled. He for one could not support [illegible]

Mr. NAPIER said, that after the House had [illegible] to the measure to be introduced on this subject [illegible] appeal [illegible] him rather strange that they should be then, for the third time, discussing whether they would consider any measure relating to the matter, [illegible] might be the character. He had heard the conduct of the Pope in this [illegible] and one explained, and [illegible] with the greatest propriety it was his highest legal authorities (Sir E Sugden amongst the number) had given their opinions, that, although the law on the subject was in a very [illegible] yet that it had been [illegible] by the law as it [illegible] might have been his former opinion, he had no hesitation [illegible] was prepared to stand by the act of 1829, [illegible] to that measure, he would certainly vote against it. The Papal Aggressors cried out for civil and religious liberty, but they could not be content by that cry was nothing but unrestrained intolerance. Their duty to take care that no party should [illegible] control or [illegible] above the law and constitution of the country, and it therefore became necessary to pass some measure to guard against foreign aggression of this description. Their former legislation had been favourable to Popery, and they had [illegible] as they had sown. In the exercise of patronage in Ireland, [illegible] almost a disqualification for office. Cries of "No, no.") [illegible] carried, that a Protestant Bishop had recently [illegible] the influence of a Roman Catholic prelate; and as the Irish bar it was notorious that Roman Catholics received appointments in preference to Protestants. Lord Clarendon, and learned gentleman then commented on the letter of the Earl of Clarendon to Archbishop Murray, and to what took place in consequence, and concluded [illegible] the policy pursued for the last twenty years was sufficiently to encourage the Court of Rome to make the recent aggression. The hon. and learned gentleman concluded by declaring that when the bill should come before the House he would give it the most careful and candid consideration.

Mr. [illegible] Mr. [illegible] with his constant opposition to the claims of the Roman Catholics, and with having been secretary to the Isle of Dogs Canal Commission, and with having been secretary to the Isle of Dogs [illegible] which was organized for the avowed purpose of [illegible] the people [illegible] ture, should those acts prove favourable to Catholic emancipation. In reply to the assertion that Protestantism was a disqualification for office in Ireland, he instanced the fact that of the twelve judges only three were Catholics. The Solicitor-General, the Vice-Chancellor, and the Masters of the Rolls, were Protestants, as were likewise the great majority of the Masters in Chancery, the Judges of the Court of Bankruptcy. Even the present Attorney General for Ireland was a Protestant. He could not understand the assertion of the hon. and learned gentleman. For himself, as a Roman Catholic, he declared, that he would much sooner submit to the [illegible] than a [illegible] wrong, who might attempt to interfere with his conscience. He [illegible] the assertion of the law. It was absurd, he contended, to claim the Pope with [illegible] power, because he had the power to [illegible] purse, and had since carried out [illegible] unaccountable to the Government of this country [illegible] would, therefore, be viewed as an [illegible] guard, in reference to his [illegible] He had no intention to offer insult to Roman Catholics. Mr. Keogh believed the statement of the noble Lord, why then should the noble Lord, and those who agreed with him in opinion, not give the same credit to the solemn assurance of others? He accused the Home Secretary of having received addresses which were [illegible] by the Roman Catholic clergy as a [illegible] of blasphemies, and stating, in answer, that they had been "graciously received" by the Sovereign. What Mr. Keogh complained of was, that while the acts of the Government had led the Roman Catholic authorities to believe that the creation of a hierarchy would be acceptable, or, at all events, not objected to by Ministers, no sooner was the step taken than a coercive enactment was proposed. The effect of the measure

would be a merciful proceeding towards the inferior orders of the Roman Catholic clergy in England [illegible] in the object, but not in the manner proposed by the bill. He would take the opportunity of moving, upon all available occasions, the omission of the clauses which related to Ireland.

Mr. Spooner supported the bringing in of the bill, and deprecated any further discussion until they should be acquainted with all its provisions. He thanked the noble Lord at the head of the Government for his letter to the Bishop of Londonderry, which he would act up to in his professions. Should he meet with [illegible] in pursuit of peace, he would find that, if he threw himself [illegible] and said that he had [illegible] course of the debate heard no sing[illegible] that no such bill should be introduced.

Colonel Thompson repudiated any foreign interference with either Protestants or Catholics in this country, and quoted from the *Universe* to show that an [illegible] spread abroad that the Line had arrived when Protestantism in this country might be put down by force of arms. For his own part, he considered [illegible] would have been a fatal mistake [illegible] noble Lord had gone much further in his measure.

Mr. Hume said he was surprised beyond measure at the observations of his [illegible], which he had always regarded as a friend to civil and religious liberty. He was sorry to find [illegible] he attempted to argue it. He deeply deplored [illegible] Government had introduced; and from the various [illegible] he [illegible] noble Lord and subscribers [illegible] he doubt but that the bill to be now brought in would be very different from what it would have been had it been laid upon the table without any discussion. He saw in the measure nothing but the elements of discord, and he wished to know how they could hope to reduce the expenditure of this country, with [illegible] they would be sure to find it, a mass of excitement from one end of it to the other.

[illegible] He hoped that Lord J. Russell, who in this instance had abandoned every principle of his life, would meet with no support from the members for Scotland.

Lord J. Russell, in reply, said that the act against which this bill was directed was sent any to the public law of every country in Europe. In answer to the observations of the noble member, and especially [illegible] Court of Rome, he reminded them that the noble Lord had left Rome, he (Lord J. Russell) had distinctly declared in that House that the Government would not give its consent to the establishment of Roman Catholic sees in this country. It was evident, therefore, that this measure was adopted by the Court of Rome in opposition to the Government of this country. And in reply to the allegation that the measure was inconsistent with his former declarations, he [illegible] was not about to say that it was not so, or that his former declarations [illegible] to this, that it was painful to [illegible] the profession of the Pope to create English bishops or archbishops. But whatever confidence he might have had in respect to the Roman Catholic religion, or the Pope, he had found [illegible] and misplaced, and he [illegible] that he was mistaken upon this point. He [illegible] much forbearance and respect for the Sovereign evinced by the Roman Catholic Defendant, at some length, his own conduct in reference to the [illegible] and declared that he would not be frightened by the word "[illegible]" from asserting the due authority of the Crown and the independence of the Government, and he reiterated that the recent Papal aggression was an insult to the country. He thought that we ought to have a Parliamentary declaration to free us from the stigma and the shame of having submitted to have our country parcelled out as if it were conquered and subjugated.

Mr. Fagan moved the adjournment of the debate.

Mr. Lawless seconded the motion, and continued speaking until six o'clock, when the Speaker left the chair, and the House stood adjourned.

HOUSE OF LORDS.—THURSDAY.

Their Lordships met at five o'clock.

THE RECENT JUDGMENT ON ROBERT AND SARAH BIRD IN THE COURT OF [illegible]

Lord Campbell brought in a bill to simplify the mode of procedure in criminal cases. This bill was rendered necessary in consequence of the decision of the Judges in the case of the Birds, as to ascertain was the construction of the law, that in that case on appeal, and after hearing argument, eight of the Judges had found to be of one opinion, and six of another. In order to make the state of the law certain, he had introduced this bill.

AGRICULTURAL DISTRESS.

Lord Stanley presented several petitions complaining of agricultural distress, and gave notice that, on Tuesday next, his noble friend, Lord Malmesbury, would bring forward a motion drawing the attention of their Lordships to the state of the country.

EXTENSION OF COUNTY COURTS BILL.

Lord Brougham will shew the bill which he had introduced on this subject, and brought in a second, which met certain objections that had been made to the original bill.

Several petitions were presented by various noble Lords against the Papal aggression.

The Marquis of Lansdowne laid on the table certain orders in council, by command of Her Majesty.

POLITICAL ENFRANCHISEMENT OF WOMEN.

The Earl of Carlisle presented a petition from the female inhabitants of Sheffield, in public meeting assembled, signed by the chairwoman, on behalf of the meeting, praying for the enfranchisement of women.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

RIOTS IN WORKHOUSES.

Mr. Banks, with reference to the recent outbreak of paupers in Barham Union Workhouse, near Ipswich, wished to know whether there were not means for the suppression of these disorders, and for securing those by whom they were principally excited?

Mr. Baines said that the district, of which the union house was the centre, extended to a radius of five miles round it, and he had ascertained that the parties who were the ringleaders in this outbreak were the same as had occasioned it during last year.

In reply to another question,

Mr. Baines gave the number of the paupers at different times, and stated that 78 had been admitted to the house on the afternoon of Saturday, previous to the outbreak on the Sunday.

ENCUMBERED ESTATES (IRELAND) BILL.

Mr. M'Cullagh gave notice that he should on an early day call the attention of the House to the operation of the Encumbered Estates Bill.

WORKING OF THE POOR-LAW.

Lord John Manners asked the hon. and learned gentleman opposite (Mr. Baines) whether he had instituted any inquiries into the state of destitution which prevailed at Carlisle?

Mr. Baines said that he had, and had taken measures to rectify the evil.

Mr. Walmsley asked the hon. and learned member whether he had any objection to lay upon the table the dietary bill for the paupers in Barham Union Workhouse?

Mr. Baines: None at all.

COURT OF CHANCERY.

Mr. J. Stuart asked Lord John Russell whether her Majesty's Government intended to bring in, without delay, a bill to authorize the appointment of a Vice-Chancellor in the room of Sir James Wigram, who had resigned; and whether the noble Lord was aware of the enormous expense and distress to [illegible] suitors [illegible] of the Court of Chancery, consequent upon the [illegible] ing for hearing, from the want of a competent Judge to discharge the judicial [illegible] hereafore discharged by Sir James Wigram?

Lord John Russell said he had state, last year that it was not the intention of Government to nominate a second Vice-Chancellor in the event of one of the two offices becoming vacant. He had also stated towards the close of last session, that it was the intention of the Government to propose a measure for regulating the business of the Court of Chancery, and he had now to add that it was his intention shortly to introduce that measure. (Hear, hear.) A good deal of additional business had recently been thrown upon the Court of Chancery by maiden suits of Parliament, and therefore, when he introduced this measure he would state to the House the reasons why he thought it was necessary to appoint a second Vice-Chancellor. (Hear.)

RATE IN AID.

Colonel Dunne wished to ask the Secretary for Ireland whether the returns [illegible] Act 12 and 13 Vic., chap. 94) demanding [illegible] and [illegible] to Ireland, had been laid on the table of the House [illegible] and if not, the reason of the delay?

Sir W. Somerville said the return had not arrived yet, but he expected it by every post. Directly it reached his hands he would lay it on the table.

COURTS OF LAW IN IRELAND.

Mr. M'Cullagh said considerable excitement had been created in Ireland by a statement which had got abroad, that it was the intention of Government to suppress some of the courts of law in Dublin. Now, such a proceeding would be [illegible], but, if it were to take place, it was desirable that it should be [illegible] own when this system of centralization and abolition was to commence. (Laughter.)

Lord J. Russell: I see no order. The hon. and learned member had given notice of his intention to put a question, but now he was going into a long statement, with the view of making imputations on the Government. Now, he submitted that such a mode of proceeding was wholly out of order. (Hear, hear.)

Mr. M'Cullagh had made no imputations against the Government. He had simply made a statement of fact. (Cries of "Order, order.") Well, then, what he wished to ask the Attorney-general for Ireland was whether it was the intention of Government to introduce any measure during the present session for the purpose of abolishing the office of master in any of the courts of law. (Hear, hear.)

Mr. Hatchell, the newly appointe[illegible] Attorney [illegible]

Lord Stanley has published an address to the electors of North Staffordshire, announcing his intention of immediately resigning the representation of that county, in consequence of the state of his health not allowing him "to perform its Parliamentary duties with that attention which is due to so important a constituency requires." A candidate to supply the vacancy was already spoken of in the person of Mr. [illegible]

[illegible]

[illegible]

[

PALAVER" BETWEEN THE GOVERNOR OF THE GAMBIA AND THE KING OF COMBO.

SKETCHES ON THE GAMBIA.

Bathurst, Gambia, January 5th, 1851.

I send you a couple of sketches of African scenery. The occasion on which they were taken was the holding of a grand "palaver," as it is called by the natives, between the Governor of the Gambia, Mr. M'Donnell, and the King of Combo.

The territory of the King or Chief of Combo adjoins ours, and is separated from it only by a creek about six miles from the town of Bathurst In his territory there is a sanatory house or station for the troops, built on a cliff overhanging the sea, about 60 feet high. Some of the Bathurst merchants have also built houses at the same place. The coast continues for miles at about the same elevation, sloping gradually down towards the interior, so that there is no swamp in the immediate vicinity; whilst, being exposed to the Atlantic, the sea-breeze blows over it. The advantages of the position are so evident, that, almost from our first settlement at the Gambia, we have endeavoured to obtain possession of some land along the coast from the natives; but, though quite willing to receive our presents, and nominally to cede almost any quantity of land, if they thought it would not be really claimed and made use of, they have shown a great repugnance to really giving any up, although the whole territory had been nominally ceded to us in 1840. At Bathurst increased it became absolutely necessary for us to have some land at the Cape, and every day the difficulty of obtaining it became increased. Persons at home are apt to class in their minds all Africans universally as savages, and to fancy that if any attempt at government exists amongst them, it is in the patriarchal or despotic power of some King or Chief. Nothing, however, can be less correct. Amongst many of the African tribes or nations an almost republican state exists, especially amongst the Mahomedans. The King is obliged to consult his "headmen" or chiefs on every occasion, and their "vested interest" in the soil is guarded with the greatest jealousy. In fact, all, or nearly all, the rudiments of civilisation exist "the same with a difference" as they have existed at different ages amongst ourselves. The practical consequence to us on the present occasion was, that, whilst former Kings had taken presents and nominally resigned large and to us useless tracts of territory, the chiefs denied that they had ever been parties to any such treaties or agreements, and refused to give up a foot of land: It was therefore determined by the Governor of the Gambia, on this occasion, to hold a solemn "palaver," not only with the King of Combo, but with all his chiefs, on their own territory, and to enter into a treaty to which all would give their assent, taking care, at the same time, to reimburse the owners of any cultivated lands for any losses they might sustain; and, by paying a yearly rent for the ceded ground, to bind not only the present King and chiefs, but their successors

The King of Combo had agreed to meet the Governor at Jaswong, in the Combo country, the nearest point to Bathurst, and where Mr. Finden, a Bathurst merchant, has a cottage. He promised to have all his chiefs with him, and, at length, to positively decide the question of the land to be given to us. At the same time, he privately advised a body of soldiers to be brought out, for he could not answer for his faithful subjects not taking the law into their own hands if they saw a chance of success.

Accordingly, on the 21st of December, a force of 120 men, with three pieces of artillery, and three rocket guns, and commanded by Captain Prendergast, 3rd West Indies Regiment, marched by night from Bathurst, and encamped (as seen in one of the Sketches sent herewith) at Jaswong. On the 23rd of December, his Majesty of Combo, with all his headmen, or chiefs, and about two thousand followers, armed with muskets and swords, attended the "palaver." Scarcely a Mandingo is under six feet high—straight, athletic fellows; while their cotton dresses, though they will not generally bear close examination on the score of cleanliness, are loose, flowing, and graceful. We all met in solemn council, as seen in the accompanying Sketch, where (under a tree in Major Finden's courtyard) are assembled the Governor and staff in uniform, with a motley crowd round them of chiefs and their servants; the King, his relatives, and some natives in war dresses, in the foreground. In the background, the bayonets of the guard of honour are seen above the head of a numerous and excited multitude, who are only kept out by the strong fence of the inclosed yard.

It would appear that diplomacy, or "lying for the good of our country," is universal in every country, and in every stage of civilisation. His Majesty of Combo had privately assured us that our claims were quite just, and that he was most anxious to give us the land; but before his own people he appeared to think it necessary to assume the warlike and indignant patriot, uninfluenced by blue baffs or dollars. He denied that any of the former treaties had the least force, and both he and his "headmen" declared that the King could not give away or sell any land; that he could not, in fact, give up his rights of sovereignty over it; but that he could, with the consent of his chief men, lend it or rent it for any period. It was at length decided, that persons appointed by both parties should ride over and survey the land which was required.

We had a proof that it is not only amongst the "Great Powers" there is tenaciousness of rank or authority. The Governor, anxious to send persons in whom the Mandingoes would place full confidence, said, "I will send the Slatee of Yundum, the next heir to the throne." The King, however, at once interrupted him, saying, "No, I will send *him*"

The next day, the Governor rode over to the Cape to point out the land which was required. Large bodies of armed men, soon after the Governor's arrival at the Cape, began to pour in towards the Cape, and endeavoured to surround him when arranging with the chiefs the best mode of measuring the ground. He therefore retired to the Sanatory House, where a small body of troops had previously been sent by sea, by the Governor's orders, as a precautionary measure. The house was for some time almost invested by the Mandingoes, who, however, made no hostile attempt; but, as the whole armed force of the country was on foot, and round us in every direction, the troops in camp were kept under arms for twenty-four hours in expectation of an attack.

It appeared that many of the people were exceedingly anxious to try a brush with us, apparently for the honour of the thing, and that the King and chiefs had great difficulty in preventing them. They only succeeded by telling them, "they no know the way white man fight—he rain lightning." Several of them had been up to Keenung to assist their friends there last year; and though accustomed universally to the use of small arms, shells and rockets had given them a severe but useful lesson towards peace and quietness. Our Keenung expedition therefore enabled us now to obtain peaceably all that we required, and we only asked for land which was of no use to the people, and of the greatest importance and necessity to us, and which we had already purchased three times previously.

The next day the Mandingoes appointed Major Finden, of the Bathurst militia, in whom they place great confidence, as their umpire; the land was marked out, and they appeared rather surprised at our moderation. The Governor returned early the following day, December 26th, to the camp, and in the afternoon a second solemn council was held, at which all the chiefs were present. The presents were made; the tribute, custom, or rent, whichever we may call it, was agreed on; and a treaty which they appeared to consider, and declared was finally binding according to their laws, was made and signed as formally as possible, the principal chiefs signing their names in Arabic. A "palaver" of great importance to us, and which at one time threatened to terminate unpleasantly, was thus brought to a conclusion satisfactory to all parties, and the camp at Jaswong was broken up.

I ought to add, that, on its being reported in Bathurst that the Mandingoes were about to attack the troops at Jaswong, a considerable body of native volunteers from the militia, and also others, immediately joined us.

The mechanics at Bathurst are chiefly of the Jolloff nation: many of them are excellent workmen—carpenters, masons, &c. There is also a large body of Liberated Africans, taken from slavers. All these people are decidedly fast improving in civilisation, and show that they appreciate the advantages of our rule, by their willingness to fight for it; and not only were they willing to do so without pay, but they actually had out considerable sums in equipping themselves The Liberated Africans look on themselves as peculiarly English; and one occasionally meets some old gentleman, retired from the world, not quite up to current events and the deaths of Kings, who proudly informs you that he is "King George man.'

ENCAMPMENT AT JASWONG.

The Lyons papers state, that, during the whole of Sunday last, the rain fell in torrents, which, added to the snow which had melted on the mountains, had caused the Rhone to rise considerably. The Saone has also risen in such a manner as to cause considerable anxiety. At St. Etienne, the waters of the Furens had swollen so much that all the shops in that part of the town, which suffered so much in July, 1849, had been closed, and the property removed. Detachments of dragoons have been stationed along the banks, both above and below the town, in order to render assistance where necessary. The Chavanelet, which is usually nothing more than a small stream, overflowed its banks, and washed down three houses. No lives were lost.

A few days since, a handsome silver medal was transmitted, by order of the Admiralty, to Mr. Stephen Collard, pilot, of Deal, for his meritorious services at the cutting out of the *Desire* French frigate, in the last war! Better late than never.

THE NEW TERMINUS OF THE SOUTH-EASTERN RAILWAY, AT LONDON-BRIDGE.

THE SOUTH-EASTERN RAILWAY.

The Buildings for the purposes of this line of Railway have, from the first, been distinguished for their taste and appropriateness; and, among these, the Terminus at London-bridge, or rather adjoining Tooley-street, was not the least remarkable for the neatness, artistic character, and reality of its *façade*. We regret, therefore, that this has disappeared, to make room, apparently, for one of less merit, with an addition of a row of unornamental houses and shops. Nevertheless, as a change in the premises of a large metropolitan establishment, we have deemed it worthy of illustration.

RYE SWING-BRIDGE.

This interesting work has just been erected on the Ashford, Rye, and Hastings branch of the South-Eastern Railway; P. W. Barlow, Esq., F.R.S., engineer. The Bridge is situated on that part of the line where it crosses the river Rother, close to the ancient town and port of Rye. It was designed and constructed by Messrs Ransomes and May, engineers, of Ipswich; and erected in its present position by Mr. R. C. May. Its total weight is about 116 tons, and length 112 feet. It belongs to the class called "swing-bridges," constructed so that when a ship has occasion to pass, that cannot lower its mast, the bridge can be swung, and will then stand lengthwise of the stream. It stands on a centre pier, twenty-two feet square, composed of thirty-seven piles, thirteen inches square, driven down into the solid ground, and capped with two thicknesses of 6-inch planking; leaving between this and the approach on either side an opening of 40 feet for ship traffic.

The Bridge itself consists of a bottom roller-path (or large circle), of 17 feet diameter, weighing about 12 tons, securely fastened to the top of the centre pier: on this is placed a ring of cast iron, being a sort of frame or roller ring, containing the rollers on which the Bridge turns: these are sixteen in number, and 13 inches diameter by 12 inches wide. On these is placed the top roller-path, of a similar diameter to the bottom one; and upon them the girders, which are very strong, and ornamented on their sides with mouldings, &c. Each girder is in two pieces, bolted and dowelled together, the joint being covered up with a shield-plate, on which the initials of the company (S.E.R.) are twisted into an ornamental monogram. Upon these girders come two large standards in the Moorish style of architecture, weighing about eight tons each; and upon the top of these are placed two large plummer blocks, with the bearing of a six-inch pin of wrought iron, on which are two joint-plates that contain the nuts for the end of the tie-bars. This nut is cut right-handed, and the one in the tie-rod left-handed, so that the screw which connects the two, being turned by means of a wrench, either tightens or slackens the tie-rod; a very necessary appliance, as the difference of temperature considerably affects so long a rod of wrought iron. These tie-rods are principally used when the Bridge is swung, as they then support the girders by being attached to them underneath, by means of a 2½-inch pin. They are twelve in number, and are double thicknesses of 6 inches wide by 1 inch thick of wrought iron. The top ends of these, and the standard-heads, are covered up by a large ornamental cap, on the front of which is emblazoned the Cinque Ports arms, Rye being one of the towns under the Lord Warden.

The swinging of the Bridge is accomplished by means of spur and bevil-wheels: two men can swing it easily in about two minutes and a half.

The adjourned meeting of the Committee for the Cambridge Military Asylum was held on Saturday last, at the Freemasons' Tavern, Lord Robert Grosvenor, M.P., in the chair, to consider a report of the final arrangements for the erection of this asylum about to be submitted to the general body of subscribers. Among the subscriptions announced was that of the Duke of Norfolk of £50; and an intimation was given that his Majesty the King of Hanover felt disposed to honour this most excellent object with a munificent donation.

It is said that one of the measures of economy which is contemplated by the Government is the consolidation of the duties of colonial treasurer and of the commissariat officer in charge of the military chest.

CHURCH, UNIVERSITIES, &c.

OXFORD.

... has been ... by permission of the Curators of the Taylor ... for exhibiting Mr. ... remaining ... tion to members of ... University, and ... (free of charge), on Mond... and Friday, during ... ical Term, between the hours of ... until further notice.

... examination and election of a Craven Scholar terminated on Saturday afternoon, in the election of Mr. George Ridding, Commoner of Balioł. There were no less than 28 candidates, of whom it is understood that Mr. Alvaisl, of Exeter, also promises success.

There will be an election at Queen's College on Thursday, the 20th March, of two exhibitioners; one on the foundation of Sean Hemington, Esq., for natives of Middlesex; the other on that of Sir Francis Bridgman ... natives of Lancashire, or Wiltshire. Candidates for the Fitzgerald exhibition must ... and not exceeded the twentieth year of their ... ... been intimidated more than ... present to the Provost, on the 31st ... day before the election, certificates of their baptism, and testimonials of good conduct from their college or school.

The number of members on the books of the several colleges and halls amounted, on the 1st of January in the present year, to 6060; at the ... last year the number was 6013. The members of convocation have increased ... during the same time by 38.

CAMBRIDGE

... ITS OF THE UNIVERSITY COMMISSION ... Cambridge proposes to lecture on Thucydides, ... that admission to those ... shall be free—for the first time. It is to be hoped they will be well attended, for though probably they may neither be profound nor very ingenious, they would assuredly be instructive and useful to the ordinary students. The first fruit of the University Commission! Well, it is trusted, be followed by other reforms in "institutions so perfect that they needed no reform at all."

We learn that the whole issue of the first edition of "Dr. Pusey's Letter to the Bishop of London" was exhausted in two days, so great was the demand; and that a cheaper edition is about to be issued. The reverend Doctor has also another reply to a rejoinder of Mr. Dalrymple in the press.

MR. BENNETT'S CURATES.—Testimonials, chiefly from the poorer members of the congregation, have been presented to the three curates of St. Barnabas. Mr De Gex and Mr. Dessly are about to retire into private life, and Perceval to the Holy Land; Mr Fyffe remains as the sole curate in charge.

Two beautifully carved oak Glastonbury chairs for the communion table, the gift of Edward Colston, Esq., have just been placed in Southtown and Trevlees. They are from the manufactory of Mr. Reeve, of that town, and are executed in a style that would do credit to the first house in the kingdom. They bear the following inscription:—Rule Excelsus, Edvardus Colston, D.D.D., A.D. MDCCCLI."

A NOBLE COMPOSER.—The Earl of Wilton has in the press a col... of hymns, chants, and responses, of his own arrangement, and which are to be ... is dedicated to the Queen.

According to the *Morning Post*, one of the churchwardens of Wall... who, with his main servant, entered the church of that parish ... of the night, two or three weeks ago, and accordingly carried off ... sticks from the altar, and placed them in an ante-room to the town ... has received a letter from the Bishop of Durham, commanding him to ... place them.

There is no foundation for the report that the Bishop of Newfoundland was about to be translated to the vacant see of Nova Scotia. No appointment has as yet been made to the latter bishopric.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments are been recently made:—Rev. J. A. Ewing, to Westmill, ... and £474; net residence ... Rev. ... to Wrotham, Kent; value £466, and residence ... Gandy, to Odd Rode Vicarage; value £466, and residence ... Rev. ... Luttrell, Rev. G. J. Garbett, to Seighton Crancy, Derbyshire; ... Rev. ... Hewitt, to Ufford, Suffolk; value £261, and residence ... Rev. ... Conon Grey. Rev. J. G. E. Hasluck, to Little Sodbury Rectory, Gloucestershire; value £235, and residence; patron, W. H. H. Hartley, Esq. ... Hewitt, to Ufford Perpetual Curacy, Westmoreland; value ... and residence; patron, Vicar of Kendal. Rev. ... S Polhampton, to the Second Mastership of Crewkerne Grammar School, Somersetshire. Rev. H. Ree, to Brent Knoll, Axbridge, Somerset. Rev. J. S. Upton (... Buckley), to Doncaster Deanery House, archdiocese York. W. Watson, B.A., to the ... Rev. ... Jackson, to the Grammar School. Rev. J. D. Jackson, ... to the presentation of John Thomas Mott, ... Trimmingham Hall, in the said county.

VACANCIES.—*Recently*.—Archdeaconry, diocese of Killaloe; patron, ... of Kildare; Rev. T. Walker, promoted. Hailsham, Sussex, rectory, ... value £342, with residence; patron, Bishop of St. Asaph; ... Rev. ... present incumbent. Liverpool, Trinity Church, diocese of Chester, ... Rev. ... Joseph Bailey, Esq.; M.P.; Rev. W. M. Williams, promoted ... Rev. ... Walderslade, Kent, and Diocese of Canterbury, value £133; patron, Archbishop of Canterbury. Rev. W. Wood, to the Vicarage of Bilton, with Purvish Vicarage, Somerset, diocese of Bath and Wells, value £352 with residence; patron, Lord and Chapter of ... Rev. ... S. L. Jacob, deceased. Rev. ... Sweetman Vicarage, county of Dublin, diocese of Dublin; patron, ... Archbishop of Dublin. Rev. ... Rectory, with Purvish Vicarage, Somerset, diocese of Bath and Wells, value £352 with residence; patron, Lord and Chapter of ... Rev. ... S. L. Jacob, deceased. Rev. ... Sweetman Vicarage, county of Dublin, diocese of Dublin; patron, ... Archbishop of Dublin. Rev. ... Rectory, county of Kilkenny, diocese of Ossory; patron, ... Archbishop of Canterbury; Rev. S. L. Jacob, deceased. Rev. ... Newmarket Perpetual Curacy, county of Cork, diocese of St Asaph; ... Rev. ... Rev. Thomas Crewe, with residence; patron, Bishop of Cork and diocese ... MONIALS.—The following clergymen have lately received testimonials of ... and affection:—The Rev. John James Webster Harris, ... Vicar of Wednesbury, from the parishioners; the Rev. W. Hall, ... from the parishioners; the Rev. Henry Veale, curate of ... Bovey Tracey, ... Devon.

ST. MARY'S, BONE GENERAL DISPENSARY.—The annual ... this charity was held at the dispensary, in Welbeck-street, on Wednesday, ... Lord Ducie presiding. The report stated, that, during the past year, a legacy of £100, free of income-tax, had been received. According to the rules of the ... Bart ... their limited ... elected ... to liquidate the ... not ... which is the resource of the ... a large sum ... rates now existing, and the claims ... coming on, the benevolent being more frequent than formerly, their resources were much diminished; but the committee were sure, it was only necessary for the public to know that their doors were always open for the relief of the suffering, and they had been obliged to appoint one regularly to ... to for the past year (including the £100 legacy) amounted to ... and the expenditure to £555 10s. 10d., leaving a balance of ... which, and £200 applied to red action of the debt due to the ... stood at £71 6s. 10d. The report was adopted, and some ... business having been transacted, the meeting separated.

ROYAL LONDON BENEVOLENT INSTITUTION.—On Monday, the annual ... general meeting of the subscribers to this institution took place at the hospital in Bloomfield street, Moorfields; the Rev. Dr. Russell in the chair. The report stated that the number of pensioners during the past year amounted to 9437, of whom 5204 were out-patients, the remaining 233 being all cases (with the exception of two) requiring operations in the establishment. Since the opening of the institution in 1850, upwards of 300,000 patients had been received, and no numbers were still gradually increasing. The expenses ... amounted to £6203 10s. 9d., whilst the income was only £6261 ... leaving a deficiency of £241 18s. 9d. The report was adopted, and a committee and auditors for the ensuing year were appointed.

SCOTTISH SOCIETY.—A meeting of the members of this society was held on Tuesday afternoon, at Freemasons' Tavern, Great Queen-street—Lord Drumlanrig in the chair—for the purpose of taking into consideration the ... rs of the society. ... ... propriety of continuing ... ... Mr. Fox Maule regretted deeply that the ... ... fairs of the society were in so ruinous a condition, and that there had been so much division of opinion among the members. That there was any less attention ... the patronage of the society in 1849 and 1850, he attributed entirely to misapprehension; and, this being the case, he did not think that they ought for a moment to obtain upon the popularity of continuing those most attractive Scottish gatherings. But, in order that the arrangements might be satisfactorily ... ... necessary to reform the managing committee. ... to all the members of the society, and ... ...

ST. VALENTINE'S DAY.—BY RICHARD DOYLE.

"Love rules the camp—the court—the grove—
The Post-office—and, indeed, most places."

VALENTINE'S DAY. Valentine's Day!
How shall my feeble pen essay,
Of thy love-burdened glories to tell?
Season of smiles—season of tears—
Season of hopes—season of fears—
Season of murmuring, kissing, and sighing;
Of whisp'ring soft nothings; of pining and dying;
Of vows of true constancy breathed o'er and o'er;
Season of loud double-knocks at the door,
And limitless rings at the bell.

Valentine's Day! Valentine's Day!
Cupid's own holiday! Long hath thy away
Govern'd the love-sick host
How many a heart hath thy influence compell'd
To divulge the fond passion long secretly held:
In how many a timid and maidenly breast
Hath Love's flame fiercely burning destroy'd all her rest,
Till, on thy day, St Valentine, all was confess'd
'Twixt her lover, herself, and the *Post!*

The lady fair was sitting in her bower up on high
(For ladies fair *had* bowers in the happy days gone by)—
I don't mean bowers such as those at Rosherville one sees,
Where Cockney gents take ladies fair to eighteen-penny teas,
But a *boudoir*, or sitting-room—a quiet snug affair,
Up somewhere in what would now be pronounced a "front two-pair."

I'm digressing, I know,
And so,
Not to tire my readers already, I'll try
To begin where I left off. She sat up on high,
In her bower
In the tower,
Where hour by hour
She watched; and her fair brow began to lour.
She was sad,
And she had
Enough, really, to make her;—'twas wrong, 'twas too bad;
'Twas St. Valentine's Day, and the postman had pass'd
'Twas near two by her watch (but her watch was too fast -
'Twas only a quarter-past one);
But there had she stood from dawn's earliest peeping
First weeping and watching, then watching and weeping.
And though now when past noon she her post was still keeping,
No signs of a Valentine—none!

But see who approaches, thus armed *cap-à-pie!*
Oh, well she remembers that form! It is he,
With his splendid war charger, and armour so gay.
That he rode through the City in, last Lord Mayor's Day.
He has come his true love to console
"I thank thee, St. Valentine," lond does she cry.
As she sees her own Knight-riding gallantly by—
On the point of his spear hold a letter on high,
(In the style that we'd serve a brown bear, by the by,
With a bun on the top of a pole.)

She opens it: O maiden fair! what happiness is thine,
To read this splendid sample of

An Antique Valentine.

"Grammercy, fayre ladye, ye rose is redde,
'I fackins, ye violet's blue;
Mass, by ye Ladye, carnations are sweet,
Aye, marry, and soe are you."

The lady sits at her lattice
(Her window you all know that is):
Why does the lady smile,
And look pleased yet alarmed the while?
Ah! see at her door is her cause of joy—
'Tis he, her own dearly loved minstrel boy;
He has come on this morn to renew his fond vow,
As he plays "Wilt thou love me then as now?"
But she knows that the Baron would bid him begone,
As we'd order an organ-boy now to "move on."

Valentine's Day! Valentine's Day!
Thine is the power we all obey.
The old man no longer on this day feels
That his joints are stiff, as he fondly kneels:
And the middle-aged lady, while dangling her fan,
Looks complacently down on the fond old man:
And the child, the sportive child,
By St. Valentine's Day beguiled,
Lets his hoop and his marbles drop:
No longer he cares for his infantile toys,
His games in the street with the rest of the boys,
For the innocent ball or top;
But will stop,
At the shop,
Whose windows St. Valentine's letters display;
The plain ones so cheap, and the colour'd so gay:
But the colour'd are twopence—repining is vain—
He has but a penny—he buys one plain.

The Postmen knock, the Postmen ring,
The Postman to-day is everything:
I never knew another day the whole year through
That gave the Postman such work to do.
Dance, the Postmen dance,
Dance, attendance dance;
Their bags stuff'd tight with letters over-night,
To deliver to the girls in the morning.

The Poet sits in his study -one,
A "brown" study for the time—
(Reader, I pray, excuse the pun)
He's waiting for a rhyme.
There are "bliss" and "kiss,"
And "heart" and "dart,"
But he's used all those before,
And "doves" and "loves,"
And "eyes" and "sighs."
And of such as these a score.
But he wants a new one to end his line:
Aid him, St. Valentine!

But, Oh, the sad truth of the bard who said
"True love never ran smooth!" as he

Could vouch by all cases he'd seen, heard, or read;
So, e'en on this day we see
Disappointments occasioned by cold, heartless folks,
Who think Valentine's Day a good chance for a hoax.
And, alas! so 'tis thought of by many.
Vile wretches to all sense of decency lost,
Who put valentines recklessly into the post,
Without paying the lawful penny.

And the stern papa,
And the fond mamma,
Who have paid for some dozens before,
Tell their daughter fair,
Or their youthful heir,
That they really will take in no more.
But entreaties will soften. Another, "Oh see!
'Tis from Charley, I know—he so doats upon me.
Do take just this one?"
It is done,
She has won.
And to gloat o'er her fortune, the maiden doth run
To her room on hope's eager wings.
She opens it. Horror! What? twopence for *that!*
An old maid with a lap-dog, a parrot, and cat—
Those horrible *quaviosl* things!

Valentine's Day! Valentine's Day!
Rush to the post-office over the way;
Scamper along, young and old, grave and gay,
As if you'd the what-do-you-call-him to pay.

Steady old fellows, in want of a wife,
To cheer their respectable elderly life;
Young men to settle in life just begun;
Men not settled at all, but who do it for fun;
Girls of eleven, who don't want to marry,
But adore Master Tommy, or Johnny, or Harry.
All! all!
Great and small!
Scamper away with you, keep up the ball.

Valentine's Day! all hail! all hail!
Long may thy power o'er mortals prevail.
Valentine's Day! Valentine's Day!
Cupid's own holiday! Valentine's Day!

William Brough.

FESTIVITIES AT PARSONSTOWN CASTLE.

The most magnificent display of fireworks ever witnessed in Ireland was given, on Monday evening week, at Birr Castle. The Earl of Rosse had the *fête* prepared for the amusement of the people of the town. The fireworks were manufactured and altogether managed at the Castle, and it is said that fairer fingers than his Lordship's were busied about the greater part of them. The Countess of Rosse felt much interest in getting up the festivities; nothing seems to gratify her Ladyship more than making her neighbours happy; and, indeed, nothing could have been more successful than the attempt to do so by the proceedings of Monday evening.

After many disappointments had been experienced on account of the unsettled state of the weather, a propitious day (Monday) at length arrived. Notice was given that the fireworks, so anxiously looked for, would take place, and invitations were issued for a juvenile party, to which, however, old and young were requested to go. At five o'clock, carriages commenced arriving at the Castle, and soon a happy and delighted circle were enjoying the freely-given and cheerful welcome of its noble owners. His Lordship's splendid library was appropriated to the reception, and was soon crowded, the children evidently not more expectant than the grown people. In a short time the dining-room was thrown open, and the younger portion of the guests were gratified by seeing a Christmas-tree, from the branches of which were suspended many and rare presents A splendid entertainment was likewise provided. The Christmas-tree was a beautifully shaped fir-tree, placed in a large wooden vessel, and illuminated by wax tapers, about fifty in number, and of different colours. This elegant and graceful-looking object, at one end of the dining-room, formed an exquisite ornament; and, although the viands and appointments on the refreshment table were such as might well distract the attention, it was evidently the universal attraction. Numbered tickets were drawn in a sort of lottery by the children, and corresponding numbers being placed on the presents on the tree, each happy possessor of the ticket claimed a prize at the termination of the evening.

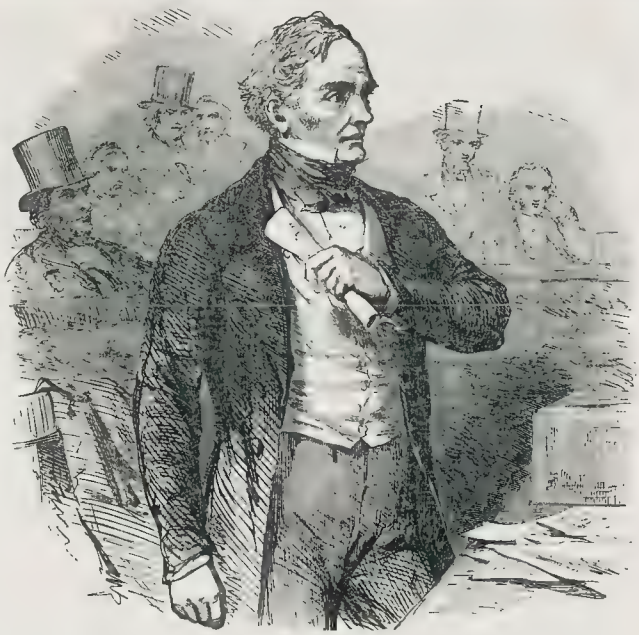
When seven o'clock arrived, all the guests left the Castle for the lawn, to witness the fireworks. The guests were about two hundred in number. But the multitudes that assembled in the demesne exceed belief: all the neighbouring towns and country must have contributed their share. Certainly, more than 20,000 persons had come together, excited by the reports that had got into circulation as to the magnitude and beauty of the forthcoming spectacle. Nor were they disappointed. It must have been highly gratifying to the noble projectors of the amusement, to find everything answer so exactly their intentions, and to learn, from the warm applause that occasionally burst from the crowds, that every person about them was delighted

The slow and majestic rise of a fire-balloon commenced the display: it gradually and steadily mounted into the air, and faded by degrees from the sight, lost in the distance.

Annexed is a copy of the programme which was handed about to the guests. It is the more remarkable as having been printed by Lord Oxmantown, Lord Rosse's eldest son, now ten years of age:—

1. Balloon, with fireworks, if weather permits.
2. Lights of different kinds.
3. Rockets, small and large.
4. Tourbillons, air marrons, and shells.
5. Wheelpiece, 4 mutations.
6. Tourbillons.
7. Mines of serpents and saucissons
8. Rockets, marrons, and shells.
9. Wheelpiece, 3 mutations.
10. Tourbillons
11. Battery of Roman candles.
12. Mines of different kinds
13. Lights fired by rockets.
14. Wheelpiece, 3 mutations
15. Rockets, shells, marrons, and mines.
16. Mine fired by a rocket.
17. Wheelpiece, 3 mutations.
18. Marrons, shells, tourbillons, and rockets.
19. Wheelpiece, 5 mutations.
20. Grande.

To particularise any of these as being good, would be invidious, as



"The only retrograde step I propose to take is that natural action of a man who finds that a blow is aimed at his head, and who steps backward to raise his arm, and put himself in a posture of defence."

LORD J. RUSSELL PROPOSING HIS MEASURE ON THE PAPAL AGGRESSION.

FIREWORKS AT BIRR CASTLE, PARSONSTOWN, THE SEAT OF THE EARL OF ROSSE

they were; I suppose nor to anything we ever before had seen; but we counted upon a succession of the rockets—their brilliancy, force, and elevation—which, as they rose to, and then their burst into a tremendous bursts and grand fall, were perfect. The lights on the dense mass of houses was curious, and the glare thrown on the Castle was exceedingly remarkable, seeming to equal in brilliancy the noon-day sun.

Lord Ross himself set off all the fireworks; and it is gratifying to think that not a mischief occurred.

It is highly interesting to see a man of Lord Rosse's capacity blending the pleasant with the useful—amusing his friends, and, in getting up this amusement, expending so much money among his people. The fireworks would, it is said, have cost, if purchased prepared, £400. This is truly doing good. It is hardly to be credited what an immense influx of strangers poured into Parsonstown during the week previous to the evening of the entertainment. It was so great, that the Hotels were all filled, and many had to put up with lodgings in the houses of the humbler classes. Without the least disturbance, and with the greatest peaceable and orderly conduct of the persons who met to see the fireworks. Although it was at first intended no admittance but those who had tickets, the crowds who presented themselves were so numerous, that selection was impossible, and all gained admission; yet not a loud word was heard, except in admiration of the spectacle; and, at the termination, all retired in the most perfect good order and sobriety, giving three cheers for the Lord and Countess of Rosse.

THE HARTLEPOOL TESTIMONIAL.

This magnificent group in silver was, on Tuesday last, presented, by the shipowners and others connected with the trade of West Hartlepool, to Ralph Ward Jackson, Esq., of Wynyard Park. The composition consists of a central column, decorated with bulrushes and lotus leaves, and surmounted with a bust of Mr. Jackson; around are the figures of Commerce, Science, and Industry; the latter with the distaff in her hand, and the bee-hive by her side, supports on the right; while Science, her foot resting on the globe, is placing about the bust a wreath of laurel; and Commerce, bearing a cornucopia by her side, points with her caduceus to a view taken from the sea of the Hartlepool West Harbour and Docks; and filling the panel beneath which are ruling figures of Neptune and Æolus, with naval emblems. Upon the pedestal are panels bearing the arms of Mr. Jackson, and the inscription. The group is placed beneath a glass shade, upon a carved stand of wood, richly carved, and decorated with dolphins and other carved devices.

The following is the inscription:—

"Presented by Merchants Shipowners, Traders, and others residing in West Hartlepool, and neighbouring districts, to Ralph Ward Jackson, Esq., of Wynyard Park, in testimony of the high esteem in which they hold his generous character and his private worth, and as a token of their admiration of his talent, skill, energy, and patient perseverance displayed in projecting and executing

THE MOVEMENT FOR THE REPEAL OF THE WINDOW-TAX.

The advocates for the repeal of this obnoxious impost were more than ordinarily active in the early part of the week, in consequence of yesterday (Friday) having been fixed by the Chancellor of the Exchequer for introducing his budget. There were two meetings on Monday, in Marylebone and St. Luke's, and on Wednesday, at Drury-Lane Theatre, there was a very imposing demonstration.

[illegible] meeting on Monday evening consisted [illegible] deputations from the various metropolitan parishes, [illegible] Mr. Mayhew, Mr. Roberts, Mr. Wilson, Mr. Cobden, and [illegible] Committee, and in the chair the Marylebone Churchwarden, Mr. [illegible]. The room, which will contain about [illegible] persons, was crowded to excess. [illegible] Mr. Mayhew, who read a letter from Lord Duncan, M.P., Mr. Wilson, M.P., Mr. [illegible], M.P., Mr. [illegible], M.P., and several other gentlemen, expressing their regret at [illegible] meeting. The Chairman then addressed the meeting, and was followed by [illegible], who moved the first resolution, which declared that the window-tax was a most unjust impost, and that it ought to be repealed. [illegible] seconded the resolution, which was carried unanimously. [illegible] Mr. Cobden, Mr. Wilson, Mr. Roberts, and other gentlemen, addressed the meeting, which was then dissolved.

[illegible] AT DRURY-LANE THEATRE—[illegible] meeting was the most important of the week, and consisted of [illegible] inhabitants of the parishes of St. George's-in-the-East, Shadwell, and [illegible] Poplar. The chair (twelve o'clock) was [illegible] Mr. Wilson, M.P., [illegible] Mr. Hindley, the [illegible] Mr. Cobden, M.P., [illegible] Mr. Roberts, and [illegible] Mr. Mayhew. The Chairman, in [illegible] the meeting, said that [illegible] the window-tax. It was [illegible] the [illegible] Downing street by some [illegible] and he trusted that science, as much [illegible] commerce, would [illegible]. It was asserted about Downing street by some [illegible] that the window-tax [illegible] and Mr. Cobden] [illegible] Mr. Disraeli must [illegible] in unconditional repeal of this, he was sure [illegible] the most [illegible] country, that in connexion with [illegible] Mr. Disraeli [illegible]. He [illegible] Mr. Disraeli [illegible] [illegible] [illegible]

CANAMORE, PART OF THE FORT, THE CHURCH, AND COORG HILLS.

SKETCHES ON THE COAST OF MALABAR.

The accompanying pair of Sketches (from drawings by a Correspondent) present interesting specimens of the scenery of Southern India. The first shows Canamore, the principal military post, and arsenal of the provinces of Malabar and Canara, with the church, and near it to the right some of the artillery gun-sheds. In the distance are the Coorg Hills; and at their foot, native houses in cocoa-nut groves and gardens, reaching to the beach; and opposite the landing-place are two large stores, covered with cocoa-nut leaves. This sketch is taken from below the curtain, showing the extremity of the ravelin, the wet ditch, and bridges. From the extreme humidity of the climate of the Coast, the walls are covered with grass, shrubs, and moss, springing out of them.

The second Sketch shows the Fort of Canamore, containing the arsenal and main-guard. The ravelin was added some forty years ago to the Portuguese enceinte, by Sartorius, of the Bombay engineers. It is not now considered of any importance, and seems falling into ruin. Some years ago the sea washed a breach of eleven feet into a bastion-wall, which proved to be thirteen feet thick. The military station of Canamore contains one European regiment, two native regiments, and half a company of foot artillery. The Sketch shows the race-course and evening drive, with the parade-ground; to the left of the picture is the rocky island opposite Tellicherry, across the Bay. The time is morning, and some of her Majesty's 94th regiment are at drill. Here, again, the climate of the western coast being so very wet, with the cold land winds of November, render it very dangerous to horses: most of the European inhabitants use bullocks in their carriages, and these animals, by a dexterous management of the tail, can be made to trot six or seven miles an hour.

CITY COMMISSIONERS OF SEWERS.

On Tuesday, the Commissioners assembled in the Guildhall; Mr. Deputy Harrison in the chair.

REPORT OF THE SURVEYOR TO THE CITY COMMISSION.

Mr Haywood, the Surveyor to the Commission, presented his annual report—a most important document of considerable length, of which the following constitute the main features:—

The 31st of December, 1850, terminated the second year since the City of London Sewers Act, which increased the former and gave additional and highly important powers to your honourable Commission, became operative, and I have the honour of submitting to you my report of the works which have been executed under your direction during the twelve months expiring at that date.

Slaughter-houses.—The slaughter-houses, which received special and early attention in 1849, and for which regulations were issued, have been periodically inspected by your officers, and their cleanliness and other needful conditions enforced, so far as your powers will permit. Slaughtering in cellars still continues in many instances: the objections to it so strongly entertained and expressed by you have been put in practical shape by the construction of a clause in the act now being applied for, seeking power to compel the total abolition of the practice.

Churchyards.—The condition of the churchyards, which, in 1849, occupied your attention, and much of the time of your officers, have not demanded so much supervision, having been for the most part permanently closed; and the act which passed during the last session of Parliament will, it is to be hoped, speedily be put into operation, and, by causing intramural interments entirely to cease, close your labours upon this head.

Public Urinals.—Various public urinals, and certain of those previously existing, have been reconstructed, drained, and supplied with water. There is still an imperative demand for increased accommodation, and I shall shortly, in pursuance of your instructions, be enabled to submit to your consideration an additional list of sites upon which I conceive they may be erected with great public advantage.

Nuisances.—The suppression of nuisances has been actively enforced, and the inquiry pursued into the general condition of premises as to drainage, water supply, and arrangements for health and decency. During the heat of summer, additional assistance was given to the inspectors, to enable the poorer dwellings to be more frequently supervised, so as to expedite the abatement of nuisances which might tend to retain or propagate disease. Owing to the large extension of sewage in the poorer neighbourhoods during the years 1849 and 1850, and the enforcement of works of permanent improvement to premises, as drainage, water supply, and the proper sanitary arrangements, the nuisances which were, in 1848 and 1849, so numerous, were last year comparatively few, nor did they, for the most part, present so obnoxious a form as was the case in the previous summer. The number of houses inspected, for the purpose of ascertaining the condition as regards drainage, &c., has been 1883. The total number of notices served for the removal of nuisances and the performance of works which, by their execution, not only abate, but permanently lessen, the chance of future nuisances, was 854.

Sewage Manure Works.—The sewage manure works of Mr. Moffatt, at Vulcan-wharf, Puddle-dock, are in the course of enlargement, so as to enable them to intercept the whole of the sewage now discharged into the river between Dowgate and Puddle-dock. The additional sewage was granted by your honourable court to Mr. Moffatt in June, 1850, with the view of encouraging and forwarding this important and almost national experiment. It was my hope that I should have been able to inform you that his works were in active operation, and that at length some portion of the excreta of the metropolitan population was in the course of its legitimate application to the enrichment of the soil, and the reproduction of food for the sustenance of man; but I am informed by Mr Moffatt that he has spent the whole of the past year in privately trying the effects of its application to the land, and in experimenting upon and perfecting its manufacture, so as to produce manures fitted for various species of vegetable growth, and thoroughly to satisfy himself of its value before undertaking its manufacture upon a larger scale, and sending it into the market in competition with the ordinary manures of the day. He hopes, however, to commence manufacturing actively within a very short time, and expresses his feeling of complete certainty in the success of his undertaking.

Side-Entrances, Flushing-gates, &c.—The facility of entrance to the sewers, and the power of keeping them clean without either annoyance to the inhabitants or inconvenience to the traffic, has been last year increased by an additional number of side-entrances, flushing-gates, and tanks, the present total number of which is:—Side-entrances, 150; flushing-gates, 108; tanks, 12. I do not contemplate the extension of the system of applying bodies of water from tanks, as, although there are special situations where they may be adopted with advantage, yet their expense will prevent the application of water by such means extensively, or with equivalent benefit.

Cleansing Sewers.—Although in no case has soil or decomposing refuse been removed or carted away from the sewers, I have found it expedient to have ballast raised and carted away from certain sewers in which it has for some years been accumulating, and, taking advantage of the winter season, 4783 cube yards has been removed. In connexion with this point, I again draw your attention to the practice existing in certain localities of using the gully gratings as dust-bins; the removal of the débris thus illegally cast into the sewers causing a considerable annual expenditure to this commission, besides originating other injurious consequences. I mention, as an instance of the extent to which the practice prevails, that the sewer under Billingsgate accumulated in a few months many cart-loads, almost wholly of fish-shells, and that 114 cart-loads of fish-shells, cinders, and rubbish were removed from the sewers in the vicinity of Middlesex-street, and were the accumulation of little more than twelve months. I feel convinced that nothing but making public examples by convicting and punishing some offenders, under clause 69 of "The City of London Sewers Act," will stop the practice so universal in the poorer localities of using the gullies as dust-bins.

House Drainage.—The total number of premises drained during the past year has been 468; the number of premises drained at the expiration of the year 1849 (as closely as could be ascertained) was 10,455; the total number of premises which are now drained in, therefore, 10,923; and undrained, 5377. The cesspools have been in all cases emptied and filled up, the closets trapped, and water supply laid on to them.

New Sewers.—Sewers have been constructed in 92 different places, their aggregate length amounting to 6052 feet, or about 1 1-7 miles. They have been almost exclusively constructed in the poorest localities heretofore without sewers, although some of them were in lieu of ancient and insufficient sewage, which doubtless was originally intended for surface-drainage only. The total length of sewers now existing within your jurisdiction is about 48 miles. Nearly the whole of the sewers constructed within the last two years have been built of stone-ware pipes of small diameter. You will, therefore, have given this mode of construction a fair trial, and a few years will demonstrate whether this much-lauded system, to which have been ascribed so many advantages, is superior or has fewer objections than that which it has partially superseded.

Gullies.—374 gullies have been retrapped upon improved principles during the year. Your Court has been always open to inventors, and at the present time there are 16 different traps, or modes of trapping gullies, under trial, within your jurisdiction. The provision of the means of excluding effluvium from the atmosphere has not been your only care; but the cleanliness of the sewers, and the prevention of accumulation of decomposing refuse, both by regulated cleansings, and construction of the sewers upon the most improved principles, have been your aim and that of your officers; and I do not hesitate to assert, that the offensiveness of the escape from the gullies has been, of late years, much diminished by the care bestowed upon the condition of the sewers.

Ventilation of Sewers.—I have, during the year, ventilated, also, additional sewers, by carrying iron pipes to the extremity of the chimney-shafts of the houses, and have no doubt of the success of the plan, if adopted as a system, i. e. as far as effecting the requisite ventilation of the sewers.

Water Supply.—Mr. Haywood, after alluding to the defective means of water supply when he made his last report, says upon that subject: "Since that date (February, 1850), the provision of means of storage has been enforced upon nearly the whole (16,300 premises), and the greater number of houses have had a separate water supply laid on to them. No houses were, at the former period, nor are there any at the present time, without the legitimate right to water supply. The receptacles for stowage are, in many instances, by no means what can be desired; but, as the water supply is daily given throughout the City, and in many of the poorer localities twice a day, the evil is not so aggravated as when

CANAMORE FORT, RACE-COURSE, AND PARADE.

water is stored in small quantities for a long time unchanged, whatever may be the casualties of impurity to which that water may be subject. Now, I need scarcely remind you, that the whole of the City area which is public way is well paved; nearly every place has a sewer, and three-fourths of the houses are drained; and when water waste takes place, it runs immediately either over well-paved surfaces to the nearest gully, or by private drains to the sewers, and the waste might be, therefore, unceasing, without any injurious effects. I will simply state, as an illustration, a fact well known to the Court, that generally, wherever your sewers have been constructed, the basements of premises have been rendered so dry, that, at this present time, they are used, more or less, throughout the whole of the city of London for the stowage of goods, and, not unfrequently, goods of a very valuable description. Throughout the year, the water companies at all times give gratuitously, as heretofore, the supplies of water needed for cleansing or other purposes."

Mr. Haywood concludes his report, which gave great satisfaction to the Commissioners, in the following manner:—

I have but in conclusion to state that nearly every place needing it within your jurisdiction has already drainage, and sewers are either in the course of execution or in preparation for the remainder. A very brief time will, therefore, now elapse before I shall have the pleasure of reporting to you that the long-desired end is attained of enabling every house to drain, and causing the total abolition of cesspools within the city of London. That great source of evil is, indeed, being rapidly removed from us, and, in conjunction with the numerous other works carried out under your direction, is causing such improvements in the physical condition of the dwellings of the community (more especially of its poorer members), that I trust before long you may see the fulfilment of the promise which medical science has made to you, in a population improving both in health and morality.

The report was ordered to be printed, and the Court adjourned.

PLATE PRESENTED TO JAMES HAY, ESQ., OF LEITH.

THIS richly-chased Silver Epergne (from the establishment of Messrs. Hunt and Roskell, late Storr and Mortimer, 156, New Bond-street), has just been presented, as described in the inscription—

PLATE PRESENTED TO JAMES HAY, ESQ.

To JAMES HAY, Esq.,

Manager of the Edinburgh Ropery Company of Leith,
From the Proprietors of that Company, to mark their esteem for him and their sense of his faithful and prosperous management.
Presented the 20th day of June, 1850,
Being the Centenary of the Establishment of the Company.

The design consists of an oak trunk and branches, supporting a cut glass dish. At the foot of the tree is a figure of Commerce bearing a cornucopia; around are grouped an anchor and coil of rope; the base is ornamented with the hemp plant in allusion to the trade of the Company by whom the plate is presented. The work has been tastefully modelled by Mr. Alfred Brown.

CIVIL LIST PENSIONS.

The following is a list of all pensions granted between the 20th day of June, 1849, and the 20th day of June, 1850, and charged upon the Civil List. The list was inadvertently omitted to be presented to Parliament at the proper time last session:—

Sarah Pennycuick, £200, in consideration of the distinguished military services of her husband, the late Lieutenant-Colonel John Pennycuick, in various campaigns in the East, and of the large family now dependent upon her for support. In trust to the Rev. John Browne and Edward Maltby, Esq.

Charlotte Agnes Cureton, £200, in consideration of the long and distinguished military services of her husband, the late Colonel Charles Robert Cureton, C.B., and of his death on the field of battle. In trust to Edward Burgoyne Cureton and Daniel Heward, Esqrs.

Sarah Austin, £100, in consideration of the services which she has rendered to literature, especially by her translations of German works. In trust to Sir Alexander Duff Gordon, Bart., and Henry Reeve, Esq.

Janet Hamilton, £100, in consideration of the valuable contributions to philosophical literature, of her husband, Sir William Hamilton, Bart., Professor of Logic and Metaphysics in the University of Edinburgh, and of the precarious state of his health. In trust to James Thomson, Gibson Craig, and Andrew Coventry, Esqrs.

Louisa Kenny, £40, in consideration of the literary talent of her husband, the late James Kenny, Esq. In trust to William Chapman and Gilbert Stephens, Esqrs.

Thomas Waghorn, £200, in consideration of the great energy and perseverance which he displayed in opening out the overland route to India, at great cost to himself, and of the services which he has thereby rendered both to that country and to Great Britain.

William Sturgeon, £50, in consideration of his scientific attainments, particularly in the branch of electro magnetism.

George Petrie, £100, in consideration of his valuable additions to archæological literature, and especially to that of Ireland.

Caroline Leghorn Grant, £30, in consideration of the gallantry of her husband, the late Sergeant Grant, of her Majesty's 45th Regiment, who was murdered in the discharge of his duty, and of her destitute condition. In trust to the Secretary at War, and the Military Superintendent of out-pensioners.

Besay Moore, £100, in consideration of the literary merits of her husband,

"GEOFFREY," MR. BUCKSTONE. "ROCHESTER," MR. DAVENPORT.

SCENE FROM "PRESENTED AT COURT," AT THE HAYMARKET THEATRE.

Thomas Moore, Esq., and the infirm state of his health. In trust to the Earl of Shelburne and Edward Baynham, Esq.

Maria Ann Price, £50, in consideration of the long and meritorious services of her husband, the late Deputy Commissary-General Price, in various climates abroad, during a period of forty years, and of the destitute condition of his numerous family, in consequence of his sudden death soon after his appointment to an important charge in the West Indies. In trust to John Charles White and Richard Price, Esqrs.

Harriet Waghorn, £40, in consideration of the eminent services of her late husband, Lieutenant Thomas Waghorn. In trust to Joseph Wottonberg and George William Wheatley, Esqrs.

Total, £1200

HAYMARKET THEATRE.

ON Thursday week, Mr. Stirling Coyne gave to the stage another example of his talents in the direction of refined comedy. "Presented at Court" is the title of the new piece, which is in five acts. A French anecdote of the reign of Louis XV. is transferred to the English Court of Charles II. The *Earl of Rochester* (Mr. Davenport) is made to conspire with the Court ladies to effect the exclusion from Court of *Mistress Anne Franklyn* (Miss Reynolds), a city heiress. The Cheapside aspirant, however, has set her heart upon the Earl, and ultimately succeeds; notwithstanding that her enemies have contrived the robbery of her dress, the destruction of her carriage, the disabling of her hairdresser, and the incarceration of her introducer. The first she recovers, the others she substitutes, and at length obtains the much-desired honour. Mr. Davenport, as the *Earl of Rochester*, had a part eminently suited to his talents, and played [with] equal grace and vivacity. The lady herself, in the hands of Miss Reynolds, found a fair and lively representative; while Mr. Buckstone, in the part of *Master Geoffrey Welderburne*, who in the course of the drama assumes female disguise, in order to pass for *Lady Zampington* (Mrs. Stanley), the proposed *chaperone* of the Court aspirant was irresistibly humorous. The comedy was decidedly successful.

NEW AFRICAN BIRD.

THIS new form in birds (*Balæniceps Rex*) has lately been obtained by Mansfield Parkins, Esq., from the upper part of the White Nile, towards the centre of Africa.

Two specimens were procured, which appeared to be male and female. In size, the bird is equal to a large marabou, or adjutant, exceeding four feet in height. It is the most extraordinary form that has been discovered for many years. Its structure differs from that of any known bird. Its head and bill are extremely large; the construction of the former indicates an affinity to the pelicans, while the body resembles that of a stork. The toes (which are very long) are entirely deficient of the slightest trace of interdigital membrane. In this peculiarity it differs from the storks, cranes, herons, and boatbill. The food of this bird is said to be large lizards and fish. The sharp cutting edges and powerful terminal hook of its bill admirably adapt it for the acquisition of such prey.

A short time since, this bird was described and figured to the Zoological Society, by Mr. Gould, the ornithologist, to whom we are indebted for the present opportunity of illustrating this new acquisition.

NEW BIRD,—BALÆNICEPS REX,—FROM THE WHITE NILE.

GREAT INDUSTRIAL EXHIBITION OF 1851.

The interior of the Crystal Palace, since the probable influx of visitors, has been a scene of ceaseless activity; in fact, within the last week, it has been turned into a vast carpenters' shop: the erection of the staircases, the division of the ground spaces by rows of boarding, the flooring laying down in parts of the nave or great central thoroughfare, &c., have employed a very legion of carpenters. Progress has also been made in laying out the spaces for the refreshment courts: that of the first class in the north side of the transept will be partitioned off by a low railing, with a 24-foot entrance; the counters on both sides will each have a frontage of 96 feet: the total space occupied by this court, including store-rooms, pantries, &c., will be 17,795 square feet: in the eastern refreshment court, the length of counters will reach 350 feet; the total area being 19,008 square feet: the western refreshment court is 19,096 square feet, having a length of counters of 36 feet.

Messrs. Jackson and Co., the table-ware manufacturers, have obtained the contract for the supply of the refreshment rooms: water is to be supplied gratis, and the rates of the refreshments are not to exceed those of an ordinarily respectable tavern.

The scaffolding has been entirely removed from the transept; blue and white seem to be the prevailing colours of the decorations of the roof and its supports. The painting of the girders (blue and white) in the south-eastern gallery has been proceeded with: the spaces in the columns have also been partly painted out for occupancy by the exhibitors, who are in full work in the various arrangements; the avenues for the exhibition of spectators have also been defined by red lines throughout the building.

Prince Albert came to the ground yesterday (on the 8th, to decide the terms of admission at the opening of the Exhibition. He also had his chance to inspect the progress of the works, expressing his satisfaction at the appearance of the transept, and then breakfasted with a select few assembled in the refreshment-room.

The illustrated scale of prices, which we subjoin, has, we understand, commanded general approbation. The Commissioners will, we trust, take such steps as will enable all readers of advertisements, strictly genuine tickets, at the price of three shillings for a gentleman's admission and two guineas for a lady's, give the exclusive right of entrance on the first day. The charge on two second and third days will be £1. On the first day, which falls on a Monday, the entrance-fee is to be 5s., so continuing for three weeks. Then the price will fall to 1s for the first four days of each week, save on Fridays, when the entrance-fee will be 2s. 6d., and on Saturday, when it rises to 5s. The Commissioners, however, reserve to themselves the full discretion, which will suppose circumstances may call upon to adopt, in the case of an admission fee, should experience suggest the propriety.

The illustrated scale of prices, which we subjoin, has, we understand, commanded general approbation. The Commissioners will, we trust, take such steps as will enable all readers of advertisements, strictly genuine tickets, at the price of three shillings for a gentleman's admission and two guineas for a lady's, give the exclusive right of entrance on the first day. The charge on two second and third days will be £1. On the first day, which falls on a Monday, the entrance-fee is to be 5s., so continuing for three weeks. Then the price will fall to 1s for the first four days of each week, save on Fridays, when the entrance-fee will be 2s. 6d., and on Saturday, when it rises to 5s. The Commissioners, however, reserve to themselves the full discretion, which will suppose circumstances may call upon to adopt, in the case of an admission fee, should experience suggest the propriety.

"Her Majesty's Commissioners for the Exhibition of 1851 have had under their consideration the most advantageous mode of the disposal of tickets, which it appears necessary to adopt for the effectual accomplishment of the purposes of the Exhibition.

"It has been determined principally directed to the following points:—

"1. The necessity of making such arrangements as shall secure the convenience of the public visiting the Exhibition, whether for study and instruction, or for the more general purposes of curiosity and amusement.

"2. The due protection and security of the property deposited in the Building.

"3. The effective control over the number of persons within the several parts of the Building, and of defraying the unusual expenses incurred.

"4. The necessity of maintaining the self-supporting character of the Exhibition, and of defraying the unusual expenses incurred.

"5. The desire of the Commissioners to render the Exhibition accessible to all persons, at the lowest possible charge, and with the least delay which a due regard to the preceding considerations will admit.

"Having these objects in view, her Majesty's Commissioners have determined to adopt the following regulations:—

"1. The Exhibition will be open every day (Sundays excepted). The hours of admission and of closing will be announced at a subsequent period.

"The scale of admission will be as follows:—

	£	s.	d.
Season tickets for a gentleman	3	3	0
Season tickets for a lady	2	2	0

"These tickets are not transferable, but they will entitle the owners to admission on all occasions on which the Exhibition is open to the public.

"The Commissioners reserve to themselves the power of raising the price of the season tickets when the first is to be exhausted, at such a sum as they may think advisable.

"On the first day of Exhibition season tickets *only* will be available, and no money will be received at the doors of entrance on that day.

On the second and third days the price of admission on entrance will be, each day

	£	s.	d.
In the fourth day of the Exhibition	0	5	0
To be reduced, on the twenty-second day, to	0	1	0

"From the twenty-second day, the prices of admission will be as follows:—

On Mondays, Tuesdays, Wednesdays, and Thursdays in each week 0 1 0
On Fridays 0 2 6
On Saturdays 0 5 0

"Notice will be given at the doors. This regulation is necessary to prevent the inconvenience and confusion which would arise from interruption or delay at the entrances.

"Should experience in the progress of the Exhibition render any alteration in these arrangements necessary, the Commissioners reserve to themselves the power of making such modifications as may appear desirable, of which due and timely notice, however, will be given to the public."

To accommodate the visits to mechanical exhibitors of Great Britain and Ireland (and as it is being extensively advanced, the position of each class in the Exhibition Building is apportioned), the arrangements published in our last number, Saturday, the 8th inst., have been altered, and the committee of the town concerned in the display of woollen and mixed textile fabrics, have wisely determined to act in concert in the fitting up of their respective allotted spaces. Manchester and Bradford, both so much noted for their laudable desire to co-operate with the suggestions of the Executive Committee for the homogeneous disposition of each section of contributions. The arrangements of the latter Committee have been somewhat impeded by the want of, and, to our own knowledge, in occasional instances, by a careless and apathetic spirit. Still it is, too, to be regretted as behind-hand in its departments. Contributors in the division of machinery are urged to be early in forwarding their specimens. The fixing of exhibitors' machinery is not the work of a day, and, unless proper efforts are made, it is feared that this, which should be a first-rate point of our national display, will be but poorly represented.

The reception of goods has commenced, the first arrival from our Continental exhibitors being a specimen of German serge, sent on the 10th instant.

The Agricultural Committee announce that implements, &c. will be received until the 8th of March: all stands, frames, and fittings to be on the ground by the 1st of April. The fields implements will at once be sent into the country for trial: the others will be then and there tried.

A force of sixty constables of the receiving men of the A division, with an inspector and sergeants, under the command of Superintendent Pearce, have taken possession of the approaches and entrances. They are to strictly enforce the regulations of the Executive Committee, in preventing all unauthorized admissions of packages containing articles for the Exhibition. They have with them additional men, to be held in reserve, the other at certain periods of the day.

The conversation in the House of Commons, on the 10th, between the member for Reading and the Home Secretary, shows how completely the Commissioners render themselves independent of any assistance from the Government. (See our Parliamentary Report, page 121 of SUPPLEMENT, published with the present No.)

All persons employed by the Customs, and foreign exhibitors, &c., must enter at the east end of the Building; British exhibitors, &c. will have to enter at the west end, all the men in charge of carts, &c. will enter at the south side only; officers, &c. of the Commission will be admitted at the north-east entrance.

Five kinds of passes will be issued, signed by Mr. Digby Wyatt—those available for more than one day, those for one day only. Personal application must be made in every case to Mr. Wyatt for the pass two days before it is wanted. The pass will specify the entrance and particular part of the Building to which the holder will only be admitted. Exhibitors will also have a brass check with a number, which they will deposit as they enter, and resume as they leave the Building. It can thus at once be ascertained whether any individual is in the Building or not. Every pass-keeper will be first required to make a declaration to conform to the rules of the Executive Committee, not to part with his ticket on any account, and to specially assist in the protection of property in the Exhibition. Instructions are issued for the delivery of packages containing articles for the Exhibition, Tuesdays, Wednesdays, and Thursdays only, reducing

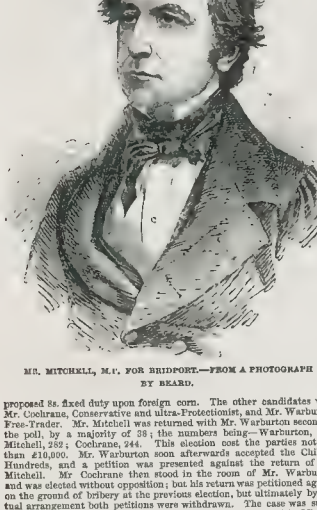
PARLIAMENTARY PORTRAITS.

THOMAS ALEXANDER MITCHELL, M.P. FOR BRIDPORT.

THE subject of our memoir (youngest son of Mr. John Mitchell, of Montrose, who established the firm of Mitchell and Co. at Riga in 1782, and, in 1810, the firm of John Mitchell and Co. in London, in connexion with the Russia house) was born at London, in 1812; and educated at first at a private school, at Richmond, where he remained until fifteen years of age, when, for the purpose of learning French and German, he was sent to a school at Weisbaden, from which he afterwards, for a short time, went to Heidelberg. At seventeen he returned to London, and was at once set to work in his father's counting-house, in Broad-street; and, in connexion with the business of the firm, several times visited Russia, and travelled over the greater portion of that empire.

The trade in hemp and flax, forming the staple manufacture of Bridport, brought Mr. Mitchell, now a partner in the firm, into intimate connexion with the borough; and in 1839 it was intimated to him that Mr. Swinford Jarvis, who, since the general election of 1837, had been its representative, would not again come forward, and that, if he would allow himself to be looked to at the next election, his return would be certain. At the general election in 1841, Mr. Mitchell accordingly came forward in the Liberal interest, and as a strong advocate of the then



MR. MITCHELL, M.P. FOR BRIDPORT.—FROM A PHOTOGRAPH BY BEARD.

proposed 8s. fixed duty upon foreign corn. The other candidates were Mr. Cochrane, Conservative and ultra-Protectionist, and Mr. Warburton, Free-Trader. Mr. Mitchell was returned with Mr. Warburton second on the poll, by a majority of 38; the numbers being—Warburton, 804; Mitchell, 282; Cochrane, 244. This election cost the parties not less than £10,000. Mr. Warburton soon afterwards accepted the Chiltern Hundreds, and a petition was presented against the return of Mr. Mitchell. Mr Cochrane then stood in the room of Mr. Warburton, and was elected without opposition; but his return was petitioned against on the ground of bribery at the previous election, but ultimately by mutual arrangement both petitions were withdrawn. The case was subsequently one of those referred to Mr. Roebuck's committee. Mr. Mitchell very frankly confessed his part in the malpractices of the election; but the late Sir Robert Peel having declared that no Parliamentary action could be taken on the report, both members, in common with all those referred to the compromise committee, retained their seats.

In 1844, Mr. Mitchell voted with Mr Villiers on his annual Corn-Law motion; and, in 1845, made a speech in its favour, his first of any length in the House, and which was one of the best listened to, and most successful of the debate on that side.

His next speech of importance, and upon a subject which he had completely mastered, was early in the session of 1847, in support of Mr. Ricardo's motion for the Committee on the Navigation Laws, of which he was appointed a member, and upon which, in conjunction with Mr. Ricardo, he took the most active part. He was at that time a member of the Committee of Lloyd's Registry of British and Foreign Shipping, from which the insulting manner of several of the members, in consequence of his exertions on Mr. Ricardo's committee, obliged him to retire. At the general election of 1847 he was again returned for Bridport—this time without one shilling of outlay except for the legal expenses; past delinquencies being atoned for by the complete absence of any approach to either bribery or treating. There were three candidates, all Liberals; and at the close of the poll the numbers were—Cochrane, 276; Mitchell, 267; Peter, 222. In the two following sessions, Mr. Mitchell spoke frequently in the debates on the Navigation Laws, advocating, on the ground both of the evidence before the Committee and his own knowledge as a merchant, their total repeal. In the session of 1849, Mr. Mitchell was a member of the Metropolitan Grand Juries Committee, and the Committee on the Bankruptcy Bill, on which latter, with Messrs. Masterman and Foster, he represented the London warehousemen and traders. The bill was prepared by a City committee, with Mr. William Hawes at its head; carried through the Lords by Lord Brougham; and after revision by the committee, of which the Attorney-General (now Chief Justice Jervis) was chairman, was passed in the same session. There have been but few such diligent committees; it sat for five weeks, four days in the week, for five or six hours a day; and the changes effected by this measure in the bankruptcy code, which simplified the processes of procedure, and gave the power of punishing fraudulent bankrupts, have proved of the utmost importance to the commercial community.

In the session of 1850, Mr. Mitchell brought forward a motion for the repeal of the duties on wood used in ship-building, on the ground of the injustice of taxing the raw material of a home-built ship, whilst the finished ship of foreign build was admitted duty free, and our owners had to compete with those of the world in the employment of their ships. On this question Mr. Mitchell obtained a majority for going into committee of the whole House; but, on going into committee, he allowed himself to be beaten on a distinct assurance from the Chancellor of the Exchequer "that the whole subject of the wood duties should be one of the earliest to receive the consideration of the Government, with the view to remove the anomalies which he admitted to exist." In the same session, Mr Mitchell sat as member of the Ramsgate and Margate Harbour Committee; and already, in the present session, he has given notice of a motion for the production of papers, previous to moving for a committee of complete investigation into the conduct and constitution of the Board of Customs.

The honourable member voted with Mr. Locke King, last session, for the extension of the £10 household franchise for counties; and has uniformly supported the ballot and the abolition of church-rates. Last year, he voted against the repeal of the window-tax, on the ground of the surplus being already disposed of; but, in the present session, will support the measure, as the most important application of this year's excess.

Mr Mitchell is now the head of his firm both in this country and Russia.

Our Portrait is from a photograph by Beard.

THE PAPAL AGGRESSION.

This week has brought forth a remarkable LETTER FROM DR. ULLATHORNE, the Roman Catholic Bishop of Birmingham, to Lord John Russell, concerning the Roman Catholic Hierarchy, of which we must give our readers an outline. He states, on good authority, that when Lord Minto was at Rome, his Holiness took up the printed document constituting the Hierarchy, of course the one first prepared, and put it into his Lordship's hands, saying, "This concerns England;" and Lord Minto laid it down on the table without saying a word. The conclusion drawn by his Holiness from that was "the continuance of the policy of non-interference in our spiritual affairs." The Bishop was consulted by the Propaganda on the subject of the Hierarchy in 1848, and declares that nothing ever passed in those consultations but what concerned the spiritual affairs of English Catholics, and that the arrangement made in 1850 wholly concerns them. He urged that an Archbishop of London and a Bishop of York should be appointed: but the Papal authorities refused, on the ground that it would give offence to our Government. The rev. prelate remonstrates with Lord John Russell for using the phrase "Court of Rome," which "is an ambiguous and offensive designation." He says the noble Lord has made much of the disapproval of some English Catholics, but affirms that not one of them has taken any unexpected course; and he insinuates that they are not communicants of the Roman Catholic Church. A dozen or so of persons disloyal to the large body are, in his opinion, as nothing. Thanking Lord John for having vindicated the Roman Catholic bishops from the charge of having violated the law, but asserts, that, while they are vindicated, unoffending Catholic people, seeking their bread, have suffered persecution. Finally, Bishop Ullathorne makes this extraordinary statement. "The hierarchy is *established, therefore it cannot be abolished*, except through the physical extermination of the Catholic Church in these realms, or, which God forbid, through universal apostacy. Is it wise (he asks), and in the spirit of a profound legislation, to put the religious teachers of a large body of her Majesty's subjects in conscientious opposition to the law? Will it aid the sanctions of the State, and that opinion, which, as our Lordship views it, is the best support of law and government, to force us into a position, where, standing, as we are bound to do, upon the law of God and our conscience, we are compelled to count the enactments which we can only consider as assaults upon the cause of heaven and our souls—enactments which, in fact, come from no divine fountain of justice, but are the offspring of party contests and sectarian dislikes."

The Earl of WINCHILSEA has published the following address:—"Fellow-countrymen, brother Protestants.—The milk-and-water measure proposed by her Majesty's Prime Minister last night against the recent act of Popish aggression is a gross insult to the Protestant feeling of this country. If you value the maintenance of our civil and religious liberties, let no time be lost in addressing the Crown for a dissolution of Parliament, and for taking the sense of the country upon a question which involves everything which is dear to us as Englishmen and Protestants."

The noble Earl has also written to the High Sheriff of Kent to call a meeting of the county, for which a requisition it, seems, has been for some time prepared

Her Majesty received at Windsor Castle a deputation from the THREE DENOMINATIONS, on Tuesday, to present an address expressive of their conviction that we are indebted, under God, for our civil and religious liberty, to those principles of the Protestant Reformation which placed the House of Brunswick on the throne. The address expressed the deep regret with which they viewed the recent Romish Aggression, and the causes which have contributed to it, among which they specified the legislative patronage of Popery and the anti-Protestant teachings and practices in the Established Church. They prayed that the development of Popery should be only so far permitted as was compatible with the security of the Throne and the liberty of the subject. Her Majesty returned the following reply:—"I receive with much satisfaction your renewed assurance of loyalty and attachment to my person and Government. I fully appreciate the importance of a firm adherence to the principles of the Protestant Reformation; and you may rely on my earnest desire, in asserting the just prerogatives of my Crown and the constitutional rights of my people, to maintain unimpaired the blessings of civil and religious liberty which are so justly dear to this country."

The Hon. Mr. CHARLES LANGDALE, a Roman Catholic gentleman of some celebrity, has addressed and published a letter to Lord John Russell, questioning his Lordship's assertion, "That, generally speaking, the laity [Catholics] England neither wished for the establishment of the Catholic hierarchy nor approved of it," and referring his Lordship to the address to Cardinal Wiseman, signed by twelve other English Catholic Peers or resident proprietors of Peers in this country, by fourteen Catholic Baronets, and by above 600 of the principal resident Catholic gentlemen of England, including thirty Catholic barristers. He further says:—"Your Lordship has advised her Majesty, in her Royal Speech, to express her earnest and firm determination, under God's blessing, to maintain unimpaired religious liberty. Beware, my Lord, how, in the face of such a solemn declaration, you introduce into Parliament a measure which may afford a violation both of the discipline and doctrine of the Catholic Church."

To Papal aggression we must also set down a call made on the Archbishop of Canterbury, to correct certain errors in the Church of [illegible]. A deputation, consisting of Rear-Admiral Vernon Harcourt, [illegible] B. Ryder, Chairman of the Board of Guardians of St. Luke's, Chelsea, and Mr. Thomas A. Young, waited upon his Grace at Lambeth Palace, on Saturday, to present the address of the Protestant laity of St. Luke's, Chelsea, unanimously adopted at a public meeting, which had received 1600 signatures. It complained of the corrupt Roman doctrines and superstitious practices that have been introduced and sanctioned by some of his Grace's suffragans, and urged his Grace to use his powers to put a stop to these abuses. His Grace replied in substance, that he received the address with much pleasure; but probably the deputation was not aware of the great difficulty there was for bishops to prevent clergymen of their diocese from doing what they deemed the present uncertain state of the ecclesiastical law. He agreed with the address, that the Popish practices thereon complained of did exist in the Church, and deeply regretted that any encouragement thereto should have been afforded from any of the bishops. He would use all his influence to repress these innovations, and believed his brethren would do the same. It was gratifying to find that the heart of the public was sound, which would enable the bishops to check and assist them in their efforts to check these objectionable practices. So great was the difficulty in suppressing erroneous doctrines, that, though they had always existed in the Church, only one case had occurred within the last fifty years where a person had been condemned on account of erroneous preaching, and he was a Socinian.

DEATH OF AUDUBON, THE ORNITHOLOGIST.

INTELLIGENCE has just been received (in the *New York Herald*) of the death of John James Audubon, the deservedly renowned naturalist, on the 27th of January, at his residence on the banks of the Hudson River, in 165th-street, New York. "He had arrived at the age of 76, and has gone down to the grave leaving a name distinguished among the scientific men of every nation, a name earned by a steady perseverance in the beautiful field of ornithology."

Little is known of this celebrated naturalist and draughtsman, except what appears in his autobiographical memoir prefixed to the descriptive letterpress of his great work, 'The Birds of America.'

"I received life and light," says he, "in the New World. When I had hardly yet learned to walk, and to articulate those first words always so endearing to parents, I felt the impossibility of giving life to my productions, I did not abandon the idea of representing nature. Many plans were successively adopted, many masters guided my hand. At the age of seventeen, when I returned from France, whither I had gone to receive the rudiments of my education, my drawings had assumed a form. David had guided my hand in tracing objects of large size. Eyes and noses belonging to giants, and heads of horses represented in ancient sculpture, were my models. Although fit subjects for men intent on pursuing the higher branches of the art, were immediately laid aside by me. I returned to the woods of the New World with fresh ardour, and commenced a collection of drawings, which are now the 'Birds of America.'

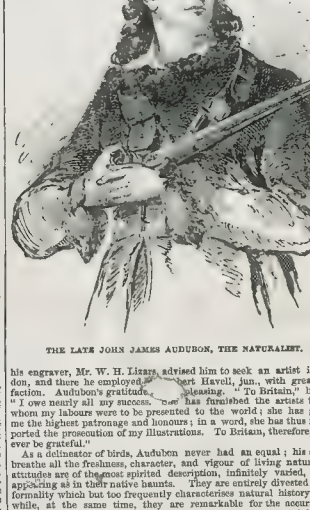
"In Pennsylvania, a beautiful state, almost central on the line of our Atlantic shores, my father, in his desire of proving my friend through life, gave me what Americans call a beautiful 'plantation,' refreshed during the summer heats by the waters of the Schuylkill River, and traversed by a creek named Perkioming. Its fine woodlands, its extensive fields, its hills crowned with evergreens, offered many subjects to my pencil. It was there that I commenced my simple but agreeable studies, with as little concern about the future as if the world had been made for me. My rambles invariably commenced at break of day; and to return wet with dew, and bearing a feathered prize, was, and ever will be, the highest enjoyment for which I have been fitted.

"For a period of nearly twenty years, my life was a succession of vicissitudes. I tried various branches of commerce, but they all proved unprofitable, doubtless because my whole mind was ever filled with my passion for rambling, and admiring those objects of Nature from which alone I received the purest gratification. I undertook long and tedious journeys, ransacked the woods, the lakes, the prairies, and the shores of the Atlantic. Years were spent away from my family. Yet, reader, will you believe it, I had no other object in view than simply to enjoy the sight of nature. Never for a moment did I conceive the hope of becoming in any degree useful to my kind, until I accidentally formed acquaintance with the Prince of Musignano, at Philadelphia, to which place I went with the view of proceeding eastward along the coast.

"I reached Philadelphia on the 5th April, 1824, just as the sun was sinking beneath the horizon. Except the good Dr. Mease, who had visited me in my younger days, I had scarcely a friend in the city; for I was then unacquainted with Harlan, Wetherell, Macmurt, Lesueur, or Selly. I called on him, and showed him some of my drawings. He presented me to the celebrated Charles Lucien Bonaparte, who in his turn introduced me to the Natural History Society of Philadelphia. But the patronage which I so much needed, I soon found myself compelled to seek elsewhere. I left Philadelphia, and visited New York, where I was received with a kindness well suited to elevate my depressed spirits, and afterwards, ascending that noble stream the Hudson, gliding over our broad lakes, to seek the wildest solitudes of the pathless and gloomy forests.

"Eighteen months elapsed. I returned to my family, then in Louisiana, explored every portion of the vast woods around, and at last sailed towards the Old World."

Audubon then describes his hospitable reception in England and Scotland. In Edinburgh he commenced publishing his *illustrations*;



THE LATE JOHN JAMES AUDUBON, THE NATURALIST.

his engraver, Mr. W. H. Lizars, advised him to seek an artist in London, and there he employed Robert Havell, jun., with great satisfaction. Audubon's gratitude [illegible] pleasing. "To Britain," he says, "I owe nearly all my success. She has furnished the artists through whom my labours were to be presented to the world; she has granted me the highest patronage and honours; in a word, she has thus far supported the prosecution of my illustrations. To Britain, therefore, I shall ever be grateful."

As a delineator of birds, Audubon never had an equal; his subjects breathe all the freshness, character, and vigour of living nature. His attitudes are of the most spirited description, infinitely varied, and all appearing as in their native haunts. They are entirely diverted of that formality which but too frequently characterises natural history plates, while, at the same time, they are remarkable for the accuracy and imitation of the finishing; and in those parts most essential to the naturalist, namely, the beaks and feet, they are drawn with matchless skill and beauty. His descriptions of birds are strikingly graphic and amusing, although, in this respect, he does not equal Wilson.

The magnificent work of Audubon gained for him a high reputation in this country. In September, 1826, he visited France, where he was received with open arms by all the celebrated naturalists of that country; and Baron Cuvier read a highly laudatory report of the "Birds of America" before the Institute

In 1829, Mr. Audubon returned to America, where he remained absent about a year, when he revisited England, bringing with him Mrs. Audubon.

The irresistible impulses of his nature again dictated another visit to his native wildernesses, for the purpose of making, if possible, fresh discoveries in the feathered creation; he accordingly set sail on the 1st of August, 1831.

The accompanyining portrait is from an engraving prefixed to a volume of "The Miscellany of Natural History," of Edinburgh, a work of standard merit.

METROPOLITAN COMMISSION OF SEWERS.—A monthly Court of Sewers was held on Tuesday, at the office, Greek-street, Soho-square. The following commissioners were present:—Lord Ebrington, M.P., who presided; Sir J. Burgoyne, Sir Henry de la Beche, Mr. Peto, M.P., Messrs. Lawes, Dawson, Hawes, Bendit, and Hardwick. Mr. Lawes read a report on the operations of the Commission during the past year, which was unanimously received and adopted. Sir J. Burgoyne then brought under the notice of the court an application made by three gentlemen of high standing (whose names he did not mention), who were desirous of entering into an arrangement with the Commissioners for utilising the sewerage manure of the metropolis. Before entering into so large an undertaking, he said, they would of course require to be guaranteed the uncontrolled and undisturbed management of the affair, and they wished for a meeting with the Commissioners to ascertain their views on the subject. It would require some consideration before coming to a decision in a matter of this kind: if the Commissioners thought the sewerage could be carried off by a Gemlory system of drainage, it would not be desirable to agree to any proposal of this nature; but if it should require a great and comprehensive measure, and a large expenditure of capital, the contractors must have some security that they would not be disturbed in their operations. He thought it advisable that they should see the gentlemen, and give them some idea of their opinions on the matter. The application was agreed to, and a day appointed for the attendance of the deputation.

DEPORTATION OF PAUPER CHILDLEN TO BERMUDA.—On Tuesday a very large meeting of the board of directors and guardians of the poor of St. Pancras was held at the vestry-hall adjoining the workhouse, King's-road, Camden-town; Mr. Churchwarden Baker in the chair. Mr. G. W. F. Cook, the vestry clerk, stated that he had received a communication from the Poor-law Board, founded on the report of their inspector Mr Hall, in reference to the forced emigration of pauper children from the workhouse of that parish to Bermuda. This letter was read. It was dated the 10th instant. The following are the most important passages in it:—

"The Poor-law Board, after a deliberate consideration of the evidence, are satisfied that the directors of the poor of St. Pancras were influenced by humane and benevolent motives in the course which they adopted with regard to those children, and that they bestowed every care and consideration in their power in order to promote the welfare of the emigrants, and to ensure the success of the experiment. The board cannot, however view with indifference the fact, which was candidly acknowledged by the chairman of the directors of the parish of St. Pancras, that "no legal formalities were gone through," and that the provisions of those Acts of Parliament which relate to the emigration of paupers were wholly overlooked

Mr. Billett congratulated the board on the manner in which they had come out of this inquiry. It showed that the board had acted in an honest and straightforward manner, and without any fear, and he thought that the whole proceedings of the inquiry should be published to the ratepayers (hear, hear), together with the report of the Poor-law Board. He moved a resolution to that effect. Mr. Shilston seconded the motion, and it having been adopted, the board separated.

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS.—FRIDAY, *Feb.* 7.

PAPAL AGGRESSION THE GOVERNMENT MEASURE.

[In our Late Edition, last week, we gave a full summary of the proceedings in the House of Commons, on Friday se'nnight, on the occasion of Lord JOHN RUSSELL'S submitting to the House the character of the measure by which the Government proposes to meet the assumption of territorial ecclesiastical titles by the Roman Catholic bishops in Great Britain. We now give a brief explanatory notice of the proposed bill, that those who received our early impression of last week may not be without a record of this interesting occasion.]

Several petitions having been presented praying for measures to defeat the Papal Aggression,

Lord JOHN RUSSELL rose, in pursuance of the notice he had given, to move for leave to bring in a bill "to prevent the assumption of certain ecclesiastical titles in respect of places in the United Kingdom." The noble Lord prefaced his motion by adverting to the deep interest felt by all classes in the country, denoted by the numerous petitions to the House and addresses to the Crown, which cast a serious responsibility upon the Government, and to the anxiety with which he approached this important subject, not diminished by the intimations which had recently fallen from certain members in that House. After referring to late occurrences in Ireland—the appointment of Dr. Cullen, the model of his appointment and the spirit he manifested; the synod of Thurles, and its dealing with the colleges, and with questions of the occupancy of land; that synod consisting entirely of ecclesiastics who had thought proper to prescribe to the Irish people their duties in reference to these questions—he observed that these proceedings gave warning of other measures on the part of the Court of Rome, to be attended with more important results; and he instanced the proceedings of that Court in Roman Catholic countries in ancient and modern times, in support of this impression on the matter. He then addressed himself to the subject of the letters apostolic, changing the organisation of the heads of the Roman Catholic Church in this country, which he declared had been done entirely without the consent or knowledge of the Government of this country. Premising that it was of the nature of all ecclesiastical bodies to endeavour to encroach upon the temporal authority—a doctrine more especially true of the Church of Rome—he proceeded to consider what had been the conduct of other Governments with regard to measures of this kind attempted by the Pope. He showed that in France, under the old Bourbon rule, as well as in more recent times, and even in Austria, the sanction or *placet* of the Sovereign was indispensable to the validity of high spiritual appointments; and he asserted broadly that no Roman Catholic Power would permit a bull to be brought into the country without the sanction of some civil authority, and that there was no such power, however weak, upon which the Pope would have attempted to pass such an insult as he had offered to the Queen of England. Lord John then argued, from the very terms and language of the letters apostolic, that there was an assumption of territorial power. It was nothing to the point that the authority could not be enforced; it was enough for him that it was assumed. He next showed, from the earliest history of this country—even in the time of the Conqueror—that our Roman Catholic ancestors were jealous of the encroaching power of Rome, and took measures to check it. Before he indicated the course he intended to propose, the noble Lord stated that the Government had, in the first instance, consulted the legal advisers of the Crown as to the existing law; that they were of opinion that neither by the common nor statute law could the mere assumption of titles be prosecuted as an offence; and that, although the introduction of bulls or writings from Rome was illegal, and subjected the party to a penalty, the law had been so long in disuse that a prosecution would on that ground probably fail. Other courses would be equally open to strong objections, which would not apply to the project they meant to submit on the present occasion.

The measure which he had to propose to the House, the noble Lord explained, consisted of two distinct main provisions. The first provision prohibited the assumption by Roman Catholic bishops of any title, not only from any diocese now existing, but from any territory or place in any part of the United Kingdom; the second provision—having reference to the control which the new Roman Catholic bishops would otherwise obtain (by the recent change of districts from vicariats-apostolic to episcopal dioceses) over large endowments in the hands of Catholic trustees in the United Kingdom—prohibited and restrained all parties from obtaining, by virtue of such assumed territorial ecclesiastical titles, any control whatever over trust property. The property bequeathed to them in trust would pass to the Crown, to be dealt with as should seem most fitting

The following were the noble Lord's words —

I consider, that, whether the assumption be that of the title of the Archbishop of Canterbury, with the jurisdiction and authority possessed over every part of the archdiocese of Canterbury, or whether it be that of Archbishop of Westminster, with a new diocese carved out of that which is under its present Protestant bishop, is immaterial to the question:—that it is an assumption of supremacy and of sovereignty which cannot be exercised by the Pope of Rome, cannot be denied. (Cheers.) But there are other questions which are closely and immediately connected with the assumption of those titles. It is believed, and I think not without foundation, that one reason for the change from vicars apostolic, under which titles the Roman Catholics have enjoyed the free exercise of their religion, and with which for two hundred years they have been satisfied, and to make them bishops with a new division of the country, is not merely to place them in the same degree with the Protestant bishops, but it is also for the purpose of enabling them to exercise, by the authority of those names, a greater control over all the endowments which are in the hands of certain Roman Catholics as trustees in this country. I don't think it would be fitting that we should allow that control to be exercised by virtue of any of those titles which we propose to prohibit. If, therefore, the House should give me leave to bring in a bill upon this subject, I propose to introduce a clause which shall enact that all gifts to persons under those titles shall be null and void—(Hear, hear) that any act done by them with those titles shall be null and void—(Hear, hear)—and that property bequeathed or given for such purposes shall pass at once to the Crown, with power to the Crown either to create a trust for purposes similar to those for which the original trust had been created, or for other purposes, as shall seem best to the Crown. (Cheers.) I do not think a power less extensive than that would enable us to reach the justice of the case. (Renewed cheers.) I am aware that in several cases there has been a transfer of property from those who have hitherto held it to other persons who have been named by authority either from Rome or by persons assuming to act as bishops under the see of Rome. I was told the other day that a person living near the sea coast was deprived of an income which he had hitherto held, being informed by ecclesiastical authority that it was found that such property and such an income could be more usefully employed for other purposes. (Hear, hear.) Now, I think we should do all in our power to defend the Roman Catholic laity against such acts of usurpation. (Cheers.) The clause which I propose to introduce will, in a great degree, do so. If it should be necessary to introduce other provisions for this purpose in the bill that my hon. and learned friend the Attorney-General will introduce with regard to charitable trusts, it can be done, and further security can be taken to guard the Catholic laity from that which purports to be a transfer of their property to hands which were not intended, nor had any right, to be possessed of it. There is a more difficult question, which, perhaps, the hon. member for Youghal may raise with regard to the means by which the transfer of this property is obtained, those means being a spiritual censure against the priests of the Roman Catholic community. That is a far more difficult question, and one which can hardly be reached unless by the spirit of some of those ancient laws to which I have referred In the present bill I do not propose to introduce any provisions of the kind contained in those laws. What I propose is, in the first place, to prevent the assumption of any title taken, not only from any diocese now existing, but from any territory or any place within any part of the United Kingdom. (Cheers.) That provision is in conformity with a proposition which was made by the Bishop of London, in answer to one of the addresses which was presented to him. He said he thought that not only ought we to prohibit the assumption of any title or rank already existing in this country, but any title derived from any place in the United Kingdom. Therefore I have agreed with that suggestion. Perhaps I may mention, that when I informed the Archbishop of Canterbury that it was not intended to institute a prosecution, he said, "I did not expect that the Government would institute a prosecution; but what I do expect is, that some legislation should take place upon this subject." I think, therefore, in this respect we prevent that which I consider to be an insult to the Crown of this country—(Cheers)—an interference with the rights of the Established Church of this country, and an attack upon the independence of this nation. (Loud cheers.) By the other clauses to which I have alluded, I think we shall obtain security against any person obtaining possession, under these titles, of any trust property to which I have referred. I have now stated the effect of the bill that I propose to introduce. It is, as the House will see, entirely different from a proposal for a new system with regard to the relation between the See of Rome and this country. I think, whatever may be our ultimate legislation upon this great subject—a subject far greater than that to which I propose the present bill to relate—we are not now in a condition to frame any such measure. Much will depend upon the temper in which the present measure may be regarded by Rome, and much upon the direction which may be given to him who has taken upon himself the responsibility of representing at Rome the opinions of the Roman Catholic clergy, and of inducing the Pope to assent to the issuing of this document. That individual has it in his own power to remove a great part of the objections which have been felt in this country.

In conclusion, the noble Lord observed, that the best course Dr. Wiseman could pursue was to renounce the title he had assumed, and, as he had assured him (Lord John) was his original intention, to reside at Rome, but if other counsels should prevail, and he should instil motives of ambition or revenge into the Court of Rome, we must prepare for a long and arduous struggle, in which the part to which we should take would be guided by the principles which had always governed his conduct in these questions: he was for the fullest enjoyment of religious liberty, but he was entirely opposed to any interference by any ecclesiastics with the temporal supremacy of this realm.

In the course of the debate which followed, the arguments and the measure of the noble Lord were combatted and opposed by Mr. Roebuck, Mr. John O'Connell, Mr. Roche, Mr. Moore, Mr. Bright, and Mr. Morgan J. O'Connell.

Mr. Henry Drummond, Mr. Disraeli, and Sir Robert H. Inglis supported the measure.

At twelve o'clock the debate was adjourned to Monday, and the House rose.

HOUSE OF LORDS.—MONDAY.

THE CHAIRMAN OF COMMITTEES OF THE HOUSE

The MARQUIS of LANSDOWNE moved an address to the Crown to the effect that the House deeply regretted the misfortune of the Earl of Shaftesbury's inability, from infirmity, any longer to execute the duties of his important office, as chairman of their Lordships' committees, a post which he had filled for thirty six years; that his necessary absence was a most serious loss, not only to the House in particular, but to the public at large; and that the House earnestly begged leave to recommend his Lordship's eminent services to her Majesty's most gracious consideration.

Lord STANLEY seconded the motion; and, after a few words of panegyric from Lord BROUGHAM, on his own behalf, and on that of Lord Lyndhurst, the address was agreed to.

POST-OFFICE CLERKS.

The Earl of ST. GERMANS presented a petition from C. P. MEASOR, lately a clerk in the money-order department of the Post-office, complaining of his dismissal, as alleged, in consequence of addressing a memorial to the Postmaster-General.

The Marquis of CLANRICARDE defended the course taken by the Post-office in the matter; and, after some observations from the Earl of ST. GERMANS in reply, expressive of his hope that his noble friend would reconsider the matter, the motion was negatived without a division.—Adjourned.

HOUSE OF COMMONS.—MONDAY.

The House met at four o'clock

NEW WRITS

On the motion of Mr. MACKENZIE, a new writ was ordered for the election of a member for North Staffordshire, in the room of Viscount Brackley, who had succeeded to Chiltern Hundreds.

On the motion of Mr. F. TREVOR, a new writ was ordered for the election of a member for the county of Glamorgan, in the room of Lord Adare (now Earl of Dunraven), who had accepted the Chiltern Hundreds.

EAST INDIA COMPANY'S CHARTER.

Viscount JOCELYN asked the President of the Board of Control, whether it was the intention of the Government to move for the committee on the East India Company's Charter during the present session? The noble Lord said, that the reason he asked the question was, that he found in 1809 a committee was appointed, preparatory to the renewal of the charter in 1813, and that in 1834 a similar committee had been moved for.

Sir J. HOBHOUSE replied, that it was a mistake to suppose that the administration of the East India government was under a charter. The government of India was at present administered under the clauses of an Act of Parliament. It was not the intention of the Government to propose any select committee on the affairs of India; but, should any material changes in the act be contemplated by her Majesty's Government, they would give every fair notice of such changes.

SMITHFIELD.

Mr. MACKINNON asked the Secretary of State for the Home Department, whether it was intended to bring in a bill to remove Smithfield Market, in accordance with the report of the select committee of this House and of the Royal commission on the subject?

Sir G. GREY replied, that a bill had been prepared so founded, and he hoped soon to be able to ask leave to introduce it to the House.

ECCLESIASTICAL RETURNS.

Sir B. HALL gave notice that he would move an address for returns of the gross and net income of each archbishopric and bishopric in England and Wales, in each year (from the 1st of January, 1844), specifying all sums received from or paid to the Ecclesiastical Commissioners, and all moneys received from rents, fines, renewals of leases, building leases, and from all other sources; and of the various items constituting, in every instance, the difference between gross and net income. Return of the appointment of pensioners or bedesmen in the Cathedral Church of Rochester, made under the great seal by the Lord Chancellors of England, from the year 1799 to the present time, with the date of each appointments.

The ATTORNEY-GENERAL postponed to Monday next his motion for leave to bring in a bill relative to the registration of assurances on land

BRITISH BLOCKADE OF SAN SALVADOR (AMERICA).

Mr. T. BARING asked the Secretary of State for Foreign Affairs, whether he could state, or lay any papers on the table of the House explanatory of, the cause of the present blockade by British force of the coast of the state of San Salvador, in Central America; and, if the reason be the recovery from the Government of that state of claims of British subjects, whether he can state the amount of the whole of the pending claims, and whether there are any similar claims on any of the other states of Central America likely to be enforced in the same manner? and also, whether he can give any opinion as to the probable duration of the present blockade? The hon. member remarked that no intimation had been given on the part of her Majesty's Government of this blockade, and until that morning no notice of it had been received at Lloyd's.

Lord PALMERSTON answered, that he had not yet received any statement that the blockade had been established, therefore no notification on his part could have been made yet. There were claims pending against the Government of San Salvador to the amount of about £20,000 on behalf of British merchants, and the whole of these claims had been acknowledged by the Government; but the latter had been unable to take such steps as he should think expedient to bring the Government of San Salvador to a settlement of their claims. With respect to claims on other Governments in this quarter, those associated with our intercourse with the Governments of the South American republics were well aware that there was hardly a moment at which some claims on those Governments were not pending. He should except the Government of Buenos Ayres, which had behaved in a liberal and handsome manner. But there were claims on the part of British subjects pending with several of the states of Spanish America; and he trusted that a sense of justice would induce them to settle these claims satisfactorily. With respect to the duration of the blockade, that would depend on the conduct of the Government of San Salvador; but he trusted that it would be for only a short time. The course taken was that adopted by former Administrations, and it was found to be the only mode of bringing these states to a sense of justice towards foreigners.

THE METROPOLITAN POLICE AND THE GREAT EXHIBITION.

Mr. STANFORD asked the Secretary of State for the Home Department, whether the augmentation of the metropolitan police force, made in consequence of the National Exhibition, would be paid out of the receipts of the Exhibition; and, whether the Secretary of State for the Home Department had thought it necessary to convey an intimation to foreign powers, through the proper channel, of the inconvenience that might arise of large bodies of foreigners visiting this country during the Exhibition in military uniforms, and wearing side-arms, &c.; and whether additional provision had been made the the safe custody to persons charged with police offences during the Exhibition?

Sir G. GREY replied, that that portion of expense would be paid by the Royal commission which would be necessary for the protection of articles in the Exhibition and for the approaches to the Park. The additional police force required to maintain order in the streets would be paid out of the metropolitan police fund. With respect to the danger from foreigners wearing side-arms, he (Sir G. Grey) did not apprehend any, for he did not think foreigners would wear side-arms.

THE LAW OF PATENTS.

Sir Dr. LAcy EVANS inquired if it was the intention of the Government to introduce a measure to protect British inventions during the Exhibition?

Sir G. GREY replied, that the Attorney-General was engaged in the consideration of a bill with respect to the general operation of the law of invention; and that a bill would be in a short time laid on the table of the House of Lords by the Vice-President of the Board of Trade, giving a limited protection to copyright during the Exhibition.

COMMITTEE OF SUPPLY.

The report of committee of supply was taken into consideration, and the resolution that a supply be granted to her Majesty was confirmed.

PAPAL AGGRESSION.—ADJOURNED DEBATE.

The adjourned debate upon the Ecclesiastical Titles Bill was then resumed by

Mr. REYNOLDS, who traced the whole excitement that had been stirred against the alleged aggression to the extreme jealousy of the Irish Church to preserve its temporalities. He argued that the bill was a violation of the compact sealed in 1829, by which civil liberties and the free exercise of ecclesiastical functions were secured to the Catholics. Denying that the Duke of Norfolk, Lord Beaumont, or Lord Camoys fairly interpreted the opinion of the Catholic body, he questioned also the correctness of the distinction made by Mr. Chisholm Anstey between the members of the Church and the members of the Court of Rome; and created much amusement in the House by giving a lively narrative of a wager which he had laid not upon the presumption that Lord J. Russell's letter to the Bishop of Durham was nothing but a hoax. The official recognition of the Catholic bishops in Ireland by their territorial titles dated back to the visit of George IV. eight years before the Emancipation Act, and was renewed so recently as last week at a *levee* held in Dublin Castle by Lord Clarendon. The measure now before them was an Algerine act forced upon the House by a cabal under the pressure of a bigoted agitation out of doors. It would, moreover, prove a dead letter, defying the power of any ministry, Whig or Tory, to carry into action. He should vote against it in every stage.

The ATTORNEY-GENERAL here rose and said, that as the House had not only occupied one long night upon this bill, but appeared disposed to continue for another the discussion of the measure, in the absence of some necessary knowledge of the details of the bill, and as it also appeared to him that the remarks of his noble friend, in introducing the bill, with respect to its purport and effect, had not been clearly understood, he wished to explain the general scope and effect of the bill as described by his noble friend. Before he did so, however, he trusted that the House would allow him to call its attention to the offence which it was intended to meet. The offence consisted of the introduction of a bull, in the course of last year, by which certain persons were authorised by the Pope of Rome to assume certain ecclesiastical titles, as being archbishops or bishops of certain sees, defined by certain territorial limits, in England and Wales. This was the direct act against which, and its consequences, they were called upon to legislate. Now, he agreed, for his own part, in that sound maxim of politics, that they ought not, in legislating against any evil, to introduce as a remedy for it any measure more extensive than was required to meet the evil (Hear)—and that if they introduced a measure that would effectually prevent persons holding these sees from being archbishops or bishops of any places in this country, the real object sought to be obtained would be obtained—(Hear)—that they would not, in short, legislate beyond the occasion, or attempt to provide against evils that had not yet arisen. He believed, then, that this bill would effectually prevent the evil that was complained of. That was the object of the measure; and with that view it had been framed. It would be for the House to consider how effectual it would be for that purpose. In considering the subject to which it had reference, it was important to draw a distinction between two different branches of the offence that had been committed by the introduction of the bull of the Pope. One great portion of the offence was what was—and justly—conceived to be the insult inflicted on this country; another portion was, the injury to be inflicted on a certain class of the inhabitants of the country. (Hear.) The insult offered to this country by a foreign power introducing a bull into it, by which he proposed to govern the whole of the country by his own immediate dependents, had produced an undue belief of the injury to be derived under that bull. With respect to the insult offered to this country, it would be useless for him to say anything. The expression of feeling which had prevailed throughout the country, and on the part of that House, would be ample enough to repel, in the most proper and dignified manner, the insult offered by the foreign potentate; and, with respect to the injury inflicted, it principally affected the Roman Catholic branches of the community, and it was of a twofold nature—of a spiritual as well as of a temporal character. Now, they had nothing to do with the spiritual effect of the introduction of the bull. With respect to its temporal effect, it was said that it would give to persons assuming to be bishops of particular dioceses, a power to interfere with regard to endowments, for the promotion of the Roman Catholic religion, and that the effect would be to give to those prelates a power that was never intended to have been entrusted to them by those who had founded any of the institutions which it was urged would be exposed to this influence. With respect to the spiritual power, he confessed he had not yet seen any assumption, by any persons being, or proposing to be, dignified altogether on the part of Rome, of a power to deal with the rights and interests of British subjects. (Hear.) The bill, then, first professed to extend the provisions of the 10th Geo. 4,—the Roman Catholic Act—which imposes a penalty of £100 for every offence, in the cases of Roman Catholic prelates assuming the titles of existing sees in the United Kingdom; such penalty to be sued for by the Attorney-General. This was extended, by the 1st section, to the case of the assumption of any titles whatever belonging to any city, or place, or district in Great Britain. (Hear.) If that which he had just named had been found effectual under the Roman Catholic Relief Act, it might equally be expected that a clause of a similar description would be found effectual with reference to titles of a like kind derived from any other territorial limits in these realms. There had been instances in which Roman Catholic prelates had assumed the titles of existing sees in Ireland. (Hear.) But the bill also attempted to make every act so done by every prelate who held a see of this description—done in his character of archbishop, bishop, or dean—absolutely void. (Hear.) And he thought that if the effect of introductory clauses of such a nature was to produce such results, they were fully entitled to be done—namely, putting a stop to the particular evil that was complained of. (Hear.) It appeared to him that a clause providing that any act whatever, whether in deed or in writing, by a person assuming such a title as any of those referred to was void, would have the effect of completely paralysing, as to temporal matters, the person assuming such title—(Hear)—that, in short, he could not do anything that would be effectual in the Court of law for the enforcement of any such act, and could not, as bishop or dean, be enabled to do that which would be proper and lawful if done by him in any other character. (Hear.) Then, as to grants that should not by law be permitted, sums money for the support or endowment of any such see so assumed, or of any person performing ecclesiastical functions in respect of any such see, or city, or district; and this by words sufficiently precise to of any such act, or any person performing ecclesiastical functions in respect provide against any evasion of such provisions of the bill. (Hear, hear, hear.) They also said that every bequest given to any one of these sees or districts should be forfeited to the Crown. (Hear.) The effect of that would be, that it would be impossible for any one, giving or bequeathing a gift for charitable purposes, to give it, for such purpose, to any one assuming any such sees or titles as those against which they were providing. Should any one wish to make a gift of this nature to Dr. Wiseman, for instance, he must give it to him as Dr. Wiseman, and not as Archbishop of Westminster, for otherwise it would be void, and be disposed of by the Crown. (Hear, hear, hear.)

in effect, the general scope and object of this bill. The House would see, that, if it prevented persons from assuming those titles, it would prevent the exercise of the diocese or see; for it was stated by Cardinal Wiseman, that such sees or dioceses could not exist without reference to some territorial extent or limit in the country in which their titles were claimed, and that, otherwise, the prelates assuming them would be nothing more than bishops *in partibus*. The hon. and learned gentleman then said, that such a mere colourable evasion as was suggested by the hon. and learned member for Sheffield on a former night—viz. that the only effect of the bill would be that Dr. Wiseman would be Archbishop of, or *near*, or *at* Westminster, instead of Archbishop *of* Westminster—would still be an offence coming within the provisions of the measure. There could be no doubt, he thought, that the bill would prevent the particular mischief and evils complained of. But the hon. member for Bucks had said, that he thought it would not interfere with synodical action. He differed, however, with the hon. gentleman on that point; he thought it would do so, and that the hon. gentleman would himself be of that opinion, on more mature consideration of the effects of the bill. It was desirable, at the same time, that they should effect this by the least interference they could. ("Hear, hear," ironically)—and that they should be embodied with provisions suitable to the occasion that had given rise to them. It was said that they did not deal with the case of those priests or persons of the Roman Catholic Church who, by means of the performance of civil duties. (Hear.) It might be possible, however, to meet the case of such persons, acting under the orders of some such body as the recent Synod of Thurles—(Hear)—might promulgate a bull requiring that the priests of his diocese should decry the sacraments, because they came before them in civil duties, as, for instance, those incidental to a juror or witness, &c., in a court of justice. But, in the first place, let it be observed that no such question as that had arisen—(hear)—nor was any such likely to arise; and, in the next place, if it did, he had no hesitation in saying that, according to the existing laws of this country, it would be an offence at common law. (Hear.) It was, therefore, very desirable not to attempt to meet cases of that description. Cases of this description, where a person was terrified by his spiritual instructor from doing, or from abstaining from doing, something which he considered his duty, were not such as legislation could, because, in these cases, the parties came before a court of law in some way or other, they were matters that were sacred between the persons themselves and their spiritual instructors. (Hear.) They must leave such cases to the judgment and good sense of the Roman Catholic himself, and who, he believed, would themselves resist any such cases, should any be attempted to be enforced by the priesthood. He did feel confidence in the Roman Catholic laity, and the Roman Catholic body in the country. (Hear.) No doubt, they were bound to consider in legislating on such measures as this, that they were in every respect, except the difference in religious belief, like themselves, and animated by a sincere desire for the welfare of the country, and for the security and independence of the established rights and government of the nation; and when they thought it necessary to legislate on a measure of this description, it was not only for the protection of the Protestant inhabitants of this country, but, as he verily believed, no less for the Catholic inhabitants of the United Kingdom, who considered as really so bound by feelings of honour, and also of spiritual reverence, as not to be able to express their sense of the advantages conferred upon them by this bill. (Hear, hear.) He thought there could be very few Catholics at whom a measure of this description ought to satisfy. It was obvious that it could not satisfy the whole of those gentlemen who, he believed, were perfectly conscientious in thinking that no legislation whatever had been inflicted by the introduction of this bill. They would, of course, disapprove of any legislation whatever on the subject (hear); so also, it would not satisfy those who took the very opportunity of embracing the present Government, of which he would be impossible to satisfy them. (A laugh.) Any measure that could be framed would either be too stringent, or would not go far enough. (Hear, hear.) But to those members who really and sincerely felt that something had been done which ought to be repressed, he confidently appealed; and he trusted that they would consider the motion a very proper one for the purpose. (Hear.) He was stated, and that the object would be fully attained by carrying it into effect (Cheers.) The Roman Catholics had always professed, he believed with great sincerity, their desire to obey the laws of the country, and to be governed by the same feelings of loyalty as the rest of their fellow-subjects. Was it not fit and proper that they should be tried by a measure of this kind? They would then see if they would persevere, if it was made an offence for them to take these titles or to administer property by means of them. He believed they would not resist the law. He knew the great danger of anything approaching to propriety; but he thought they could conform to the provisions of the measure. He felt satisfied, however, that, if they should not, and if it should be necessary to take some further and more stringent steps, to do so would be the easiest and simplest thing imaginable. He felt persuaded that they would not be able to frame a measure to meet any resistance to the law. (Cheers.) In common with many others, he regretted that the Pope had been so rash as to introduce into this country a measure which, he was satisfied, not only the Protestants, but of Romanism, but would, on the other hand, seriously retard them. At the same time, he felt they ought to put confidence in the Roman Catholics themselves, and that they would assist in administering a law which had been thought necessary for the protection of Protestants, and for the protection of themselves against an undue assumption of temporal rights and power by the bishops over the laity and the inferior order of the clergy. (Cheers.) The measure was distinctly and entirely different from everything relating to spiritual matters, with which, he apprehended, they had nothing whatever to do. It was not important to keep the two things perfectly distinct; but it was essential to bear in mind, that they were dealing with the temporal rights and powers which were conferred on persons by a bull of this description—and, by the by, the canon law, were obliged to consider themselves dependent upon the Pope, who appointed them, and not on the laws of the country. (Cheers.)

Lord ASHLEY: Mr. Speaker, however important and necessary it is to approach this question with great calmness, we must at least entertain the most serious convictions in respect to it. We must approach it with decision and resolution equal to the emergency. (Hear, hear.) Let us, then, consider the issue that is before us. The question is, whether we shall allow the ecclesiastics of the Church of Rome to seize and occupy in this realm a position which I believe has never been occupied in the most palmy days of Romanism in this country—(Hear, hear)—a position which they do not occupy and never will be permitted to occupy in any Continental nation even owning the authority of the Vatican. (Hear.) This, sir, is no question merely affecting the Church of England. This is no bill to secure her establishment, to protect her honour, or to extend her influence. The question is, whether you will or will not give us the necessary protection that we demand for carrying on the civil and religious liberties of this country. This question, sir, affects equally the Wesleyan, the Independent, and the Dissenters of all denominations. I believe it is a question we could prove affecting as much the religious liberties of the Roman Catholic laity themselves, as the civil and religious liberties of the inferior orders of the Roman Catholic clergy. I was astonished to hear the hon. member for Manchester state that no Dissenting congregation north of this metropolis had taken any part in it. I hope I may be allowed to express the great admiration I entertain at the conduct of the great majority of Dissenters upon this subject. They have agreed to set aside their various differences, to withhold their petition what they call the State Church, and thus to make common cause against the common injury. When I heard the hon. member for Manchester state that no movement had been made in the north of the metropolis, I recollected a most remarkable document which centers north of the metropolis, I recollected a most remarkable document which had fallen into my hands—a document that may be considered the most remarkable of modern times. It was called the "Declaration of the Protestant Congregational Denominations in the County of Lancaster," and was drawn up by that eminent and distinguished man, Dr. Vaughan, of Moorcside. With the leave of the House, I will read one passage from this document, as it expresses, in my opinion, although I admit we are many expressions contained in it with which I cannot concur. It, however, gives the boldest and most intelligible statement of the position of the question, as between the Protestant and the Roman Catholic that it has ever been my good fortune to peruse Now, says this declaration:—"In all this we see Romanism in a form the most despotic, arrogant, and offensive, strikingly in contrast with the more liberal Emancipation Act—in a more benign English Catholic before the passing of the Emancipation Act—in a form, indeed, which is so much after the pattern of the worst reigns in the history of the Papacy, as to furnish precedent enough, if allowed silently to take its course, for aggressions, dangerous alike to the British Crown and to those liberties, civil and religious, which our Protestant fathers have bequeathed to us." Is this a weak and unsatisfactory declaration of Dissenters from the north of the metropolis? (Hear, hear, hear.) It is a remarkable proof that the Nonconformists of the present day inherit the spirit of those of old, and that they are not to be wheedled by the language of Mr. Wiseman, any more than were their forefathers at the time of James II., when he meditated a deadly stroke against the civil and religious liberties of the country. (Hear, hear.) So far as I have been able to follow the arguments that have been used against the introduction of the proposed measure, they seem to be reduced to two or three. The first that is against the bill is that which has reference to the sanction of that power which was called upon to take up arms, and of Spain? But it is said that the movement now made in this country is a movement dictated by fear. It is not that we entertain the slightest fear of all the political or spiritual power the Pope can bring into the field; but it is a great and intolerable insult that must be repressed. (Hear, hear.) If the Pope had merely confined himself to the issuing of a proclamation, or even the act might be passed over; but it is an insult reduced to practice, and embodied in the persons of the Archbishop of Westminster and twelve other bishops, who, by their presence here and the daily parade of their titles, infringe on the Queen's prerogative—dispute the loyal sentiment that she is the fountain of honour, and, by the distribution of the country amongst themselves, declare that she is not the sole governor supreme in her own dominions. (Hear, hear.) The latest argument I have heard against this measure is this—that a law may assume any name he pleases, and no one had a right to interfere with him for so doing. I should like, I confess, to hear the Attorney-General or any other eminent lawyer upon this point. Now, I do not believe that a man can change his name to any one he pleases, and make it legal for the execution of documents. But, however, setting that aside, and going to the main reason, I find the great argument used is the—that the proposed bill is a restriction of religious liberty, and that it is an infringement upon the privileges conferred in the act of 1829. Such a sentiment is, he would say, a libel on the vast bodies without this House—I do not answer for any one in this House; but I can answer for those outside, from the frequent intercourse I have had with them of late, from having been at many of their meetings, and from the great correspondence I have had with large masses out of this House—that they have no desire whatever to entrench upon the least of those privileges conferred in the act of 1829. Such a sentiment is neither indicated by their arguments nor entertained by their feelings. The question is not whether we shall take anything from the Roman Catholics, but whether we will allow them to take something from us. (Hear, hear.) The question is, whether the late movement is consistent with the rights of the Crown and the civil and religious liberties of all the subjects of this realm. We are not of the aggressors in this matter. We have not begun this movement. I do not pause to inquire whether the document that has called forth this excitement has been legally or otherwise introduced into the country. Whether the pretension of the Sovereign, or any communication being made to her Majesty's Government, the Pope of Rome has thought proper to divide this realm into provinces and dioceses, appointing to them his own bishops, and entering them with some degree of title. The advocates of this Papal measure say that this is altogether in keeping with the spirit of the act of 1829, and that it is necessary for the full development of the Roman Catholic religion. Surely in this statement there arise two questions. The first is this:—Is this step necessary to the development of the Catholic religion; and, next, is this step consistent with the rights of the Crown and the civil and religious liberties of all the people of this realm. I will not, sir, pause to speak of the temper of the apostolic brief. I will not comment on the tone and temper of that brief or pastoral. I will at once proceed to the consideration of the two propositions. I will see, in the first place, whether the establishment of this hierarchy is necessary for the development of the Roman Catholic religion. In reference to the measure of 1829, it is perfectly clear that the Roman Catholics had full rights and privileges to develop their religion—to diffuse and extend it by any legislative means in their power—and I will even go further, and say, that, although their church has been governed in this realm for 300 years by vicars apostolic, yet the episcopal functions being so necessary to the government of that church, I believe, as at present advised, that they would have full power to convert these vicars apostolic into bishops. But, sir, I do not know very well the detriment we should receive from the institution of such a hierarchy; but, nevertheless, it appears to me that it would be in conformity with the concessions of 1829, and with the spirit of the age. It is not as one has proved—no one has even attempted to prove, and my belief is, that no one will be able to prove, that territorial titles are in any degree necessary to the proper exercise of the episcopal functions. (Hear, hear.) Nay, more, it is not even a matter of canon law. (Hear, hear.) Let me refer, then, to the canon law

to stay this act of insolent aggression; and while, on the one hand, they should establish their consistency as Protestants, by opposing all interference with their church, on the other they should free themselves from the charge of bigotry, and show an example to the world of tolerance in religion

Mr. M'CULLAGH earnestly condemned the course taken by the Government, contending that the Queen, as the head of the Government, notwithstanding her display of ability, had made not no case for the interposition of Parliament. The noble Lord had complained of the synodical functions of the Catholic Church, and had charged the promulgated document of the Synod of Thurles as containing a violent *pronunciamento* against the Queen's colleges and the system of land occupancy. On the other hand, he (Mr M'Cullagh) considered the self-denying charities of the parish priests with the carelessness and even cruelty of the landlords during the period of Irish famine, and deplored a measure that formed an lamentable bar to the dream of union and the promise of equality between England and Ireland.

Sir G. GREY said, that, after the ample discussion which the subject under the consideration of the House had undergone, he should have felt it scarcely necessary to offer himself to the notice of the House, even for a short period, were it not that some of the observations in the speech which they had just heard should not be passed over altogether in silence. It was impossible, with regard to the specific motion before the House, not to feel the inconvenience of a protracted discussion which must necessarily involve the provisions and minute details of a bill, which, though ready to be laid on the table, was not yet in the possession of the House. (Hear, hear.) He thought that must assuredly be the opinion of the House on the consideration of the measure; and that certain propositions had been established and demonstrated for its basis, by the most conclusive arguments and the most convincing evidence. (Hear, hear.) Some of these propositions were the following: It had been demonstrated that the act which they now proposed to have recourse to was an act not in the nature of a new law, which they could call on the House to take was in accordance with a demand made from one end of Great Britain to the other (Hear, hear)—and that it had been provoked by those who now complained of the measure which they now, certainly felt themselves compelled to adopt. (Hear, hear.) The hon. gentleman the member for Dublin, who began the debate that night, and the hon. and learned member who spoke last, complained of the bigotry of the English people. The hon. member for Dublin drew a gratifying and pleasing picture of the harmony which prevailed among the different sects of this country; but it was not they who were responsible for the bitterness and discord that had been evoked. (Hear, hear.) It was caused by an illegal act. (Cheers.) The hon. and learned member for Oxford (Mr. Pope Wood) had demonstrated by his able argument that the act was contrary to the universal law of nations; and not only that, but that it was contrary to the statute law of the realm. (Hear, hear.) The hon. and learned member for Dundalk conversed that view of the question. The noble Lord had met the hon and learned member for Oxford not by argument, but by bare assertion. (Cheers.) He said that Lord Lyndhurst introduced a measure into the House for the repeal of the statute of Elizabeth; but he omitted to state that at that time an amendment was afterwards introduced, when Lord Lyndhurst had charge of the bill, though he was not in office at the time, in which it was declared that nothing contained in the bill should render the act now done lawful. (Hear, hear.) But then they were asked, why they did not instruct the law officers of the Crown to prosecute it as illegal act had been committed? (Hear, hear.) He begged to tell those gentlemen who cheered that there was no doubt that the acts done in violation of the statute law which the Government did not feel themselves bound to notice by prosecution. (Hear, hear.) He need not then go into the reasons which prevented them from instituting proceedings against Dr. Wiseman; but he was prepared to defend their conduct in that respect as sound, wise, and discreet. (Hear, hear.) Another point which had been established beyond the power to contradict, was, that the act complained of was not a spiritual act of a spiritual authority designed for the benefit of the communion to which it more particularly referred, but was an act of sovereignty.—(Hear, hear.) It was committed by a power which exercised a mixed ecclesiastical and spiritual authority, the act of a party claiming undivided sway and absolute dominion over the realm of England. (Hear, hear.) The best argument in proof of that was the language of the document itself. Which had been so much referred to; for that document disregarded the existence of the Queen of England as much as if she were not on the throne. It was the very existence of any other church or denomination other than that presided over by the Pope of Rome and those who were called on to exercise authority under him. (Cheers.) The language of the brief, and the spiritual which accompanied it, showed that the act was not a spiritual act confined to the members of that body of which the Pope was the head, but an assertion of absolute and undivided dominion, both ecclesiastical and civil, as well as spiritual, an act variance with the supremacy of the Queen, and with rights and privileges which were dear to all the inhabitants of the kingdom. (Hear, hear.) These points had been established by proof, and the last point which had been

THE PARABLE OF THE WISE AND FOOLISH VIRGINS.—PAINTED BY F. G. SCHADOW.

FINE ARTS.

ART IN GERMANY.

The elevated tone which modern German Art has assumed, and which has aroused the attention of all the schools in Europe, may be dated from the year 1810, when Cornelius joined Overbeck at Rome, and was speedily followed by Scnadow, Veit, Schnorr, and others—having been expelled from the Academy at Dusseldorf under the same circumstances as Overbeck from that of Vienna, because they persisted in working from the life, contrary to the manner and precepts of their masters.

Some time, of course, elapsed, after the secession of these students from the German schools, before the truth of their principles began to be acknowledged. It was at Rome, in 1820, that the regeneration was first declared, and the flame kindled which now burns with such ardour and purity at Dusseldorf, Munich, &c.

The first frescoes were commissioned by Mendelssohn Bartholdy, the Prussian Consul; and the artists chosen were Overbeck, Cornelius, Schadow, and Veit, whose subsequent reputation, as well, perhaps, as that of painting in fresco itself, depended to a great extent on the execution of those works. Canova was the next to commission Veit, who executed several frescoes for him; and the example was followed by the Marchese Massimi, who enriched his villa by the works of Overbeck, Cornelius, Koch, Fuhrich, and Schnorr.

The painstaking students with whom the modern movement originated, went at once to the commencement of art, and were so charmed with the simple devotion of its ancient professors antecedent to Raffaelle, that many of them were content to remain with them. Of the results which have been arrived at by such a course of study in the German schools, we give our readers a selection, each characteristic of the style of the eminent masters whom they represent.

Our first Engraving, by Frederick Guillaume Schadow, the director of the Academy at Dusseldorf, one of the finest compositions, and perhaps the finest of the school over which he presides, is the parable of the Wise and Foolish Virgins. Schadow was born at Berlin in 1789, and made his first studies in that city under his father and Wetsch, the Court painter. In 1810 he went to Rome. In 1827 he assumed the directorship of the Academy of Dusseldorf, and since then has contributed much to the growing esteem in which that school is held.

Schadow and his pupils have adopted a new method of painting, which they believe to have been that of the ancient Venetians. They commence the picture in a monocrome or grey colour, and finish it with glazings.

The next Engraving is by Augusté Hopfgarten. The subject is "Ruth and Naomi." The old Naomi having lost her two sons, sad and resigned, is returning with her daughters-in-law to the country of Juda. Orpah is leaving them to return unto her people; but Ruth will not abandon her mother-in-law, in spite of her entreaties.

RUTH AND NAOMI.—PAINTED BY A. HOPFGARTEN.

The poetry and dignity associated with this subject speak stronger than language. The noble and severe style of the German school accords well with the sacred writings in their sublime simplicity. The characters are admirably rendered, and great knowledge is shown in the execution of the draperies. Hopfgarten was born at Berlin in 1807, and studied in the Academy, and, later, in the *atelier* of Wach, of whom he is one of the most distinguished pupils. There is no analogy, however, between their styles. In 1837 he went to Italy, where he remained till 1838, and has since exercised his talents in his native city with much zeal and success. He is a good colourist.

The third Engraving is from a fine picture by Edouard Bendeman, representing Jeremiah among the ruins of Jerusalem. This picture is, perhaps, as full of grandeur and majesty as any of the present epoch. The talent of Bendeman is of a high order, and exercised in its proper sphere. Bendeman was born at Berlin in 1811, and, being the son of a wealthy banker, has, therefore, enjoyed advantages which fall to the lot of but few distinguished members of his profession. At the age of twenty-one he produced his well-known picture of "The Captive Jews;" and, two years after, the "Jeremiah" which is the subject of the Engraving.

(To be continued.)

Balances of Public Money in the Exchequer.—The balances of public money in the Exchequer on the 8th of January, 1850, amounted to £9,748,539, and on the 8th of January, 1851, to £9,245,876. The amount issued to the Commissioners for the Reduction of the National Debt within the year was £2,333,966. The Exchequer bills issued for the payment of supply bills amounted to £17,703,820. The total amount of advances for local works, under various acts of Parliament, including £1,241,896 for drainage in Great Britain and Ireland, and for railways, union workhouses, distressed unions, &c., in Ireland, was £1,335,562. Of this amount, £1,189,359 was repaid, making the excess of advances over repayments £746,330.

A new hotel is about to be built at Boston, United States, six stories high, with a dining-hall containing 5625 square feet, and other rooms, to the number of 200, in due proportion.

David Robert Ross, Esq. (formerly M.P. for Belfast), has been appointed Lieutenant-Governor of Tobago, in the room of Major Lawrence Graeme, deceased.

Samuel Allan Wilmont, Esq., Attorney-General of New Brunswick, has been appointed Puisne Judge of the Supreme Court in that colony, in place of W. Carter, Esq., appointed Chief Justice; and Aston Davoren, Esq., has been appointed Chief Justice at St. Christopher's.

HOUSE OF COMMONS.—TUESDAY.

(*Continued from page* 123.)

In South Africa, praying her Majesty's sanction to the heads of a constitution embodied in that petition?

Mr. HAWES said that the correspondence in question would be laid before the House as soon as possible, but at present it would be highly inconvenient. With regard to the petition, he might say that it was only on Saturday that it had been received.

Mr. ADDERLEY gave notice that he would move for the papers that had been refused.

CEYLON COMMISSION.

Mr. BAILLIE rose to ask the Under-Secretary of State of the Colonies if it was the intention of the Government to oppose the motion of which notice had been given, that the evidence taken by the Ceylon Committee should be printed? Whether it is the intention of the Government to lay upon the table of the House the report of the Royal Commission which was sent to Ceylon in consequence of a address from the House of Commons in the last session of Parliament, as well as the evidence taken before that Commission?

Mr. HAWES said that it was impossible to lay before the House the papers which the hon. member asked for, as a court-martial was speedily to be held on Captain Watson, and it would be unfair to publish these papers beforehand.

Mr. BAILLIE then asked the Speaker whether, the evidence having been in its entire state submitted to a committee of the House, the document was not to be considered as being in possession of the House, and whether they were not in fact entitled to it [Question]. A question of law as a member of the House, whose character had been impugned, this was not a question of privilege, and whether he had not on that ground also a right to ask for the production of those documents?

The SPEAKER said, that, with regard to the first question, it depended entirely on the mode in which the papers in question had been laid before the committee. If they had been produced in a formal manner, and entered regularly in the Journals, they were certainly in the possession of the House, and to refuse them would be a breach of privilege for any Government department to withhold them; but if they had not been laid before the committee, the Government department in which they were could produce them or not, as they saw fit. With regard to the second question, it was not a question of privilege, but one to be decided by a motion of the House.

THE FRANCHISE.

Sir J. WALMSLEY asked Lord J. Russell whether it was the intention of her Majesty's Ministers to take any steps during the present session to extend the franchise to the members of the House to other portions of the adult male population of those realms than those now in possession of the existing franchise under the provisions of the Reform Act; or whether there was any intention to amend the deficiencies of the Reform Act of 1832?

Lord J. RUSSELL.—Sir, in answer to the two questions of the hon. gentleman, I can say, in the first place, that it is not the intention of her Majesty's Ministers to take any steps in the present session to extend the right of voting for members to sit in this House [laughter]. With regard to the second question, whether there is any intention to amend the deficiencies of the Reform Act of 1832, I have on a previous occasion expressed my opinion to the House that there were certain amendments to the Reform Bill which I thought it was desirous to make, with a view to the extension of the franchise. (Hear, hear.) I still retain that opinion, and I shall certainly carry it out when I think the proper time has arrived for doing so. (Laughter.)

AGRICULTURAL DISTRESS.

Mr. DISRAELI then proceeded to move the resolution of which he had given notice:—"That the severe distress which continues to exist in the United Kingdom among that important class of her Majesty's subjects the owners and occupiers of land, and which is justly lamented in her Majesty's Speech, renders it the duty of her Majesty's Ministers to introduce, without delay, such measures as may be most effectual for the relief thereof." Having adverted to the social anomaly of a country generally prosperous, but containing one most important interest plunged in a chronic state of depression—an anomaly at present exhibited by the United Kingdom—he said it had been his intention to have brought forward evidence of the depressed state of the agricultural interest, but it became unnecessary for him to do so now that it was admitted in her Majesty's Speech, and not disputed by any honourable gentleman on either side of the House. When Free Trade was first introduced in 1846, Sir Robert Peel said he anticipated that corn would not fall below or its then price of 58s. 6d.; but last year they had heard the right honourable Baronet declare his belief that it was hopeless to expect that it would ever rise much above its then value, which was very far below the value in 1846. Experience proved the fallacy of the calculations upon which the House was induced to embrace the doctrines of Free Trade, but the consequences will not be healed by repentance, and the Chancellor of the Exchequer would have every year exceptional. Let the harvest be great, or let it be small, prices were still low; and in either or every case the year was said to be abnormal. In 1847, the year of the Irish famine, corn could come from nowhere, and prices must rise. All these cavillations and predictions proved fallacious, and it was therefore the more requisite for the House to see if it could not itself devise a remedy for a now-admitted evil. The hon. gentleman then proceeded to argue that the matter in hand was a farmer's as well as a landlord's question, and to contend against the supposition representing rent to be an arbitrary exaction, a sort of feudal palladium instead of what it was, an economic necessity. Recent legislation was tending to reduce the agricultural hierarchy to the two classes of the proprietor and the peasant; and war was being made against the rural middle order—the best safeguard for, and the best result of, civilization. He hoped the House would understand the ground on which he stood. He was making no individual attempt to bring back Protection. If Protection was dead, it should be buried in silence and not in state. His present motion was brought forward in consequence of the alarm of Protection, for he was about to ask why the English farmer could not compete with the foreign cultivator? The reason was, the weight of taxation by which the farmer was hampered. Of the abstract amount of taxation so endured he did not complain. What he did complain of was, that the owners and occupiers of land were specially subjected to unequal pressure in their class, because taxation had been imposed under circumstances which rendered it a partial system ensuring them a good market for their productions, but which system was now removed. Let them now, then, therefore, review our whole fiscal system. By customs, excise, and local burdens, we yearly raise near £50,000,000. Of the various great items was raised by the agriculturist to grow a certain crop. A great portion constituted the value of cattle. Now, the rental raised from the owners of harvest rarely represented, with interest and the twelve millions of local burdens were extracted from the agriculturists' pockets. The hon. gentleman then proceeded to demonstrate that Britain, and particularly Ireland, was well fitted for growing tobacco, and to contend that, having protection for nothing he grew, the farmer ought to be at liberty to grow what he pleased. Turning to the malt-tax, he asked with what fairness the farmer could be told not to depend upon his wheat crop, when the malt-tax was a monopoly to the maltster that grew barley, was imposed with a crushing weight of taxation, as malt-liquor and then, addressing himself to local burdens as affecting the land, he recapitulated the attempts which he had made to introduce a reform into the system, and referred to the parties against whom the charges specially fell—the proprietors of the absolutely unproductive buildings which they were forced to provide for the general public, ought to be equally and impartially distributed over the whole of the general public. Then the malt-tax and the sugar-tax was another agricultural grievance—a passing one certainly—but meanwhile a most local burden, because the money payment had been arranged upon a scale of prices which did not now exist; so that the farmer who to pay his tithe had formerly to sell seven quarters of corn had now to dispose of twelve. Well, but against all this it was urged that if the land were specially taxed in some respects, it was specially exempted in others. To a certain extent he admitted those exemptions. He admitted that personal property paid more in probate and legacy duty than land, but even of the £2,000,000 raised under the head of property £500,000 was paid by land in agency duty, while all farming stock in trade was subject to both executions. If farmers were exempted from the window-tax, so were shops; and as manufacturers paid no duty on their machines—steam-engines, why should farmers pay taxes on their machines—horses? Paying, then, virtually one-half of the customs, two-thirds of the excise, and seven-tenths of all local burdens, the wonder was, how they kept Protection and parliamentary reform were mooted, they could not compete with barley, was indeed with a crushing weight of taxation, or not to be taxed

general rule, and given us a sly hit at the Early Christian Art School, or the Pre-Raffaellite Brotherhood, as the gentlemen in question love to designate themselves. Fancy a clean little Skye terrier, all sharpness and impudence, cocking his ears, barking up, and jerking up his expressive ear, in futile mental endeavours to fathom the mystery of the creation of a distorted Chinas monster, endowed with the vague and hazy outline of a dog, which is set upon the floor before him. In the background we have indicated a reminiscence of Millai's picture of last year, like a lightning safety-rod, conducting to itself the flash of satire struck out by the contrast of the real dog with the artificial one—"Nature and Art." Mr. Earle's clever skit excited much and genuine amusement.

Among the smaller *genre* pictures, a few deserve mention. There is Glass's "Flight—a Resting-place" (129), introducing us to a stout woman trooper fresh from an unsuccessful raid, and pulling up her blown and jaded horse at the summit of a pass. Scott's well-loved border heroes crowd upon us as we gaze—"Johnnie Armstrong," "Dick o' the Cow, or the "River of Westhumflat." A neighbouring picture gives promise, J. Drummond's "Edinburgh—Scene after the Battle of Prestonpans" (130). The group of Highlanders sharpening their daggers is very clever and effective. Dehaussey's picture of "Vandyke and his Mistress" (801) is merely unfinished by over-painting; Mr. J. Sant contributes two studies; one, the "Historic Muse," and the other "Light," both treated with great boldness of drawing and harmonious brilliancy of colouring

Holding a high place amid the paintings of its class, we may instance Mr. Thomas's carefully drawn and effective "St. Anthony's Day in Rome" an unpretending but thoroughly satisfactory picture; while Mr. Gilbert contributes a delightfully shrewd portrait of Sancho Panza puzzling his brains to decide the knotty cases which came before him as Governor of Barataria

A STORY OF THE PRESENT DAY.

CHAPTER III.

CHARITY EVEN IN STARVATION. -HEROISM OF THE POOR SPITALFIELDS WEAVER

WITH a heavy heart the little girl had gone to her bed. A curtain hung upon a rope divided off a portion of the room, and here she slept. During the day the old mattress was rolled up against the wall endways, under a patchwork counterpane; for the bedstead it had belonged to had "gone" long since, just before her mother had died of a fever, three years ago. The weaver had been angry with his daughter because she would not use the bedstead he slept on, and give him the mattress. But she wouldn't listen to him, saying he was getting old, and having always been a strange obstinate girl, she at last gained her point.

By the light that glimmered in at the window, she crept under the scanty covering to try and sleep away her wretchedness. But her brain was too fully divided off a portion of the room, and here she slept. was too full for sleep. Ah, and her father's words kept ringing in her mind, forcing the tears from her eyes Once or twice a half-stifled sob escaped from her; and then starting up, she would listen, in fear, to see if her father had noticed it; and she would hear the creaking of his bedstead and the rustling of the clothes as he seemed to writhe under the sound.

At last, unable to rest, she rose silently and went to the window. In all the garrets round about the weavers' lamps were burning with their dim red light, and the whirling of the shuttle and the thumping of the batten sounded unearthly in the stillness of the night, like the groans of those that were still offering up to the labour that crushed them. "God help them," prayed the girl, as she glanced around her

"And to-day was a holiday," she added, after a moment's silence; "a day of pleasure, when the workshop was to have been closed, and the lamps for once grow weaned with merry-making Oh! this dreadful poverty, that they've had to curse in childhood, plaited into every livery of rags upon us, so that the world should know whose slaves we are. Ah! we may struggle and struggle to cast off the curse, but it clings to us like a pestilence. As you walk the very streets, men point to our hollow cheeks, the brand of poverty, and shun us, as though each other's rags, and the whose tatters are less worn, will be the mistress. Oh! that we could escape from this life of drudgery—even to change the tyranny for that of a master."

With her head resting on the window-sill, she turned her thoughts over in her mind. She racked and racked her brain till it throbbed again, to find some means to escape from the labyrinth of want she lived in. But every opening that was all at once to set her free, but no sooner had she reached the spot, than some new difficulty would hedge her in again, and force her thoughts back into their old path once more

The old weaver was a strange sort of being. Although so deep in poverty, that he looked upon his very sleep as so much time lost, still he was obstinate on the only point that had any likelihood of bettering his fate. So long as he could stand to his work, his daughter should never leave him Once, a friend of his had told him that he thought a place out at service could be got for his girl, and had most urgently besought the old man to let her go. Kitty herself had added her entreaties. They spoke of their poverty how cruelly it trapped them; and, drawing a bright picture of the future, begged of him to give his consent. The old man had listened to them in silence till they had finished. Then taking from a shelf a roll of old memoranda, so brown with dust, that it looked like unbarked wood; he took from it a paper so time-worn, that, as he unfolded it, it seemed almost like lace-work. It was the passport of his ancestors—those who had fixed their home in this country were persecution had driven them from their own.

"Lock," he said, pointing to the date, "it's nearly two hundred years since this paper was written on. It's a long time, two hundred years. My father valued this old tattered paper as much as his father had. It isn't worth a farthing—say, not that—and yet he prized it as if it held to him some rich inheritance. And so it did," he added, proudly, "it was the title-deed that gave to him a good name, the only inheritance that can make man carry his head proudly in the world; and, thank God, I know of no act of mine that can cause me to blush before my neighbour's gaze. This girl," he continued, taking Kitty's hand, "is the last of all our numerous family. Day by day, I seek to teach her how she may live as worthily as the others have died. Think Heaven will not have in subscription and the patience that makes misery ennobling. It's true we toil long and reap little, but still the bread we eat has no bitter thought in it, for it has come honestly. Now, suppose I let this little one fight for herself. You tell me the food we shared will all be mine, that what scarcely kept life in two will fatten one. But suppose the good name we shared should all be mine also, that she, poor little one, yielding to the temptation that surrounded her, should lose the only control that poverty knew—virtue. How should I fatten on my bread then? No, no! let us live together, strengthening each other in our trials, and when we sleep in death, a good conscience will be our easy pillow."

Since that day she had never dared to speak to him on that subject again. But, as she sat turning her wheel, the same thought would rise up in her mind. Why should she not work as well as her father? With her earnings added to his, they would be as it were one person, and then she stood, the week's work must be hard and prosperous, that would supply a dish of meat for the Sunday's dinner. But if, as each Saturday came round, she had her little sum to receive, the amount *her* industry had gained, why the room might be a little cleaner, the food might be better, the clothes might be warmer, and, in fact, they might live as happily as in those happy days her father had that morning grieved over.

At last she remembered the placard she had seen at the fair.

"Five hundred hands wanted directly!" Dear, dear! what a pity she had not spoken to the gentleman then and there! She might be too late. The five hundred hands might have been engaged. It was foolish of her But on the morrow, when her father was busy at the loom, she would slip out on the sly, and run down to the 'Temple of Fashion.' It was true she knew nothing about artificial flower-making; but she would soon learn Besides, even if the five hundred hands were engaged, still the man might recommend her to some one. Again, she could work well with her needle; and she knew that many persons made a living with it. Indeed, she had heard that very large sums had been earned that way. Why shouldn't she? She could bring the work home; and, whilst her father wove his silks, she could ply her needle; and, as each day some little extra comfort showed they were more prosperous in the world, the old man would love her the more for her forethought. Ah! it was an excellent thought, that of hers."

How strange it is that nearly all women are possessed with this same notion of living by their needle! Poor things! the ground is too barren to bring forth much bread; they may sew and sew, but there is but little to reap.

Kitty still stood at the window. The lamps around her were gradually disappearing, and the street was almost in silence. The garret opposite was the only one where a light was yet burning. She was wondering to herself what could keep the people up so late (for there was no loom working), when she thought she heard a sound like some one groaning in agony. She listened again, opening the window as quietly as she could. There was the same low cry of pain. Some one was ill and suffering in the room where the light burned.

As the policeman came tramping down the street, the moans were for a moment drowned in the noise of his footsteps. It seemed as if he too had heard the sound, for he stopped and listened, and, taking his lantern from his belt, threw the bright light on the windows of the house; but he was too much accustomed to such sounds to be startled by them, so he walked on again.

Presently she saw shadows moving about in the room. The casement was opened, as if to let the air in, and then the groans were plain enough. She heard some one say, "Bring her to the window, bring her to the window," in a quick, hurried voice. But the groans grew weaker and weaker; until, at last, the window was closed, the lamp extinguished, and all was silence again.

Shivering from the night air, and frightened with what she had heard, Kitty once more crept into bed, and was soon asleep. In her dreams she was quickly at work, flower-making, for she thought the man at the booth had come to her, instead of her seeking him. The floor was covered with the roses she had made, and crowds of people stood round her, praising her work, as bunch after bunch was finished. She was startled herself; for the work she fancied would be difficult, was so easy, a child might do it. She fancied they were living in the old house her father had told her of, although it was strange, for the room she worked in was their old room, too, with the black walls, and cracked and stained ceiling. The only thing that vexed her was, that her father would keep on working at his loom. Although she called to him several times, still he never answered her, but, with his eyes intently fixed on his work, still plied the shuttle. At last she went to him, to see what could make him so busy. Then, for the first time, she noticed how pale he was; and, although she tried to shake him, she could not even move her arm, he seemed like stone. At last, with a shriek of agony, she turned to her, and, pointing to the white linen on the loom, bade her be silent, for the old man was weaving his shroud.

As she heard the words, she started up. It was daylight; the sun was shining in; and she could hear her father's voice talking to some one out of the window. Ah! it was only a dream! Thank goodness she didn't believe in them, or she would never have the courage to go near the Temple of Fashion.

On the top of the house opposite—the one where Kitty had heard the groans—stood a lad, holding a long pole with a rag tied to the end of it. It was seated on a large lath-built cage, that covered the whole of the flat part of the roof. Over his head, a flock of pigeons were flying round and round. The lad was watching them intently, every now and then, when they seemed to be flying too far away, shouting through his hands loud enough to startle a huntsman. Sometimes the birds would try to settle on their cage, but instantly the lad was at them, waving the pole and flag with the energy of a shipwrecked sailor, until every one of the birds was off again in the air

He was one of the weavers that tried to make a shilling or two by fancying pigeons. His hair, which was as long and rusty as a colt's, was fastened off his eyes by a band tied round his forehead, so that he might work more comfortably at the loom. Like a true Spitalfields man, he made rare havoc with the "s's" and "z's," whenever he spoke. He wore neither coat nor waistcoat, and over his shoulder passed one leather brace, brown and shiny with wear, which seemed to have pulled his body out of shape, for one side was as high again as the other.

"Do you know how to tell a pigeon-fancier, Joe?" he shouted across. "Well, then, I'll tell yer. Look at the back of his hat, and if the rim's bent up, he's a fancier. It's vith looking up, you see. You'll never miss; it's as sure as a tailor's being bandy." And off he went, shouting again, "Ho! hoi! hoi!"

"What sort of birds do you call yours, Joe?"

"Well, they's all sorts. There's only one sort as I've set my face agin, and they're the vilde sort. Those bars vith the dreamy colourneys dyes 'em as black as inside a spaniel's mouth. They vants vhitevashing once a veek, to make 'em look even pepper-and-salt. No; I likes my birds to be like my sister's Sunday gown—varranted not to show the dirt: she's had it five years, and it's wuss as good as new still."

As the birds came circling nearer, he shouted out suddenly, "There! there! Did you see that tumbler—down like a fit of appoplexy, and up again like a cab-horse? There's breed for you. He-o! he-o! But tumblers aint worth half they used, for I did tell you how I'd been selling 'em at fippence each in the Lowther Arcade, but I can't bring my mind to it."

"Do you make much by them?" asked Lamere.

"Vell, I aint made my fortun yet," he answered, waving his pole as he spoke "But it helps, you know; and them I can't sell, ve eats. Ve had a blue rock for dinner last Sunday; it vere as tough as blue granite, and ought to have been carved vith a chisel and mallet; but ve eat him Lays a very good foundation for a strong constitution, them rocks. I thought of trying a mouthful of mortar arter mine. I sold a very fine Grand Turk three weeks ago; he had the handsomest symmeter I think I ever see a Grand Turk vith. He'd strut about as if he vas a doing it in Regent-street. I vas bid by a party too for a pair of pouters I've got. My vord! after a blow-out, they've buzzums like hoccifers. You blow into their beaks, and they svell like balloons"

"What do they generally eat?" continued the old man, who seemed quite interested in the conversation

"He-o! he-o! Vell, I changes their diet accordin' to carcumstances. They aint very dainty, and vith a little bread and vater and a pea or two by way of a relish, they rubs on very contented. The Dragons is the most ravenous; they'll almost eat anything, they're so precious hardy. I did think of a trying them on old iron, like ostritches. It comes handy vhere a family's plenty of old saucepans—out of the pot into the pot like. The only place vhere you can vound a dragon is in the belly. They'll fight over a pea like a jury of Quakers over a verdict. But for a regular, out and out, first-rate guttler, nothing beats a Jacobin; I've got a pair here that'll eat a pint of barley, like as for a heagle, he's such a interior, that old cock has. Vhy, I've seed his yellow eyes sticking half out of his head, like brass nails on a baize door. Ah! he'd pack at that classic as no longer ago than Monday, that old cock vould."

Just then, three birds that were flying widely about high in the air, caught Joe's eye. Starting up as if he'd been sitting on a spring, he cried, "By Jove! there goes strays! Here's luck!" And he commenced shouting and shouting in a style that would have been a fortune at "fine fresh mackerel." But the birds, after answering to the call with one or two circles, at last darted off again. "Ah, they's carriers, I'll vager. Did you ever see mine, Mr. Lamere? I've took them to Primrose-hill over and over again on a Sunday morning, and they come home beautiful. Here's a message as safe as a ticket-porter of a Sunday when the houses are shut. You see, you ties the letter under the ving, and off they goes like a tippenny postman. They're the real original flying mail. Often and often I've vritten to Sarey, saying 'Chalk Farm and a quarter,' or vhatever the news may be; and I'll eat my boots that afore I've drunk it sister's a raging at me for spending the money. A better pair than mine never flew at Epsom. I'm a training 'em up to the vinner of the Darby business"

The old man, whilst the lad was busy fastening up his birds as they alighted, asked him, "Have you heard anything of Tim Bradley? I was told he had come out of the workhouse. Is it true, Joe?"

"Ah! poor fellow!" answered the lad, "it vere true. Dear, dear, vhat trials that young man has gone through! I vonder his heart aint gone down vith all that's been put upon it. Ah! I never shall forget the night his poor vife died of the cholera—never in all my life. Poor soul! she vrithed under the torture like leather in the fire. And there stood old Tim, as pale as death, but never a tear, a rubbing her as if he'd set her a fire, and panting as if he were going to die. Oh, it vas horrible! All the little 'uns huddled in a corner vith fright, like rats in a pit. And vhen in spite of him she had gone, he fell down just on the spot vhere he stood, all of a lump, like a cart-load of bricks, just as if the blow had stunned him. Ugh! that vas a night, that vas!"

"And now he's come out again, has he?"

"Yes; his father's got him a bit of work, so he came out again, and now he's a-living vith his parents. He tells me they sleep twelve in a room. It's so hot," he says, "that though the vindow's vide open all night, he can hear the young 'uns panting vith heat, like a dog in the sunshine. And yet they blames me for keeping a few pigeons, and says it's unbecoming a veaver. Is it? says I. Vell then; vhat velvet vont do, pigeons must, and that's keep me, says I."

Just then, Kitty came to the window. "I didn't like to wake you, girl," said her father. "I heard you up, moving, very late last night"

"How are you, miss?" shouted Joe, trying to be as polite as he could.

Without heeding what the pigeon-fancier said, Kitty asked him impatenly, "What was the matter in your house last night, Joe? Was any one suffering?"

"Oh! dear, no, miss," answered the lad; "it's only a poor soul that vas fetched. A bit of good luck came suddenly on her, and now she is as happy as peace and comfort can make her."

"How do you mean?" asked Lamere, whilst Kitty looked inquiringly

"Vhy she's in heaven; that's vhat I mean," he answered solemnly. "She died at last. That's good luck, I should think."

They were all silent for a moment, as if near-stricken

"What was she? What did she die of?" asked the girl quickly

"Vell, she died of the old complaint, miss, the same as vere all suffering from—starvation. She vas a constant sufferer, she vas As to vittels, vhy she used to work for a gentleman as keeps four or five carriages, and is a very charitable man, I have been told He gives 'em vays to make, tho' he actually loses by it, he says. The vomen can make as much as three shillings a veek, they can, by working hard. After paying rent, they've upvards of a shilling left to live a veek upon. The gentleman that loses by this business has just bought another country-house somevhere or other, he's going to the dogs so quick. The vomen says that they call a seamstress; and I pray God, miss, you may never be the like. It's a short road to the churchyard, but it's a very torturous one. I a'most think weaving's an easier death, I do."

The poor girl had turned ghastly white as she heard the words. The poor lad's prayer had nearly broken her heart. Luckily, her father was busy thinking over the poor seamstress's bitter lot. She seized hold of the window-sill to support herself, for her legs were tottering under her.

"So she was very poor," said the weaver half to himself

Joe thought it was addressed to him, and spoke out again: "Vell, if she varnt, it vas the best shamming as ever I see. There varnt a single thing in the room, except an old stool: chairs, bed, table—everything had gone to the house that always stands next the vorkhouse—the pawn-shop! It lies just before the gates, that shop do, miss. You always goes through it. Ugh! I vas in bed, when Sarey says, says she, 'There's the garret's groaning, Joe;' and, after listening a bit, ve heard something fall on the floor, like a bit of lead. 'Go,' says she; and up I jumped, tearing up the broken stairs, and there I found her, poor soul, still holding her cursed vork in her hand, and nearly doubled up with pain. She vas a strange old lady, she vas. I never see such pride as hers; no, never! All along she never said a vord about vant, although there vas another voman living in the house; and, you know, though ve vere pretty nigh as bad off, still she could sometimes have eaten one end of our loaf as ve gnawed t'other."

"Good lad! good lad!" said Lamere, his face brightening up at the boy's charity.

"She vere born very respectable, it appears by some papers found in a corner. Ve vas trying to find out her friends, you see. She vas an officer's child, and yet coined to this vant. There vas nothing in the room but this stool and an old plate all over cracks; it vere like a double puzzle nap when it's fun up. The parish vill bury her, I suppose"

All that morning Lamere never spoke a word as he stood at the loom. He worked harder than usual, as if he was trying to forget some remembrance that haunted him. His grit sat almost like a statue. It had been a heavy blow to her the news she had heard that morning. She almost repented for having sought it. A few words, a mere puff of breath, had blown down the air castles she had been building, making the future seem equally wretched with the present. Still, there might be some hope, she thought. The poor seamstress was not a flower-maker, as she wished to be.

As they ate their bread at dinner-time, old Lamere said to his child, "I've been all this morning repenting, Kit, for what I said yesterday. To be sure, I didn't then know how well we were favoured by Providence; and, with life strong in me, I was grumbling whilst that poor soul was dying. A good Christian, Kit, should learn to suffer patiently. We should submit, my girl; for it is beyond our knowledge to fathom the wisdom that ordained the evil we groan under. As my poor father used to say, *we should not blame the cutter because the knife cuts the finger.* It was made for a good purpose, and we should take the evil we complain of and place it on one side the balance, and on the other we will crowd our numberless blessings—the fields, the sky, the song of the bird—and we shall find the last no longer unable, our happiness will far exceed our misery. Ah, I was indeed wrong to grumble as I did, but I was ill, I think that was the cause of it. We must force ourselves to look on suffering as a blessing almost—one that softens the heart, teaching us to feel with pity the misery of others, and making us more able to bear our own. Our reward will be the consciousness that we have struggled well and conquered ourselves. The very beauty of the fight will be our glory. Which is the more noble, to slay the lion or the hare? We must look upon the mass of suffering as the school of virtue. There all evil thoughts fly at the very threshold; and as you look upon the sick-bed, or the thin pale face of the dying, all enmities are forgiven, and you feel at peace with the world. Henceforward, Kit, we will bear our evils with patience; we admire it in others, and will practise it ourselves. And, when we flag at all, I will tell you tales of men who have smiled at the stake, or have borne, without murmuring, wounds, hunger, thirst, and cold for their country's sake; and we will talk over these heroes, Kit, until we shall envy them their fate, and laugh at our own pigmy wants."

His daughter was weeping, as he took her hand, saying, "We will make atonement for our conduct, Kit; we will not only enjoy one of the blessings that suffering gives to us. A father and his little ones are without a home. Our room is large, and he shall share it. What do you say?"

Smiling through her tears, she fell upon her father's neck

"You yourself shall make the offer, my dearest one. Go, seek poor Tim Bradley; you will offer it more gently than I should."

(*To be continued.*)

CONVENTION OF NAVIGATION WITH SARDINIA.—The following are the terms of the operative clauses in the convention with Sardinia relative to navigation. The convention was alluded to in the Royal Speech at the opening of Parliament, was signed by Lord Palmerston, Mr. Labouchere, and the Marquis d'Azeglio, in London, on the 32rd ult.:—

1. No duties of tonnage, harbour, lighthouse, pilotage, quarantine, or other or similar or extraordinary duties, of whatever nature or under whatever denomination, shall be imposed in the ports of either country upon the vessels of the other country, from whatever port or place they may arrive, which shall not be imposed in the like cases on nations, vessels; and in neither country shall any duty, charge, restriction, or prohibition be imposed upon, nor any other bounty, or allowance be granted to, any goods imported into or exported from such country in vessels of the other, which shall not be equally imposed upon or withheld from such goods, when so imported or exported in national vessels.

2. All vessels which, according to the laws of Great Britain, are to be deemed British vessels, and all vessels which, according to the laws of the kingdom of Sardinia, are to be deemed Sardinian vessels, shall, for the purposes of this convention, be deemed vessels of the said countries respectively

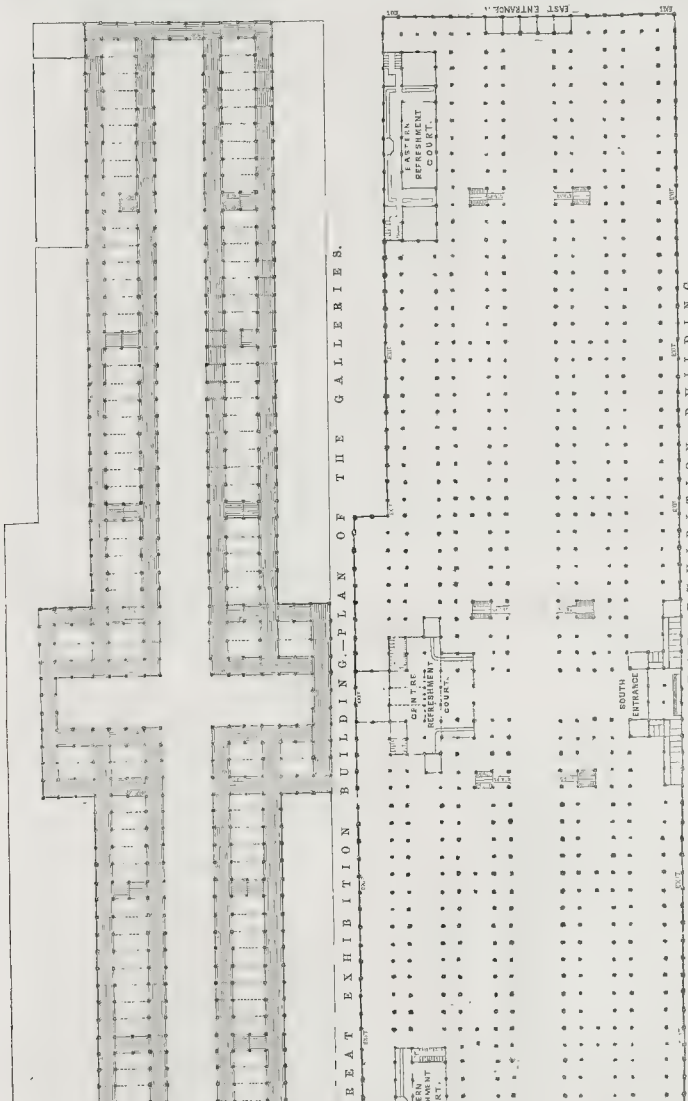
MORTALITY IN THE IRISH WORKHOUSES.—A parliamentary return, issued on Saturday, by order of the House of Commons, at the instance of Sir Wm. Somerville, exhibits in detail the terrible mortality which prevailed in the Irish workhouses during the last four years. The rate of mortality ranged from 6 to 16 per cent. of the inmates. The number of deaths in the workhouses during the year ended the 29th of September, 1847, was 68,449; in 1848, 47,756; 1849 (the cholera year), 73,170; and, in 1850, 47,498. The total number of persons relieved in the workhouse in 1847 was 420,499; in 1848, 610,578, and out-door, 419,024; in 1849, 343,307, and out-door, 310,486; and in 1850, 789,191, and out-door, 372,568. The total number for whom workhouse accommodation was prepared in 1850 was 289,531.

TREATY OF RECIPROCITY BETWEEN FRANCE AND CHILI.—The *Moniteur* publishes the text of the bill presented by M. Schneider, the Minister of Commerce, tending to assimilate the Chilian ships entering the ports of France to French vessels. The bill is composed of the two following articles:—"During the duration of the law passed July, 1850, by the Republic of Chili, for the suppression of differential taxes, and in expectation of the treaty concluded with Chili, September 16, 1846, Chilian ships entering or leaving the ports of France shall be placed on the same footing with French ships in all that concerns the navigation duties, and other taxes levied on ships. Merchandise imported into France in Chilian ships shall pay neither more nor less duty than if it had been imported from the same country in French ships" The presentation of this bill has been stimulated by a resolution notified to the Executive by the Chilian Chargé d'Affaires, according to which the vessels of powers which do not grant to the Chilian flag the benefit of assimilation to their own will be subjected in Chilian ports, first, to an extraordinary duty of five francs per ton, and secondly, to a differential surtax of 10 centimes, equal to 10 per cent. on the rates of the customs taxes already established by the tariff of importation under the national flag.

RAILWAY ACCIDENTS.—From a Parliamentary return just published, it appears that the number of passengers conveyed over the railways open for traffic, amounting to 6308 miles, between the 31st December, 1849, and the 30th June, 1850, was 31,766,203. In the same period, 3 passengers were killed and 23 injured, owing to causes beyond their control, and 7 killed and 3 injured, owing to their own misconduct or want of caution; 25 servants of companies or contractors killed and 17 injured, from causes beyond their control, and 29 killed and 10 injured, owing to their own misconduct or want of caution; 26 trespassers and other persons were killed and 5 injured, by crossing or walking on railways; and 3 committed suicide. The total number killed on all the railways was, therefore, 93, and injured, 68. The number of passengers killed was one in every 3,176,640 conveyed; and injured, one in every 892,493.

PROSPECTUS OF THE CHESS TOURNAMENT AT THE ST. GEORGE'S CHESS CLUB, IN 1851.

MOTIVES AND SPIRIT OF THE MEETING. Many circumstances of the utmost interest to Chess Players have long rendered them desirous to see a General Congress of their fraternity. In the first place, it is an old matter of regret that annoyances and obscurities, both in its laws and language, should still be permitted to impede the diffusion of a game, which, perhaps, of all until extant exercises, that are *merely exercises*, is acknowledged to be the most sharpening and bracing to the calculating powers of the mind. Until such an assemblage as that now contemplated takes place, and for which the approaching Exhibition will afford opportunities never before enjoyed, these discrepancies and imperfections are likely to continue: but from this *réunion* of the *leading* players of the age, it is not too much to expect we may obtain a revision of the general laws which regulate the game, an authoritative decision upon the differences existing between the Chess code of Italy and that of the rest of Europe, and the establishment of one consistent and uniform system of notation for the whole Chess community. In the second place, there is a very natural anxiety among those who have long been acquainted with each other by reputation, to see and know each other personally; and a desire not less natural among



the great body of Chess amateurs to fix, by a practical criterion, the real rank of the most skilful and celebrated players, and to test, by actual conflict, the just value of rival styles of chess strategy. To effect these objects, and, at the same time to prove, that, while we excel all other nations in sports of an athletic nature, we are equally anxious to cultivate proficiency in those which are intellectual, the Chess amateurs of England have determined to hold a Tournament, open to all comers from every country and nation in the world. This proposal has already met with the most zealous response, not only in the three Kingdoms, but throughout Europe, America, and the East Indies, and committees of noblemen and gentlemen have been organised in London and Paris, for the purpose of deciding and superintending the general plan of proceeding.*

CONSTITUENT ASSEMBLY FOR REMODELLING THE LAWS OF CHESS. The members of this "Chess Parliament," it has been suggested, should be elected by the great body of players present at the Tournament, who must not only appoint these representatives of the Chess Confederation, but define their duties and invest them with such authority as will give to their decisions an indisputable efficacy. Until the assembling of that body, it is therefore impossible to enter on this head into details, which it will be the office of the Congress itself to arrange.

* The names of the two Committees will be found in our Number for January 11.

CONDITIONS OF THE TOURNAMENT.

The Tournament will comprise—1. A series of grand individual matches, in which players of all countries will be admitted to contend. 2. Of matches in which only the provincial players of Great Britain and Ireland will compete together. 3 If time will permit, of a great Consultation Match, to be contested by four selected British, against four foreign players.

Manner of Play. In the great series of matches, the competitors will be paired in the following way. Suppose the number of combatants to consist of thirty-two (a number assumed for the faculty of ultimate division, they will be paired off *by lot*, and commence their games simultaneously. The *sixteen* players winning two out of three games to be declared victors in the *first section* of the serie. The sixteen losers to be excluded from all further participation in the play, except as regards the right which each one has to challenge the winner of the highest prize, according to the terms hereunder mentioned. The sixteen winners are then to be paired off *by lot* as before, the eight couple beginning their matches simultaneously. The eight winners of the first two games to be declared conquerors in this, the *second section* of the contest, and to be held entitled to the eight prizes. To determine the order in which the prizes shall be distributed, the eight prize bearers will then be paired off against each other, as before, each couple to play the best of three games. The four winners in the third contest will then be paired off by lot again, and play the best of three games; while the four losers will be paired off in another division, to play in the same manner. The four winners in the first division of four will then contend for the *first* prize—the second prize going to the loser. The two losers will play for the *third* prize, the *fourth* prize going to the player beaten. The two winners in the *second* division will, in like manner, contend who is to have the *fifth*, and who the *sixth*, prize; and the two losers contend who is to have the *seventh*, and who the *eighth*, prize. This *last set* of matches between the eight winners will be commenced simultaneously, and in each match the winner of the first four games shall have the higher prize.

NUMBER AND AMOUNT OF THE PRIZES, after deducting all necessary expenses.—The First Prize will consist of a sum not less than *one-third* of the net amount of the funds collected. The Second Prize will consist of a sum not less than *one-tenth* of the net funds collected. The Third Prize will consist of a sum not less than *one fourteenth* of the net funds collected. The Fourth Prize will consist of a sum not less than *one-twentieth* of the net funds collected. The Fifth Prize will consist of a sum not less than *one-thirtieth* of the net funds collected. The Sixth Prize will consist of a sum not less than *one-fortieth* of the net funds collected. The Seventh Prize will consist of a silver cup, with commemorative inscription; or, at the option of the winner, of a sum not less than *one-sixtieth* part of the net subscription. The Eighth Prize will consist of a large (club size) set of ivory Chessmen, with suitable Chess-board, inscribed with the winner's name and victory.

THE PROVINCIAL MATCHES.

The competitors in these contests will be paired by lot as in the previously mentioned cases, and, again assuming the number of thirty-two, the sixteen couple will play one game each. The sixteen winners will again be paired by lot, and play one game each. The eight winners will then in like manner be paired off, and play one game each; and the four winners will then be entitled to the prizes. These four will cast lots for competitors, and each couple play a rubber of three games. The two winners of this rubber will then play another rubber, to decide who is to have the *first* and who the *second* prize; and the other two will play a rubber, to decide who is to have the *third* and who the *fourth* prize.

NUMBER AND AMOUNT OF PRIZES IN THE PROVINCIAL MATCHES.—The first prize will consist of a sum not less than *one-twentieth* of the net funds collected. The second prize will consist of a handsome silver cup, with suitable inscription. The third prize will consist of a large set (club size) ivory chess-men, and suitable board, inscribed. The fourth prize will consist of a set of small size ivory chess-men, with handsome board, inscribed.

CONSULTATION MATCH.

This match, it is proposed by the committee, shall consist of the best of seven games played by four chosen British players, consulting together, against four foreign players from any part of the world, also consulting together. The prize to be a sum divided among the victors, of not less than one-tenth of the net funds collected

RULES AND REGULATIONS OF THE TOURNAMENT.

1. The Tournament to be played at the St. George's Chess Club.

2 The names of all competitors in the Tournament must be sent in to the Managing Committee on or before the *26th of April*. After that period no one will be allowed, under any circumstances, to enter.

3. The Tournament to commence with the competition for the General Prizes on *Tuesday the 27th of May*; but the whole of the combatants will be required to be present at the St. George's Chess Club on the previous day, when they will be paired by lot, and the hours and days of play appointed.

4. The competition for the Provincial Prizes to begin on *Tuesday the 3rd of June*; but the whole of the combatants will be required to be present at the St. George's Chess Club on the previous day, when they will be paired, and the hours and days of play decided on. Each competitor to these prizes to pay an entrance fee of one guinea.

5. The competition in the Consultation Match will not commence until the previous contests are concluded, and of this due notice will be given. There will be no entrance-fee for this match.

6. The prizes in the general *melée* will be open for competition to all the world, but, to guard against an influx of inferior players, who might protract, but could in no way add to the interest of the contests, a subscription of *five pounds* will be required from every one entering for these prizes, which subscription must be paid previous to, or on the day before the play begins.†

7. The mode adopted for pairing the combatants will, it is hoped, bring the two *best* players in the Tournament into collision for the chief prize; but, as this desirable object might be frustrated, the Committee have decided that the winner of the great prize shall hold himself open, for forty-eight hours, to accept a challenge for a single match with any competitor in the Tournament who shall first challenge him, for one hundred pounds a side.

8. The games to be played in accordance with the rules of the chief European Chess Clubs, and all disputed points referred to the Managing Committee, whose decision must be considered final.

9. Any player failing to attend within half an hour of the time appointed for the games to be played, must forfeit one guinea to the fund, for each and every non-attendance; and after three forfeitures for absence, he will not be permitted to enter the lists again.

10. One game at least to be played by each pair of combatants at a sitting, unless it be protracted above *eight hours*, when by mutual consent it may be adjourned to the next day.

11. For non-attendance, *on one occasion* only, a medical certificate will be allowed to excuse the absentee from penalty.

12 As the Managing Committee guarantee to every subscriber of a guinea and upwards a correct copy of the whole games, and as considerable expense must attend the recording of so many games and their subsequent publication, it must be understood that no one will be allowed, in the first instance, to publish any part of them, without the express sanction of the Committee.

13. Every player entering the lists in the Tournament must consider himself, *ipso facto*, bound by all regulations issued by the Managing Committee.

5, Cavendish-square, London, Feb. 8th, 1851.

† Throughout the play in the Tournament, it is to be understood that drawn games do not count.

‡ The Committee reserve to themselves the right of waiving this fee, in the case of any very eminent player from abroad, who may have incurred great expense in attending the Tournament.

LETTERS TO POLAND.—A Post-office circular gives notice, that henceforward, letters for Poland, transmitted through Prussia by way of Belgium or Holland, or Hamburg, will be liable to reduced rates of postage in lieu of the rates heretofore chargeable. These letters may be forwarded unpaid or paid. Letters for Poland will be sent through Prussia, by way of Belgium, unless specially addressed to be otherwise forwarded, and the rates of postage by the route must be taken upon such letters when paid in the United Kingdom.

SPORTING IN CEYLON.—The Earl Grosvenor, who, for some years has regularly visited the Highlands on grouse-shooting and deer-stalking expeditions, has now adventured on higher game, having arrived at Ceylon on an elephant-shooting excursion. The *Colombo Observer* states, that his Lordship, accompanied by the Hon. Frederick Leveson Gower and Captain Egerton, The *Observer* welcomes the noble party, and assures them that every elephant killed is a benefit to the country.

THE CHASE AND THE RAILWAY.—A singular accident occurred in the course of a run with the Surrey hounds. The fox made for the railway where a steep chalk cutting, about 80 feet, and quite perpendicular, is crossed by a bridge. The hounds were about five minutes behind the fox, and the first seven couple went clean down the cutting on to the rails. Eleven of them were killed on the spot, and the other three have either died since or been destroyed. The two whips, assisted by several gentlemen, hauled the bodies off the line by means of ropes. The fact was not known to the huntsman nor to most of the field, for, within half a minute after the check came to at the rail, a "view halloa" was raised behind, and the remainder of the pack, comprising fifteen couple, were laid on to the second fox, and the field of course followed. It is not known whether the fox went down the cutting, but probably he knew the place and ran some way along the edge behind the embankment, and then doubled back.

BOG SLIP ON ABERDARE HILL.—During the continuance of the late heavy rains, a large tract of boggy ground on the side of this hill, adjoining the road, moved a considerable distance, and spread completely across the road. Many years ago a similar circumstance occurred on the same hill. On Sunday it was visited by several hundreds of people from Merthyr and Aberdare, and a gentleman, either inadvertently or imprudently, went into it with his horse, and there stuck fast, so that it was found necessary to obtain ropes to drag the animal and its adventurous rider out of the bog.

The official appointments have been made for the colony of South Australia; viz. Captain Charles Sturt, Colonial Secretary; Boyle Francis Finnis, Esq., Colonial Treasurer, George Frederick Dashwood, Esq., Commissioner of Police, Australia; and Richard F. Newland, Esq., has been appointed Resident Magistrate for the port of Adelaide.

THE ILLUSTRATED LONDON NEWS

No. 471.—Vol. XVIII.] SATURDAY, FEBRUARY 22, 1851. [Sixpence {WITH SUPPLEMENT, GRATIS.

THE BUDGET.

The Chancellor of the Exchequer has introduced the Budget. Much was expected from him on this occasion. He had a surplus to deal with, and an opportunity of showing that his wisdom as a financier was worthy of his responsibilities. Never did a Minister in such a position so wofully disappoint expectation.

The speech in which the right hon. gentleman embodied his financial statement fell upon the ears of an attentive, but a cold and unapproving auditory. There was not an independent or Opposition member in the House, or even a friend of the Government, who did not feel that the weakness of the Administration was exposed in its most important department; and that—after such a display of utter want of comprehension of the feeling of the country, of the philosophy of finance, and of the necessities of the tax-paying community—the doom of the Administration was only postponed, until it was worth the while of the Opposition to displace it. Since the delivery of the speech the feeling generated in the House has extended through the country, increasing in intensity the more the Budget has been discussed, and the more the eyes of the people have been opened to the extraordinary and almost incredible wrongheadedness and blundering of the Government in a department which more than any other in these times requires wisdom and foresight to conduct it.

The whole scheme is based upon the renewal of the Property and Income-tax for three years. It might have been imagined, considering the importance of this subject, not only in itself, but as the only possible foundation for those reductions of taxation which the country has a right to expect, when its present and proximate income exceeds the expenditure, that care would have been taken to remove the universally admitted dishonesty of the impost as now levied. But Sir Charles Wood needlessly, and as if from the very wantonness of official despotism, has refused to give himself the slightest trouble in the matter, and proposes to perpetuate the gross immorality of mulcting precarious income to the same extent as realised property. With the most provoking coolness, he admits that "perfectly good arguments may be adduced against the injustice of schedule D;" but persists, without argument to prove his statements, "that, upon the whole, the only fair and practicable mode of proceeding is to tax all income alike," whether derived from houses and lands, worth 20 or 30 years purchase, or from the brains of the professional man, dependent upon life, health, and sanity, and which in any individual case may not be worth the purchase of a twelvemonth, or even of a day. Although the cruelty of the tax in this respect is proved to have led to its systematic evasion by a large class of the people—who agree that it is not dishonest to deceive a dishonest Government—the iniquity, so easily to be remedied, is to remain in full force, to be a perpetual source of wrong and annoyance to the most valuable classes of the community; and to keep up an irritation which cannot possibly have a good, but must inevitably produce a bad effect upon the minds of men whom a wise Government would, above all things, endeavour to satisfy and propitiate. The Property and Income-tax was originally submitted to with all its proved hardship, because it was understood that its operation was to be temporary; and because it was not worth while, under such circumstances, to defeat the great measures of permanent good that were to flow from it. But now that it is to be a regular item in the ways and means of the country, it is a gross dereliction of duty on the part of the Ministry to refuse to reform it. If we must endure such an impost, it must be made equitable. The Property-tax must extend to all property, under, as well as above, the arbitrary line of £150 per annum drawn by Sir Robert Peel; and it must have regard to those principles of public as well as private morality, in the distinction between income from realised property and that from precarious exertion of mind or body, which can alone give it a title to the respect of the people. In its present form there will continue to be an agitation against it on the one hand, and an evasion of it on the other; accompanied in both cases by a continued sense of injustice, and a strong feeling of irritation against the gratuitous folly of the Government which imposed or perpetuated it.

But this is not all. Even if this tax were made as equitable as could be desired, and if all reasonable ground of complaint against it were removed, the Budget would in other respects be a monument of Ministerial incapacity to understand or deal with the great financial questions of our time. With a surplus which might have enabled the Government to do positive good, in freeing industry from the trammels still left upon it, or in untaxing the light and air of heaven—the Chancellor of the Exchequer has contrived a complex scheme, which, if carried, will sacrifice his surplus without giving satisfaction to a single class or interest. In the first place, the repeal of the Window Duties has been framed on so ridiculous a principle, and in so confused and intricate a manner, as to do the least possible amount of good, at the greatest possible cost. Windows are no longer to be taxed; but all houses already built are to pay two-thirds of their present assessment for windows as a permanent house-tax, while houses hereafter built are to pay a house-tax of five per cent. on the rental. Why a distinction should be made between houses built and unbuilt, would puzzle anyone but our sagacious Chancellor of the Exchequer. To show the folly, as well as injustice of the distinction, the following case will suffice. There are, within our knowledge, in a certain district of London (which need not be more particularly specified), a row of houses let at from £70 to £75 per annum. These houses pay window-tax on twenty-seven windows, or openings, or £8 11s. per annum. By the plan of Sir Charles Wood, they will be liable to a permanent house-tax of £3 14s. Precisely similar houses, if built hereafter, and let at the same rental, will have to pay only £3 15s. The "force of bungling can no further go." We are willing to admit that a house-tax is better than a window-tax; but, that a Minister should so wilfully run his head into an absurdity, in striving to get rid of a wrong, passes our comprehension altogether.

Then, again, the Chancellor of the Exchequer proposes to pay off a million of the National Debt. The policy of this, at the present time, is exceedingly questionable, when, as Mr. Hume showed, for every £100 of debt which had been funded at £86, the nation would have to pay at the rate of £96. This, it must be admitted, is a very bad investment of the surplus, or of any portion of it. Surely it would be far better to untax industry, and thereby lay the foundation for a still larger surplus than is now at disposal, than to pay about a farthing in the pound on the National Debt, and leave such branches of industry as the manufacture of paper and soap to be burdened, as they now are, with excise duties which prevent the remunerative employment of from a quarter to half a million of people. Sir Charles Wood, however, does not seem to be of this opinion; an error of judgment which, it is to be hoped, the House of Commons will help him to rectify.

The reduction of the duties on coffee will give but little satisfaction to any one but the retail grocers, who will, in all probability, be the only parties benefited by it. The English are not pre-eminently a coffee-drinking people; they prefer tea. The reduction of the Tea duties, while it would have tended to increase our trade with a very rich country, and which might have been effected without any ultimate sacrifice of revenue, would have been attended with the greatest benefit to the poorer classes of this country. But then such a question required energy, courage, and comprehensiveness of views; and, failing these on the part of the Government, a peddling, pettifogging, insignificant reduction in the coffee duties has been substituted for the wiser and larger measure which sound policy would have dictated.

The reduction of the duties on foreign timber and foreign seeds are, as far as we know, unobjectionable; but why these items should have been selected from amid the mass of infinitely more important matters that call for revision, we confess our inability to account for, unless it be that Sir Charles Wood likes to deal in

THE CHANCELLOR OF THE EXCHEQUER (RIGHT HON. SIR CHARLES WOOD) INTRODUCING THE BUDGET IN THE HOUSE OF COMMONS.

surprises, and to shower his benefits in quarters where they are not expected.

Some of these changes are offered as boons to the distressed agriculturists—especially the substitution of a house for a window-tax, and the reduction of the duty on grass and clover-seeds. Whether the agriculturists will be grateful for either, remains to be seen. A third boon offered to them is the transfer of the cost of maintaining pauper lunatics from the county rates to the Consolidated Fund. Upon this principle, we cannot see why the whole of the poor-rates should not be transferred in the same manner. There is as much argument for the one transfer as for the other. But, from beginning to end, the Budget is one huge blunder; the more unpardonable because the Chancellor of the Exchequer confesses to some of the evils which he refuses to remove, and endeavours to perpetuate wrong, apparently because he will not be dictated to as to the manner in which he should do right.

If the opposition are ready to turn out the Ministry, and are prepared with a plan of finance, they have now an opportunity for action. Possibly Lord Stanley and Mr. Disraeli are not prepared; but, in any case, we much question whether it will be possible for

the Ministry to carry such a Budget as this. They *may* outlive the discredit that it will bring upon them, but it will not be for any lengthened period.

FOREIGN AND COLONIAL NEWS.

FRANCE.

Political affairs at the present moment in France are in a perfect state of calm the natural reaction resulting from the recent excitement of the discussions between the Assembly and the President of the Republic.

Louis Napoleon has accepted with an appearance of stoical *nonchalance* the refusal of the Assembly to increase his income, and is preparing to reduce the expenditure of his establishment. His expensive receptions at the Elysée have been stopped, and a sale of twenty-one of his saddle and carriage-horses is announced for the 26th inst.

The question of an amnesty, which has been mooted by the Mountain, is exciting increased attention, and it is thought probable that it will be carried.

Considerable preparations which the Government is making in the organization of the National Guard of Paris, are laid hold of by those who look upon everything done by the Government as a fresh attempt on the part of Louis Napoleon to arrive at the Empire. The army of Paris has, it appears, been divided into four divisions, instead of two. The opposition papers say that the effect of this measure has been to diminish by one half the number of troops under the command of General Perey, who is at the head of the troops intended for the defence of the Assembly. They also say that General Jubien, who commands a brigade of the army of Paris, is removed, because, in the course of a private conversation, he made a declaration condemnatory of the court paid by Louis Napoleon to the troops at the reviews in autumn last, and similar to the one which led to the removal of Gen. Neumayer. In short, they insinuate that the Government is preparing the army in such a manner as to bring it to bear in favour of the cause of Louis Napoleon, whatever may be the determination of the Assembly with respect to the revision of the Constitution. In other respects the journals are without interest, being mostly occupied with the debates in the *Assemblée* on the proposed organic law respecting communal and departmental administration.

The first cargo of French articles, consisting of 1200 packages, for the Hyde-Park Exhibition, left Paris on Tuesday for Dunkirk, thence to be transmitted to Ostend, on its way to England.

ITALIAN STATES.

Advices from Geneva, of the 17th instant, mention the arrival there of the celebrated Roman chief Garibaldi, whose object, it is said, is to get up an expedition to operate in Italy, at the commencement of spring. Mazzini is actively employed in forwarding the contemplated plan of insurrection. [illegible] to the loan organized by Mazzini for revolutionizing the various Italian States, it is said that in Genoa his success has been greatest. Piedmont has furnished 897,000 francs; the Roman States, 435,726fr.; the Two Sicilies, [illegible] Lombardy, 516,363fr.; the other petty States, 294,511fr. The investigation of the French authorities into the recently discovered Lyons plot has led to the traces of a vast conspiracy, which prepared a revolution at Naples and Rome. This discovery has led to some arrests at those two places.

GERMAN STATES.

It is very generally understood (though the intelligence still needs confirmation) that Austria and Prussia have succeeded in carrying, at the Dresden Conference [illegible]nition by which not only the non-German provinces (Slavic, Polish, Hungarian, &c.) of both nations, but also the Italian provinces of Austria, are to be represented in the new Diet of the German Confederation, and that France and England have strongly protested against the measure, as being likely to lead to the destruction of the balance of power amongst European nations, by giving too great an influence to Austria.

The desire of Prussia to recover her Protectorate, in all its full power and influence, over the Swiss Canton of Neufchâtel, and the dissatisfaction of both Austria and Prussia at the countenance given in the Swiss Cantons to the Italian and other foreign revolutionary refugees, have produced an estrangement between the Governments of the German States and the Swiss Confederation. Likely to need the intervention of France or England to restore friendly relations between them.

TURKEY.

Advices from Constantinople of the 8th inst. state that there had been some sharp fighting between the Arabs and the Turks at Bagdad, when the former were defeated, with the loss of 30 men killed. The Arab chief, Sheik Asail was among the wounded.

UNITED STATES.

There is no political intelligence of any importance in the accounts received from New York this week, which are to the 5th inst. The principal topics are the gross accounts of the loss of the steamer *John Adams* on the Mississippi: no fewer than 193 of her crew and passengers drowned.

In Congress the Branch Mint Bill had been under discussion, and New York excluded from the operation of it.

The Constitutional Convention of Indiana has, by a decisive vote, excluded negroes and mulattoes from hereafter settling in that state. It is further decided that all contracts with such persons shall be void; that any one employing them or encouraging them to remain in the state, shall be liable to a fine from 10 to 500 dollars; and that one-tenth shall be appropriated towards the gradual colonisation of the negroes now in the state. This article is to be submitted to a separate vote of the people.

The frigate *St. Lawrence*, with articles for the Great Exhibition, was nearly ready for sea, having taken on board nearly all the contributions, numbering about 500.

It is said that Sir H. Bulwer has addressed a letter to Mr. Webster, in which he states that the Clayton treaty had no reference whatever to the Mosquito Protectorate," and that it has been entirely superseded by the Arbitration Convention of San Juan de Nicaragua. This letter Mr. Webster has laid before the committee of foreign relations.

Nicaragua accounts to Dec. 31 report that the port of San Juan had been made free to all nations. The canal operators were rapidly progressing, the steamer directors having succeeded in getting on the lake.

INDIA.

We noticed in our Postscript last week a telegraphic despatch, received viâ Trieste, briefly communicating intelligence from Bombay to Jan. 17, and Calcutta Jan. 7. Fuller accounts have since arrived. Except in the Nizam's dominions, tranquility prevailed throughout India. The interview between the Maharajah Gholab Singh and the Governor-General was celebrated with great splendour on the 26th of December and succeeding days, at Wuzeerabad. Gholab was accompanied by his son, Rajah Meea Runbeer, and Colonel Steinbach, the commander of his army, of which about 2500 men formed his escort. The chiefs were received at the durbar tent with all the pomp imaginable, the whole of the troops being drawn up for the occasion. The Governor-General wore the full dress of a minister of state, with the star, ribbon, and collar of the thistle; the members of his staff, &c. also wearing their several decorations. The Maharajah was splendidly dressed, but not so his attendants. His entire suite, to a man [illegible] but had dyed his beard black, to make himself appear younger. The [illegible] of the chiefs having offered gifts in cash, the presents intended for them in return were brought in and exhibited, the Maharajah's consisting of an elephant with a silver howda or chair, two horses, and forty-one trays of miscellaneous articles. The usual ceremony of presentation of nuzzurs, taking and friendship on the part of both rulers towards each other was exchanged, and the tamasha ended. The next afternoon the Governor-General returned the visit, accompanied by Sir H. Lawrence, Sir H. Fane, Sir H. Elliot, and a host of others, all mounted on elephants, the noble Marquis seated in a splendid new howdah, which is said to be the most magnificent thing of the kind ever made. The Maharajah's son was so far as his dignity can go to show it, like unto his father, that of his sire, who had advanced nearly a mile for the purpose of doing honour to his illustrious visitor: the Marquis only accompanied his guest the previous day from his seat to the centre of the carpet in the durbar tent. The interview terminated with a review of the British troops under Major-General Gilbert.

The health of the troops throughout the Punjaub was steadily improving, though the hospitals were still crowded.

At Bombay the cholera is much abated, and its visit has given an impulse to the progress of sanatory improvement, which is likely to be permanently beneficial.

The Bombay railway is proceeding satisfactorily.

In Bengal, a commission has been appointed to make the most complete investigation into the whole organization of the commissariat. The alleged frauds in this department, and the claims commonly made against it for large unadjusted balances, have lately occasioned a good deal of comment.

The act for taking land for railways in Bengal has scarcely yet come into effective operation, some doubts, though apparently without sufficient reason, have been at first entertained regarding its sufficiency.

CHINA.

The accounts by the Overland Mail from Hong-Kong are to December 30. The disturbances by the rebels in the Kwang-tung and Kwang-si provinces were at an end.

It was generally reported at Canton that Commissioner Lin was dead. He had been sent by the Emperor to put down the rebels in the Kwang-si district, not [illegible] far from Canton. From the energy of his character and the dread entertained by his countrymen, his death may be considered a loss for the [illegible] Government, as the consequences resulting to Canton, by his acts in [illegible] were [illegible] in six weeks, and by the success of the [illegible] rebels.

[illegible] killed among her Majesty's 59th Regiment upwards of [illegible] hospital.

Two Swedish missionaries at Foochow, in the early part of December, returning from a recess, with a small amount of money for their personal wants, were attacked by pirates. One (Mr Fast) was killed; and the other was severely wounded, but escaped by jumping into the water and swimming ashore. The native authorities were very prompt on this occasion in discovering the perpetrators and inflicting punishment.

IMPERIAL PARLIAMENT.

(Continued from Page 150 of the Supplement.)

HOUSE OF LORDS.—TUESDAY.

AGRICULTURAL DISTRESS.

Lord Stanley presented petitions from Devonshire, very numerously signed, complaining of agricultural depression, and attributing that depression to the Free-trade measures of recent years. (Hear.) The petitioners prayed that their Lordships would pass measures for the revision of the tariff, and complained of the past measures as a system of one-sided Free Trade, under the operation of which all their best exertions were paralysed. They prayed, also, for a revision of the present Navigation Laws, for the imposition of such an amount of import duties on foreign produce as should be equivalent to the higher taxation paid by the home producer, and for an alteration in the currency laws. The noble Lord added, that such a state of things as was represented to their Lordships by these petitioners surely deserved their most serious consideration. (Hear.)

The Duke of Richmond presented a great number of petitions to the same effect, and numerously signed, from various parts of the country.

The Earl of Hardwicke then rose, in accordance with the notice he had given, to present petitions from Cambridgeshire, complaining of agricultural distress, and said, that he trusted that those petitions would be considered by their Lordships of sufficient importance to have justified him in giving notice of his intention to call their attention to that subject—(Hear)—more especially as he was desirous to have an early opportunity of expressing his opinion as to the state and condition of the agricultural interest. (Hear.) The noble Lord entered into an elaborate detail of the condition and sufferings of the classes interested in agriculture, alluding to the various prophecies that had been hazarded, at the time that, and since, the Corn-law Repeal Bill was discussed, predicting the speedy diminution of the imports and restoration of the price, of which the noble Earl declared that all these predictions had been falsified by the result. Every symptom showed that the disasters foretold as that (the opposition) side of the House were rapidly becoming realised, and the owners and occupiers of land drawing step by step nearer to their ruin. He inquired to what source the Ministry looked for the confident hope which they had made her Majesty express in the advent of better times, and then proceeded to illustrate, by copious appeals to documentary and statistical returns, the prevailing distress in his own county of Cambridge, which included not only the landowners and farmers, but the labouring classes of all descriptions and employments. Turning to the foreign trade, his Lordship denounced that enormous quantities of grain were pouring into the country from various quarters at low prices, and promised hereafter to be still larger and cheaper. He proceeded with a variety of quotations to show that the nations who exist on their corn purchased so more of our manufactures in consequence, and argued that there was a larger and incessant drain of capital as a consequence of this unfavourable balance of trade. He insisted upon the necessity of retracing our steps, and dwelt upon the injustice that was committed when all classes connected with the land—owners, occupiers, clergymen, and labourers—were suffering from the effects of the policy now pursued, that the Chancellor of the Exchequer should be the only person who would not consent to bear his proportion of the general depression.

The Earl of Granville said the advocates of Free Trade had only prophesied the extension of our commerce, and the consequent increase of the prosperity of the people, which had been most abundantly fulfilled, as was proved by the increasing value of our exports, and the continued surplus in the Exchequer. He believed that this improvement extended to the farmers, the reason from whose increased skill were becoming progressively developed. The noble Lord concluded by challenging the leader of the opposition to the Government to declare at once what he proposed to do, in order that the farmers might be kept no longer in a state of suspense.

The Duke of Richmond would undertake to prove the existence of severe distress amongst the agriculturists, leaving it to the Government to provide the remedy. There was a scarcity already prominent of employment for labourers, although the hundreds and farmers were giving work to much greater numbers than they required or could afford, in order to enable them to live. This was a course which could not last, and then they might anticipate the increase of crime, the filling of our prisons, and the endangering of public tranquility. He condemned the malt-tax as both unjust and obnoxious, pressing with great injustice on the labouring classes of the community. It was impossible that the heavily-taxed British farmer could compete with the lightly-taxed foreign farmer; and the loss of the home trade, which must follow the depression of agriculture, was very quickly put down to the manufacturer by the same level of ruin as the agriculturist.

Lord Wodehouse honestly believed that in the county of Norfolk the condition of the agricultural labourer was more favourable than it had been for the last few years, as was proved by the diminished returns of pauperism and other evidences. He could scarcely think that any party in the country would be bold enough to reverse a policy which had produced such gratifying results.

The Earl of Strathmore was astonished that the distress amongst the agriculturists should be for one moment questioned. The remedy he advised was to abandon class taxation, which was producing such mischievous results since class protection had been withdrawn.

The Earl of Winchilsea denied that the difference between the price of wheat promised by Sir R. Peel and that which now prevailed had swallowed up the whole rental of the land. During the last two years, the cultivators of the soil had shown that they were not beyond the reach of high farming could, under the present state of things, render farming profitable. The country was, however, now aware of the truth, and the question would be settled by the next dissolution of Parliament.

The Earl of Malmesbury said, that, as the distress of the agriculturists was admitted in the Speech from the Throne, it ought to have been followed by a resolution declaring the necessity of some measure of relief, as in the course of next week for effecting a general change in the administration of justice in the Court of Chancery

In reply to a question from Lord Stanley, the Lord Chancellor said it had not as yet been decided as to which House of Parliament the measure should be brought forward in. Adjourned.

HOUSE OF COMMONS.—TUESDAY.

NEW MEMBER.

Mr. Barrow took the oaths and his seat for South Nottinghamshire.

The second reading of the Great Northern Railway (No. 3) Bill was rejected on a division by 102 to 46.

SUPPLY OF WATER TO THE METROPOLIS.

Sir G. Grey moved that it be an instruction to the Committee of the whole not to fix the sitting of the committee on any bill connected with the supply of water to the metropolis, and that no private bill for that purpose would not say founded on the scheme of the board, but which, if it received the sanction of the House, was a ready extremely desirable that no new bills on the subject should be brought forward until the report of the board was before the House. He therefore proposed, as the fairest course which could be adopted under the circumstances, that these bills should be deferred until after Easter.

SUPREMACY OF THE CROWN.

Mr. John Stuart asked Lord John Russell, whether any of the law officers of the Crown, for England, or Scotland, or Ireland, had given any opinion to the effect that, in order to the vindication of the supremacy of the Crown against the assumption of the Pope of Rome, it was necessary or expedient that the [illegible]t of penalties and disabilities against the Protestant Bishops of the Scotch Episcopal Church should be enforced by the sanction of Parliament? Whether those any such opinion had been given, there was any objection to lay a copy of such opinion before the House.

Lord J. Russell said, it was usually the practice of the Government to ask the opinion of the law officers of the Crown as to the state of the law, when any occasion arose for doing so; but it was not the practice to ask their opinion with regard to measures which Parliament might be asked to legislate upon. He was not aware that any opinion had been given such as the hon. gentleman mentioned, but admitting freely that the law on the subject of patronage might be susceptible of great improvement, he should not oppose the appointment of a committee.

The appointment of the committee was then agreed to.

THE COUNTY FRANCHISE

Mr. I. King moved for leave to bring in a bill to make the franchise in counties in England and Wales the same as that in boroughs, by giving the right of voting to all occupiers of tenements of the annual value of £10. The hon. gentleman contended that a great deal had been done in various parts of England a great decrease in the constituencies, and a similar diminution had been the chief argument in support of the Irish Franchise Bill of last session: he thought it was at present a good ground for adopting a similar course towards England.

Mr. Hume seconded the motion.

Lord J. Russell admitted that the class of persons whom this alteration of the law would enfranchise were those who were persons who would be like y to exercise it with great discretion; but the question they had to consider was, whether it would really be an improvement on the present system of representation of the country. He had always been of opinion that the Chandos clause of the Reform Bill had diminished the influence of the class of independent freeholders of the counties, and as the proposition would carry that clause into still further operation, and still further diminish the influence of the freeholders, he could not privately his assent. It was to be remembered, at this last [illegible] not only to the case of Ireland, where the forty-shilling freeholders had been already totally abolished. He was, on the whole, of opinion that at this change would not improve our representation, and would therefore oppose the motion of the

estimate in the Miscellaneous Estimates, and probably it would be No. 1, but he could not say precisely.

To a question of Mr. Higgins, viz. whether it is the intention of her Majesty's Government to introduce any measure this session for the regulation of grand juries in Ireland? Sir W. Somerville was understood to reply in the negative.

Mr. Keogh asked, whether it was the intention of the Government to place any Roman Catholics on the Commission of Inquiry into the University of Dublin?

Lord J. Russell said, the commissioners were appointed on the recommendation of Lord Clarendon, and he (Lord J. Russell) could not then say whether there was a Roman Catholic among them or not.

Mr. P. Scrope moved for a select committee to consider the expediency of assimilating the poor-laws of England, Scotland, and Ireland, and promoting the productive employment of able bodied paupers. His object was to obtain uniformity in the poor-laws of the kingdom.

The hon. gentleman was proceeding to unfold his project, when, on an hon. member's moving that the House be counted, which was done, and there being only 37 members present, the House stood adjourned at six o'clock

HOUSE OF COMMONS.—WEDNESDAY.

The House met at noon

NEW MEMBER.

Mr. Knox took the oaths and his seat for Dungannon.

JEWISH DISABILITIES.

Lord J. Russell gave notice, that on Monday next he would move for a committee of the whole House to take into consideration the oaths of abjuration, as affecting those professing the Jewish religion. (Hear.)

COMPOUND HOUSEHOLDERS.

Sir W. Clay moved the second reading of the Compound Householders Bill. It was the same in word for word and letter, as the bill of last session, and was to remedy what might be described as an accidental omission in the Reform Act. Under that act the franchise was conceded to all £10 householders occupying for a certain period and paying their rates. Unless, however, the name of the occupant appeared on the rate-book, he was not entitled to vote. In all parishes, however, there were many houses which had been compounded for in respect of the rates, and the names of whose occupiers, therefore, did not appear in the rate-book. Many of these houses, however, were of greater value than £10 per annum, and yet their occupants were not entitled to vote out of them, in consequence of the non-payment of the rates by the landlords, although they occupied in all other respects within the provisions of the Reform Act. The bill was to remedy that defect, and to make the tender of the rate on the part of the occupant sufficient title to the franchise.

After some discussion, the bill was read a second time.

PUBLIC PROSECUTIONS.

Sir G. Grey moved for leave to bring in a bill to amend and render more uniform the law relating to the expenses of prosecutions. The chief object of the bill appeared to be to transfer from the courts of quarter sessions throughout the country to the Secretary of State the regulation of the fees and expenses of prosecutions, and to give power, on the recommendation of the courts of quarter-sessions, to pay the clerks of the peace by salary, instead of fees.

After some observations from Mr. Hume,

Mr. S. Wortley said he was in hopes the right hon. gentleman would have directed his attention not only to the expenses, but also to the mode of conducting prosecutions. He thought some provision might be made to fix the responsibility somewhere for the proper management of prosecutions without going the length of appointing a public prosecutor.

Sir G. Grey admitted the great importance of the suggestions of Mr. S. Wortley, but did not see how they could be carried out without the appointment of a public [illegible]

Mr. Henley said the public should feel indebted to the Government for bringing in this bill; but he must say, that, if it should be carried, something must be done to fix somewhere the responsibility of having these prosecutions properly conducted.

Leave was then given to bring in the bill.

SMITHFIELD MARKET.

Sir G. Grey moved for leave to bring in a bill for the removal of Smithfield Market, and contended that it became necessary to provide a cattle market in lieu of Smithfield Market, and to appoint a Commission by which the proper site should be chosen, and by which such regulations for its management should be made; the distance of the site not to exceed five miles from the metropolis. And power was to be given to borrow the requisite sums for providing the market upon the credit of the tolls and rents to be levied on the said future one.

Mr. Bankes thought the farmers would feel greatly indebted to the Government for bringing in the bill.

Mr. A. Stafford hoped that ample time would be given for consideration before the second reading of the bill.

Sir G. Grey said he would give as much time as the standing orders would permit.

Mr. S. Wortley would not oppose the introduction of the bill, but hoped its provisions would be referred, with those of another bill on the same subject, to the consideration of a select committee.

After a few observations from Mr. Ellis, leave was given to bring in the bill. The bill was then read for by Sir G. Grey were brought in and severally read a first time.—Adjourned.

HOUSE OF LORDS.—THURSDAY.

Their Lordships sat for a short time.

COURT OF CHANCERY

In reply to a question from Lord Brougham, the Lord Chancellor said it was the intention of the Government to introduce a bill in the course of next week for effecting a general change in the administration of justice in the Court of Chancery

In reply to a question from Lord Stanley, the Lord Chancellor said it had not as yet been decided as to which House of Parliament the measure should be brought forward in. Adjourned.

HOUSE OF COMMONS.—THURSDAY.

NEW MEMBER.

Mr. Barrow took the oaths and his seat for South Nottinghamshire.

The second reading of the Great Northern Railway (No. 3) Bill was rejected on a division by 102 to 46.

SUPPLY OF WATER TO THE METROPOLIS.

Sir G. Grey moved that it be an instruction to the Committee of the whole not to fix the sitting of the committee on any bill connected with the supply of water to the metropolis, and that no private bill for that purpose would not say founded on the scheme of the board, but which, if it received the sanction of the House, was a ready extremely desirable that no new bills on the subject should be brought forward until the report of the board was before the House. He therefore proposed, as the fairest course which could be adopted under the circumstances, that these bills should be deferred until after Easter.

SUPREMACY OF THE CROWN.

Mr. John Stuart asked Lord John Russell, whether any of the law officers of the Crown, for England, or Scotland, or Ireland, had given any opinion to the effect that, in order to the vindication of the supremacy of the Crown against the assumption of the Pope of Rome, it was necessary or expedient that the [illegible]t of penalties and disabilities against the Protestant Bishops of the Scotch Episcopal Church should be enforced by the sanction of Parliament? Whether those any such opinion had been given, there was any objection to lay a copy of such opinion before the House.

Lord J. Russell said, it was usually the practice of the Government to ask the opinion of the law officers of the Crown as to the state of the law, when any occasion arose for doing so; but it was not the practice to ask their opinion with regard to measures which Parliament might be asked to legislate upon. He was not aware that any opinion had been given such as the hon. gentleman mentioned, but admitting freely that the law on the subject of patronage might be susceptible of great improvement, he should not oppose the appointment of a committee.

The appointment of the committee was then agreed to.

THE COUNTY FRANCHISE

Mr. I. King moved for leave to bring in a bill to make the franchise in counties in England and Wales the same as that in boroughs, by giving the right of voting to all occupiers of tenements of the annual value of £10. The hon. gentleman contended that a great deal had been done in various parts of England a great decrease in the constituencies, and a similar diminution had been the chief argument in support of the Irish Franchise Bill of last session: he thought it was at present a good ground for adopting a similar course towards England.

Mr. Hume seconded the motion.

Lord J. Russell admitted that the class of persons whom this alteration of the law would enfranchise were those who were persons who would be like y to exercise it with great discretion; but the question they had to consider was, whether it would really be an improvement on the present system of representation of the country. He had always been of opinion that the Chandos clause of the Reform Bill had diminished the influence of the class of independent freeholders of the counties, and as the proposition would carry that clause into still further operation, and still further diminish the influence of the freeholders, he could not privately his assent. It was to be remembered, at this last [illegible] not only to the case of Ireland, where the forty-shilling freeholders had been already totally abolished. He was, on the whole, of opinion that at this change would not improve our representation, and would therefore oppose the motion of the

hon gentleman. The noble Lord said, that in the next session of Parliament he would bring in a bill with a view to the enlargement of the franchise.

MR. HUME could not see why, if the enlargement of the franchise was desirable, the people at all should be deprived of the benefit of the measure the moment Lord John proposed such for a whole year. He thought no time so proper for enlarging the suffrage as when the people at large were in a state of calmness and quietude.

MR. OSBORNE said he had heard with great pleasure the promise of the noble Lord, and he hoped that in the interim the noble Lord would turn his attention to the subject with a view to obtain as substantial a measure as possible. The hon. gentleman concluded by stating that the £20 householders would be unlikely to be in possession of more than the £50 tenants at will, and that the 40s. freeholders throughout the country would be rejected at the success of the motion before the House.

MR. P. HOWARD supported the motion.

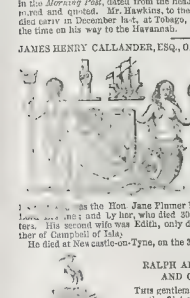
The House was then divided, when the numbers were—

For Mr. King's motion	..	..	..	100
Against it	..	..	..	82
Majority against Government	..	..	..	18

On the motion of LORD SEYMOUR, leave was given to bring in a bill to amend the act for regulating the construction and use of buildings in the metropolis and its neighbourhood.

THE ATTORNEY-GENERAL for IRELAND obtained leave to bring in a bill to consolidate and amend the laws relating to civil bills and the courts of quarter sessions in Ireland, and to transfer to the head-quarters of Cahers, were much adjourned and quoted. MR. Hawkins, to the deep regret of his family and friends, died early in December last, at Tobago, of congestion of the brain. He was at the time on his way to the Havannah.

JAMES HENRY CALLANDER, ESQ., OF CRAIGFORTH AND ARDKINLAN

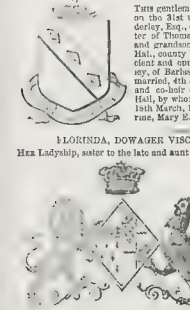


MR. CALLANDER, of Craigforth, member for Argyleshire in the first Reformed Parliament, was son and heir of the late Lieutenant-Colonel George Callander, of Craigforth, by Elizabeth his wife, eldest daughter of the Hon. Henry Erskine, of Ammondell, and grandson of James Callander, Esq., of Craigforth, who assumed the surname of Campbell on succeeding, in right of his mother, to his cousin-german Sir Alex. Campbell, in the estate of Ardkinlas.

MR. CALLANDER was born 17th of August, 1804, and married twice. [illegible] as the Hon. Jane Elmore Erskine, youngest daughter of David, Lord Erskine; and by her, who died 30th March, 1845, he had three daughters. His second wife was Editha, only daughter of John Campbell, Esq., brother of Campbell of Islay.

He died at Newcastle-on-Tyne, on the 31st ult.

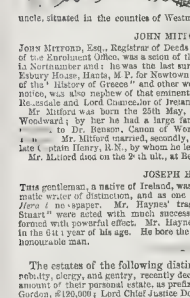
RALPH ADDERLEY, ESQ., OF BARLASTON AND COTON, COUNTY STAFFORD.



THIS gentleman died at Torquay, in his 70th year, on the 31st ult. He was second son of Ralph Adderley, Esq., of Coton, by his wife, daughter of Thomas Kynaston, Esq., of Loxley Park, and grandson of Rowyer Adderley, Esq., of Hams Hall, county Warwick, the representative of an ancient and opulent Staffordshire family. MR. ADDERLEY, of Barlaston, was born 16th June, 1781, and married, 4th July, 1816, Rosamund, eldest daughter and co-heir of William Mills, Esq., of Barlaston Hall, by whom he had issue, Ralph Thomas, born 19th March, 1826; Randolph Ras-ph, Sophia Catherine, Mary Elizabeth, and Anna Selina.

FLORINDA, DOWAGER VISCOUNTESS CASTLEMAINE.

HER Ladyship, sister to the late and aunt to the present Earl of Clancarty, died on the 9th inst., at Meydrum Castle, county of Galway, at the advanced age of 88. In her the poor have lost a kind and beneficent benefactress, and her relations and acquaintance a warm and generous friend. HER Ladyship married, March 20, 1782, the Right Hon. William Handcock, of Mayfield Park, county Waterford, Lord Castlemaine, but was left a widow without issue, Jan. 7, 1849. By her death the present Lord Castlemaine comes into possession of the valuable and extensive estates of his uncle, situated in the counties of Westmeath and Roscommon.



JOHN MITFORD, ESQ.

JOHN MITFORD, Esq., Registrar of Deeds for the county of Middlesex, and Clerk of the Enrolment Office, was a scion of the family of Mitford, of Mitford Castle, in Northumberland; and he was the last surviving son of William Mitford, Esq., of Exbury House, Hants, M.P. for Newtown, and the learned and popular author of the "History of Greece" and other works. MR. Mitford, the subject of this notice, was also nephew of that eminent equity lawyer Admiral Mitford, first Lord Redesdale and Lord Chancellor of Ireland.

MR. Mitford was born the 25th May, 1779. He married, first, in 1801, Miss Woodward; by her he had a large family, of whom the eldest daughter was married to Dr. Benson, Canon of Worcester, and some time Master of the [illegible]. MR. Mitford married, secondly, in 1836, Susan, only daughter of the late Captain Henry, R.N., by whom he leaves a son.

MR. Mitford died on the 24th ult., at Bedford.

JOSEPH HAYNES.

THIS gentleman, a native of Ireland, was well known some years ago as a dramatic writer of distinction, and as one of the leading editors of the *Morning Herald* in support of Mr. Haynes' speeches of "Conscience" and "Mary Stuart" were acted with much success, in the latter play Mr Macready performed with powerful effect. Mr. Haynes died on the 24th ultimo at Norwood, in the 64th year of his age. He bore the reputation in private of a kind and honourable man.

The estates of the following distinguished individuals, and of the nobility, clergy, and gentry, recently deceased, have paid probate duty on the amount of their personal estate, as prefixed to their names: General Sir J. W. Gordon, £120,000; Lord Chief Justice Doherty, £50,000; George Spence, Q.C., £14,000; C. Barrow, £70,000; E. Gardner, £50,000; J. M. Gordon, £40,000; [illegible] £5,000; T. A. Hewson, £30,000; H. P. Court, £16,000; T. [illegible] Kerr, £14,000; G. H. Calling, £10,000; G. Fleming, £14,000; H. Enderley, £12,000; J. M. Weldon, £10,000; the Rev. J. Bland, £18,000; and Rev. T. Westmoreland, £10,000. The estates of Lord Burghersh and the Hon. J. C. W. Van Macdonald have also been sworn under £20,000.

CHARITABLE BEQUESTS.—To the Governesses' Benevolent Institution, [illegible] Society, £200, Society for Promoting the [illegible] Society, £200; Lodgers' Blind, St. George's-fields, £200; Liverpool Blind Asylum, £200; Liverpool Deaf and Dumb Asylum, £200; British and Foreign Bible Society, £100; Society for Propagating the Gospel in Foreign Parts, £100; Seamen's Hospital, £100; Incorporated National Society for Promoting the Education of the Poor in the Principles of the Established Church, £100; Society for the Protection and Employment of Distressed Needlewomen, £20. The legacies are left under the will of the late John Francis Smith, Esq., of Whitborne Court, Hereford, who has also left to the poor of Whitborne £200, and to the Worcester and Hereford infirmaries each £100, and a further sum of £500 to each of these infirmaries on the decease of his two sisters

"THE GREAT GLOBE ITSELF."—It has been already made known that the enclosure of Leicester-square is the spot chosen for the erection of a building to receive Mr. Wyld's intended great globe. After much difficulty, and the payment of no less than £3000, the arrangement for the ground is now completed. The building is of a circular form, 90 feet across, containing the globe, of 60 feet in diameter. Corridors for promenade will surround it, and it is to have four covered approaches from the sides of the square. The external design at the sides is proposed to be 80 feet high, surmounted by the large ball. [illegible] The building itself will be many of timber, to the inner [illegible] of the globe of plaster of Paris. In the centre of the globe will be a series of galleries, four in number, constructed so as to enable visitors to see every portion of the model. These galleries, it is said, will afford accommodation for 1000 or 1500 persons at one time, and are to be approached by [illegible] staircases in the centre; the entrance is to be at the south of the globe.

On Thursday a labouring man of Liverpool found a pocket-book containing a cheque for £150. He obtained a directory, ascertained the residence of the owner, and restored the lost book and its contents; for which honest act he was liberally rewarded with a fourpenny bit.

THE ILLUSTRATED LONDON NEWS.

COURT OF EXCHEQUER.

THE ATTORNEY-GENERAL *v.* THE LONDON DOCK COMPANY.

The allegations of fraudulent malpractices which the Board of Customs has charged the London Dock Company with systematically encouraging and countenancing, on the part of their servants, to the great loss of the revenue and to the injury both of the mercantile community and the Customs' revenue, have been at length submitted to the test of a trial by jury.

The trial, which has been of extraordinary duration—having commenced on Tuesday the 4th inst., and not having concluded until Tuesday the 18th—took place in the Court of Exchequer, before the Lord Chief Baron and a special jury. The case presented was an information filed by the Attorney General, with reference to 4000 lb. of coffee, and 200 cwt. of grape, landed by the Dock Company without duly reporting them to the Customs' authorities. The first count in the information charged the defendants with having landed these goods without a due report having been made. The second, with landing them without the duty being paid or secured. The third, with delivering them out with out the duty being so paid or secured. The fourth and fifth, for warehousing them without due entry; sixth, for clandestinely moving the goods from one warehouse to another; seventh, for fraudulently concealing them in a warehouse; eighth, for fraudulently moving them from the warehouse.

A vast number of witnesses were examined in the course of the trial, the evidence for the Crown seeking to establish against the Dock Company the practice of a system of breach of legal regulations, fraudulent abstraction of goods, and evasion of duties to a vast extent of several thousand pounds sterling a year. Many of the witnesses for the Crown were formerly in the service of the Dock Company, but, previously to, and during, the trial were supported by funds supplied by the Customs; and, according to their testimony, it was quite an usual practice on the part of the Dock officers to abstract from every cargo of a ship of a quarter varying from half a dozen to three or four tons, and apply it to the service and benefit of the Company in various ways, a locality named Davis's-corner being especially mentioned where good sugar was customarily abstracted and prepared so as to make refuse or molasses to sell to refiners and scum-boilers at a profit. Several of these witnesses, however, on cross-examination, proved to be men of indifferent character, and their testimony not to be very worthy of credit.

Sir Fitzroy Kelly, who was the leading counsel for the defence, and whose opening speech on Monday week lasted six hours, showed that the whole case, as regarded its main features, was a fabrication, and that the charges which had really occurred, were of a very trifling nature, and had been committed by subordinate officers of the Dock Company, wholly unknown to the directors and managers of the Company.

The evidence adduced for the defence went far to sustain Sir F. Kelly's address.

On Tuesday last, the Lord Chief Baron summed up the whole case for the Jury. His Lordship said: "It is satisfactory to think, that, as this case now stands, no charge is made on the personal honour, character, or conduct of any of the directors of the London Docks. I should have thought it a national misfortune if anything like a system of plunder had been carried on in which the directors, or any of them, had participated. But I understand that the Solicitor-General disclaims any charge against the directors of the London Docks of having, as a body, acted dishonestly or dishonourably. I have no appeal to make—have announced any friends, either on the merchant or the revenue; but he says, that a certain lax system has prevailed in the Docks which it was incumbent on the Customs to put an end to. I say again, that it is satisfactory to know that he has entirely abandoned—not abandoned, but disclaimed—any such charge as that which he was supposed to have brought against the Company." His Lordship then went through the whole of the evidence, his address lasting from four o'clock in the morning until three in the afternoon, when the jury retired to consider their verdict.

After a short absence the jury returned, and delivered the following verdict: —"We find for the Crown on the 7th and 8th counts as to the two boxes of sugar; as to the remaining 27 casks of sugar, and as to all the 57 packages of cocoa, for the defendants; at the same time we comply with the verdict in recommendation that greater strictness should be observed by the Company towards their subordinate servants, in order to prevent irregularities which have occurred."

A Juryman: We find for the Crown as to the two boxes upon your Lordship's direction that the putting them into a cask was a clandestine and illegal removal.

His Lordship then asked the jury whether they did not find that the two boxes had been fraudulently removed, within the 10th and 11th counts?

The Foreman: Yes, but we find no intention to defraud the revenue.

NAVAL AND MILITARY INTELLIGENCE.

VACANT COMMANDS-IN-CHIEF IN 1851.—The following Commanders-in-Chief will have completed their stated periods of service during the present year:—Mediterranean: Admiral Sir William Parker, Bart., G.C.B.: Commander-in-Chief in the Mediterranean, appointed February, 1845, having served a double term. It is reported that the Government intend to appoint to the command in the Mediterranean, until the Portsmouth command is vacant. West Indies: Vice-Admiral the Earl of Dundonald, G.C.B., term of service expired Jan. 19, 1846, up to relief next month by Vice-Admiral Sir George Seymour, G.C.H., appointed last month: Commodore Thomas Bennett, second in command, appointed Feb. 7, 1848. Devonport: Admiral Sir William Hall Gage, G.C.B., appointed April 17, 1845, to be succeeded by Admiral Sir Provo Wallis, K.C.B. Nore: Vice-Admiral the Hon George Elliot, C.B., appointed May 8, 1848. South-east Coast of America: Rear-Admiral Barrington Reynolds, C.B., appointed to Cape Station, March 1, 1848. Portsmouth: Admiral the Hon. Sir Thomas Bladen Capel, K.C.B., appointed Sept. 14, 1846.

THE TROOPS IN THE COLONIES.—The regiments stationed in the Australian colonies and New Zealand are to be reduced to six service companies each, and to have a four company depot for duty at home; it is expected that the greater number of the men, instead of returning to England, will be induced to become settlers.

NAVAL MEDALS.—The committee of flag-officers, appointed to decide upon the validity of claims to a naval war-medal, in the issue of her Majesty's command of the 7th of June, 1847, have reported to the Lords of the Admiralty that the crews of 426 vessels are entitled to medals; viz. 126, according to her Majesty's commands; 117 for services on the coast of Egypt, in 1801; 53 for services at Algiers, Navarino, and Acre; 43 for attending vessels; 131 for ships co-operating with the army at Kartnagne, &c.; 324 for ships entitled, by promotion, of first-lieutenants. The number of crews proved entitled, by promotion, of first-lieutenants. The number of crews proved entitled, by promotion, of first-lieutenants. The number of crews proved

THE SHIP "HIBERNIA," BUILT AT QUEBEC.

THE SHIP "HIBERNIA."

This superb new frigate-built ship is considered the finest specimen of her class ever built at Quebec. She was constructed by Mr. James Erskine Oliver, and is the property of a very spirited and enterprising shipowner, John Dunn, Esq., of Belfast. The *Hibernia* registers 1065 tons measurement, and is about 1600 tons burthen: and, as she is esteemed an excellent model for sailing, and as she is in superior trim for realising these expectations from her cargo, outfit, &c., there is no doubt she will earn a high reputation for her fast sailing qualities. She is about being despatched to Port Adelaide and Port Phillip, with a cargo of merchandise and emigrants, by Messrs. G. and A. Herring and Co.

DESTRUCTIVE FIRE IN TOOLEY-STREET.

Early on Wednesday morning, a fire of a most destructive character broke out upon the premises of Messrs. Wigan, White, and Co., hop-factors, of Duke-street and Tooley-street, Southwark, in the neighbourhood of the South-Eastern Railway Station. This locality has been singularly unfortunate in regard to visitations of this kind within the last few years. In 1836 a great fire broke out in a grocer's shop in Wellington-street, and, extending rapidly, destroyed the premises which stood upon the very ground where the present fire has taken place, with Fenning's Wharf in addition. In 1843, Topping's Wharf, which adjoins Fenning's Wharf, was burnt to the ground, St. Olave's Church being nearly destroyed.

The fire of Wednesday commenced in the basement story of No. 5, Duke-street, occupied by Messrs. Wigan as offices. The policeman on duty speedily gave the alarm, and the engines from various Brigade stations began to arrive in quick succession, those from Tooley-street and Southwark-bridge being first on the spot. "In consequence of the 'high service' required at this part of Duke-street," the *Herald* reporter states, "unfortunately there was but a scanty supply of water for some time after the arrival of the engines." Meantime, the wind blowing fresh from the south-west, the flames had full play, and quickly made their way to the warehouses in the rear of the house where the fire originated, where they very soon raged with a fury which caused the greatest alarm for the surrounding houses, many of which, indeed, suffered considerable damage. The two floating engines, stationed at the Tower and Southwark-bridge, were now sent for, and they arrived in the course of an hour—not before their services were much needed; for it appears, unfortunately, that, although several of the engines of the land brigade were sent round to the Tooley-street side as soon as the warehouse was ascertained to be on fire, "the extreme height of the building upon which it was desired to throw the water (nearly eighty feet from the level of the street), rendered it impossible to effect much service from this quarter, and the labours of the firemen were at first almost confined to keeping the adjoining premises cool."

After some delay a survey of the scene of devastation was made by Mr Braidwood, and other officers of the Brigade force, from the roofs of adjoining houses, and the hose of some of the engines having been sent up to the same places, streams of water were poured upon the fire, which, combining with those from the floating engines, now got to work, put the flames in some degree in check, though they were utterly powerless to prevent the destruction of the whole building, with its valuable contents, including hops to the value of some £40,000 or £50,000. The roof fell in early, and floor after floor followed, until all was a mass of blazing ruins. At eleven o'clock—eight hours after the commencement of the fire—Mr. Braidwood was enabled to pronounce that they had seen the worst of it, and that there was no longer any danger of its extension beyond the walls of the warehouse in which it had done such havoc, and the dwelling-house in Duke-street, which was totally consumed. One limit to the general havoc, however, we are happy to record. It appears that when the premises were built, after the fire of 1836, Mr. Alderman Humphery, M.P., who is the proprietor of this and a great deal of property in the neighbourhood, resolved to make the building fireproof as far as possible, and to this end had the floor over the ground-floor, and that between the latter and the cellars, constructed of concrete. The precaution was successful; and the fire was stopped in its downward ravages at the former point, and so escaped communicating with the cellars, which contained at the moment some 2000 tons of oil, much to the astonishment of the Brigade and all beholders, until the arrival of Alderman Humphery, who explained the circumstance referred to.

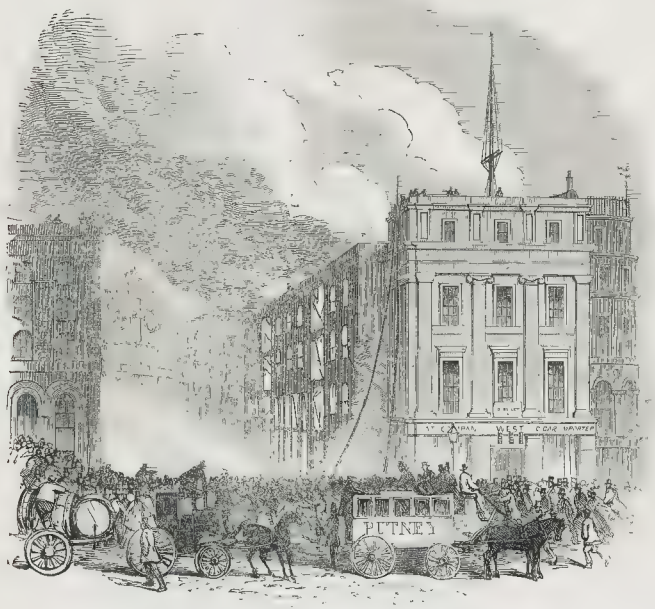
For some time there was much apprehension that the walls would fall, but this fortunately did not occur; if it had, the lives of the firemen, who were daring, zealous, and untiring in their labours, would have been placed in imminent peril. At four o'clock in the afternoon, the firemen, having been at work for twelve hours, were relieved by drafts from other divisions in the metropolis, by whom water still continued to be poured upon the ruins throughout the evening and great part of the night.

Of the surrounding premises, those of Mr. Wynn, bootmaker, 6, Duke-street; Mr. Bolton, coffee-shop-keeper, 3, Duke-street; Mr. Smithers, fishmonger, 1, Duke-street, were partially damaged by fire and water; and three others suffered more or less from water. Messrs. Wigan, we understand, are fully insured; but Alderman Humphery, though insured, is not so, it is said, to the full value of the building.

We cannot avoid the opportunity which the accounts of this occurrence afford us of directing attention to the lamentably insufficient means which at present exist in this great metropolis for the extinction of fires. Without detracting for one moment from the well-earned and well-sustained character for efficiency of the fire-brigade, or the ability and good generalship of Mr. Braidwood, who superintends their exertions, it cannot be denied, that as regards the appliances at their command, we are greatly in the rear of the spirit of the age, as evidenced in its application to other important public works; whilst we have undoubtedly much to learn from many communities both in Europe and America. Some interesting statements in reference to this important subject occur in the course of the "Report of the Board of Health on Water Supply;" and, though our present limits will not allow us to go into its details at anything like the length it deserves, we may, perhaps, be doing some good by referring to some of the principal and most obvious points considered in the course of the inquiries of the Commissioners.

It need hardly be suggested, that, in the case of a fire "breaking out," as it is phrased, assistance, to be of use in the way of suppression, should be prompt. A jugfull of water, instantly applied, may extinguish a burning curtain; whilst, as is notorious, the whole force of the London Brigade, though "promptly on the spot," with the turnkey too often *in their rear*, seldom—in very few instances proportionally—save even the house in which a fire occurs. It appears, from the evidence of various witnesses, that, in the average of cases, from twenty minutes to half an hour elapses between the alarm of fire being given, and the arrival of the first engine: then comes the delay of turning on the water; then the vexation of finding an insufficient supply, as was the case on Wednesday: then the insufficient power of the engines, worked by the brute force of human hands, to reach the elevated points to which the flames, left unchecked, have been all this time ascending; all which was specially and lamentably instanced in the fire on Wednesday last.

It is remarkable of this particular district of Southwark, that, whilst it is crowded with large warehouses, full of valuable property, and is precisely that point, of all the metropolis, where a fire, once breaking out, would be likely to be most destructive, the supply of water is the worst. Mr Braidwood, in his evidence, says:—"Along the south shore, from London-bridge, *we have some very heavy fires*, and *great want of water*."



DESTRUCTIVE FIRE IN TOOLEY-STREET, SOUTHWARK, ON WEDNESDAY.

BEDDINGTON CHURCH.—NEW AISLE.

RESTORATION OF BEDDINGTON CHURCH

THE fine old church of Beddington, in Surrey, has lately undergone an entire restoration, in strict accordance with the original character of the architecture; and there has been added to the sacred edifice a north aisle in the Decorated style of the 14th century. We have engraved this new portion. The Church, it will be recollected, was founded before the Conquest, and was rebuilt in the reign of Richard II. This structure has already been engraved in No 138 of the ILLUSTRATED LONDON NEWS

The new aisle, extending the whole length of the nave, is separated from the old church by a row of round columns, with carved capitals of foliage. The roof of the nave is of open timber-work, with carving.

The other works are as follows:—The chancel arch has been rebuilt, and a hammer-beam roof placed upon the chancel. The old stalls have been restored to their original position, and the whole of the nave filled with benches, some of which have their ends filled with tracery The whole of the wood-work is oak, and the columns, dressings, &c are of Bath stone.
